Cane (Florida): 25 growers on 20,000 acres, producing less than 1 percent of United States supply; employs 2,000 to 2,500 persons in fields and mills. Average area, 800 acres.

Cane (Puerto Rico): 12,000 growers on 300,000 acres, producing 13 percent of United States supply; employs 90,000 persons, including refinery workers on islands and in continental refineries.

Cane (Hawaii): 50 plantations (with 3,000 growers wholly on share basis) on 130,000 acres, producing 14 percent of United States supply; employs 45,000 persons in fields, mills, and refineries.

Cane (Cuba): 20,000 out of 30,000 planters producing two-thirds of island's production, representing 29 percent of United States supply. Number of island workers not available. Approximately 5,200 employees of continental plants are engaged in refining Cuban sugar. Twenty-five plantations, with those under American control producing 68.1 percent of the Cuban sugar, produce the bulk of the Cuban supply.

Cane (Philippines): 23,500 planters on 650,000 acres producing 14 percent of the United States supply. (Thirty-three percent of the Philippine industry is owned by American capital.)

There are no figures immediately available as to employment in the fields and mills of Cuba and the Philippines. Refining of Cuban sugar in the United States is estimated to provide employment for more than 5,000 of the continental refinery workers.

Employment in the beet-sugar industry, especially in the fields, is much larger than in the cane areas. Wages are likewise higher for beet workers. Growers have reported that 25 percent of the return from beets goes to field workers.

On the industrial side of the picture so far as the continent is concerned, there are around 14,000 refinery workers engaged in processing cane sugar. In the cane mills of Louisiana and Florida there is an average annual employment of 4,221. The average annual employment in the beet factories is 9,366, with the maximum around 30,000.

Agricultural employment in both the cane and beet areas is seasonal, as is also a large part of the industrial operations.

Aside from the stabilizing influence of sugar-beet production on western agriculture, particularly in the irrigated areas, the number of persons concerned with the industry enhances its importance and indicates what will result from its expansion.

Any formula set up for fixing quotas in part at least on the basis of the number of growers and the farm and factory employment provided or that will result from expansion will give the sugar-beet area a distinct advantage, considering both domestic and foreign cane areas.

The Tariff Commission, in a report to the President in 1924, said: "The growing of sugar beets promotes the program of diversification in farming. It provides a dependable cash crop, is an agricultural advantage by reason of the fact that the scientific care and thorough cultural methods required in beet production promote good farming and lend stability to land values by removing the hazard common to one-crop system of farming."

Hon. John Andrew Martin

## EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

Mr. SABATH. Mr. Speaker, "The night comes on that knows not morn."

When night came without a morn for JOHN ANDREW MARTIN not only did the membership of the House lose a substantial friend, but the whole country lost a sterling, seasoned legislator whose broad-ranging activities were characterized by wisdom and high-mindedness. In other words, our good friend was not circumscribed by State lines and provincialism.

Mr. MARTIN entered the Congress 2 years after my service began, and although he served only 4 years at that time, he exhibited the results of his successful experience in law and as a State legislator. It is a matter of regret that he did not choose to continue here, he having retired voluntarily, when experienced legislators were indispensable, following the panic of 1907 and when our tariff-making was, under leadership of such men as Mr. Aldrich, Mr. Tawney, and Mr. Payne, undergoing a radical and, to my mind, an unwise change. And men of Mr. MARTIN's experience and capacity were especially needed because we Democrats were not numerically strong immediately before the reigns of government were committed to our keeping just after the Taft administration, when we were faced by the necessity of enacting a new and salutary tariff law.

I need not recite to the present membership of the House the lovable traits of character and the important and persistently intelligent work of our departed friend since he rejoined us at the beginning of the Sixty-third Congress with, I was pleased to observe, new potency born of well-directed industry during his absence. Those qualities constitute for all, regardless of political affiliations, a pleasing memory.

My association with Mr. MARTIN was somewhat close, and the longer I knew him the greater, if possible, my respect and admiration for him. In legislative matters I always found that the standard to which he subjected any proposed legislation, whether it be by friend or foe, to be this, How will it affect all the people of the United States? And measured by highest and most exacting tests, our friend was a real success.

He, with meticulous accuracy, judged the best interests, the proper desires, and the laudable wishes not only of his appreciating constituency but of the whole country. His

fondest desideratum was peace, unity, happy tranquillity, industry, and the preservation of the basic principles of true Americanism, which he understood so well and worked so hard to preserve, stimulate, and promote. He was ever alive, especially during the last few years, to the contagion of false doctrines, to all that was wicked in intent and treacherous in conduct.

Our good friend knew well that throughout all history the government of nations has been a determinative factor for good or evil, harmony or discord, progress or retrogression, peace or war; and that is why he always worked so cautiously. He knew the dangers of uncertainty and instability in legislation; and he always bore in mind and encouraged true brotherhood, world peace, health, happiness, and prosperity from the national standpoint. His standard of righteousness and judgment always measured up to the criterion of truth. For him there was nothing so sweet as duty, and the best pleasures of life came in the wake of duties well done. In a world said by many to be too much influenced by frivolity—gin, jazz, and joy—we had a safe anchor in the person of this honorable deceased.

As editor, lawyer, legislator, and soldier this good man learned the problems and the aspirations of the so-called lowly, and he never failed to act as he thought best in their behalf. Mr. MARTIN's final test of a gentleman was this: His respect for those who could be of no possible service to him. He appreciated that prosperity gets followers, but adversity distinguishes them.

When Mr. MARTIN appeared for the last time before the Committee on Rules, of which I have the honor to be chairman, he spoke with clarity and reason for a rule for his wool bill; and, since he was ever my good and accommodating friend, it pained me that, due to the condition of the legislative calendar in the closing days of the last regular session, it was not practicable to grant a rule for consideration of his proposal. It would have pleased me immeasurably to see his bill enacted into law.

The courage and intelligence with which our friend embarked on his quest for sound and remedial legislation, his gentleness, and his adamant opposition to all forms of menacing legislation, immorality and violence have given his particular stamp to many years of this House's wholesome and progressive development.

The 12 years of his service here are brightened with inspired deeds and utterances which record his name among the noblest of his illustrious contemporaries and predecessors; and we who would emulate his virtues cannot fail to profit by them.

### Bituminous Coal Legislation

#### EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

ADDRESS BY CARROLL B. HUNTRESS

Mr. ALLEN of Pennsylvania. Mr. Speaker, under the permission granted to me in the House of Representatives, I wish to include in my remarks a speech made by Carroll B. Huntress of the Republic Coal & Coke Co. before the West Virginia coal conference in Morgantown last September. All those who are interested in the welfare of the bituminous coal industry should read the timely remarks of Mr. Huntress which follow:

Coal, in the common vernacular, has everything. That likely explains its eerie grip on all who eke out an existence from its production. Mind you, I do not apply the verb eke, which implies existence in scanty form, to the distributor. However much the operator may lose and however little the miner may earn, the party

who passes the precious product from the mine to the consumer may net a moderate return. But we are getting ahead of our story. The homily is that that black substance we call coal is part and parcel of the very fiber of those who produce it. They labor on, tenaciously holding to the hope that supplies of competitive energy sources will soon diminish, and that extensive use will be made of the many hundred byproducts, resulting in substantial increase in demand. If the faithful can endure for what, in some quarters, seems an interminable period, they surely will be generously rewarded.

This judgment is certain, but perhaps not until the day of their children or children's children. Our task, it would appear, is to try to break the log jam now. "This indecisive backing and filling can't last forever," one producer observed last week. "No; and neither can I," was the rejoinder. For the purpose of stabilizing the situation, every coal conference is more or less planned. Of all States in the Union none offers richer returns from earnest efforts than does West Virginia, with its vast coal deposits of proven economy at the door of large consuming markets. This is a giant coal domain, both as to output and recoverable reserves. The production of coal in this State, over the 16-year span, 1923-38, inclusive, was 1,821,000,000 tons, nearly two billions; a figure over five times the annual consumption of bituminous coal in the entire country at the 1938 rate. This enormous output has made but a small dent in the vast bituminous coal reserves of the State, which, by the way, are about double those of Pennsylvania. West Virginia reserves, on January 1, 1939, were 66,540,000,000 tons—sixty-six billions.

It's no wonder that this great university should direct major efforts toward realization of the potentialities patent in those figures. It's no surprise that such an aggressive and progressive person as President Lawall should leave nothing undone within his power to impress upon the industry the importance of research and technological development in fuel-burning and in equipment, along with advance in mining methods. Too often in the past we've heard the comment from that type of coal operators who never outgrew the "digger" complex that research merely showed folks how to use less coal. "Tommyrot, if you ask me," one of the directors of the National Coal Association blurted out in the washroom a decade ago, on the occasion of a committee meeting to discuss the financing of a fellowship related to coal combustion. Now you mustn't jump at the conclusion that that director was dumb, for he later drew a \$100,000 salary, which, after all, to research workers and some others is no chicken feed. This incident, however, does illustrate the point in question and, incidentally, for whatever personal catharsis the research student can achieve, indicates that bigness in financial compensation is not invariably companioned by extraordinary vision. It is also revealing with respect to a type of management to which a portion of the industry has been subjected, and accounts for many headaches.

In recent years, research, private and governmental, in the face of enormous obstacles, financial and otherwise, has grown apace here and abroad. On the 28th of July an Associated Press dispatch from Liege, Belgium, narrated a demonstration by Max Morand of the production of 2,000,000 volts of electric energy with a handful of coal dust. That was done in a two-story tower, a power house for the energy, used to smash atoms. New uses for coal brighten the picture. The records of these coal conferences are in themselves warrant for every dollar expended to enlighten the industry. And they call for larger, more extended effort.

In the light of the growing awareness of the industry to the value of research and the tempo of its progress the casual observer might reasonably infer that the industry was surely on its way to better days. That inference would certainly be correct if research alone could remedy the situation. However, there are other factors which figure prominently, such as those which explain the frequent sale of a carload of coal at approximately the same mine price as the product of a stone quarry can be purchased. Until those factors have been dealt with, not by resort to extremes but rather in the intelligent manner which characterizes proper approach to fundamental research problems, apart from the welter of politics, aside from the purely selfish aims of this or that individual, coal will continue in chaos. I have touched upon the distribution problem, and there the finger points. Let us not underestimate the value of research, but also let us not attach undue significance to its development. In other words, let us remember that one sound apple in a barrel of rotten ones proves of little avail.

The distribution problem must be attacked from several angles. Research makes for a wider market through new uses, and is promotive of retention of markets by way of reducing mining costs and refining heating equipment. Of recent date, any additional market through new uses is relatively insignificant as compared, for instance, to the nearly 1,000,000 tons lost to oil last spring in the New York metropolitan area, a loss for which the so-called mining suspension is held responsible. A reduced price for a better prepared product has not held the lines in several markets against competition of natural gas, oil, and water power. At this point the observation might be in order that the income of some producers in certain circumstances can be increased considerably by a judicious lowering of the mine price, and in certain sets of circumstances the same relationship exists between the incomes of miners and the price of their labor.

The outlook, however, is more propitious. The natural-gas fields appear to be more limited than the rosy prognostications of pipeline promoters signified. New processes, including the Houdry, which make for a larger percent of the refined petroleum product will drastically curtail the fuel-oil supply, so oil men predict. Use

of water power for generation of electric current is unsound economically, except in a few areas and for a limited territory. Were it not for "The Visions Asinine," the T. V. A.'s, we would hear little or nothing of hydroelectric plants. As it is, of course, the money of the taxpayers is being squandered in many sections to subsidize water power in competition with private enterprise. If a complacent citizenry permits the hydro program, running into the billions, to continue, the consequent elimination of the coal industry will be immaterial, for the tax load around everyone's neck, along with a standard Government halter, will make everything fine and dandy. Possibly, we shall then faintly remember that once upon a time it was bruited around that mountaineers were free and West Virginia was a sovereign State.

In other respects there is ground for optimism. There is a steady trend toward mechanization and improved preparation. There is a concentration of mining, fewer and larger units. According to the latest available figures of the United States Bureau of Mines on this subject, those for 1936, 36.5 percent of the total bituminous output came from mines producing more than 500,000 tons that year; whereas in 1928, or 8 years before, but 23.3 percent came from operations of that size. And in 1936, 69 percent of the total production came from mines of 200,000 tons and over. If we go back to 1918 we find only 48.6 percent of the output of that year came from mines of 200,000 tons and over. From a mechanization angle, another comparison is enlightening, namely, that which shows the growth in stripping operations from 1928 to 1937. In the former year 19,788,000 tons came from strip mines, or 4 percent of the output; in 1937, 31,750,000 tons were stripped, or 7.1 percent. Over half of the Indiana production and about a third of the Illinois output came from strip mines. In the last 2 years, for which figures are not available, there has been a steady increase in all forms of mechanization. It is generally conceded that the more concentrated the industry the greater degree of stability it will attain, and that is something for which coal men since time immemorial have been praying—and fighting.

We now come to the technique which characterizes that combat and which has divided the industry into hostile camps. I assume that all forms of praying are more or less the same, but the styles of fighting for the common objective of a stabilized, profitable industry are quite different. It would be unpardonable to inject an extraneous or a discordant note into this gathering, but it would be a la Pollyanna to ignore vital facts. The subject lends itself, I believe, to dispassionate treatment, a facing of the issues, fairly defined, squarely in the face. Otherwise, we get nowhere. Let us be realists.

The line-up is somewhat as follows: There remains a small faction in the industry, whom their enemies dub "bitter enders," and accuse of seeking to restore the malodorous status quo ante. Suffering from no delusions about human nature, they spurn that which smacks of voluntary cooperation, and, as far as legal loopholes permit, endeavor to escape Federal regimentation. Charged against these operators may be grievous faults and shortcomings, but inconsistency is scarcely one of them. And memory does not call to mind the name of one of their clan whose operation is insolvent. There may be exceptional conditions or extraordinary circumstances attached to the case of each, but the fact remains that, generally speaking, they occupy that enviable position of being "in the black." Handful though they are, they are vocal at times, and their influence is not to be discounted. For all their so-called faults, we love them still.

There are two other classes, each of about equal strength in numbers. The one class, of two distinct factions, battles for rigid governmental price fixing. The other class contends for industry control on price and other questions, with a minimum degree of Federal supervision. There are divers phrases which might be employed to differentiate these two classes or to define their economic beliefs, but I believe that general outline suffices for this well-informed audience. The purpose is to expose, in the raw, the sharp cleavage that exists between the two schools of thought. The conflict resolves itself into a wrestle between two worlds, between two ways of life, the American way and the totalitarian way. First we must accept the premise, if history counts for aught, that, if price fixing is to obtain in coal, it will be extended not only to other natural-resource industries, as is urged by a legion of coal-price advocates, but to other basic industries as well. Some years ago, in discussing the coal-control measure with one of its foremost supporters, I inquired if he did not accept that premise. His answer was that he would much prefer to see the auto and steel industries under Government control than in the hands of such "ruthless men" as the generally accepted leaders of those industries. There you have it; so let's start from that premise. This is neither the time nor the place for one to venture into the realm of conjecture. And who is qualified to speak ex cathedra? My desire is merely to voice the viewpoints of the conflicting groups; yours, I take it, to reach your own conclusions.

The Government-control group pleads justification for its position on the basis of the frightfully weakened position of the industry through internecine warfare of long duration. Here might be interpolated the observation that the last 6 years, marked by intermittent Federal control, constitute the most trying period of its history. It just happens, perhaps, that members of the Government-control group have, in the main, been more weakened by that warfare than have those in the industry-control group. As I have stated, there are two factions in the former group. The one faction supports the present price-control act but is bitterly opposed to proposal to widen its scope by provision for production control, allocation of tonnage. That faction is banking on artificial price

control to help it recover markets lost, in the main, to southern fields, and also to insure continued unionization of those fields. The other faction is composed of realists, in that, acquainted with the British record, they are cognizant of the fundamental fact that price fixing without production control cannot long be enforced by any government. There are scores of sincere operators in this second class. Many of them are thoroughly dispirited and see no hope for what they term the "civilization" of the industry save through Federal control of prices and production. Some operators admit that even rigid Federal laws will fail to keep numerous operations above water, but they contend legislation will serve as a merciful cushion to ease the blow and delay the day of reckoning. For such delay the now solvent operator might pay a heavy price. Had it not been for "shots in the arm" by N. R. A., under which various price levels, violative of the law of supply and demand, were established, along with blind trust in the efficacy of political medicine, there would today, for whatever it would mean, be fewer and bigger operating units in the industry.

Attention is called to the attitude of the Secretary of the Interior, by whose Department the Coal Act is now administered and in which Department a spokesman for a group of operators opined in their presence to Mr. Ickes, on July 17, that the industry had found "a good home." Mr. Ickes has declared in favor of Government ownership of coal mines. Does the statement of the coal spokesman lend credence to a suspicion long entertained in certain circles that some leaders of the drive for Federal control are, in reality, seeking a market with Uncle Sam for their coal properties? It was about 20 years ago that mine labor in convention assembled went on record for nationalization of the mines. The Plumb plan for Government ownership of basic resources has been before us for a longer period. That idea was supported only a few months ago in testimony before the Congressional Committee on Monopoly, by A. A. Berle, Assistant Secretary of State, who advocates Government ownership of basic resources. Summing up the position of Government-control advocates, we detect a willingness to surrender a large measure of control, even to submission to "the insolence of office and law's delays," in confidence that such surrender and submission will yield a return on their investment and, if not, will pave the way for sale of their properties. In other words, even though nationalization of mines be at the end of the one road, they see only bankruptcy as the alternative.

Let us now consider the third class, who are sometimes called middle-of-the-roads. The leaders of this group, for the most part successful operators, whether by fortune or by exercise of brains or an admixture of both, are not opposed to improvements because they are innovations. They know that such an attitude frequently forces people to accept innovations which are not improvements. Possibly some of the innovations now being forced upon them are due to the fact that a few operators in all three groups formerly were cold to any constructive policies that contravened their fixed notions. As a whole, the leaders of the third group are more or less elastic-minded, but they are thoroughly convinced we have had too much mischievous nonsense concerning redistribution of reduced production, coal, pigs, or what not. They think it has led up blind alleys and dead-end streets, for 6 long years, a succession of governmental edicts and interferences which would have totally wrecked any industry less hardy than theirs.

Seven years ago a forward-looking figure in the coal industry labored long and diligently to bring to fruition the regional sales agency idea, as represented by Appalachian Coals, Inc. None can claim perfection for that plan, but none can deny that it has never had a real opportunity, due to the restriction, first of the N. R. A. and second, of the Guffey Act, to function. I speak of this plan because it is around an amplification of the sales agency idea that Representative ROBERT G. ALLEN, Pennsylvania Democrat, has introduced a bill to modify the present Coal Act, which bill is supposed to reflect, partially at least, the views of the group to which I am now referring. Of the present law, BOB ALLEN, in a recent speech on the floor of the House, declared: "The coal industry has had nearly 6 years' experience with ill-advised experiments in Federal regulation and it is my contention that the Secretary of the Interior or no one else will be able to administer the Coal Act as it is now written."

Some consideration can appropriately be accorded to the attitude of consumers; for, after all, consumer cooperation is essential to successful administration of a law. In reverse English, as it were, America learned that lesson through Mr. Volstead. The largest consumers of coal are the railroads. Without question, W. M. Jeffers, president of the Union Pacific Railroad, voiced the viewpoint of the railroad industry on June 17, when he said, at Rock Springs, Wyo., "In my opinion the Guffey Act is the most foolish piece of legislation ever conceived. It was a failure before it even passed."

Something about the genesis of the Guffey measure to which President Jeffers referred was related last month in a Saturday Evening Post article by Raymond Moley. He said, "The President wisely refused to go along with it," but on June 6, 1935, "to avert a walk-out of the United Mine Workers," he got behind it. Professor Moley observes that, "The President has bitten off more than he can chew." Possibly he predicates that statement on the growing public opposition to price fixing in all lines. In the September 9 issue of the Saturday Evening Post, Mr. Moley wrote: "It was Roosevelt's insistence upon the essential unity of his policies that inevitably brought into question his understanding of economics. Except in terms of misunderstanding, there was no way to comprehend such phenomena as an attempt to rehabilitate the soft-coal business which proceeded without reference to simultaneous efforts

to encourage the production of electricity through vast water-power projects." Only a few months ago, John M. Carmody, who knows his coal, through former editorship of *Coal Age*, and who is now Federal Works Administrator, said, "I know I may be running counter to the opinion of some in the Government (and that's a gem of understatement) but I believe that the price maintenance theory does more harm to industry than any other single factor."

This presents the picture, at least as I see it. Unquestionably, the next 18 months, at the end of which the present Coal Act expires, are fraught with supreme importance. Even the laboratory worker will be engulfed in the wars of words and ballots over two forms of political government as far apart as the poles. So no heresy is involved in citation of the issues, in which everyone associated with this business called coal is immensely concerned. Coal is the spearhead of the drive of those battling at what they call Armageddon, for a new day and a new order. Secretary Ickes leads the evangelistic hosts with his battle cry, "All old roads are closed forever."

In the opinion of some observers, the Coal Act, respecting prices, will soon function. Within a few months, the second session of the Seventy-sixth Congress will convene; whereupon, hearings will be held on the Allen bill. It is reported in usually well-informed sources that hearings on another bill will also take place. I refer to a measure which Abe Fortas, counsel for the Bituminous Division of the Interior Department, is said to be drafting, in collaboration with Messrs. Cohen and Corcoran. Production control will be incorporated in that measure it is reported. This is all to the good for such hearings will furnish an excellent opportunity for full ventilation of all views. The industry should profit, hugely, and the public will be treated to a circus of many rings. The burden of expense upon the industry, through extended hearings, will be enormous, but the boys are accustomed, through protracted wage negotiations and otherwise, to such incidentals. The experience will be well worth the admission price.

However we feel on the subject of coal legislation we cannot brush aside its momentous bearing on any future program. It becomes every coal man, if he is worth his salt, to declare his position, whatever that position may be. This is no time for fence walkers. They have been the bane of the industry, those suave, obsequious fence walkers. The out-and-out proponents of Federal control have taken a clear-cut stand for the better or the worse. Many of their number will yield to none in faith that coal has everything. Their doctrine is that heroic Federal measures are required to realize its potentialities, to make it an attractive business. The approaching congressional hearings promise a splendid forum which all should welcome. They will afford a rare arena for the play and counterplay of pressure groups, and will expose any system rooted in spoils and largesse and calculated to take away the rights and incentives of any class.

Everyone in this room is surely of one mind that this country was built on private business enterprise, that its survival depends upon a satisfactory revival of business enterprise. We believe in an expanding economy; in making more, not less; in enlargement of purchasing power through increased efficiency, promotion of lower prices and larger demand; all making for more work, higher incomes.

Hon. J. Will Taylor

## EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

Mr. SABATH. Mr. Speaker, the tie that binds those who have been long together in public service is apt to grow very close as the years glide by. Mr. TAYLOR and I served together ever since he came to the House at the beginning of the Sixty-sixth Congress. Before his arrival we all were anxious to meet him because he had unseated a southern stalwart of his own political faith, Richard Austin, who exerted much influence in this House, although it seemed that he favored every appropriation bill and few tax measures.

When Mr. TAYLOR entered the Congress, or shortly thereafter, he and I found ourselves together on the Committee on Immigration, which was very active at the time. Ever afterwards, until his death, we were much together on at least one committee. I had to surrender membership on the Committee on Immigration when I came to the Committee on Rules; but Mr. TAYLOR was permitted to retain membership on the Committee on Immigration when he joined the Committee on Rules.

At the time of his passing our friend was the ranking minority member of the Committee on Immigration, on which committee he rendered valuable service by reason of his broad and penetrating knowledge of the subject and his sectional detachment, largely, from the immediate effects of immigration.

This honorable deceased with a potent factor in the House of Representatives, and in his party's councils. He had to an unusual degree the sagacity to oppose a proposal without bombast or offense to friend or foe. When he approached one with a request his geniality and good fellowship had already half won his desire. In other words, he was well nigh irresistible. The people of his district honored and trusted him, and he was altogether faithful to their interests. They loved him, and he gave them his personal affection in return. He won their continued support by his fidelity to duty, but he won their hearts by his unfailing kindness and gentle bearing toward everybody.

In committee he was able and impartial and there, with the late Mr. Mapes, his broadmindedness and tolerance did much to facilitate the public business. He never sought opportunity to make a headline—he did not need headlines to continue here—just to keep the public informed that J. WILL TAYLOR still lived or in any other way promote a selfish interest.

Mr. TAYLOR was a political partisan, but never illogically or offensively so. During all our service together I never heard this gentleman speak ill of anybody, and he always accorded everybody credit for reasonable intelligence and patriotic motive. He knew that the overruling laws of the moral world are that selfishness of evil is made to defeat itself.

Tennessee also mourns his loss for he was a true representative of his race—tolerant, broadminded, sagacious, genial, winning high and enduring place by sterling conduct—all that the Nation and his State could ask of a gentleman, a legislator, and a patriot. Tennessee will ever bow in reverence over the tomb of such a son.

Standing in imagination at the grave of our honorable dead, may we come more deeply than ever into the intimacies of God, and even while drinking the bitter cup, have power and grace given unto us to say, "The Lord hath given; the Lord hath taken away; blessed be the name of the Lord."

## American Farm Recovery—The Republican Way

## EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix to the Record an interesting and comprehensive discussion of the farm problem and farm recovery by the Senator from New Hampshire [Mr. BRIDGES] in a speech delivered in Mankato, Minn., on Saturday, January 27, 1940, at a Republican rally sponsored by the Minnesota Republican State central committee.

There being no objection, the address was ordered to be printed in the Record, as follows:

Fellow Republicans, I plan to discuss the problems of agriculture with you tonight. I was born on a farm, I was reared on a farm, I graduated from an agricultural college, I taught agriculture, I served as a county farm agent and as executive secretary of the New Hampshire Farm Bureau. What little wealth I have today is invested in what you would call small farms—in my home State.

But not even with this background do I bring you a panacea. And before I get into a direct discussion of the problems of agriculture, I should like to recite some other items which bear upon them—which are, indeed, part and parcel of the so-called farm problem.

In the coming months we shall be hearing a lot about, "Do you want to go back to the dark days of 1932?" This chorus was revived at the Jackson Day dinners. As the fall campaign approaches the cry will grow increasingly loud to convince the people that they must choose between the self-styled liberalism of the New Deal and the "black reaction" of Republicanism.

These and similar words have been so misused of recent years that they have come to have little meaning in themselves. Then, too, all of them apply in one way or another to most of us. For instance, the New Deal is reactionary in that it insists on conducting all over again experiments which have been tried in country after country since the dawn of history, and found to fail. It is conservative chiefly in its desperate determination to conserve itself in office. Other than its liberality with your money and mine, the New Deal test of liberalism seems to be the extent to which the affairs of the citizen are run from Washington.

On the other hand, we Republicans are reactionary against many New Deal practices and theories. We are conservative, in our determination to preserve the best of our American tradition—the free Government and free economy under which this Nation grew great, and which are necessary if free men are to advance. But we are also liberal in that we believe that our problems can and must be solved by more freedom for the individual, and not less.

As to "going back," it is the new dealers who keep thinking in terms of the past. It is the new dealers who justify their schemings and their failures by the meanness of some man or some men 10 years ago. Apparently, they would punish us for the sins of an Insult the rest of our lives.

But a new note—an apologetic note—was struck by Mr. Roosevelt at the Jackson Day dinner. We should judge the New Deal by its motives, he said in effect.

For one, I am prepared to do that. I am prepared to pass judgment now on its motives of regimenting the people, of bringing about some socialized form of Government in our country—and of using relief funds, while at the same time browbeating business, in pursuing these motives. I have said before and I say again that I believe the first pump-priming program would have worked had not these funds been diverted to the primary purpose of throttling business and carrying out the New Deal reforms.

But accomplishments are usually given more importance in our appraisal of men and certainly of governments.

In 1933 two of the greatest problems were unemployment and disastrously low farm prices. In 1940, the most tremendous tasks before us are still the reemployment of between nine and ten million souls who are still out of work and the raising of agricultural prices. Today these tasks have been made vastly more difficult by the other problems added to them by the New Deal—staggering debt, oppressive taxation, industrial bitterness and strife, and economy throttled by regulation, hampered by competition, and fearful of the future. And to these problems of its own creation, it should be obvious to everyone by now that the New Deal has no solution save more debt, more taxes, and more regulation.

As the campaign approaches, we are asked to overlook the consequences of these failures and to be satisfied with the protestation of noble objectives in domestic affairs. "By their motives," declared the President in his Jackson Day speech, "ye shall know them." For the rest, we are asked to turn our attention to the foreign field. A prominent Washington columnist, who has become accepted as the historian of the New Deal, declared in a recent article on the candidacy of Secretary of State Cordell Hull for the Democratic Presidential nomination:

"The shift in emphasis from domestic to foreign affairs also helps Hull. This shift is pronounced in the President's own mind. It is not only a political shift designed to bridge the schisms in the Democratic Party on matters of New Deal policy. The President's attention and thoughts and aspirations have moved more and more to the foreign field. He is following in the path of Woodrow Wilson, although he has not gone so far, and may never do so. At best, it is difficult to keep one's mind off affairs abroad and on the hard, painful facts of unsolved problems at home. Like many another head of state, Roosevelt seems, at least subconsciously, to be seeking an escape through international action. In his case it is not imperialism, not aggrandizement, but a yearning to do something constructive for the world. Hull, who has always doubted our ability to solve our own problems, who has consistently advocated an international approach, becomes more and more the logical successor to a Roosevelt whose eyes are fixed more on world affairs and less upon the tedious business of creating a great social and economic democracy in the United States."

I do not believe that the American people will be thus distracted, nor that they will accept high-sounding platitudes about social objectives any more than I think that they will be persuaded to vote for the New Deal from the negative fear of going "back" to the days of 1932.

The question is not, can we afford to go back, but can we afford to go on as we have for the past 7½ years? Can we afford to go deeper into the mine of oppressive debt and strangling taxation, knowing that to pursue such a policy can but lead to bankruptcy and inflation? We have witnessed the events which followed the ruin and despair brought by inflation in Germany. With such an example before our eyes, can we afford to pass on to our children a Nation burdened with debt, paralyzed by stagnation and crippled by unemployment?

Are the unemployed to be doomed to 4 more years of dependence upon relief as a way of life because of Government folly? Or will

they be given the opportunity of employment in private industry through a revival of our system of economy? The question is not will vast expenditures for relief be continued but will they be necessary during the next 4 years? Is the administration of necessary relief to continue for 4 more years under the present vast political bureaucracy, are relief rolls to continue to rise before elections and fall thereafter, or is relief to be made nonpartisan, and locally administered on a basis of human need? Can we afford 4 more years of wholesale unemployment and relief thus administered?

In regard to private enterprise, the question is not whether business is to be allowed to run riot, but is it to be given a chance to recover, so that it may provide jobs for the unemployed and prosperity for all of our people? Are we to have 4 more years of business-baiting by a hostile administration, 4 more years of Government competition, stifling taxes, and strangling regulation, or will a friendly administration make possible the revival of our economic system through the encouragement of individual effort and enterprise which, taken collectively, spell progress? Can we afford 4 more years of Government suppression of our system of private economy?

The question is not, is the Securities and Exchange Commission to be abolished, thus allowing business speculation to run rampant, but is it to be used as the means of Government control of all credit and investment? Is it to be permitted to spend 4 more years—and the taxpayers' money—in conducting witch hunts against business, notably in the fields of banking and insurance, in using the Temporary National Economic Committee as a sounding-board for building up and by publicizing its case against business in order to bring about increased Government regulation which borders on the socialization of credit and investment? Is it to continue for 4 more years to discourage private investment, thus adding strength to the New Deal argument that Government spending must compensate for the lack of private investment?

Every honest American wants to see fraud and dizzy speculation abolished, and probably 99 percent of them favor a Government agency for this purpose. But every American who believes in a system of private economy agrees that such an agency—along with every other department of government—should help rather than hamper private industry by encouraging the flow of capital into every legitimate enterprise. Under a Republican administration, that is the purpose the S. E. C. will serve.

In the case of the National Labor Relations Board, the issue is not whether the act is to be abolished or sabotaged, as New Dealers would have you think, but whether that Board will continue for 4 more years to add to the bitterness of industrial strife.

Contrary to Democratic propaganda, Republicans do not seek the amendment of the National Labor Relations Act in order to permit the exploitation of the worker. On the contrary, we seek the freedom of the worker from the domination of the Government as well as from his employer, a domination which is as more dangerous as it is more powerful, because he has no recourse.

I have mentioned these problems because they are vital to what is known as the agriculture problem. Ever since I have been knee high to a gatepost I have been hearing about the farmer having to support countless middlemen or "services" before his product reaches the consumer.

Then certainly it is no solution of his problems today to add hundreds of thousands of other middlemen upon his back. I refer to the army of bureaucrats which the New Deal has set up to watch over him and to be supported by him.

Therefore, I say that any Republican farm program must be predicated upon a simplification of the bureaucratic structure which he has to carry. It must be predicated upon simplification and fairness.

By fairness, I mean it must be a program designed really to help him, and therefore to promote the national welfare. It must not be a program with which he is arrayed against the consumer—the so-called workingman and the business and industrial communities.

There is first the matter of the reciprocal-trade treaties.

No one exceeds me in admiration for our Secretary of State, Mr. Cordell Hull. For 25 years or more he has cherished foreign-trade ideas different from Republicans, and frankly, different from many influences within his own party. The present administration gave him carte blanche to carry his ideas out. The Republicans until recently have made very little protest. If ever a man had free rein to try his ideas out, Mr. Hull has had it.

But the plain fact is, ladies and gentlemen, they haven't worked. The tragedy, I think, is that all the while we have been permitting this splendid man to experiment with a beautiful idea, we have given a bureaucracy in Washington the power of life or death over farmers who might be engaged in raising a particular product or an industry dealing in a particular article.

The constitutional duty of the Senate to pass upon all treaties negotiated with foreign nations must be exercised by that body.

From January 1 to December 1, in 1938, agricultural exports amounted to \$763,224,000, while agricultural imports were valued at \$876,889,000. That left an unfavorable balance of \$113,665,000. For the same period in 1939 agricultural exports fell to \$578,166,000, while agricultural imports rose to \$998,354,000, an unfavorable balance of \$420,188,000. In other words, we exported over \$185,000,000 worth less of agricultural products while we imported nearly one hundred twenty-one and one-half million dollars worth more of agricultural products in the first 11 months of 1939 as com-

pared with the same period in 1938. Figures such as these would hardly indicate that the farmer has profited under such a program.

And what of the increased amount of trade that was to result from these treaties? The total trade for these 11 months in 1939 was over \$63,500,000 less than during those same months in 1938, despite the outbreak of wars which might have been expected to increase foreign purchases.

At the risk of burdening you with too many figures, let me quote a few specific items. All of them cover the first 10 months of 1939, as compared with the same period in 1938. We imported over 664,000 of cattle, an increase of over 100 percent, and over 104,000,000 pounds of cattle hides, an increase of nearly 165 percent. We imported over 197,000,000 pounds of unmanufactured wool, an increase of nearly 170 percent, and over 50,000,000 pounds of sheep hides, or close to twice as many as the year before. The importation of barley rose from 126,000 bushels to 745,000.

But what is even worse, we have heard much of the surpluses of wheat and cotton in the United States and of the restrictive measures the Government has taken to reduce or dispose of these surpluses. But, believe it or not, we imported over 9,000,000 bushels of wheat, or 4 times as much during the first 10 months of 1939 as in 1938, while our importation of wheat byproduct feeds soared to nearly 373,000 pounds, or over 13 times the amount imported the year before. This, despite the money that the taxpayer pays in parity prices, in loans on surpluses, and in warehouse storage for American cotton and wheat that cannot be sold. Are we to have 4 more years of this?

It is small wonder that an ever-increasing number of farmers and workers are rebelling against the injustices these treaties have wrought. Yet, with characteristic New Deal failure to credit its opponents with honest motives, Secretaries Hull and Wallace are now busy maligning all those who oppose the program. They are "unscrupulous," according to the Secretary of State. The Secretary of Agriculture, apparently doubting the intelligence of great groups of our farmers and workers, declares that they are being used as "political fronts" and "cat's paw" by industrialists seeking "another tariff grab." The head of a great farm organization he accuses of selfishly seeking personal political gain. But the facts speak for themselves.

No; we do not want to go back to anything except a little common sense. We do not ask a return to tariffs sufficiently high to constitute serious barriers to trade. But we do demand that the American farmer be given the American markets which are rightfully his. We do believe that our own unemployed at home deserve more consideration than the farmers and workers of other nations. We do maintain that the first duty of the American Government is to protect the way in which millions of the American people earn their daily bread. This right, this opportunity, and this protection the Republican Party pledges to the farmers and workers of America.

At the present session of Congress I propose to offer the following amendments to the bill providing for any future trade treaties:

(1) Ninety days' notice shall be required before negotiations shall be concluded for any item to be included in any treaty, in order to provide ample time for hearings.

(2) The same personnel that conducts the investigations shall also negotiate the treaties.

(3) No product produced in this country shall enter the United States below the American cost of production.

In the interests of safeguarding the farmer's domestic markets and of recapturing his foreign markets which have shrunk so disastrously—largely due to New Deal folly—a nonpartisan foreign trade board, coordinated with the Tariff Commission and directly responsible to Congress, could be of great service.

A Republican farm program will include, I am convinced, a sound policy of land use, whose purpose is actual soil conservation and not the limitation and regimentation of production. It will continue compensatory payments as long as they remain necessary, but these will not be used as the means of enforcing crop control, nor will they be considered the solution to the problems of the farmer. It will be a program administered so far as it is possible by the farmers themselves in order that it may be adapted to individual farm and family needs. It will encourage the development of cooperative marketing as the democratic way of self-help. For we believe that the family-sized farm is the true unit of American agriculture. It will encourage new uses for agricultural products. We maintain that there must be adequate safeguard for the interests of tenants, and that the Farm Credit Administration should be independently administered by a bipartisan board.

If domestic trade is to be stimulated, we must facilitate the transportation of his products by liberalizing the regulations now enforced upon the railroads, insofar as this does not conflict with the public interest, and encourage cheaper and better transportation by water and by truck as well.

We realize that agricultural prices, like those of industry, must be based on the cost of production plus a fair profit. In industry, our policy has been to protect American wages and standards of living of our workers through a protective tariff. We realize that similar protection must be given to American prices for our farmers. The present administration policy of holding the prices of farm products in line with world prices and then subsidizing the farmer to make up the difference is not only a serious drain on the Treasury, but has failed to bring prosperity to the farmer.

In short, our aim is to help the farmer to put farming on a business basis, to free him from the necessity of accepting Gov-

ernment subsidy, to eliminate regimentation in agriculture, to reestablish agricultural credit and eliminate Government-controlled financing, to help the farmer in the American way by making it possible for him to help himself, and by seeing that agricultural development keeps pace with industrial improvements.

We cannot, therefore, regard agriculture as a separate problem, but must seek a balance based upon the mutual cooperation and advancement of industry, labor, and agriculture. Around 10,000,000 unemployed are 10,000,000 potential customers for the worker and the farmer. It is estimated that about 20 percent of American labor is unemployed. Put them back to work through a revival of business, thus increasing their purchasing power in the only healthy way it can be increased, and farm prices are sure to rise. The so-called surplus—but how can we speak of a surplus as long as there are those who are ill-housed, ill-clad, and ill-fed?—will dwindle away.

According to the Department of Agriculture, a liberal diet for all of our people would necessitate a 71-percent increase in the production of beef cattle, 152-percent increase in veal calves, 187-percent increase in hogs, over 85-percent increase in sheep and lambs, nearly 47-percent increase in poultry, and almost 74-percent increase in dairy cattle. And the administration talks of overproduction.

Ease the present burden of taxation by eliminating Government waste and extravagance; revise such laws as the Wagner Act, the Wages and Hours Act, and the Securities and Exchange Commission Act; put in office an administration which is dedicated to putting America back to work in an economy of abundance rather than to a program of regimented scarcity, and the problems of agriculture, industry, and labor alike will be largely solved.

Now, in many instances, where the issue appears on the surface to be of maladministration, Democrats retort that Republican charges are motivated by the partisan desire to do the administering. Some truly liberal Democrats who admit that mistakes have been made during the past 7 years, declare, as did Senator WHEELER, of Montana, in his Jackson Day speech, that the Democrats will rectify their own errors.

But will they? From a practical standpoint, constructive legislation must have the support of the party in power. The New Deal is in power in the Democratic Party and in the coming election, because the Democrats must rise or fall on the record of the last 7½ years.

In view of the bitter opposition to every attempt of Jeffersonian Democrats and Republicans to modify its measures or policies, we know from experience the hopelessness of any idea that the New Deal will reform itself.

But you and I know that the issue is more than one of maladministration. We know that New Deal acts and agencies have been administered as they have because of the fundamental concept behind them. The issue is rather one of two conflicting philosophies of government, of economy, of life itself. It is the New Deal philosophy, under which the Government seeks to extend ever further its control over the economy of the Nation and the lives of the people, versus the American way of progress, under which the function of government is to preserve the liberty and opportunity of free men, to encourage the initiative and effort of individuals united by voluntary cooperation for the welfare and progress of all. No, the question is not one of turning back. After 10 years of depression, 7½ years of the New Deal, the question is whether we are to be allowed to go forward.

That is the challenge. 1940 can and must mark the turning point. A Republican Party, dedicated to the democratic way of progress, can and must lead the American people forward to the glorious future that is their destiny.

## Electric Rates of Municipalities of Tennessee Valley

### EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

LETTER FROM L. J. WILHOITE TO EDITOR OF COLLIER'S MAGAZINE

Mr. McKELLAR. Mr. President, in a recent issue of Collier's Magazine there appeared an editorial and cartoon "depicting the municipalities of the Tennessee Valley as the fat recipients of cheap electricity at the expense of the taxpayers of the Nation." I have a letter from Mr. L. J. Wilhoite, chairman of the Electric Power Board of Chattanooga,

Chattanooga, Tenn., enclosing a letter addressed by him to the editor of Collier's by way of a reply to the cartoon and the editorial, and also an accompanying document. I ask unanimous consent that the matters referred to may be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

ELECTRIC POWER BOARD OF CHATTANOOGA,  
Chattanooga, Tenn., January 25, 1940.

Senator KENNETH McKELLAR,  
Senate Office Building, Washington, D. C.

DEAR SENATOR McKELLAR: I am attaching hereto a letter which the Chattanooga Power Board has directed to the editor of Colliers. Perhaps you saw the editorial and cartoon in last week's issue of that magazine.

This letter, of course, is in reply to what we consider an unwarranted and unjustified criticism of the program of the Tennessee Valley. We feel sure that Colliers will be glad to make the correction of misstatements and misleading inferences in the article and cartoon referred to.

We are sending copies of this letter to Members of the Tennessee, Alabama, Georgia, and Mississippi delegations and we hope, if you deem it advisable, that you will have this called to the attention of other interested parties in the Senate.

With very best wishes, I am,

Sincerely yours,

L. J. WILHOITE, Chairman.

ELECTRIC POWER BOARD OF CHATTANOOGA,  
Chattanooga, Tenn., January 24, 1940.

Mr. WILLIAM CHENERY,  
Editor of Colliers, Crowell-Collier Publishing Co.,  
250 Park Avenue, New York City, N. Y.

DEAR MR. CHENERY: The cartoon in the current issue of Colliers, depicting the municipalities of the Tennessee Valley as the fat recipients of cheap electricity at the expense of the taxpayers of the Nation, is an unmerited attack upon the honor and the integrity of the people of the Tennessee Valley area.

I believe that you were victimized by private power propagandists in admitting this cartoon to your columns. I believe this because of my confidence in the inherent decency of Colliers and because of the statement in your editorial in support of the cartoon that you "don't pretend to know the answer" to the issues involved in the T. V. A. matter. It is because of this belief in the intent of Colliers to be honest that I am going to give you a few very plain and very simple facts about public power and taxes and the Tennessee Valley Authority.

The city of Chattanooga, one of the municipalities that you depicted in your cartoon as the waxing-fat recipient of cheap electricity at the expense of the taxpayers of the Nation, paid to the Commonwealth & Southern Corporation, of New York, the owners of the former private power-distribution system in Chattanooga, \$10,850,000 for their local power properties. This amount was paid after the city had already expended, because of the continued refusal of the private company to sell at any price, \$2,149,000 toward the building of a new distribution system. Thus, the city of Chattanooga has invested in its power-distribution system \$12,999,000.

Had the city refused to purchase the existing private system, as it would have been fully justified in doing under all of the circumstances involved, and, instead, completed its own system, the total cost for a complete, new, streamlined, modern distribution network would have been \$7,609,000. Thus, the people of Chattanooga paid in spot cash to the private power company \$3,141,000 more than it would have cost to duplicate the system—and that, too, after \$2,149,000 had been expended by the city in that direction because of the dog-in-the-manger attitude of the private company.

The people of Chattanooga paid \$5,290,000 over and above what it would have been necessary to expend for a complete new distribution system. This was done to the end that no man, or group of men, could honestly say that one single dollar of private property had been destroyed or one dime lost by any legitimate investor in the securities of the private power company.

The people of Chattanooga didn't have to do this. They had the moral right, the legal power, the financial resources, and the engineering and technical ability to duplicate the private system for approximately half the price they paid for it. In other words, the people of Chattanooga voluntarily assumed an excess capital burden of more than \$5,000,000 simply to save investors from the consequences of their folly in entrusting their money to the manipulations of private utility financiers.

The tangible assets, the physical value of the properties purchased, was less than half the par value of the preferred stocks and bonds outstanding against the properties, but the people of Chattanooga retired these securities at their par value. This excess capital burden will cost the people of Chattanooga, for interest and retirement, approximately \$500,000 per year for a period of 25 years. That is the annual tribute they are paying in order to wash out the private-power speculations of the past with the least possible dislocation of business and industry. Bear in mind that this excess capital burden assumed by the people of Chattanooga for the economic purpose of washing out the sins of private power gradually, and thereby avoiding the miseries of the "wringer," is reflected in the rates for electric service as paid monthly by the users of that service. This same situation has been met in practically the same manner by every other municipality in the Tennessee Valley public power area. Is there

anything in this picture to justify your depicting these cities as the fat recipients of cheap electricity at the expense of the Nation?

The rates for power in the Chattanooga municipal power operation are not only loaded to carry a capital burden approximately double what that burden would be but for the past sins of private power, but, furthermore (and I hope you don't miss this one) the rates are also sufficiently loaded to pay to the State, the county, and the city exactly the same taxes that the private utility formerly paid. Again—and I also hope that you don't miss this one—the taxes have already been paid to the city and the money is in the bank to pay the State and county taxes just as soon as the State legislature meets and grants to the city of Chattanooga the legal right to do so. Furthermore—and please get this one, too—all of this tax money was collected, and is being collected, and is going to continue to be collected from the users of electric service in their rates for service and is going into the treasuries of the city, the county, and the State to be used just like any other money, and not one dime of it has been, is being, or is going to be, used to meet any of the obligations of the municipal-power operation. This tax matter is being handled in substantially this same manner by every other municipality in the Tennessee Valley public power area. Is there anything in this picture to justify your misrepresenting these cities to the country as the fat recipients of cheap electricity at the expense of the taxpayers inside and outside the valley area?

And now, here is the kernel in the cheap-electricity nut. Go right ahead, pick it right out and eat it. It is perfectly sound. There is not a worm in it, and when you taste it, you will say it's pretty damn good—at least, that is what everybody hereabouts is saying.

With the rates for power to all classes of consumers loaded with the capital sins of the private power boys who preceded us, and loaded again for taxes in an amount equal to the taxes formerly paid by the private power boys, one would naturally think that the price for electricity to the consumer would be somewhere in the neighborhood of the price formerly charged by the private power boys. But such, doubtless very much to your surprise, is not the case. On the contrary, the cost of electric service to all classes of consumers, residential, commercial and industrial, has been reduced, as shown by the attached statement of the operations of the Chattanooga Municipal Power System, \$553,731 in the first 4½ months of operation. At this rate, the savings will amount to \$1,661,193 annually as against what the cost would have been to the consumers of electricity had the private company continued in operation. This saving has been effected too despite the fact that the private company drastically reduced rates following the advent of the T. V. A. in a desperate effort to forestall municipal ownership and operation. Compared with what the rates were when the T. V. A. came to town with power to sell, the people of Chattanooga are today saving on their electricity bills more than \$3,000,000 per year—and that's a lot of money for a big, little town like Chattanooga. And, besides all this, the municipal power operation is meeting all its obligations, including bills from the T. V. A. for power and still has money in the bank.

Speaking of bills from the T. V. A. for power reminds us of another very illuminating thing that I am sure you will be glad to know in the interest of cartoon and editorial accuracy hereafter. The price that the T. V. A. charges the city of Chattanooga for power is loaded with 12½ percent of the selling price. This 12½ percent loading is being paid the T. V. A. by the city of Chattanooga in order to enable the T. V. A. to pay to the States, counties, and cities in the T. V. A. power area an amount equal to the taxes lost by these governmental units on account of the acquisition by the T. V. A. of the generation and transmission properties of the private power companies located in these governmental subdivisions.

All the other municipalities in the valley are making similar contributions to the T. V. A. for tax purposes. Therefore, I hope you will use your editorial influence, including your cartoon influence to persuade Congress to enact legislation that will permit the T. V. A. to pay this money over to the affected governmental units. For Congress to take such action will, in no sense, be an authorization to tax Federal property. The T. V. A. is simply a tax-collecting agency collecting a tax on energy sold to municipalities, and as such should not only be permitted but should be compelled by Congress to turn the money thus collected over to those governmental units in the Tennessee Valley area that are suffering tax-revenue losses because of the transition from private to public power. The money is being paid by the municipalities to the T. V. A. for that specific purpose.

Is there anything in this picture to justify you in publishing a cartoon and an editorial misrepresenting these cities to the people of the Nation as waxing fat on cheap electricity at the cost of the taxpayers, inside and outside the valley area?

#### A SUMMARY OF THE SIMPLE FACTS

1. The city of Chattanooga bailed every legitimate private power security holder 100 cents on the dollar and all the other municipalities in the T. V. A. public power area did the same thing.
2. The municipalities in the valley area have passed this bail-out burden on to the users of the electricity in the valley.
3. The public power operation in Chattanooga is paying municipal taxes on the properties acquired from the private power company in the same amounts that the private company paid. These taxes are not being used to meet the obligations of the municipal power operations. They are being used by the municipality for general purposes, the same as all other taxes.
4. The same procedure will be followed by Chattanooga with respect to State and county taxes as soon as necessary enabling legislation can be enacted by the Tennessee General Assembly.

5. The municipal power operation has met all its obligations during its first 4½ months of operation, has a surplus of \$99,406.88, and has saved consumers \$553,731. This saving is at the rate of \$1,661,193 annually.

6. The city of Chattanooga has paid the Tennessee Valley Authority an amount equal to 12½ percent of the Tennessee Valley Authority power bills to the city in order to aid in the creation of a fund out of which the Tennessee Valley Authority can reimburse governmental units that have suffered tax losses on account of the acquisition by the Tennessee Valley Authority of private utility properties, and all other municipalities in the valley are doing the same thing.

Is there anything in these simple facts to justify your using the columns of Collier's to create the false and misleading impression that Chattanooga and the other valley cities are waxing fat on cheap electricity at the expense of the taxpayers of the Nation?

Very truly yours,

L. J. WILHOITE, Chairman.

ELECTRIC POWER BOARD OF CHATTANOOGA,  
Chattanooga, Tenn., January 10, 1940.

To the MAYOR AND BOARD OF COMMISSIONERS,  
City of Chattanooga, Chattanooga, Tenn.

GENTLEMEN: In accordance with the requirements of chapter 455, section 12, Private Acts 1935, amending the charter of the city of Chattanooga, the Electric Power Board of Chattanooga is submitting herewith a financial statement as of December 31, 1939, showing the financial operations and financial condition of the electric distribution system acquired by the city on August 15, 1939.

The balance sheet of this statement shows total assets of \$14,883,783.52, including current assets in cash of \$412,061.51. The principal liabilities against these assets consist of a \$13,200,000 issue of electric power revenue bonds of the city of Chattanooga, 1939, and \$100,000 of general obligation bonds of the city of Chattanooga, 1937. Semiannual interest charges of \$182,725 on the bond issues were paid January 1, 1940.

The income and expense summary of this statement shows total sales of electric energy from August 16 through December 31, 1939, of \$1,190,974.40; other electric revenues of \$53,771.86, providing a total gross revenue for the 4½ months' period of \$1,244,746.26. Operating expenses, including purchase of power at wholesale from the Tennessee Valley Authority, totaled \$777,677.71, leaving a gross income after operating expenses of \$467,068.55.

Legal deductions after operating expenses to provide for interest charges, depreciation and taxes totaled \$292,661.67, providing a net income for the electric power board distribution system of \$174,406.88 for the 4½ months' period. From this net income an amount of \$75,000 has been set aside in accordance with the requirements of our bond ordinance as a provision for a bond reserve fund, leaving an earned surplus of \$99,406.88.

All city and county taxes, on an assessed valuation of \$6,537,725 for the city and \$7,797,801 for the county for the taxing year 1939, since date of purchase, against the property owned have been paid by the board from its funds. You are familiar with the fact that none of the city's general taxing income has been used for the support of the electric power board's electric-distribution system. The basic Tennessee Valley Authority resale rates, without surcharge, have been charged as our retail rates. The attached comments cover principal features of our operations.

Yours very truly,

ELECTRIC POWER BOARD OF CHATTANOOGA,  
L. J. WILHOITE, Chairman.

Electric Power Board of Chattanooga—Balance sheet—Dec. 31, 1939—Continued

LIABILITIES AND OTHER CREDITS

Long-term debt:	
General obligation bonds, city of Chattanooga, issued July 1, 1937, due 1948–58	\$100,000.00
Electric power revenue bonds, city of Chattanooga, issued July 1, 1939, due 1941–69	13,200,000.00
Total long-term debt	13,300,000.00

Current and accrued liabilities:	
Accounts payable	219,419.84
Customers' and employees' deposits	64,779.17
Interest accrued	10,327.26
Liability for Electric Home and Farm Authority accounts	313,348.29
Total current and accrued liabilities	607,874.56

Deferred credits:	
Unamortized premium on debt	35,573.28
Customers' advances for construction	26,419.91
Total deferred credits	61,993.19

Reserves:	
Reserve for depreciation of electric plant	79,188.02
Reserve for uncollectible accounts	10,158.55
Bond reserve	75,000.00
Total reserves	164,346.57

Contributions in aid of construction	650,162.32
Earned surplus	99,406.88
Total liabilities and other credits	14,883,783.52

Income and expense summary, Aug. 16–Dec. 31, 1939

Sales of electric energy:	
Residential or domestic sales	\$395,770.05
Commercial sales	194,092.03
Industrial sales	575,585.52
Public street and highway lighting	25,526.80
Total electric sales	1,190,974.40

Other electric revenues:	
Rent from electric property	220.35
Customers' forfeited discounts and penalties	18,046.55
Servicing of customers' installations	15,479.17
Miscellaneous electric revenues	20,025.79
Total other electric revenues	53,771.86

Total electric revenues	1,244,746.26
-------------------------	--------------

Operating expenses:	
Purchased power	536,116.81
Transmission expenses	3,474.18
Distribution expenses	126,311.10
Customers' accounting and collecting expenses	41,198.89
Sales-promotion expenses	22,268.18
General accounting expenses	7,257.19
Administrative and general expenses	41,051.36
Total operating expenses	777,677.71

Gross income after expenses	467,068.55
-----------------------------	------------

Deductions:	
Interest on long-term debt	137,891.80
Other interest charges	1,398.59
Interest on certificates of deposit—credit	52.07
Interest charged to construction—credit	17,738.58
Amortization of debt discount and expense	2,129.65
Amortization of premium on debt—credit	1,499.38
Depreciation	120,823.46
Taxes	49,708.20
Total deductions	292,661.67

Net income	174,406.88
------------	------------

Reservation of net income: Provision for bond reserve fund	75,000.00
--	-----------

Balance to surplus	99,406.88
--------------------	-----------

	Number of customers	Kilowatt-hour sales
Statistics of electric-current sales:		
Residential or domestic	33,606	\$20,153,880
Commercial	4,632	8,912,199
Industrial	306	85,173,726
Public street and highway lighting	6	911,257
Total	38,640	115,151,062

## COMMENTS

The electric power board sold on August 15 a \$13,200,000 electric-power revenue bond issue dated July 1, 1939, with maturities commencing July 1, 1941, of \$250,000, and with annual maturities gradually increasing to \$690,000 in 1969. The average interest cost of this bond issue was 2.7 percent. In addition to the principal amount of \$13,200,000 received, a premium of \$52,800 and accrued interest from July 1 to August 15 of \$44,155.83 were also received, making available to the Board on August 15 a total amount of \$13,296,955.83.

On August 15 the board purchased the Chattanooga district electric-distribution system of the Tennessee Electric Power Co. for \$10,850,000. A sum of \$1,469,421.91 was used to retire a principal amount of \$1,400,000 of city of Chattanooga general-obligation bonds dated October 1, 1937, which were issued to finance the construction of the electric power distribution system which the board was constructing at the time of acquisition. An amount of \$650,000 from the proceeds of the bond issue was set up as a renewal and replacement fund and \$300,000 allocated as working funds.

The board is carrying forward to completion a \$3,460,000 P. W. A. construction program, of which amount 45 percent will be paid as a free grant by P. W. A. Approximately \$2,500,000 of this program had been completed or was in the process of completion at the time of acquisition and the principal remaining sections of the program constitute an expenditure of \$600,000 for a modern distribution-service building and electric power board office building.

As of January 1 the board had 400 employees, consisting of 336 men and 64 women. At the time of acquisition on August 15 practically all of the employees of the Tepco in the Chattanooga district, excepting the merchandising section, were retained in the employ of the board. The board does not merchandise electrical appliances but has encouraged sales of appliances by dealers. Since August 15 approximately 850 new electric ranges and 400 new electric water heaters have been sold by dealers.

The electric energy consumed by the board's customers in December represented an all-time peak sale of electric current in Chattanooga. In confirmation of its estimates the board finds the existing system greatly in need of rehabilitation and reconstruction due to a large amount of deferred maintenance, which work it is anticipated can be carried forward over a period of time from the funds set aside for renewal and replacement and from the earned surplus. Since August 15 the board has expended \$505,517.10 for rehabilitation of and extensions to the system purchased.

The board has legal authority to pay city taxes of \$130,754.50 per annum on the assessed valuation of the distribution system acquired within the city taxing limits. It has no legal authority to pay Hamilton County taxes amounting to \$138,800.86 on assessed valuation of property acquired in the county. The earned surplus, however, provides a sufficient amount for this purpose if and when the board is legally permitted to do so. The payment of 1939 State and county taxes constituted a part of the purchase contract.

Based on the average rate per kilowatt-hour charged for electric service in the last 4 months of 1938 under private operation, customers of the electric power board, with T. V. A. rates, in the last 4 months of 1939 saved as follows:

Residential users saved.....	\$149,658
Commercial users saved.....	72,051
Industrial users saved.....	324,146
Street and highway lighting users saved.....	7,876

Total savings..... 553,731

The above savings are at the rate of \$1,661,193 annually.

## A. Frank Lever

## EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

ADDRESS BY HON. A. FRANK LEVER BEFORE THE SOUTHERN COMMERCIAL CONGRESS IN THE CITY OF NEW YORK

Mr. FULMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an address delivered by ex-Congressman A. Frank Lever, of South Carolina, before the Southern Commercial Congress in the city of New York on September 12, 1939. Congressman Lever, personally known to many Members of the present Congress, served for many years the district that I now have the honor of serving. During President Wilson's administration Mr. Lever was chairman of the great Agricultural Committee. Because of his past experience as a legislator and because of this posi-

tion on the committee, he was in a wonderful position, being chairman of this great committee, to not only render a great service to his Southland but the Nation as a whole in passing in his own name as chairman constructive legislation. I am sure that this address will be very informative and will be read with a great deal of interest, not only by Members of Congress but those who have the opportunity of reading the CONGRESSIONAL RECORD.

The address is as follows:

Mr. President and gentlemen of the Southern Commercial Congress, to be invited to have a part—even a small part—in the proceedings of so vital and fruitful an organization as is here assembled in its thirty-first annual convention is an honor which must appeal to anyone familiar with its personnel and ideals.

For more than a quarter of a century I have known the high character and splendid, practical objectives of its membership; I knew its founders and worked in harmony with them in its initial phases; I have rallied to and followed its flag on many a hard-fought economic field, sometimes tasting the bitterness of its disappointments, more often enjoying the sweet fruits of its fine victories.

Again to be with you invigorates me as would a draught from the fabled "Fountain of Youth." We are all young men today even if tomorrow we have to pay the penalty for thinking so.

You have asked me to sketch the history of the events and personalities of those connected with them that have eventuated in laying the foundations of a rural credit system for this country, adequate at all times and under all conditions, to meet the credit needs—long term, short term, intermediate, and cooperative—of American agriculture.

At best you may not expect me to do more than summarize.

Early American agriculture was extremely primitive, just a way of existence, for an extremely primitive people, engaged in the hazardous task of bringing a wilderness to do their bidding.

It was a curious but necessary mixture of the simple and complex. The farm had to be both a farm and a factory. It had to supply means to a living in its function as a farm, and as a factory had to supply all the tools and implements needed in its operation and at the same time convert its raw material into usable and finished products.

The farmer himself was both farmer and manufacturer. His needs were few and simple. His commerce was in the form of barter between himself and his neighbors. His need for transportation was negligible. His farm was almost self-sufficient.

This very self-sufficiency and his detached environment developed in him a high degree of individualism and conservatism, characteristics that have served to help and to hinder his progress even until now. But whatever else it may have done for him, it has, at least, made him the sheet anchor for the safety and perpetuation of American institutions.

It was not until about the middle of the last century that the transition in the relationship of agriculture to the other occupations of men began to fix the status he was to occupy in the social and economic life of the Nation for the centuries to follow:

Immigration poured into the country; commerce, domestic and foreign, increased; transportation took on definite importance; industry grew by leaps and bounds; towns and cities came into being overnight; the star of empire moved farther and farther westward—a continent was opening up—the great adventure of the revolution had evolved itself into a nation—a real nation—and the farmer, the bedrock of it, by force of the inevitable, found himself in a relationship of tremendous responsibility and importance. The nonagricultural population had to be fed and clothed. He was the only means to this end; and this meant expansion of his operations, the felling of more forests, the bridging of more streams, the cultivation of more lands, the multiplication of hands to do the work, the advent of the hired man, wages, the enlarging of his entire field of operation to care for the broader and growing demands upon him by these increasing economic and social developments.

From the chrysalis of mere self-sufficiency, he found that his occupation as farmer had been transformed, without conscious effort upon his part, by the impact of commerce and industry upon it, into the business of agriculture. Primitive methods and practices no longer sufficed to meet the needs of the farm itself and at the same time to supply the increasing demands of the industrial population for agricultural products. The operation of the farm as a mere way of living had to give place to the operation of it as a business enterprise, because it now had become affected with a broad national interest.

While the "Immortal Trinity"—Webster, Clay, and Calhoun—each entering the outer rim of his setting sun—were still thundering their interpretations of the Constitution, its reaches and its limitations, forward-looking farm leaders, pioneers, and enlightened economists were launching the first efforts to organize public opinion in behalf of a movement to bring the Government itself to a realization of its proper relationship and duty toward this basic and vital occupation to the end that equity, equality, and justice by way of legislation might be had for American agriculture and for those engaged in it.

## LAND GRANT COLLEGE ACT

The first step in this direction took form of a demand upon the Congress for the establishment of a national system of education

for the practical, as contrasted to the cultural, preparation of farm boys for life work in agriculture and the mechanic arts. Incidentally, it may be of interest to know that this was the first successful attempt on a national scale to organize the agricultural opinion of the Nation. And it is illustrative of the tremendous innate power of agriculture when organized and directed by capable leadership.

Congress responded favorably, though paradoxically, in spite of the opposition of southern leadership.

In the early days of the Buchanan administration a bill was passed by the Congress establishing colleges for teaching agriculture and the mechanic arts in each of the States, with definitions of their duties and functions. It is one of the curious quirks in our agricultural history that Buchanan, the devoted disciple of Jefferson, who, by the way, was the first of American statesmen to understand the importance of agriculture in our scheme of economy and to give expression of the duty and proper relationship of the Government to it, vetoed the bill because he was unable to find in the Constitution any power in Congress to appropriate money for purposes of education or agriculture, a position as untenable to us of the liberal mind as was the recent dictum that "agriculture is a local and not a national affair."

This executive rebuff, fortunately, neither dismayed nor disorganized the supporters of this idea of a system of practical agricultural education. Rather, it served to stimulate their activity and to spur them into increased determination.

While all this was taking place, the tragic shot had been fired across Charleston Harbor—the shot that never should have been fired. The death struggle of conflicting ideals and interpretations—the "irrepressible conflict" had begun, to end only in 4 years of blood and tears on the fateful field of Appomattox. That mysterious, sad, awkward character, the most elusive to understanding of any character in history, a towering figure among the immortals, had become the President of the United States. The background of his life had been rural. He had walked and talked with the wayside children of poverty. The pioneer promoters of the ideals of an educated class were alert always to every situation that might further their cause. Even before Mr. Lincoln was nominated as the standard bearer of his party, they had committed him to the signing of any bill to carry out their purpose in this respect, and when the measure, in somewhat modified form, had passed the Congress, he had no hesitancy in affixing his signature thereto, and thus came into being the first fundamental Nation-wide act of Congress in behalf of American agriculture. This legislation is known to history as the Land Grant College Act, or the first Morrill Act of 1862.

From a study of the debates on the Morrill bill and of contemporary literature it is evident that the relationship of science to agriculture had not then entered into the organized thinking of the prevailing agricultural leadership of the Nation, and was not even a minor factor in promoting the enactment of this legislation. The dominant thought of this period was that a young man, strong in muscle, with the willingness to work from sun to sun, if educated in these newly organized institutions, furnished the kind of raw material necessary in the making of a successful farmer.

But this new system of agricultural education had not been in operation long before its deficiencies, its incompleteness, became apparent. The colleges were without foundation facts. After all the pains and efforts to make them practical, they found their curricula were more or less academic; and farm leadership quickly awoke to the fact that the system they had visualized as all-inclusive was far from complete, and that the magnificent cathedral of their dreams was unfinished.

It began to dawn upon them that there was a definite relationship between agriculture and science; that agriculture, in fact, was a science, operating in the field of production along scientific lines and influenced by scientific phenomena.

#### THE HATCH ACT OF 1887

And, now, they agreed that the time had come to broaden the bases of the original Morrill Act to provide for the organization of such supplemental institutions that should devote themselves solely to the finding and study of basic facts from which basic conclusions should be drawn both for the use of the colleges and for those upon the farm. They sought to team up science and agriculture, as nature seems to have intended. The response of the Congress was the passage of the Hatch Act of 1887, providing for our present system of agricultural experiment stations, whose splendid work has justified their establishment a thousand times over.

#### SMITH-LEVER ACT

Another quarter of a century was to pass before the motivating inspiration of the Morrill Act was to find itself in full fruition.

A great rural philosopher and teacher had been sent in 1903 to combat the advance of the Mexican boll weevil, which threatened the economic and social foundations of the South. The problem had defied the best brains of the country, but this man, Seaman A. Knapp, in characteristics much like another great rural philosopher we shall describe later, harnessed science and common sense into a working team and proved that he could maintain production of cotton under boll-weevil conditions and in doing so put into practice what has now become his world-famous method of demonstration teaching. A Republican in partisan, political affiliations, he was, in fact, a fundamental Democrat, with a fine understanding of the power and importance in the economic pattern of those at the foot of the ladder. He was firmly convinced, as was this other great leader mentioned, that the hope of American institutions was to be

found in the homes and about the hearthstones of the American rural people.

He was not satisfied to educate solely the privileged few. He took the Morrill ideal and democratized it to reach all the rural people, men and women, boys and girls, white and colored—everywhere in the country.

These monumental services in the South, the methods and philosophies used by him, were made the foundations upon which was built the Agricultural Extension Act of 1914, which has brought into fulfillment the vision of those great pioneer thinkers, who dreamed of a universal system of agricultural education.

And, now, after more than a half century, the rich, ripened fruits of their incomparable efforts are in our laps. It is a story of achievement as romantically entrancing as ever conceived in the imagination of the human mind.

My friends, I am sure you have been impressed with the fact that up to about that period, agriculture had been regarded by its leaders and by the legislation enacted by their influence, as a business, limited alone to production.

But, in the meantime, the Nation had grown from its statue of the period of the Morrill Act into a great world power, and its agriculture had grown from a business—a mere way of living—into "a kind of highly organized industry," taking on broad national and international implications and responsibilities. Necessarily, its problems multiplied both in number and complexity. Its very bigness—the biggest, single industry in the world—carried with it need for greatly enlarged capitalization, more and certain credits, and more adequate methods of distribution of production. And all future considerations of it, perforce, implied a comprehensive recognition of all the factors entering into it—production, finance, and distribution.

But, if in the interim agriculture had been undergoing a process of gradual evolution, so, also, had the methods of consideration of it, because, for nearly a decade, discerning students had begun to observe the emergence of a new type of rural economist and statesman. These newcomers brought into the atmosphere of rural thinking a new and broader approach. They seem to have begun to sense a kind of relationship of adequate finance and scientific distribution to a profitable agriculture and a happy and contented, rural life.

As early as 1907, the great teacher and apostle of the new agriculture and the new rural life of the South, Seaman A. Knapp, in his Declaration of Principles at Pinehurst, N. C., had included the organization of a system of agricultural banks to assist in his program of populating the country with thrifty home owners, and proclaiming rural homes to be "the royal rights of American sovereigns and more honorable than the Order of the Garter or the Golden Fleece."

It is a remarkable coincidence, that synchronizing almost to the day, another of the world's greatest agricultural statesmen, David Lubin, who had already done much preliminary work, was writing President Theodore Roosevelt, urging upon him that the establishment of a "system of cooperative credit associations would lift the southern producer of cotton and tobacco from the payment of 10 to 100 percent interest entailed by the crop lien system and give him money at 6 percent."

Such expressions from two of the world's foremost rural philosophers must be regarded as symbolic of the evolution taking place in the state of mind and attitude of the agricultural leadership in this transiting period. True, it was all nebulous and inchoate, unorganized and undirected, but that there was something taking place in and differently coloring the atmosphere of rural thinking was unmistakable and it proved a living, impelling force that gripped and challenged farm leadership.

As our David Lubin expresses it:

"There is no need to teach the farmer to blow his nose or his wife to dance a polka; make the business of farming profitable and there will be no need to worry about rural exodus," that "to grow two blades of grass where one grew before is good declamation, but may be disastrous business."

But this was abstract thinking. The time for organizing and directing public opinion into concrete action had come.

#### SOUTHERN COMMERCIAL CONGRESS

Fortunately, some years before, there had been brought about an organization in the South, well prepared to take the leadership and to direct the procedure for the investigation and study of one of the newly discovered phases of agriculture that had now become apparent to all students of it.

This organization bearing the title "The Southern Commercial Congress" had evolved out of the virile brain of a young southern schoolmaster whose rich imagination and penetrating vision had reached out in comprehensive grasp to a clear understanding of the problems of the rural South and, in fact, it was he who was largely responsible in creating the new coloring in the rural economic atmosphere to which we have alluded.

This young man, Dr. Clarence J. Owens, has grown into the genial and honored host of this delightful occasion. Time has not withered his enthusiasm nor slowed down his inherent, dynamic force.

It was in my first campaign for Congress that I came to know him. He was teaching in my district as president of the Orangeburg College and in the home town of my opponent. And he was so handsome, so full of himself, so self-reliant, so genial, so bubbling over with new ideas and new ideals, and so plausible in the presentation of them, and so energetic and tenacious in the pursuit of them, that I was certain that I had discovered in him that

unusual type of embryonic statesmanship that saw as its only objective the one thing—of service; service in its broad aspects.

And, my friends, 38 years have passed—38 years of examination and evaluation of the services rendered by the individuals of that great host, living and dead, who have crossed the pathway of my life—and, judging Dr. Owens and his work by the standard of his great preceptor, "the just weight and the just measure," I acclaim him now, as always he has been, a genuine genius in effective service to the South, with especial emphasis on his services to its agriculture and commerce.

It was his brilliant idea that brought David Lubin from Rome to take part in the discussions of the fourth annual convention of the Southern Commercial Congress, in the city of Nashville, April 1-6, 1912, the central theme of which was a study of farm finance and rural credits.

This convention was composed of leading economists and statesmen of the South, presided over by the late Senator Duncan U. Fletcher, who, while lacking in brilliancy or great originality of thought, yet, by his evenness of temper, his kindness, his great common sense, and his knowledge of southern men and southern affairs, was ideally fitted for the difficult task of helping fashion into definite form the intangible, undigested thinking of such a group.

#### DAVID LUBIN

David Lubin was the dominating spirit of the convention, and the importance of his wise initiative and guidance cannot be overestimated.

Lubin was a strange and picturesque character—a mystic, who believed himself predestined to return the Israel of old to the dominant leadership it held in the world of the Bible.

The spiritual underlain and overtones his thinking and colored his attitude toward men and the affairs of men. His thinking and philosophies were the outgrowth of a deeply embedded idealism, his objectives and methods were those of the practical realist. He preached the seemingly paradox of a union of ethics and economics, to use his own phrase.

From early manhood, the unequal struggle of agriculture had challenged his attention and enlisted his sympathies. The central thesis of his life was "Equality for Agriculture," especially the agriculture of the liberal democracies of the world.

The conviction that the hope of civilization was bedrocked upon the conservatism of agriculture inspired in him almost fanatical efforts in its behalf.

He believed in an agriculture of home owners; he feared the radicalism of the landless and the homeless, and the basis of his fight for a system of rural and landed credits, enabling him—the farmer—to finance his business on terms of equality with the merchant, was the overpowering belief that in the homes and about the firesides of the rural population are to be found the safeguards of democratic institutions and the impelling forces of progressive civilization.

His fight for a system of parcel post, his great efforts in behalf of equality in transportation for farmers, his years of struggle for the organization of the international institute of agriculture; his, for a long while, almost single-handed agitation for an American system of agricultural finance, and the final, but heroic, fight for a world chamber of agriculture, rooting itself back into the nations of all the world, are but the striking evidence of his faith in the stabilizing and mellowing influences of a contented agriculture in the affairs of the world.

To this great and mysterious Hebrew, he of the persecuted race, inspired by such mighty visions, the Nashville convention was both opportunity and Armageddon. His triumph was complete.

The convention was epoch making. It aroused and organized public opinion, mobilized agricultural leadership, and concentrated it upon the main objective. It enlisted the support of the President, the President-elect, and the dynamic former President, Theodore Roosevelt, and wrote its demands into the platforms of declaration of the three great political parties. It created its own commission to visit Europe for investigation, study, and report upon rural credit systems, and was primarily responsible for the creation by the Congress of a special commission to work in conjunction with it.

While the commission, under the wise and able leadership of our Dr. Clarence J. Owens, was at its work delving after facts, studying farm psychology, and getting a true picture of the agricultural European set-up and the effect upon it of the various types of farm-credit systems they found in operation, farm leaders at home and their ambitious congressional and senatorial friends rushed into sudden and great activity.

All sorts of ill-considered, half-baked suggestions and schemes were proposed, varying in type from direct Federal appropriation under bureaucratic distribution to the individual farmer to that of utilization of fourth-class postmasters as the channel for reaching the individual farmer with Federal largesses. The files of the United States Senate will show the introduction of a bill carrying out this latter proposition and a serious discussion upon it.

The predominant thought seems to have been a system of rural credits financed wholly out of Federal funds.

The idea of a system providing a plan of enabling the farmer to convert his land and other assets into means for the purposes of credit seems never to have entered into the minds of these seriously and honestly intentioned leaders.

But, my friends, this utter confusion in the minds of representative and responsible leadership at that time is neither surprising nor must it be regarded as any reflection upon the usual sound thinking of the statesmanship of that period. These leaders were without concrete facts upon which to base straight and sound thinking or from which to draw sound conclusions.

It is right here in this very connection that the joint commissions were able to perform their most far-reaching service and to make their most vital contributions to the cause of agricultural finance in this country. Had their reports veered in the slightest out of the channels of sound economics, the effect in the end could have been thoroughly disastrous.

A careful analysis of the recommendations of both commissions discloses how important may become the thinking of one or two men at critical turning points in history, and how such thinking, in fact, may fix the currents of history.

The fundamental life philosophies of two men shine out in these reports as clearly as a noonday sun in an unclouded sky.

The lives of David Lubin, the Jew, and Sir Horace Plunkett, the great Irish agricultural leader, had been built upon the foundations of self-help. Neither could look to any other source. Both lived amidst and were profound students of farm economics in the Old World. They had studied in great detail all of the then existing systems of farm finance, and had found that all which had stood the buffets of time had been built upon the same fundamental foundations—self-help through individual cooperative organization, sometimes operating independently, sometimes under governmental regulations, but always on the same basis of cooperative self-help.

The reports of the commissions crystallized public opinion and legislative thinking upon this idea as the basis for consideration of the question of farm finance, and the influence exerted is abundantly apparent in the finished product of congressional action.

And may I remark parenthetically, often I wonder if the future happiness of the peoples of the world might not be more definitely assured if each and all of us should begin now sincerely to embrace the philosophies and the fine spiritual doctrines of these wise old prophets?

These vital documents were not available for public use until in January 1914, but in the meantime important and far-reaching political events had taken place.

Woodrow Wilson had been elected President of the United States on a platform containing this pregnant and significant sentence: "Of equal importance with the question of currency reform is the question of rural credits or agricultural finance," with a recommendation for an investigation of European systems by some sort of commission.

The first efforts of the Wilson administration were in the direction of currency reform and revision of the tariff. When these had been accomplished, the President, too much the covenantor, either to forget or ignore a solemn pledge, and in the conscience and mind of this much misunderstood man a political platform declaration was the sacred pledge of the word, threw the force of his mighty personality into the fight to redeem this specific platform declaration.

My memory is not entirely clear (Dr. Owens may help to refresh it) how it came about that a joint committee, consisting of 12 Members of the House and Senate, chosen from the Agricultural and Banking Committees thereof, came to be appointed. My recollection inclines me to think it was the suggestion of the President. At any rate such a committee was appointed, and the doughty little warrior, CARTER GLASS, of Virginia, was appointed its chairman. He had already to his credit the authorship of the Federal Reserve Act.

The committee divided its work into two studies, one of personal rural credits, the other of land-mortgage loans.

The chairman of the latter committee was Senator Henry F. Hollis, of New Hampshire. The other members from the Senate were the blind Senator, Thomas P. Gore, and that great old character, Newton Nelson, of Minnesota. The House members were Michael Phelan, of Massachusetts; Everis A. Hayes, of California; and Asbury F. Lever, of South Carolina; and Carter Glass acted with the committee in an ex-officio capacity.

The Committee on Personal Rural Credits reported its inability to suggest any system of short-term credits suited to American conditions.

The Committee on Land Mortgage Loans was more fortunate. After months of intense labor and thorough exploration of the entire subject, it reported on January 4, 1916, its findings and submitted therewith a bill carrying out its recommendations.

The bill suggested two types of banks—the Federal land bank, regional in its operation and built upon the principle of self-help through cooperative farm organizations and capitalized ultimately and automatically by the borrowing farmers themselves; and the joint-stock land bank, privately capitalized and operating under governmental regulations.

This suggested bill went to the Banking and Currency Committees of the two Houses, of which GLASS was chairman of the House committee and Owen of the Senate committee. These committees, using the joint committee bill as a working model, labored long and earnestly, and in the end, though greatly improving it in details, recommended the adoption of the joint committee bill in all of its substantial and fundamental features.

When the bill reached the President and he had decided to sign it, he invited in to witness this event a number of those who had taken

leading and active parts in bringing this long effort to its final conclusion. This was on July 17, 1916.

I have before me, as I dictate, a photograph entitled "Signing the Great Charter of American Farm Finance," subtitle "Historic Scene in the Executive Office at the White House, Washington, D. C., July 17, 1916. When the President of the United States, Woodrow Wilson, Signed the Federal Farm Loan Act" (previously it was called the rural-credits bill).

The President is at his desk, with pen in hand, writing; the desk is littered with papers and documents; in the center is a vase of roses. Standing immediately in front of him, dressed in white, his left hand in his pocket and his right thumb hooked into his belt, is CARTER GLASS, the finest and most courageous thinker in the parliamentary history of America. Near him is Congressman BARKLEY, now the Democratic leader of the Senate. Immediately behind him is Wingo, of Arkansas, now passed into the beyond. By his side stands your speaker; and standing with him, the only lady in the room—who she was, I know not. And then, immediately to the right of the President, is Senator Robert Owen, and to his left, Governor Ruby, of Missouri, and by his side the massive Senator Hoke Smith, and then Phelan, and next that fine, old statesman Senator Fletcher, and then Herbert Myrick. Immediately to his rear is Harvie Jordan, leader of the Farmers' Union, and to his left is seen the tall, impressive figure of McAdoo, Secretary of the Treasury and a tower of strength in this effort; immediately in front of him, with head bowed, beginning to show the weight of years, is David Lubin, the Jew, whose face indicates the joy he felt. Immediately behind him is Senator Pomerene, and to his right, Senator Hollis, whose work has never been given the credit it deserves; and to his left, Senator Gronna, who introduced the first resolution to send a commission to Europe. Standing immediately in front of him, head raised, shoulders back, evidently filled with pride in the part he had taken, is the honored host of this occasion, Clarence J. Owens.

Indeed, it was a historic scene; indeed, it was the signing of the great charter of American farm finance, the beginning of a new day in the relationship of the Government to the agriculture of the Nation, because, remember, that all subsequent enactments to broaden the reaches of the Federal Farm Loan Act have only supplemented and dovetailed into it. It is the parent, pioneer legislation from which has come our present system of farm credits, the most comprehensive and complete system of farm finance in the history of the world.

To these pioneer heroes we bring salutations and profoundest gratitude. They wrought well. You wrought well, Dr. Owens.

But your work is not finished. The field of farm distribution lies at your feet. It sends out its challenge. Your history records that a challenge to you is as meat and drink to the hungry and the thirsty.

I thank you.

## Foreclosures Under Farm Bankruptcy Act

### EXTENSION OF REMARKS

OF

HON. LYNN J. FRAZIER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, January 29, 1940

### OPINION OF SUPREME COURT

Mr. FRAZIER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent opinion of the Supreme Court of the United States in which they reverse the Supreme Court of the State of Wisconsin in regard to a case under the Farm Bankruptcy Act.

There being no objection, the opinion was ordered to be printed in the RECORD, as follows:

[Supreme Court of the United States. Nos. 120, 121—October Term, 1939, 120, Ernest Newton Kalb and Margaret Kalb, his wife, appellants, versus Henry Feuerstein and Helen Feuerstein, his wife. 121, Ernest Newton Kalb, appellant, versus Roscoe R. Luce, Henry Feuerstein, Helen Feuerstein, and George O'Brien. Appeals from the Supreme Court of the State of Wisconsin. January 2, 1940] Mr. Justice Black delivered the opinion of the Court.

Appellants are farmers. Two of appellees, as mortgagees, began foreclosure on appellants' farm<sup>1</sup> March 7, 1933, in the Walworth

(Wis.) County Court; judgment of foreclosure was entered April 21, 1933; July 20, 1935, the sheriff sold the property under the judgment; September 16, 1935, while appellant Ernest Newton Kalb had duly pending<sup>2</sup> in the bankruptcy court a petition for composition and extension of time to pay his debts under section 75 of the Bankruptcy Act (Frazier-Lemke Act),<sup>3</sup> the Walworth County Court granted the mortgagees' motion for confirmation of the sheriff's sale; no stay of the foreclosure or of the subsequent action to enforce it was ever sought or granted in the State or bankruptcy court; December 16, 1935, the mortgagees, who had purchased at the sheriff's sale, obtained a writ of assistance from the State court; and March 12, 1936, the sheriff executed the writ by ejecting appellants and their family from the mortgaged farm.

The questions in both No. 120 and No. 121 are whether the Wisconsin County Court had jurisdiction, while the petition under the Frazier-Lemke Act was pending in the bankruptcy court, to confirm the sheriff's sale and order appellants dispossessed, and, if it did not, whether its action in the absence of direct appeal is subject to collateral attack.

No. 120. After ejection from their farm, appellants brought an action in equity in the Circuit Court of Walworth County, Wis., against the mortgagees who had purchased at the sheriff's sale, for restoration of possession, for cancellation of the sheriff's deed, and for removal of the mortgagees from the farm. Demurrer was sustained for failure to state a cause of action and the complaint was dismissed. The Supreme Court of Wisconsin affirmed.<sup>4</sup>

No. 121 is a suit at law in the State court by appellant Ernest Newton Kalb against the mortgagees, the sheriff, and the county court judge who confirmed the foreclosure sale and issued the writ of assistance. Damages are sought for conspiracy to deprive appellant of possession, for assault and battery, and for false imprisonment. As in No. 120, demurrer was sustained, and the Supreme Court of Wisconsin affirmed.<sup>5</sup>

In its first opinion the Supreme Court of Wisconsin said: "It is the contention of the plaintiff [mortgagor] that this statute is self-executing, that is, that it requires no application to the State or Federal court in which foreclosure proceedings are pending for a stay; in other words, that it provides for a statutory and not for a judicial stay. Plaintiff's claims under the Bankruptcy Act present a question which clearly arises under the laws of the United States and therefore present a Federal question upon which determination of the Federal courts is controlling." Addressing itself solely to this Federal question of construing the Frazier-Lemke Act, the Wisconsin court decided that the Federal act did not itself as an automatic statutory stay terminate the State court's jurisdiction when the farmer filed his petition in the bankruptcy court. Since there had been no judicial stay, it held that the confirmation of sale and writ of assistance were not in violation of the act.

Appellees insist, however, that the Wisconsin court on rehearing rested its judgment on an adequate non-Federal ground. If that were the fact, we would not, under accepted practice, reach the State court's construction of the Federal statute.<sup>6</sup> The statement on rehearing relied on as constituting the non-Federal ground was: "We need not consider nor discuss the question whether the Congress has power to divest the jurisdiction of a State court which has once attached. That question is not presented by this record. It would seem from a consideration of section 75 as amended that the filing of the petition automatically operated to extend the period of redemption. It is possible that that state of facts if made to appear would make the order of the trial court erroneous but the order would be within the power of the court to make. No appeal having been taken, no showing having been made in the State court, an order of sale having been confirmed and the purchaser put in possession, the plaintiff is in no position to claim that the order of the circuit court is void."

But if appellants are right in their contention that the Federal act of itself, from the moment the petition was filed and so long as it remained pending, operated, in the absence of the bankruptcy court's consent, to oust the jurisdiction of the State court so as to stay its power to proceed with foreclosure, to confirm a sale, and to issue an order ejecting appellants from their farm, the action of the

<sup>1</sup> October 2, 1934, the petition was filed and approved. June 27, 1935, the petition was dismissed, but September 6, 1935, it was reinstated and the order of dismissal was vacated pursuant to the second Frazier-Lemke Act, 11 U. S. C. 203, sec. 5.

<sup>2</sup> 11 U. S. C. 203.

<sup>3</sup> —Wis. —.

<sup>4</sup> Demurrer to one count against the sheriff for assault and battery was overruled, but the Supreme Court of Wisconsin reversed as to this count. The opinion of the court upholding the demurrer appears in *Kalb v. Luce* (223 Wis. 519, 279 N. W. 685). Appeal to this court was dismissed because no final judgment had been entered (305 U. S. 566). Upon remand the State circuit court dismissed, the Supreme Court of Wisconsin affirmed, "for the reasons \* \* \* stated" in its opinion in *Kalb v. Luce*, supra (—Wis. —), and the appeals here are from the judgments of dismissal (—U. S. —).

<sup>5</sup> *Honeyman v. Hanan* (300 U. S. 14, 18), *Lynch v. New York ex rel. Pierson* (293 U. S. 52, 54), *Enterprise Irrigation District v. Farmers Mutual Canal Co.* (243 U. S. 157, 164), *Hammond v. Johnson* (142 U. S. 73).

<sup>1</sup> In both No. 120 and No. 121, the complaints alleged that appellant Kalb and his wife executed the mortgage. In No. 120 both Kalb and his wife were alleged to be owners of the farm, while in No. 121 appellant Kalb was alleged to be the owner.

Walworth County Court was not merely erroneous but was beyond its power, void, and subject to collateral attack. And the determination whether the act did so operate is a construction of that act and a Federal question.

It is generally true that a judgment by a court of competent jurisdiction bears a presumption of regularity and is not thereafter subject to collateral attack.<sup>7</sup> But Congress, because its power over the subject of bankruptcy is plenary, may by specific bankruptcy legislation create an exception to that principle and render judicial acts taken with respect to the person or property of a debtor whom the bankruptcy law protects nullities and vulnerable collaterally.<sup>8</sup> Although the Walworth County Court had general jurisdiction over foreclosures under the law of Wisconsin,<sup>9</sup> a peremptory prohibition by Congress in the exercise of its supreme power over bankruptcy that no State court have jurisdiction over a petitioning farmer-debtor or his property, would have rendered the confirmation of sale and its enforcement beyond the county court's power and nullities subject to collateral attack.<sup>10</sup> The States cannot, in the exercise of control over local laws and practice, vest State courts with power to violate the supreme law of the land.<sup>11</sup> The Constitution grants Congress exclusive power to regulate bankruptcy and under this power Congress can limit the jurisdiction which courts, State or Federal, can exercise over the person and property of a debtor who duly invokes the bankruptcy law. If Congress has vested in the bankruptcy courts exclusive jurisdiction over farmer-debtors and their property, and has by its act withdrawn from all other courts all power under any circumstances to maintain and enforce foreclosure proceedings against them, its act is the supreme law of the land which all courts—State and Federal—must observe. The wisdom and desirability of an automatic statutory ouster of jurisdiction of all except bankruptcy courts over farmer-debtors and their property were considerations for Congress alone.

We think the language and broad policy of the Frazier-Lemke Act conclusively demonstrates that Congress intended to, and did deprive the Wisconsin county court of the power and jurisdiction to continue or maintain in any manner the foreclosure proceedings against appellants without the consent after hearing of the bankruptcy court in which the farmer's petition was then pending.<sup>12</sup> The act expressly provided:

"(n) The filing of a petition \* \* \* shall immediately subject the farmer and all his property, wherever located \* \* \* to the exclusive jurisdiction of the court, including \* \* \* the right or the equity of redemption where the period of redemption has not or had not expired, \* \* \* or where the sale has not or had not been confirmed," and "In all cases where, at the time of filing the petition, the period of redemption has not or had not expired, \* \* \* or where the sale has not or had not been confirmed, \* \* \* the period of redemption shall be extended or the confirmation of sale withheld for the period necessary for the purpose of carrying out the provisions of this section"; and

"(o) Except upon petition made to and granted by the judge after hearing and report by the conciliation commissioner, the following proceedings shall not be instituted, or if instituted at any time prior to the filing of a petition under this section, shall not be maintained, in any court or otherwise, against the farmer or his property, at any time after the filing of the petition under this section, and prior to the confirmation or other disposition of the composition or extension proposal by the court:

"(2) Proceedings for foreclosure of a mortgage on land, or for cancellation, rescission, or specific performance of an agreement for sale of land or for recovery of possession of land;

"(6) Seizure, distress, sale, or other proceedings under an execution or under any lease, lien, chattel mortgage, conditional sale agreement, crop-payment agreement, or mortgage.

"(p) The prohibitions \* \* \* shall apply to all judicial or official proceedings in any court or under the direction of any official, and shall apply to all creditors, public or private, and to all of the debtor's property, wherever located. All such property shall be under the sole jurisdiction and control of the court in bankruptcy, and subject to the payment of the debtor farmer's creditors, as provided for in section 75 of this act."

<sup>7</sup> No. 122, *Chicot County Drainage District v. The Baxter State Bank*, this day decided; *Stoll v. Gottlieb* (305 U. S. 165, 171, 172); *Dovell v. Applegate* (152 U. S. 327, 340).

<sup>8</sup> *Valley v. Northern Fire Ins. Co.* (254 U. S. 348, 353-354); and compare *Elliott et al. v. The Lessee of Piersol et al.* (1 Pet. 328, 340); *Williamson et al. v. Berry* (8 How. 495, 540, 541, 542).

<sup>9</sup> Laws of Wisconsin, 1907, chap. 234.

<sup>10</sup> *Valley v. Northern Fire Ins. Co.*, supra, 355; cf. *Taylor v. Sternberg* (293 U. S. 470, 473).

<sup>11</sup> *Hines v. Lowrey* (305 U. S. 85, 90, 91); *Davis v. Wechsler*, (263 U. S. 22, 24).

<sup>12</sup> That a State court before which a proceeding is competently initiated may—by operation of supreme Federal law—lose jurisdiction to proceed to a judgment unassailable on collateral attack is not a concept unknown to our Federal system. See *Moore v. Dempsey* (261 U. S. 86). Cf. *Johnson v. Zerbst* (304 U. S. 458).

Thus Congress repeatedly stated its unequivocal purpose to prohibit—in the absence of consent by the bankruptcy court in which a distressed farmer has a pending petition—a mortgagee or any court from instituting, or maintaining if already instituted, any proceeding against the farmer to sell under mortgage foreclosure, to confirm such a sale, or to dispossess under it.

This congressional purpose is more apparent in the light of the Frazier-Lemke Act's legislative history. Clarifying and altering the sweeping provisions for exclusive Federal jurisdiction in the original act,<sup>13</sup> Congress made several important changes in 1935.<sup>14</sup> It was then that subsection (p) was amended so that the prohibitions in subsection (o) of any steps against a farmer-debtor or his property once his petition is filed were made specifically applicable "to all judicial or official proceedings in any court or under the direction of any official, and \* \* \* to all creditors, public or private, and to all of the debtor's property, wherever located. All such property shall be under the sole jurisdiction and control of the court in bankruptcy, and subject to the payment of the debtor-farmer's creditors, as provided for in section 75 \* \* \*."

As stated by the Senate Judiciary Committee in reporting these amendments: " \* \* \* subsection (n) brings all of the bankrupt's property, wherever located, under the absolute jurisdiction of the bankruptcy court, where it ought to be. Any farmer who takes advantage of this act ought to be willing to surrender all his property to the jurisdiction of the court, for the purpose of paying his debts, and for the sake of uniformity."

"The amendment to subsection (p) further carries out the amendment to subsection (n) and places the sole jurisdiction of the bankrupt's estate and of his obligations all in the bankruptcy court, without exception."<sup>15</sup>

The congressional purpose is similarly set out in the House Judiciary Committee's report: "The amendment to subsection (n) in fact construes, interprets, and clarifies both subsections (n) and (o) of section 75. By reading subsections (n) and (o) as now amended in this bill, it becomes clear that it was the intention of Congress when it passed section 75, that the farmer-debtor and all of his property should come under the jurisdiction of the court of bankruptcy, and that the benefits of the act should extend to the farmer, prior to confirmation of sale, during the period of redemption, and during a moratorium, and that no proceedings after the filing of the petition should be instituted, or if instituted prior to filing of the petition, should not be maintained in any court, or otherwise."<sup>16</sup>

Congress set up in the act an exclusive and easily accessible statutory means for rehabilitating distressed farmers who, as victims of a general economic depression, were without means to engage in formal court litigation. To this end, a referee or conciliation commissioner was provided for every county in which 15 prospective farmer-debtors requested an appointment, and express provision was made that these commissioners should "upon request assist any farmer in preparing and filing a petition under this section and in all matters subsequent thereto arising under this section and farmers shall not be required to be represented by an attorney in any proceeding under this section."<sup>17</sup> In harmony with the general plan of giving the farmer an opportunity for rehabilitation, he was relieved—after filing a petition for composition and extension—of the necessity of litigation elsewhere and its consequent expense. This was accomplished by granting the bankruptcy court exclusive jurisdiction of the petitioning farmer and all his property with complete and self-executing statutory exclusion of all other courts.

The mortgagees who sought to enforce the mortgage after the petition was duly filed in the bankruptcy court, the Walworth County Court that attempted to grant the mortgagees relief, and the sheriff who enforced the court's judgment were all acting in violation of the controlling act of Congress. Because that State court had been deprived of all jurisdiction or power to proceed with the foreclosure, the confirmation of the sale, the execution of the sheriff's deed, the writ of assistance, and the ejection of appellants from their property—to the extent based upon the court's actions—were all without authority of law. Individual responsibility for such unlawful acts must be decided according to the law of the State. We therefore express no opinion as to other contentions based upon State law and raised by appellees in support of the judgments of the Supreme Court of Wisconsin.

Congress manifested its intention that the issue of jurisdiction in the foreclosing court need not be contested or even raised by the distressed farmer-debtor. The protection of the farmers was left to the farmers themselves or to the commissioners who might be laymen, and considerations as to whether the issue of jurisdiction was actually contested in the county court,<sup>18</sup> or whether it could have been contested,<sup>19</sup> are not applicable where the plenary power of Congress over bankruptcy has been exercised as in this act.

<sup>13</sup> 47 Stat. 1470, sec. 75.

<sup>14</sup> 49 Stat. 942, 943.

<sup>15</sup> S. Rept. No. 985, 74th Cong., 1st sess.

<sup>16</sup> House Report No. 1808, 74th Cong., 1st sess.

<sup>17</sup> 47 Stat. 1473 (q).

<sup>18</sup> *Stoll v. Gottlieb*, supra.

<sup>19</sup> *Chicot County Drainage District v. The Baxter State Bank*, supra.

The judgments in both cases are reversed and the causes are remanded to the Supreme Court of Wisconsin for further proceedings not inconsistent with this opinion.

Reversed.

## The Foreign-Trade Zone of New York

### EXTENSION OF REMARKS

OF

### HON. EMANUEL CELLER

OF NEW YORK

### IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on December 9, 1939:

Come with me on a visit to the free port at Stapleton, Staten Island, the only enterprise of its kind in the United States and one which is rapidly justifying the optimistic expectations of its sponsors and others who waged a long and unceasing fight for its establishment.

Before we pass through its gates, however, we should pause and recall that the free port—or the foreign-trade zone as it is known officially—has been in business less than 3 years. For half of that period it was operated by a private corporation, the New York Foreign Trade Zone Operators, Inc., which functions under a 20-year contract granted by the board of estimate.

We have often heard of the free port of Copenhagen, the free port of Danzig, and many others. Now we have the free port of New York—thanks to my foreign-trade-zone bill, which became law in 1934. I fought for the passage of that bill for many years. The fine record already established for the free port at New York is ample reward for my efforts. Tribute must be paid to Mayor LaGuardia and his able commissioner of docks, Mr. John McKenzie, for their unstinting labors in making the experiment an outstanding success. I would be remiss if I did not also pay tribute to the Honorable Newbold Morris, president of the New York City Council, who has rendered yeoman service to the building up of the free port.

At the outset, let it be understood that a free port has nothing to do with free trade. It is a zone limited generally to foreign commerce and trade. It is a policed, segregated area on Staten Island, where goods, imported free of duty and customs supervision, may be graded, sorted, manipulated, mixed, with domestic material, repacked, reclassified, warehoused, stored, or labeled. Such goods are subject to duty only when released from the zone into domestic commerce. If such goods are transshipped to foreign territory, no duty is imposed. As far as customs are concerned, the zone is foreign territory.

At present the free port includes four of the piers constructed during the administration of the late Mayor John F. Hylan at the conclusion of the World War two decades ago. For many years these piers were known as white elephants; they represented a dead investment on which the city realized virtually no return.

Would that the late Mr. Hylan could accompany us as we walk into the free port today and observe the amazing transformation that has come over these erstwhile white elephant piers during the past 18 or 19 months. I have made many visits to Stapleton since the foreign-trade zone was opened. I am agreeably astonished at the volume of industry and the extent of activities now centered there.

When President Roosevelt signed my bill he expressed the hope to me that four free ports might be set up—two on the Atlantic coast and one on the Gulf of Mexico and one on the Pacific coast. The New York free port is now well established. It is hoped the three other free ports yet to be established will follow the successful example of New York's zone.

We see at the New York free port such diversified commodities as hides and silver-fox furs, tobacco from Sumatra, brandy from South Africa, tungsten ore from China, corned beef from the Argentine, and rugs from distant Iran. We see cognacs and champagnes from the vineyards of France, whisky from the distilleries of Ireland, linoleum from Italy, and sisal fiber from Yucatan. Here are untold thousands of pounds of nuts from the jungles of Brazil, delicate watch parts from Switzerland. We also see the strong room in which is kept a valuable shipment of diamonds from the Netherlands.

All around us is the bustle of men at work loading and unloading cargoes between steamships and the docks. Groups of girls are busy attaching keys and labels to cans of cooked meats. The most

spectacular sight in the zone is the thousands of boxes, crates, and lift vans containing the furniture and personal effects of central European refugees fleeing the terrors of dictatorships. It is a vivid yet pathetic commentary on the European situation. What a human and vital need is thus served by the zone. In addition to its value as a halfway house of commerce, the free port, we see, is an enterprise that provides employment to many of our citizens.

Just how is the free port used by shippers, importers, and exporters? Let us examine this cargo of South American meat. The firm which brings these meats to the trade zone began with a shipment of 17 tons. It now ships approximately 350 tons through the zone each month. These shipments have brought substantial business to manufacturers of the cardboard cartons in which the cans are packed for distribution among wholesalers throughout the United States. Printers and lithographers turn out the millions of labels that are pasted on the cans before they are packed, and wire manufacturers furnish the keys which are attached to the metal containers. All this business, of course, goes to American firms. The corned-beef operation at the free port, consequently, has resulted not only in employment for men and women at the zone but in new purchases of manufactured American products.

The silver-fox furs and the sheepskin hides we have seen represent an important development of American commerce. They indicate that this country is at least regaining one world market it lost some years ago and is winning another world market which in the past has always been located in Europe.

For many years the port of New York had been the hide market of the world. It lost this market to Holland; hides from South America and from the Far East were shipped to Holland instead of to New York, and buyers from the world around were compelled to travel to that country to make their extensive purchases. The free port is bringing the hide market back to this city. The facilities of the foreign-trade zone were the magnet that induced the important industry to return to its former abode.

The fur market of the world was long established in Leipzig, Germany. Some years ago it was transferred to Leningrad, Russia, and about 6 months ago it was shifted to London. Fur buyers traveled from every country to the capital of Britain to attend the auction sales on silver foxes and other costly skins. Only recently this market was moved across the Atlantic to the foreign-trade zone on Staten Island. Auctions will be held at the zone from time to time and the foreign buyers will henceforth come to New York to purchase their furs instead of going to Europe.

The experience of the importers of Brazil nuts demonstrates the fashion in which the free port is proving its worth as a money saver to persons and corporations engaged in foreign commerce. A year ago one of our largest importers of this product shipped in bulk some 3,000 tons of Brazil nuts which were to be cured at the zone. The nuts arrived in April and remained in the cooled space until October 1. By this time they showed a shrinkage of something like 15 to 20 percent which the importer saved in duty, as he paid the Government duty on the weights discharged into customs territory and ready for marketing, not on the weights which were brought into the zone.

So successful was this importer's first experience that this year the tonnage was increased to 5,000 tons or 10,000,000 pounds. Here again the shipments bring wages to Staten Island residents, since, besides the longshoremen and warehousemen who are required to move the cargoes, it usually takes about 150 girls to go through an entire shipment to select and grade these Brazil nuts before they can be marketed.

An experiment is at this moment being tried out at the free port by a large organization which has perfected a machine for shelling cashew nuts. If this test shows the satisfactory results that are anticipated the shelled nuts will be put up in packages and the hulls sent to a processing plant where the shells will be crushed and the oil which they contain will be used for various purposes. Here again, additional labor will be called for, all new to the United States.

The South African brandy was sent to the foreign-trade zone direct from South Africa in order that it might be reduced to 85 proof, which is the standard strength of brandy, and bottled. The bottles, of course, are American. The labor is also American.

Wines of old vintage are sent to the foreign-trade zone from Europe, and liquors, cognacs, and champagnes are shipped here for aging.

Especially to the importer of Persian rugs is the foreign-trade zone a useful point of shipment. Persian rugs, the genuine article, are very expensive. When they are bought the importer in reality does not know the condition of the rugs upon their arrival in this country. However, in the foreign-trade zone and nowhere else in the entire United States, he is permitted to open up the bales and examine their contents. If the rugs are flawless they are brought into customs territory and sent out to the retail stores. Should they be marred in any way they are sent back to the country of origin.

The same situation applies to the importation of linoleum from Italy. Let me cite a recent case in which one of the largest importers of this floor covering suffered a very serious financial loss

due to the fact that the shipment was sent to a warehouse and was not examined upon arrival here. After this particular lot had been sold at San Francisco and the rolls opened, it was found that the print had run. The entire shipment was refused and the importer had no redress because in the warehouse where they were stored he did not have the privilege of examining the goods, and, as a result, there was nothing left for him to do but take the loss. When the linoleum is stored at the free port the importer may examine it at any time and withhold payment on his shipments until he is satisfied that they are in perfect condition. Only the free port makes such transactions possible.

A shipment of diamonds valued at nearly \$200,000 was sent to the foreign trade zone recently by airplane parcel post. The 8,000 stones comprising the shipment were sorted and graded, duty was paid on the pieces which were entered into the United States, and the balance was exported to Latin-American countries. During the time that these diamonds were in the zone the customary customs guards were on hand and 6 special watchmen were assigned as a precaution against anything happening to this shipment. Of course, guards and watchmen protect all commodities at the zone, but in this case the operators had to take special precautionary measures because of the value of the jewels.

The watch trade has found employment at the zone through the importation of Swiss movements which are fitted in cases of American production. The completed watch is then sent into the United States after payment of duty.

Motion-picture films come to the zone from all over the world. Here they are clipped and then reexported to countries demanding the various series of pictures that are cataloged. In this way the duty is saved.

Recently the United States Government closed contracts for the very valuable tungsten ore. This ore is now being concentrated in the foreign-trade zone pending orders for shipment to points specified by the Government.

At the present moment there is more than \$1,500,000 worth of Sumatra tobacco at the zone. It is stored in specially constructed rooms for one of the largest cigar manufacturers in the United States.

The free port serves as an important transshipment point. This fact is attested by the thousands of tons of such commodities as sisal, or ixtle, and soybeans, which arrive here annually for transshipment to European countries. This operation alone requires the services of approximately 250 men for many days at a stretch in the unloading and loading of the ships which arrive directly in the zone.

There is one activity at the free port which is not widely known. This is the storage, duty-free, of historic and valuable books from universities in the war area of Shanghai, China, which have been sent here for safekeeping. They will be returned to the shelves from which they were plucked after the hostilities in the Far East are ended.

One of the special features of the zone's operation which requires a great deal of labor is the examination of woollens shipped from England, Japan, and other countries. The bolts are put on spindles, placed in the light, and turned on rollers so that imperfections show up to the examiner. When faults in the cloth are found, the bolts are laid aside and returned to the port of origin. Such bolts as are in satisfactory condition and are acceptable to the inspector are brought into customs territory or else reexported to foreign countries. Here, as in the case of the rug and linoleum shipments, the importer again is afforded protection by the free port against the necessity of accepting and paying for unsatisfactory commodities.

Department stores are beginning to use the zone to save the expense of sending buyers abroad for selection of merchandise. Traveling costs are cut by having the manufacturers in Europe send samples of their wares directly to the zone, where the buyers select the items they desire and the balance is returned to the manufacturers. Recently some manufacturers shipped quantities of dresses to the zone. Those selected for American stores by domestic buyers were kept in this country and the remainder of the shipment was sent back to Europe.

Manufacturers of various commodities in Europe are taking advantage of the foreign-trade zone on an ever-mounting scale. Some have sent their merchandise to Stapleton and have used the receipts from sales at the zone to serve as deposits in the various import banks on which money is borrowed for the purchase of other products, including foodstuffs, for export back to Europe. This operation in itself is a gigantic one. It opens the door to an entirely new avenue of commerce which may prove of substantial benefit to United States industries and farmers.

As was pointed out to me recently by Thomas E. Lyons, distinguished and splendid executive secretary of the Foreign Trade Zone Board at Washington, a Scandinavian exporter brought pictures and picture frames to the zone. These arrived at different dates, by different vessels, and under different tariff classifications. Ordinarily each lot would have to be entered separately, but, by using the zone, pictures and frames were assembled and were then entered under a single entry. The benefits of a single entry are obvious. Not only that, but case lots were broken down, not permissible in bonded warehouses, and buyers were able to inspect individual

pictures and frames and give orders for preferred combinations for assembly before delivery.

A well-known explorer recently used the zone to collect and prepare his equipment for an extended trailer journey through Asia. Much of his equipment was highly dutiable, had it entered customs territory, and in this regard the zone was of real service to him.

In our brief tour of the foreign-trade zone we have seen enough of its varied activities to warrant our belief that the zone has proved its worth as a stimulant to foreign and domestic commerce. One marvels at the thought that only 2 or 3 years ago these piers were a dreary void, empty of cargoes and of men, while today they accommodate shipments to the value of approximately \$15,000,000. During the month of October 1939, \$32,800 has been paid out in wages to approximately 908 men and women. The zone has stimulated not only the commercial life of our Nation and of many nations in other parts of the world, but also the trade of the neighborhood shopkeepers on Staten Island and elsewhere in our city, who have benefited by the added patronage brought about through the increased employment of local residents.

And so the zone is prospering, bringing revenue to the city from the receipts at the piers and income to the Federal Government in customs duties paid on commodities brought into the country. There is, however, one draw-back which clouds to some extent the optimism with which the zone's operators face the future. This single cloud is one which may be removed virtually at will by the city administration.

The foreign-trade zone is filled to capacity by the commerce which occupies its present facilities. It has orders for additional business which cannot be accepted because there is no space to accommodate any further shipments. Some of these orders require specialized types of facilities, with which the zone is not at present equipped. It needs these facilities badly; there is no reason why it should have to operate without them.

The zone needs refrigerated storage quarters and tanks for storage of vegetable oil. It needs a building with apparatus for various kinds of manipulations. Funds for these improvements were authorized by the Works Progress Administration about a year ago, but the construction work has not yet been started. I have been unable to ascertain the cause of the delay, but I am confident that the deadlock can be broken by a display of the usual aggression of our courageous mayor on this matter.

I urge Mayor LaGuardia to sever the knots in the red tape that is keeping the foreign-trade zone from fulfilling its destiny. The mayor was one of the earliest and most active sponsors of my bill. He spared no energy in obtaining the Federal certificate which enabled the city of New York to establish the zone. Now, I believe, the situation demands a renewal of the activity which the mayor displayed at Washington over 3 years ago. The interests of the city of New York, as well as those of the New York foreign-trade-zone operators, are at stake today; those interests must not be permitted to languish. The zone needs those new facilities to carry on and expand its excellent work. New York City needs the zone to pour new lifeblood into the arteries of this Nation's commerce.

### Tribute to the Late Representative William I. Sirovich

#### EXTENSION OF REMARKS

OF

#### HON. EMANUEL CELLER

OF NEW YORK

#### IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

Mr. CELLER. Mr. Speaker, my good friend and colleague, WILLIAM I. SIROVICH, is with us no more. His untimely demise a number of weeks ago brought to a close the brilliant career of one who combined within himself the virtues of a great leader, an outstanding American, and a true statesman.

His profound intellect and persuasive eloquence were known even beyond the Halls of Congress, which he had adorned with honor for many years.

His sympathies were always with the underprivileged, the poor, and the oppressed. Their problems were his problems, and he died as he had lived, working in their interests.

Our good friend was a true soldier in the service of humanity. A lifetime of good deeds will be an everlasting tribute to his memory.

## The "City of Flint"

## EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

STATEMENT BY CAPT. JOSEPH A. GAINARD, OF THE "CITY OF FLINT"

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Capt. Joseph A. Gainard, of the *City of Flint*, which appeared in the Washington Star of Sunday, January 28. There is so much interest in the dramatic and vitally important incident of the capture of the *City of Flint* by the Germans and people are anxious for every bit of information they can secure. The article follows:

[From the Washington Sunday Star of January 28, 1940]

"CITY OF FLINT'S" CAPTAIN TELLS THRILLING STORY OF WANDERINGS—FREIGHTER AT BALTIMORE, WEATHER-BEATEN, RUSTY AFTER 114-DAY VOYAGE

(By Garnett D. Horner)

BALTIMORE, January 27.—The steamship *City of Flint* brought back from the fringes of Europe's war today her thrill-packed story of nerve-wracking adventures in a grim international game of hide and seek.

A sailor's respect for the Germans who captured the American freighter and contempt for discourteous and uncooperative Russians mingled with praise for the hospitality of the Norwegians who restored the vessel to the United States flag in the tales told by Capt. Joseph A. Gainard and his crew of 40.

The weather-beaten, rusty, and ice-incrusted freighter docked in Baltimore Harbor shortly before noon to end a voyage that began in New York last October 3 as an ordinary trip to England and back, but was stretched out to 114 days by the adventures of war.

Captured by the German pocket battleship *Deutschland* 6 days out of New York, taken by a Nazi prize crew into the Russian Arctic port of Murmansk for 5 days, and then headed through the British blockade toward Germany, the vessel finally was returned to its American crew when its German captors violated international law by stopping in a Norwegian port.

## TENSE MOMENTS RECALLED

But there was a time when Captain Gainard did not know if there would be any *City of Flint* to bring back to American shores—and there would not have been but for the "splendid" behavior of his crew under "trying circumstances," the grim-jawed, soft-spoken skipper said.

"If we had not held ourselves in restraint—not doing the things an American feels like doing under those circumstances—we could have had plenty of trouble and there probably would not have been any *City of Flint*," Captain Gainard told reporters in talking about the weeks his ship was in control of the Nazi prize crew. The Germans had threatened to sink the freighter if there was any resistance.

His sailors in the forecabin recalled a tense moment when a spotlight from a British cruiser also cast doubt on the *City of Flint's* future. That incident occurred during the last days of the German "occupancy," when the freighter was threading its way among the fjords down the Norwegian coast toward Germany.

"The whole ship was suddenly lighted up by a searchlight of a British cruiser flashed on us from a few hundred yards away," said William Taylor, an engine-room wiper from Nashville, Tenn. "The Germans knew it was a 'limey' cruiser and they ducked for cover in a hurry."

"But a little 85-foot Norwegian gunboat that was tagging along with us poked her nose right at the Britisher, flashed her own searchlights over her, and told her to 'get out—these are neutral waters.' And the limey got out."

There had been fears that the American freighter might be the victim of an attempt by the British Navy to try to take her from the Nazis on the desperate run for a German port.

But apparently the German captors decided not to risk a battle. Captain Gainard said the commander of the prize crew aboard the freighter received from a passing German ship definite orders from his government to put into Haugesund, Norway, as they approached that port.

The skipper's statement cleared up to some extent the mystery that had surrounded the circumstances of the *City of Flint's* stopping at Haugesund and at Murmansk—points that had been the center of controversy involving the United States, Germany, Russia, and Norway.

## PRIZE CREW INTERNED

He said the Germans wanted to put forward the excuse of engine trouble for going into Haugesund, but realized that "wouldn't work" with the Norwegians and instead claimed a sailor needed hospital treatment—after definite orders from Berlin to stop there no matter what.

Norwegian authorities found no sailor sick enough to justify stopping in neutral waters, and so promptly interned the German prize crew and turned the ship back to Captain Gainard and his crew. This occurred November 3.

The United States contended Russia should have taken similar action at Murmansk when the ship was taken in there October 23. International law provides that a prize crew may take a captured ship into a neutral port only in case of stress of weather, want of fuel or provision, or necessity of repair. In all other cases, the neutral is obligated to intern the prize crew and restore the vessel to its original crew.

Russia allowed the Germans to take the *City of Flint* out of Murmansk after a 5-day stay there on the grounds that it had been necessary to put into repair "defective machinery."

"There was nothing the matter with the machinery of this ship at Murmansk or anywhere else," Captain Gainard flatly declared.

Bitter sarcasm crept into his recital of his treatment by the Russian authorities at Murmansk.

"Only the naval officer among those that boarded us extended the usual courtesies," he said. "The rest of them didn't know."

## UNABLE TO PHONE ENVOY

Asked whether the Russians looked starved or well fed, Captain Gainard said he couldn't tell, because "a Russian has no look; he has the same expression as a cow in a field."

Russian naval commander boarded the *City of Flint* as soon as it put into Murmansk, he related, took off the ship's papers and the German prize crew, and told Captain Gainard that he would be free to leave with his ship as soon as the papers were examined ashore and sent back—apparently intending then to act under the international law provisions later observed by Norway.

"But those papers didn't come back for 4 days 23 hours and 10 minutes," Captain Gainard said, with a wry grin; "and when they did, the Germans came back, too—in charge again—and we started heading for Germany."

Throughout the stay at Murmansk, he added, he tried, unsuccessfully, to get in touch with the American Ambassador at Moscow. "I gave messages addressed to the Ambassador to the boarding officials each day, and they said they would send them along; but they didn't get there. I asked to go ashore to telephone Moscow, but wasn't allowed to. I even asked if there was any possibility of them putting at my disposal for a trip to Moscow one of their 11,000 wonderful warplanes."

## CAPTAIN TALKS FREELY

Captain Gainard, his officers, and seamen talked freely with reporters who boarded his vessel from the Coast Guard cutter *Calumet* as the *City of Flint* lay off quarantine station an hour's run from her dock this morning.

There were no reports of any fights or other trouble between the American crew members and the German captors, despite what one seaman described as "a lot of bull" that had been spread about the situation.

"We got along fine after we got acquainted," said Mr. Taylor as he and half a dozen other sailors off watch waited in the messroom for a mess boy to set up their places for a midday meal on the red-checked tablecloths covering the tables.

"The Germans seemed to be glad to be able to learn to speak a little English. They learned to play hearts and other card games we play here on the mess tables. They told us we would have a big time when we got to Germany."

"We did have some fun kidding them, though. Every one of them seemed to understand what 'limey cruiser' meant (limey is slang for British), and every once in a while one of us would look out a porthole and yell, 'There's a limey cruiser.' You should have seen those Germans jump."

## WATCHED CLOSELY BY OFFICERS

William Neher, a seaman from New York, said he was born in Germany, and although a naturalized American citizen now still spoke and understood German well, so he got along fine with the Nazi sailors individually, although he didn't like their doctrines. He said they talked little about Germany or Nazi-ism.

Other sailors said the association became to be taken so much a matter of course that the Germans would go to sleep with their hand grenades and revolvers lying about where anyone might pick them up. "They would even let us handle their pistols sometimes and show us how they worked," one remarked.

There was some resentment among the crew at the ship's officers for not making an effort to be put ashore at Tromsø, Norway, when the vessel first stopped there before going on to Murmansk, and some said they thought the captain should have let them try to take over the ship from the Nazis.

"Our own officers watched us closer than the Germans did," one seaman commented. "They watched particularly closely in the engine room and down by the sea cock, apparently afraid somebody would try to scuttle the ship."

## CONSUL'S BOOTS DISAPPEAR

About the only actual trouble developed after the *City of Flint* was freed from the Nazis and was lying at anchor in Bergen. The sailors got shore leave, and one of them spent a night in a room in the same hotel where the German consul lived. The German consul put a new pair of boots outside his door that night to be cleaned, and they never were found again. An American sailor was held in jail for 24 hours, but then was released for lack of evidence after Norwegian police had searched the ship thoroughly. None of the *City of Flint* crew would say whether the German consul's boots might be worn in Baltimore tonight.

One of the proudest members of the crew was Junior Third Mate Carl C. Ellis, 23, of Newtonville, Mass., to whom a blond bride is coming from Bergen next month. "I met her the first night we were ashore in Bergen," he said with a shy smile. "In about a week and a half we were engaged. She is coming over next month to marry me." His fiancée is Ruth W. Engelsen, 22. She speaks English and has promised to teach him Norwegian, Mr. Ellis said.

## STEWARD HAS EGGS LEFT

Another proud man was Chief Steward Joseph Freer, of Baltimore. He was proud of the captain's praise for his record in feeding without a hitch the extra men the *City of Flint* had aboard so long—and the big, white eggs he stocked up with in Bergen at 28 cents a dozen. He had several dozen left when he reached here, as well as a plentiful supply of tender Norwegian turkeys, ducks, and chickens. This wasn't his toughest feeding job though—that came on the *City of Flint*'s previous voyage when it picked up and took to Halifax and New York 223 survivors of the torpedoed British liner *Athenia*.

"I figured out that by the time we got to Halifax I'd have one egg a day for each person," he said, "but knew they would think they were getting two, the way I can fix 'em."

The *City of Flint* came into harbor here with two big United States flags painted on each side, alongside her name in big letters that once were white but now faded. The Stars and Stripes flew from her stern. All signs of her American ownership had once been painted out by the Germans, who substituted the name "Alf." This painting out of the American flag was the only actual work the German sailors did, aside from standing guard duty, while aboard the freighter, crew members said.

## PRAISES MRS. HARRIMAN

Captain Gainard began his story with praise for "the wonderful way in which the ship and the ship's people were treated by the Norwegian Government and people." He also said that Mrs. Florence J. Harriman, American Minister to Norway, had demonstrated that a woman can hold down such a diplomatic post as well as a man.

Sitting cross-legged in civilian clothes on a desk in his chart-room packed with reporters and nervously blacking-in circles on a memo pad with a pencil as he talked, the skipper who said he didn't like his high-school nickname of "slugger," emphasized his gratitude to his crew for their cooperation throughout the *City of Flint*'s "grief."

He recalled that one of the German sailors in the prize crew wore a cap with the name "Grief" on it, and that he had tried to get that cap as a souvenir of so much grief of the voyage but had not succeeded.

"There could have been real trouble at any time I wanted it," Captain Gainard said in speaking of his crew's relations with the Nazis. "My crew was ready to go, or to stop, as I gave the word."

## CREW DID DUTIES WELL

"Soon after the Germans took us over, I gathered the crew in the messroom and explained what the consequences might be if we tried to resist. Resistance would give the Germans the right to keep the ship and crew, I told them, and the next American ship sighted by a German warship might not be given a chance as we were, but probably would be blown up. I pointed out that we ought to so conduct ourselves as to stay within the rules and let the Government take care of things later.

"I knew damned well that the Germans wouldn't blow us up—that the last thing they wanted was trouble with the American Government. I knew that if we behaved ourselves the situation would work out eventually.

"The crew then performed their regular duties well and there was no disturbance, although at times they had other ideas—the same as the rest of us, they would have liked to have gone to work on the Germans. Not because they were Germans, but because they were foreigners on an American ship—we would have felt the same way about any other nation in the circumstances."

## QUESTIONED ABOUT FLOUR

The skipper told in detail how he was stopped by the German pocket battleship on October 9. "They put up signals to stop and not to use our wireless," he said, "and then sent a lieutenant aboard. The lieutenant asked to see our papers and said he was sorry to have to stop us—he was polite and a good guy.

"He seemed to be interested in some flour we were carrying, presumably because he was running short of food, but forgot about it when I told him we couldn't get to that cargo.

"Then there was an exchange of signals with the warship. They asked me if I could take 38 male passengers to the United States. I told them 'Yes.' They sent back something about we were only a freighter, but I told them we had carried many more passengers than that (referring to the *Athenia* survivors).

"The boarding officer returned to the ship then, and a launch brought over the 38 members of the crew of the British freighter *Stonegate* which they had sunk previously, and a prize crew."

The Nazis planned to take the ship into a German port for action by a prize court on her cargo, which Captain Gainard described as "general cargo" but which the Germans claimed was mostly contraband for England.

## TWENTY-ONE IN PRIZE CREW

There were 3 officers and 18 men in the prize crew, Captain Gainard added. They had 1 machine gun and each man wore a pistol and 2 hand grenades strapped to his waist, but no arms were brandished "to terrify anybody," he said.

The prize crew commander told the *Stonegate* crew they had to obey Captain Gainard's orders or get killed, the skipper continued, and told the American crew to continue obeying their officers as usual.

"Then he conferred with me on the chart and told me what he wanted to do. I said I wouldn't do it that way, and showed him what I would do, and he said that was what he intended in the first place. So we proceeded by various routes to Tromsø, Norway.

"The North Atlantic weather was cold and stormy. We put in at Tromsø for fresh water and put ashore there the *Stonegate* men. We would have proceeded on through the fjords to Germany if it had been permitted by the Norwegians, but they refused permission to go through their territorial waters, and we put out to sea again, intending to go on to Germany. But the weather, the presence of belligerent warships, and the danger from mines—five other ships were sunk by mines around there that night—caused the German commander to decide to go to Murmansk.

"He told me this decision and asked me what I thought of it. I agreed that it was the best thing to do. I hoped we might be able to get the ship back there. He would have gone anyway."

## NOT ALLOWED ASHORE

Then Captain Gainard told of the mysterious experience in Murmansk, with none of the Americans allowed to go ashore from the *City of Flint* but with the Germans off it. He said he heard over an American radio news broadcast that the Germans were coming back to resume control of the vessel 25 minutes before they did so.

He said the Germans appeared surprised when the Norwegian authorities took them off the freighter at Haugesund. One of the sailors said the Nazis shouted, "See you in a couple of days" when they left there. The Germans still are interned in Norway.

When the Norwegian warship that took off the Germans at Haugesund told him that it was proceeding to Bergen, "that was all the hint I needed," Captain Gainard said. "I went with them." He added that at no time on the run down the Norwegian coast toward Germany was the freighter more than 100 yards "from the Norwegian Navy." The *City of Flint* threaded in and out of the fjords close to shore, keeping within Norwegian territorial waters, and the Norwegian warships went along to guard against violations of Norway's neutrality.

## DELAY IN UNLOADING

At Bergen, where she arrived November 5, the *City of Flint* encountered long delay in unloading her cargo. She finally went on to Narvik, Norway, and took on a cargo of iron ore which Captain Gainard described as ballast for her return trip to the United States, sailing January 7.

Incidentally, Captain Gainard said he saw, in the harbor at Murmansk, the German liners *Bremen*, *St. Louis*, *Milwaukee*, and *New York*, with several freighters and tankers.

Most of the German prize crew slept on the deck of the wheel house while they were aboard, Captain Gainard said. The officers doubled up with the ship's regular officers. Meals were served in relays to the crews, but the officers ate whenever they felt like it, and one time Captain Gainard, the German commander, and the captain of the sunken *Stonegate*, all ate at the same time—but that didn't happen often, he said.

Asked what his plans for the future were, Captain Gainard would say no more than that the first thing was to get rid of reporters. He was tired of talking about his troubles, he said.

Long in the South American run, he once was in command of a ship on which the crew staged a sit-down strike. He said he did not know about the union affiliations of the *City of Flint* crew—that all he knew was that they were American sailors who had behaved splendidly under trying circumstances.

When the freighter reached her dock, icicles hanging from the anchors drawn up in her prow, Captain Gainard was welcomed by Mrs. Gainard, who had come from Melrose, Mass., and stood in the bitter cold waiting to be the first to board the ship.

"I hope he gets a quiet coastwise job next trip," she commented. Also among the first visitors going aboard the vessel at the dock was Miss Cathleen Schurr, 23-year-old New York girl, who was one of the *Athenia* survivors returned to the United States by the *City of Flint* last September. She waved hearty greetings to the sailors who had helped to make her comfortable on that crowded voyage.

There was some disagreement among the crew over comparisons of the weather in Baltimore and Murmansk, well within the Arctic Circle. Several of the seamen said it was colder here this morning than in Murmansk when they were there. Others said the Russian harbor was colder. Captain Gainard said he noticed little difference, except I like the people better here.

Earlier reports that United States Lines officials had gone aboard the *City of Flint* yesterday as she entered Chesapeake Bay at the Virginia Capes with the crew's first pay roll since October 3 proved erroneous.

## The Expert Hallucination

## EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

LETTER FROM CLARENCE AUSTIN CASTLE, OF MONTVALE, N. J.

Mr. GEARHART. Mr. Speaker, much has been said about experts during the course of the hearings before the Ways and Means Committee on the bill for the extension of the Reciprocal Trade Agreement Act.

Over and over again proponents of this strange method of tariff tinkering have asserted that the substitution of tariff-rate fixing by experts is far superior to the old constitutional method of tariff-rate determination by the representatives of the people—that is, by the Congress of the United States.

Aside from the fact that the so-called experts have never yet concluded a trade agreement, and never will, unless the statute is amended, this argument has so often been repeated that, though utterly false, it has been accepted by many, many people as a truism, as a new order of things.

If there is anyone who still believes that our trade agreements are actually concluded by this mythical breed called "experts," let me refer them to the statute itself. But a casual glance at that act will reveal that the President is the one who by law is clothed with the authority to conclude agreements of this kind.

It can be assumed, of course, that the President, in approving trade agreements, acts upon the advice of others—even upon that of those glorified persons of infallible wisdom called "experts"—but the responsibility, nevertheless, rests with the Chief Executive, not anyone else.

Now, no one would pretend that the President himself can be classed as an expert in tariff-rate fixing any more than are the Members of Congress who, under the plain terms of the Constitution, are charged with the duty of writing all tax legislation, including that which relates to the tariff.

Certainly no one who has not resigned his reason would contend that the Chief Executive can act more efficiently in writing a tariff rate "under the advice of experts" than could the Members of the Congress in writing a tariff rate "under the advice of experts," even the same experts, gloriously heralded as they are.

It is time that this fake argument in favor of the continuation of this insane program be brushed aside in the interest of simple truth. Experts are not writing these trade agreements, and it is time that the people of the country are informed of the fact.

But, since we are talking about that group of gentlemen who delight to describe themselves as experts, I wonder if I would be permitted to whisper into the ears of my colleagues of the legislative body just a wee bit of a doubt concerning the expertness of this band of worthies who so glibly assume the high-sounding title.

Well, sir, because another has done a far better job in this regard than I possibly could, I am for the moment spared the necessity of an attempt. A letter from the capable pen of Mr. Clarence Austin Castle turns a pitiless searchlight on the whole caboodle of these bright boys, applies to them in an expert way—if I can be pardoned for using the word—a rather delicate, a very skillful analysis, an appraisal of this new group of self-asserted superlative wisdom, which I think will interest and amuse, if not instruct, the membership of this legislative body.

Therefore, Mr. Speaker, I ask the unanimous consent of the membership to include Mr. Castle's letter to the Cleveland News in the CONGRESSIONAL RECORD as a part of my instant remarks of this day.

There being no objection, Mr. Castle's letter follows:

[From the Cleveland News]

To the EDITOR OF THE NEWS.

SIR: Although Mr. Hull, its chief, is actively engaged in negotiating foreign-trade arrangements, the Department of State actually does not know their effects upon American jobs. His Herbert Feis, titled "adviser on international economic affairs of the Department of State," writes me officially June 10, 1939, and reaffirms regretfully in a confirming letter of August 16, 1939, after nearly 20 trade arrangements with as many countries had been concluded:

"This Department of State has no available information concerning the amount of employment, or man-hours, consumed in the production of goods exported from or imported into the United States."

The very department charged with promoting the welfare of Americans by international trade is itself in ignorance of the effects of that trade on American jobs. When a department and its chief are that inept, we can only expect catastrophe from their actions.

Even the America-wooing League of Nations declares that the United States is the lowest of the 20 major nations as regards each one's ratio to its own industrial production for 1929. Each of 12 of these nations is actually producing more than it did in 1929. Each of only 8 is producing less than it did in 1929. The United States is at the bottom of all 20. No wonder we have 80 percent of the world's total unemployment with only 7 percent of the world's population living in only 6 percent of the world's territory.

Is international trade being glorified? Will it eliminate military and the equally deadly commercial wars? There is no proof that it has augmented jobs for Americans. To erase its ally and critic, the Department of State patronizingly swallowed the Bureau of Foreign and Domestic Commerce, built up by Dr. Julius Klein, and by Mr. Hoover as Secretary of Commerce. Thus Mr. Hull has his own unhampered policy, viz, he sits in judgment on all nations, indexing them to his will as "friendly" or as "enemy." Then he favors his "friendly" nations with trade arrangements, but punishes his "enemy" nations by withholding them. He has made himself commander in chief—dictator—of international trade. As his weapons he uses your and my purchasing power and your and my jobs.

Did we vote him authority to wage America's international trade wars as he sees fit? Have we even consented that he choose for us our exports and our imports—with their reactions on our jobs? If we did, what do we profit? Do his trade arrangements with other nations make us a "have not" nation on the ascent, or a "have" nation in a decline?

We have 80 percent of the world's unemployed. Keeping that fact in mind, ask yourself, "What are trade balances?" They are simply international bankers' balances. You haven't one—I haven't one. Country A buys directly and indirectly from country B. But country B buys directly and indirectly from country A. From time to time the trade is balanced and it is found that one country owes the other. An international banker ships some currency to the creditor nation, and that nation is said to have a favorable trade balance because it is the recipient of some money. It is as simple as that. Jobs are never mentioned; it is all done with money.

Take one example of this so-called trade or exchange. Suppose we import \$5,000,000 worth of blown glassware from JapBohEng. In every country, including the United States, 60 percent of the costs of manufacture of blown glassware is wages paid to labor. Therefore \$3,000,000 (of the \$5,000,000) was wages paid to labor in JapBohEng. But in JapBohEng wages for blown glassware average 10 cents an hour (in Japan it is only 6 cents an hour). Thus the glassware imported into the United States represents (\$3,000,000 divided by 10 cents) 30,000,000 man-hours of labor in its manufacture.

The average American wage in that industry is 60 cents an hour. Thirty million man-hours at 60 cents are \$18,000,000. Thus the \$5,000,000 glassware imports displaced \$18,000,000 of American labor. That is about 17 years of steady employment for 1,000 Americans. Said another way, \$5,000,000 of imports unemployed 17,000 Americans for 1 year.

It is an international crime to balance the trade between countries in the currency of any one of them.

A fair statement is that imports into the United States employ many times the small number of Americans provided with jobs by exports from the United States. Figures favorably prepared by those bolstering the Hull trade arrangements estimate that 2,400,000 Americans were employed because of our exports in 1937.

That was 5 percent of the estimated 48,000,000 Americans at work at that time.

Col. Millard D. Brown, president of Continental Mills, Inc., quotes figures from the late Senator Schall to show how many Americans could be given jobs, were only 19 categories of imports prohibited. That number, fellow Americans, is 5,730,000. If each worker supported himself and two others, the elimination of 19 imports would give lifetime, full-time livelihood to 17,190,000 Americans.

From the standpoint of jobs for Americans, it would be decidedly advantageous to cancel all our exports solely to prohibit the entry of only these 19 imports. The calculation is: 5,730,000 jobs gained by eliminating 19 imports; 2,400,000 jobs lost by canceling all exports, giving 3,330,000 new jobs for Americans.

Montvale, N. J.

## Warm Clothing Plays an Important Part in the Victories of the Finns Over the Russians

### EXTENSION OF REMARKS

OF

HON. ROSS A. COLLINS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

LETTER BY VILHJALMUR STEFANSSON

Mr. COLLINS. Mr. Speaker, when Congress is spending tremendous sums upon military defense measures, some thought should be given to proper clothing for soldiers in Arctic regions. It has been known for a long time that Alaska is the most important zone for the protection of the United States from an oriental foe. Appropriations have already been made for extensive air bases in that region. Little consideration, however, has been given to warm apparel to be worn by our soldiers stationed or operating there. My friend Vilhjalmur Stefansson, the great Arctic explorer, has told me repeatedly that reindeer skin provides the best clothing for cold weather in addition to being a fine local food. Very recently I received a letter from him in which he sets out the use of the reindeer for food and clothing. The letter coming from this great authority should waken widespread interest in the protection of the reindeer for these purposes. For this reason I am taking the opportunity to insert it in the RECORD. The letter follows:

REINDEER AS ALASKA DEFENSE MEASURE

New York, January 19, 1940.

Hon. ROSS A. COLLINS,

House of Representatives,

New House Office Building, Washington, D. C.

DEAR MR. COLLINS: This letter is being addressed to you because of your long and deep interest in Alaska from a military standpoint and because, although upon a military subject, at is one which I believe should be called to the attention of an appropriate committee of Congress rather than presented directly to the War Department.

The news dispatches from Finland bring out a point which you and I have more than once discussed—that good clothing, and knowing how to keep your clothes in good condition, is about the most fundamental Army problem for cold-weather operations. No other cold-weather clothes are nearly as good as reindeer, which is again as you and I have been saying.

Some of the dispatches from Finland state in a general way that Finnish soldiers are better clad than those of the Soviet Union. This may be true, even when you compare merely woolen-clad Finns with woolen-clad Soviet troops. Occasionally dispatches bring out that the superiority of Finnish clothing is through use of reindeer skins. As a sample I attach a cutting from today's Herald Tribune. The reindeer angle of the Finnish war is the specific reason for this letter.

There are at least three ways in which reindeer can play an important part in any northern war, as they are doing in the present Finnish-Soviet war.

Reindeer-skin clothes, when properly made from skins of the right age and sex, and when their proper care is understood by the wearer, are as durable as any clothes, more flexible than any other clothes which will keep you warm enough, and warmer for their weight, than any other clothes yet devised. A soldier dressed in a reindeer suit can move faster and more easily than if dressed in woollens or in any other substitute. He can be more comfortable at intensely low temperatures than in any other clothing; in fact, perfectly comfortable indefinitely at 50° below zero, even though not moving at all. For temperatures below Fahrenheit zero there is no form of outdoor activity, military or civil, that is not more easy in reindeer clothing than in other clothes. Reindeer clothes are also good in the temperatures between zero and 20° above.

The clothing importance of reindeer does not make it necessary that there shall be a reindeer industry in the country where the military operations are being conducted; reindeer clothes can be brought from other lands with no more difficulty than woolen clothes. But the remaining two chief values are, from a military point of view, dependent on there being a reindeer industry in the country where the war is being fought.

Reindeer, when in their own country, are self-supporting and self-transporting. Bands of steers suitable for meat can feed as they travel, can be driven to a place near the scene of any military operation and be butchered locally. The butchering is much simpler in cold weather than people of the South realize; there are no

problems of keeping meat fresh, for it will freeze almost immediately after the beast has been skinned and cut up. For a country like central and northern Alaska, or central and northern Finland, the reindeer has not merely the advantage of being an animal which can be produced locally for food but is also one which, particularly in the stress of a mobile campaign, solves (at least in certain instances) its own transportation problem.

Lastly, there is the value of reindeer for the transport of people and goods. Frequently this value is overrated but it still remains true that they are a fast, if not very strong, beast of transport, and that within limits they are self-supporting even when used as draft animals—they feed on local herbage during rest periods and at night.

All this is written with the idea that you might find some appropriate way of calling to the attention of Congress that in Alaska the reindeer is one of our most valuable defense resources. When Congress is spending large sums upon other defense measures in that Territory, they should spend also at least some money and some thought upon how its reindeer industry can be conserved and built up. This is not deprecating the peacetime values of the reindeer, as they are ordinarily presented, but is merely bringing out that the industry has in Alaskan defense a key value—that it produces the best clothing for cold weather, that it is a local supply of food, that it is in some cases a self-transporting food supply, and that it has still further value for the transport of men and goods.

Up to the present, I believe the departments which have been chiefly interested in Alaska reindeer are those of Agriculture and Interior. Do you not think it worth while to consider whether an interest should not be taken by other departments of our Government, particularly by those directly concerned with defense?

VILHJALMUR STEFANSSON.

## Internal Revenue Collections and Grants to States

### EXTENSION OF REMARKS

OF

HON. GEORGE S. WILLIAMS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a table which I have prepared showing the total internal-revenue collections from each State; also the total grants to and expenditures within these States. I think a comparative study of this table will give surprising information.

Total internal-revenue collections per capita by States—Total grants to and expenditures within States—Fiscal year ending June 30, 1939

	Population as of July 1, 1937 <sup>1</sup>	Total internal- revenue col- lections	Total internal- revenue collections per capita	Grants to and expenditures within States
Alabama.....	2,895,000	\$15,491,000	\$5.35	\$96,999,000
Alaska.....	62,000	960,000	15.61	2,456,000
Arizona.....	412,000	4,379,000	10.63	26,372,000
Arkansas.....	2,048,000	7,943,000	3.88	82,967,000

## P. W. A. Hospital Construction

### EXTENSION OF REMARKS

OF

HON. WILLIAM S. JACOBSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

#### REPORT BY THE PUBLIC WORKS ADMINISTRATION

Mr. JACOBSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report received from the Public Works Administration on hospital construction throughout the United States:

#### P. W. A. HOSPITAL CONSTRUCTION

During the past 6½ years the Public Works Administration has made \$176,928,556 in allotments for 743 hospital projects involving the construction of 2,056 buildings providing 107,849 hospital beds. The total construction cost of this portion of the P. W. A. program has been estimated at \$297,253,706. These P. W. A.-constructed hospitals are located in all of the 48 States, the District of Columbia, Alaska, Hawaii, and Puerto Rico, and approximately 45 percent of them are located in States that do not contain large metropolitan areas. Many of the hospitals were constructed in communities which heretofore had been without adequate hospital facilities.

In addition to non-Federal hospital construction, there have been 152 Federal hospital and sanitarium projects costing \$37,002,853. These projects, including veterans' hospitals and sanitariums, Indian and military hospitals, and Federal prison infirmaries, have added an additional 13,911 beds to the Nation's hospital capacity, making a total with the non-Federal figure of 121,760.

The technical committee appointed at the President's National Health Conference in 1938 determined that the normal increase in hospital beds has been 25,000 a year. As a result of P. W. A. hospital construction there has been the equivalent of 5 years of normal growth.

P. W. A.-financed non-Federal hospitals are classified into four major types: General hospitals, those specializing in mental cases, tuberculosis cases, and homes for the aged and indigent.

Although the classifications, both Federal and non-Federal, show how P. W. A. has been responsible for a marked increase in the Nation's hospital capacity, they do not cover the field of P. W. A. help to public health, since a large number of projects were for service and utility buildings in connection with existing plants. There have been hundreds of projects for rebuilding kitchen facilities, boiler plants, power and light plants, nurses' homes, administration buildings, staff quarters, garages, water-supply systems, and other utilities.

There is still another type of medical project that does not provide beds but is of great importance in the national hospital picture. P. W. A. has made allotments for the construction of medical and dental schools, where medical students and graduate doctors may receive more adequate training. Medical buildings and clinics, dispensaries, and research centers have been built in connection

with educational projects at many of the Nation's colleges and universities.

Seven percent of P. W. A.-financed hospitals located in 17 States were constructed for the use of Negro patients. In addition, many of the general hospitals provide wards for Negro patients.

Broad as has been the P. W. A. hospital-construction program, there is still a serious shortage of hospital facilities in many sections of the country to bring the Nation's hospital facilities to an adequate standard. The President's technical committee advised that 36,000 beds a year for 10 years should be added to the existing supply to adequately meet the demand, and in addition, the setting up of some 500 health and diagnostic centers in areas now inaccessible to hospitals.

This Nation-wide need for additional hospital facilities was indicated in the fact that when P. W. A. returned 5,043 applications to public bodies on September 6, 1939, because of the lack of additional funds, there were 203 applications for hospitals and institutions with an estimated construction cost of \$105,486,892.

A list of P. W. A. allotments for non-Federal construction by States is appended:

#### List of P. W. A. allotments for non-Federal hospital construction by States

	Number of projects	Number of buildings	Number of additional beds provided	Total estimated cost
Alabama.....	9	15	1,449	\$3,396,186
Arizona.....	3	5	255	1,338,312

## Loan to Finland

### EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

Mr. GOSSETT. Mr. Speaker, I think it might be said in tribute to the average American citizen that he has a high sense of honor and is resentful of injustice wherever or however perpetrated. The vast majority of American citizens

deplore the ruthless and unprovoked attack of big Russia upon the courageous and liberty-loving people of little Finland. The American attitude is shown by the following article appearing in the *Wichita Falls Record News*, *Wichita Falls, Tex.*, on Thursday, January 25:

**WICHITANS STRONG FOR LENDING FINNS MONEY TO BUY WAR MATERIAL**

The United States should lend Finland all the money it needs to fight the Russians—and with no strings attached as to how the money is used.

A "horseback" survey of *Wichita Falls* opinion Wednesday by the *Record-News* showed citizens of this city favor giving the Finns a military loan with which they can buy machine guns, cannon, bombers, or whatever is needed to stop the red "barbarians."

The opinion is strong but not unanimous. The 1-minute interviews even revealed one family divided against itself, but the ratio is about 5 to 1. The interviews follow:

Sam Hamlett, manager of Production Credit Association: "It looks like we ought to help the Finns. They are the only people from whom we have collected loans made during the former war. I think we should abide by strict neutrality in all European fustles. The Finns have proved they are good loan risks, and we are on their side."

Chris Jensen, city scout car patrolman: "Yes; I do. If we don't help them now, we will have to fight the Russians later. The Finns are about the best people in the world, and they deserve all the help we can spare them. I don't think helping them will get us into war any quicker. We are bound to get in anyway."

Rev. J. Henry Cox, pastor of the North Side Baptist Church: "Personally, I think we ought to loan Finland all the money they need. Russia has defied every decent human institution. They (the Russians) have defied God and all His teachings. If Russia isn't defeated by Finland or stopped, it will mean we will have to fight them to save democracy and religion."

Dr. Clark Wilcox, ranking Army Reserve officer in *Wichita Falls*: "We have been raising money for the aid of noncombatants. Our sympathy is for those in distress from the oppression. We have a strong sympathy for the movement to combat the communistic selfishness in this case. We should remain strictly neutral in reference to other nations. But we should go a little farther than voluntary contributions. We should extend money for purchase of arms."

Tom Vague, chairman of military affairs committee of the chamber of commerce, captain in the Army Reserves: "It is ridiculous that we even have to debate a minute about whether or not we should send aid to Finland. We ought to send it immediately with no limitations on what they could buy. Everybody has proved how we feel, and I think it is just dirty politics to hold up the proposed loan. The Finns have proved good creditors. We have already extended \$10,000,000 in loans. That precedent should point the way. I don't think it will get us into the war."

J. R. Martin, radio service man and president of North Texas Rifle and Pistol Club, 1802 Woodrow Street: "Yes. Finland is subject to an unreasonable attack and I think we should help. From a business standpoint we should regard a loan as a good investment, for Finland has paid her debts."

Mrs. J. R. Martin: "No; if we have money to spend, there are many people in need in this country. I believe charity should begin at home."

Henry Armstrong, high-school football co-captain: "Yes; because Finland has paid her debts."

William E. Huff, insurance man: "Yes."

W. N. McCaslin, Jr., Braniff Airways attaché: "I am much in favor of the loan. Finland is certainly a deserving country and I think it will have a great bearing on the outcome of the whole European war. By stopping Russia we are indirectly stopping Germany."

Mrs. W. W. Lankford, 1703 Kemp, housewife: "It looks to me like a very good cause. I don't think we should sell them guns, however. If we had enough to supply both Finland and the United States, it would be different. As it is, I think we should keep our guns at home and be prepared for better or for worse."

W. S. Bourland, Jr., 2017 McGregor, oil operator: "I'm in favor of selling them anything in the world that will help those poor people. We know they have been true, faithful, and courageous. They have paid their honest debts."

Mrs. Kenneth Bebb, executive secretary, North Texas Civic Music Association: "I do not believe now there is much feeling of neutrality with any of us, so far as Finland is concerned. There seems to me sufficient reason and sufficient precedent to extend Finland a reasonable loan without restriction as to uses made of such funds."

Ernest Guffey, owner Monroe Street pharmacy: "I am very much in sympathy with Finland. I think our Government should lend them help and stand behind them."

A. K. Presson, assistant principal, *Wichita Falls* High School: "I am inclined to say yes; make them a loan, but my attitude is one largely of sentiment, rather than business principle."

Marconi Hobbs, grocer, 1802 Harrison: "I would favor lending Finland a reasonable amount of money on any basis that would not get us into a political jam."

George W. Anderson, attorney: "Absolutely right; yes, sir."

Fred L. Story, insurance man: "I think I would approve such a loan, the way my sympathies are now, but I should hate to see our Nation become involved in any way with Europe's troubles. My

sympathy would prompt me to lend Finland money for them to use as they might see fit."

J. C. Boyd, Jr., assistant traffic industrial manager of the *Wichita Falls* Chamber of Commerce: "I approve of giving financial aid to Finland. Selling them guns is O. K., too, but I'm opposed to ever sending men. You have to draw the line somewhere. Right now I'm a grand hand for letting the other fellow do the fighting."

Mrs. W. J. Howard, 1110 Fifteenth Street, housewife: "I think it is wonderful that Finland was the only country to pay their debts to the United States. I certainly think they should have the money. As for selling them arms and ammunition, \* \* \* well, what they do with the money after they get it is their business."

Mrs. G. M. Crutsinger, wife of Dr. Crutsinger, dean and director of *Hardin Junior College*: "Lending them money is probably all right. We are a strong Nation, and it seems that the strong should help the weak. I'm like many other women, however. I have a boy who is old enough to fight; I want to stay out of war."

It is hoped that the ideals and common good sense of the average American will enable our country to become a stabilizing force for peace and order in a war-torn, war-demoralized world.

### The Work of the Dies Committee Should Be Continued

#### EXTENSION OF REMARKS

OF

HON. CLARENCE J. McLEOD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 23, 1940

Mr. McLEOD. Mr. Speaker, in casting my vote for the continued existence of the Dies committee investigating un-American activities, it was my sincere belief that all alien "isms" should be swept from our shores as unclean and unwanted. It is my opinion that the only "ism" which should exist in this land is Americanism.

That there are thousands upon thousands within our shores who seek to turn out democracy and raise the bloody flag of communism over the white dome of this Capitol Building is an established fact. It was this danger from within of which I was mindful when casting my vote.

We were not requested to give a blanket endorsement of the ways and means by which the Dies committee has conducted its inquiry. What we did was to give our stamp of approval to a program of detecting and stamping out the seeds of totalitarianism before they can take root and spread their poisonous tendrils throughout the land.

Despite criticism and against unwarranted odds, the Dies committee has been untiring in its efforts to reveal the methods and examine the extent of alien and domestic forces engaged in propagating political doctrines hostile to our native democracy. The undefeatable majority by which the House of Representatives voted to continue the Dies group mirrors an overwhelming public opinion that there remains work to be done in uncovering these sore spots, and that a congressional investigation of these unscrupulous gangs is essential to the safety of our Government at this time.

All America must awaken to the fact that within our midst, undercover organizations of undeterminable strength are threatening and attempting to harass and undermine our system of government. America must be made aware of the fundamental truth, that the condition upon which God has given liberty to man, is eternal vigilance. Eternal vigilance is the price we must pay for liberty. We can ill afford to be indifferent to these hidden dangers and merely indulge in wishful thinking.

The time for counteraction against these subversive groups is now. Not next month, not next year, but now.

Every day organizations are springing up under a cloak of secrecy whose ideologies are in direct contrast to our democratic system of government. It is not enough that we take pride in this great Nation of ours. It is the common fate of the indolent to see their rights become a prey to the active. We can unconsciously surrender our rights to these malcon-

tents until the day we awaken to realize, too late, that liberty is gone and we are no longer the masters of our destiny. Apathy, not time, is the great lever of democratic institutions.

As a concrete example of threats to our Government, may I point out the fact that there was undisputed evidence before the Special Congressional Committee Investigating Un-American Activities that a short time ago a convention was proposed to band together in a united front 150 disreputable, un-American organizations, which now exist in the United States, their sole thought and purpose being to break down our democratic system of government. America must not tolerate atheistic communism—must not tolerate the growth and expansion of such groups and organizations as the White Front, the Christian Front, the Black Shirts, Gold Shirts, Christian Mobilizers, Christian Crusaders, the American Nationalist Confederation, and numerous others.

Because of their veiled, stealthy, cunning activities and concealed methods of organization, we have no definite way of determining the aggregate strength of these under-cover un-American groups. We do know, however, that these organizations, no matter what their total enrollment may be, are far too strong to be left uncurbed, to multiply and spread their insidious doctrines throughout the land.

The State Department has informed me that at the present time a total of 394 foreign propaganda agents are registered with the American Government. No one can estimate the number of foreign agents in the country illegally and who are not registered.

In view of these facts, the course of our future destiny depends on intelligence, constructive action, and perseverance; depends on the awakening of the inherent qualities of our forefathers in their history-making struggle for freedom; depends on our true fortitude as individuals and as Americans.

Let us realize and appreciate the many priceless gifts we possess—gifts that only a real democracy gives to its people. A great trust is in the hands of our generation, and, Mr. Speaker, it is a most sacred trust. Our forebears, with the same responsibilities, did not fail; they passed on to us the same free democracy that has been handed down to them from the founding fathers.

Centuries of political experience with the keen thinkers of by-gone days combined with the liberty-loving peoples of all nations gave us what we have today. We have won every industrial battle we ever entered. Against the stubborn forest we won a continent. Against unwilling nature we have produced the products of mine and field. Against the odds of world-wide industrial competition we have won an enviable place. We have won all our political wars since the Revolution. Now at peace externally, we must settle down to fight the enemy from within.

Our form of government insures the most individual freedom, and it is under this guaranty of freedom of thought, speech, and religion that the Communist and his sly fellow travelers carry on their nefarious activities. Once obtaining the privileges of our political indulgence, the Communist unloads his base theories of government. He violates the confidence America has placed in him, and tries to undermine the very system of government by whose grace he enjoys the freedom of speech he violates.

It seems to me that if individuals in this country desire to benefit from our vast resources, they should be only too glad to adhere to the American form of government under which these resources have been developed. It has been my policy whenever possible to urge that every organization in this country have as one of its basic principles of existence the preservation and the allegiance to the American type of government—democracy.

Now is the time for the people of the United States to take upon their shoulders the responsibilities relative to protecting our great Nation, not only from attack from without, but from attack from within. Our inherent rights are protected by the Constitution, and are not the pawns of a dictator. It is the

express duty of every American to sacrifice his very life in order that these rights may be handed down intact to future generations of Americans. If we fail, democracy will die and our restless spirits will bear the burden of democracy's passing. Surely this is a burden which none of us care to assume.

With all the human weaknesses and imperfections, our Government is the best in the world. Its existence is dependent upon every man, woman, and child. It is our duty to prepare to preserve ourselves from attack from within by an enlightened public opinion. The Dies committee has brought to light the workings of many "ism" groups, and has frightened many others out of existence. Any committee which can accomplish these duties deserves to be continued by and with the support of all real Americans.

Carl E. Mapes

## EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

Mr. SABATH. Mr. Speaker, "Death is come up into our windows and entered into our palaces."

I speak briefly on this sad occasion, not because any poor word of mine will add to the story of courage and achievements of our late colleague, the Honorable CARL E. MAPES, who has, by passing beyond the reach of human help or harm, and I would faintly hope, through grace, above our praise, left such a void, and in the front ranks here, but because of the especially high esteem in which I held this honorable dead.

Mr. MAPES entered the Congress on March 4, 1913, or 6 years after I entered; and during all the years of our association our relations were most cordial, especially since I became chairman and he the ranking Republican of the Committee on Rules. A more affable and accommodating gentleman I have never known. In the differences that naturally develop in our system of party government I never once heard this gentleman utter one unkind or uncharitable word against a living soul, and he was ever proffering to facilitate action on measures pending before our committee. Mr. MAPES contradicted the oft-repeated assertion in ill-informed circles that legislators cannot place weal of country above political expediency.

His high degree of intelligence and simplicity are too well known to this membership to require restatement. If you would observe a specimen of his simplicity and self-effacement, consult the biographical section of the Congressional Directory, which does not indicate that he was the ranking minority member of two of the most important committees of the House.

Our departed friend needs no eulogy. His work is finished and will be a worthy monument for many years. I feel sure that Mr. MAPES would not have any of us say anything laudatory of his life and work, but we can take advantage of him now.

In the tumult of strange ideas and extreme passions, in the face of threatening rumblings of sinister things, at the eve of uncertain tomorrows, Mr. MAPES, with enviable wisdom and poise, could not be perplexed or frightened, but went on in fortune and misfortune at his own private pace, like a clock in a thunderstorm. He taught us by example that the most certain sign of wisdom is a continued cheerfulness. Again, he taught us by example that talk which does not end in any kind of action is better suppressed altogether. He always squared promise with fulfillment, mouth with hand, and he was very seldom outclassed in capacity and never in courage. Indifference to his personal welfare was actuated by his complete devotion to his onerous and important duties. Our late friend did not change his mind to suit men and circumstances, he relied upon the reward given to men who do

not flinch before the cries of the multitude, and who do not seek their political fortune in the success of the moment. He walked straight in what he thought was the right path as a good citizen and faithful servant of all the United States.

Our late friend and colleague has left the memory of really a good and able man, one who during a busy and useful life ever did his best in every way to promote equality of opportunity and happiness, and he had an unappeasable and uncompromising detestation for all that was baneful or iniquitous or menacing in actuality or potentiality.

Faithful and intelligent servant of the Republic, rest in peace, ever garlanded by the love of friends and sanctified by the adoration of family and kinsmen.

### The Naval Construction Program

#### EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

LETTER BY HON. COLGATE W. DARDEN, JR., OF VIRGINIA

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to the editor of the Washington Evening Star by my colleague from Virginia [Mr. DARDEN].

[From the Washington Evening Star]

MR. DARDEN DEFENDS VINSON BILL SLASH—VIRGINIA REPRESENTATIVE SEES NO DANGER IN NAVAL CUT

TO THE EDITOR OF THE STAR:

I have read with interest your editorial of January 19, entitled "Dangerous Economy." While I am in accord with your desire to see authorized the naval tonnage necessary for the protection of our country, I feel that you are unduly apprehensive as to the effect of the changes suggested by Chairman VINSON.

There is no cause for alarm in the proposal made by the chairman of the House Naval Affairs Committee in view of the recent report on naval tonnage, authorized and available, made to the committee by the Navy Department.

Without touching upon battleship construction, the authorizations for which, I take it, you deem adequate, we find that the Budget for the coming fiscal year 1941 provides for the following construction which has heretofore been authorized:

1. One aircraft carrier of 20,400 tons.
2. Two cruisers aggregating 20,000 tons.
3. Eight destroyers aggregating 13,600 tons.
4. Six submarines aggregating 9,600 tons.

After this construction has been appropriated for there will be available for further appropriation and construction, authorization having already been made, as of July 1, 1940, the following:

1. Cruisers, 82,999 tons, or four times the tonnage being appropriated for the fiscal year 1941.
2. Destroyers, 61,830 tons, or almost five times the tonnage being appropriated for the fiscal year 1941.
3. Submarines, 12,856 tons, or about 40 percent more than the tonnage being appropriated for the fiscal year 1941.

In your comments on Mr. VINSON's proposal you stress particularly the danger of neglecting to add to our destroyer strength. There is no danger from this source, notwithstanding the fact that it is proposed to strike destroyer authorization from the pending bill.

After the construction now provided for in the Budget for the fiscal year 1941, there will be authorization outstanding for sufficient tonnage to permit the construction of 33 new destroyers of the 1,850-ton leader type, or 40 new destroyers of the conventional 1,500-ton type.

This gives us, should we continue construction on the basis which has obtained for the past several years—namely, 8 each year—sufficient tonnage for 4 years' work if only the leader type is utilized, and for 5 years' work if the 1,500-ton type is built. In view of the fact that comparatively few leaders need to be constructed in a balanced program, it is reasonable to assume that we have available much nearer 5 years' work than 4. This being the case, I believe your criticism on this point is not well founded.

The Vinson bill, with the changes recently proposed, authorizes the following additional tonnage:

1. Carriers, 75,000 tons, or 3 new ships of our latest class.
2. Cruisers, 110,000 tons, or 11 new ships of our latest class.

3. Submarines, 33,000 tons, or approximately 20 new ships of our latest class.

This tonnage is added to the authorized tonnage above referred to which will be available after the construction provided in the Budget for the fiscal year 1941.

Thus, the tonnage available with the passage of the Vinson bill not only provides an ample reservoir from which actual construction can be drawn when the necessary appropriations are made but it gives sufficient opportunity for the Navy to work on new designs, as suggested in your article, and with which suggestion I am in hearty accord.

It appears to me that the bill, with the changes suggested by the chairman, is a much sounder piece of legislation. I cannot escape the conclusion that the editorial in question is unduly alarming and tends to create in the minds of your readers, of whom I have been one for a number of years, an erroneous conception of our naval program.

COLGATE W. DARDEN, JR.,  
Representative from Virginia.

William A. Ashbrook

#### EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

Mr. SABATH. Mr. Speaker, it is to me a source of mingled sorrow and pleasure to have an opportunity to speak on this occasion of sorrow, because it brings freshly to my mind the thought of the loss of him whose memory we are honoring and of pleasure because of the opportunity given me to add my short tribute of respect and affection to the fuller tributes placed on the altar of his memory this and other days.

I knew Mr. ASHBROOK and some other members of his family very well, having first met them at a local hotel where we all lived. His family life was beautiful and typically American. The flowers of unsullied affection bloomed ever fresh in that household.

We entered the Congress the same date, March 4, 1907, and for 14 years immediately thereafter we were closely associated in our legislative work. He went out in the Harding landslide of 1920 by only 123 votes, but, undiscouraged, he returned 14 years later. He was 14 years a Member, 14 years absent, and again a Member.

When our late friend first came here he was an aggressive liberal, and therefore I confess to being somewhat painfully surprised at seeing the change time had made in his political philosophy during his absence. I think it is fair to say that he was, from the time of his reentering the Congress on January 3, 1935, to the time of his passing, ultraconservative in a rapidly changing world. Perhaps he fell into ill company among the bankers.

While we were in complete harmony during the deceased's first service here, yet I did not agree with many of his late political views; but it affords me pleasure to say that he was conscientious in what he advocated or defended. We properly designate that quality as excellent.

This good man, who was well grounded in the principles of journalism, finance, and agriculture, made valuable contributions to the permanent work of this body. He left, all told, a record as citizen and legislator of which nobody should be ashamed. He was, as he believed, ever braced, intellectually and emotionally, for the defense of the right.

We are told by those who knew our honorable friend best that no elevation in society diminished his respect for the sons of toil. He learned lessons of self-reliance in the hard way, and they sustained him in seasons of adversity. Poverty and toil were his steps to honor; and he was a steady and uniform friend of humanity. He held Justice to be the great interest of man on earth; and he knew that wherever her temples stood there was a foundation for social security, general happiness, and the improvement and progress of our race.

It has been said that adversities and sorrow make us better men, and I believe this is true. As we look upon the seat of our late colleague, now vacated by him, we must fully realize that if we are to carry out to the fullest the Saviour's plan we must daily practice justice, mercy, wisdom, and truth with those with whom we come in contact.

The hard blows we get in the daily give and take of life make us not only better able to go about our duties with a sterner purpose and determination but, at the same time, we are enabled to feel the keen edge of another's woes when the tide of life is running strong against his fortunes.

Let justice, mercy, wisdom, and truth be our daily guides—justice to our fellow man in every relation of life, well established; mercy to cover the frailties and weaknesses of those who fall by the wayside; wisdom to guide us always on the great highways of life; and truth as the beacon light directing us along our course. May these virtues ever be with us.

Lastly, Mr. Speaker, as the snows of winter shall disappear and be succeeded by the brightness of springtime, with all its gladdening verdure, may the sorrows, the vexations, and the troubles of mortal life be followed by a beautiful and glorious immortality, the hope of the religious world.

### The Dies Committee

#### EXTENSION OF REMARKS

OF

HON. MATTHEW A. DUNN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

Mr. DUNN. Mr. Speaker, I have received letters from individuals and organizations favoring the continuation of the Committee to Investigate Un-American Activities in the United States; however, the greater number of communications received concerning this subject were from individuals and organizations opposing its continuation, mainly because it did not investigate organizations which should have been thoroughly investigated.

It is true that the committee did not investigate certain organizations which had been and still are responsible for the brutal treatment of people who are trying to promote the welfare of labor. It is a known fact that in many States of our Union people who are trying to better their working conditions are intimidated and brutalized by a certain element who call themselves the Vigilantes—in fact, I received three communications from an organization called the Vigilantes threatening my life if I continued to support legislation which I believed to be progressive and humane.

I did not vote in favor of the creation of the committee; neither did I vote for its continuation. I believed, and still believe, that the Department of Justice could do a better job than the Dies committee or any other committee. The men who are connected with the Department of Justice are experienced and well qualified to investigate organizations which are attempting to undermine our Government, and there would be no partiality shown.

If \$100,000 was being requested for the purpose of ascertaining the reasons for the unemployment situation and also to find out why one-third of our population are in need of food, shelter, and clothing, a great deal more good for humanity's sake would be accomplished than to spend that amount of money for the investigation of un-American activities. If the advocates of communism, socialism, fascism, nazism, or any other kind of "ism"—and God knows there is a multiplicity of them—tried to overthrow our Government, they would not be successful in their undertaking if Congress would pass legislation which would abolish the causes of unemployment. Regardless of how much money we would spend for the investigation of un-American activities, we would accomplish but very little as long as one-third of our people are in need of the necessities of life.

### America Looks Ahead

#### EXTENSION OF REMARKS

OF

HON. JOSHUA L. JOHNS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

RADIO ADDRESS BY ELLIOTT ROOSEVELT

Mr. JOHNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Mr. Elliott Roosevelt, which was published in the January issue of the Protectionist:

Good evening, everyone, the other night I had dinner in a restaurant, and during the course of the meal a waiter came in with a great wheel of cheese.

It was good. \* \* \* It was so satisfying I couldn't believe it. \* \* \* It made me think of the easterner who went into the West and stood on the brink of the Grand Canyon for the first time. As his eyes swept across that infinity of space, he shook his head incredulously. "It's a lie," he said. "It's a lie."

So I turned to the waiter, who by now was standing near me with the air of a great painter who knows he has just turned out a masterpiece. "Wonderful," I said. "This is wonderful. Where did it come from?"

"Switzerland," he replied.

I told him again how excellent it was. I said, "I'd like to buy one of those myself—a whole one; can you get it for me?"

For a moment he seemed startled. He seemed at a loss. He said, "Why, I'm sure it could be arranged, Mr. Roosevelt. I'll see. I'll speak to the manager myself."

In a moment he returned and said, "Look, Mr. Roosevelt, I'm going to tell you something about that cheese. \* \* \* You won't let it make any difference, will you? \* \* \* You won't stop eating it, will you?"

That was such a strange request that for a moment I couldn't answer. I said, "No."

"Well," he said, "I was fooling about this cheese. It didn't come from Switzerland. It came from Wisconsin—right here in the United States. It's the finest cheese in the world. But we have to tell some of our patrons it's imported or they won't want it. They think anything made at home is cheap."

Here in a sudden burst of confidence this waiter was touching on one of the strange mental quirks in the people of this country—the mania that most of us have for something "foreign," for something imported, something brought in under a high tariff and sold at exorbitant fees. We like to say, "Best wine in the world—straight from Tuscany." We like to say, "This new tweed is imported, just off the boat." We like to feast our eyes on the little label that says, "Made in England," "Made in Japan," or "Made in Germany."

But every time we do this we place a stigma on American ingenuity, on our own native resourcefulness and competence. If we have green pastures here, and cows grazing in them, why isn't our cheese just as good as the cheese from Switzerland? If we have vineyards here, and sunshine, why aren't the sunny fields of California just as health giving and nurturing as the sunny hillsides of France?

To be guilty of the crime of pride in self or homeland leads to narrowness. To go around making the unqualified statement that American goods are inferior to those elsewhere is sheer ignorance—and nothing else. The people who share this view are generally those who never had time to learn anything about the United States—because they were always too busy reading about some other country. They know the names of Napoleon's generals—but ask them the names of the lieutenant governor of their own State, and they can't tell you.

Only the other day I was talking with a hotel man who had just come from a luncheon with another hotel man from Ithaca, N. Y. During the luncheon this visitor had been greatly impressed by the beauty of a certain kind of salad bowl which he saw at the hotel. "It's beautiful," he said. "Where did you get it? I'd like to have some like it for our hotel."

"Well," said the other, "I hate to tell you this, because it might embarrass you. But this particular bowl came from Ithaca. There's a factory there that makes them. This factory, as I recall, is just a couple of blocks from your office."

That's the way it generally goes. For some reason—and it may be our imaginations playing tricks on us—most of us have a perverted sense of values. We aren't as bad about this as we used to be. We're waking up and realizing what a satisfying old country we live in after all. But all too often we still place emphasis on a label—"Made in Spain," "Made in Italy." Our own goods are similar to the prophet who was not without honor, as you recall, save in his own country. And there was the easterner, as you also recall, decided to make a grand tour of the Western States. In the desert he became fascinated with the Indians, who apparently were weaving beautiful Navajo blankets—before his very

eyes. He bought several and took them home, and when he displayed them proudly to his friends, there was the little tell-tale label on each blanket, "Made in Paterson, N. J."

We say the Swiss know how to make fine cheese—and they do. But we have Swiss in this country—quite a good number. And we also have dairies—quite a good number. If a Swiss and a cow can make a cheese in Switzerland, why can't he make it just as good, just as fragrant, just as satisfying in America? And when I say "cheese," I mean everything else, too—Paris styles and Hollywood styles, Montana T-bone steaks and Argentine T-bone steaks, Florida oranges and Spanish oranges.

I'm not saying one shouldn't eat Spanish oranges. By all means eat them—if you must. But don't go around making the assertion that Spanish oranges are superior to American oranges until you know what you are talking about.

There's no use denying it, \* \* \* most of us are still a little in awe of what we call Old World glamour. The mere fact that a cheap pocket hankie comes from some shop on the Rue de la Paix, seems to invest it with an irresistible charm.

Handkerchiefs and cheeses and finished products are one thing—raw materials are another. I don't mean that we shouldn't have free and open commerce between nations. That is essential. But the individual who spends his dollar for something that comes from a shop across the Atlantic when he could go down on Main Street and do just as well, is lessening the purchasing power of his country by just that amount. And when a sufficient number of people do this, it begins to hurt.

But we are growing up. We are coming of age. And when the day finally comes that we can go to Switzerland and find the natives listening respectfully to the waiters, who whisper, "Sirs, here is a treat—a real treat. This cheese came all the way from America."

On that day, ladies and gentlemen, we shall have arrived.

### P. W. A. Aids National Sanitation

#### EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

Mr. KEOGH. Mr. Speaker, the Public Works Administration during the past 6½ years has allotted funds for more than 1,500 sewer projects costing nearly half a billion dollars. This type of public works is, indeed, the frontier of America that can and should be developed.

When construction of sewage disposal systems fell from \$100,000,000 in 1928 to \$22,000,000 in 1932, the Public Works Administration came to the rescue of this essential type of building and made it possible for construction to increase to \$61,000,000 in 1934, \$100,000,000 in 1935, \$110,000,000 in 1936, and \$115,000,000 in 1938.

To date P. W. A. has made grants of \$172,031,000 and loans of \$106,653,425 toward the construction of 1,525 sewer projects costing \$467,962,671. In addition to the sewer projects, the report states that P. W. A. also made grants for 195 combination waterworks and sewer projects costing \$23,951,390, of which approximately \$10,000,000 was the cost of sewer construction proportion of these projects.

There have been nearly 900 treatment plant projects under the Public Works Administration program. Many of these served communities which had sewers or disposal plants, but their treatment facilities were inadequate. Complete new sewer systems, including treatment plants, were completed in 462 communities.

Many of the communities receiving Public Works Administration allotments for the construction of sewer projects also received allotments for the construction of waterworks projects. In some cases the two were combined under one application. Had not these allotments for waterworks projects been made, many sewer projects would not have been possible, as efficient sewer systems are required where there is adequate water supply.

Many communities which have never had sewage-disposal systems have financed such projects through P. W. A. loans and grants and many others have been aided in extending and improving their sewage-treatment plants. The community always has borne the major portion of the cost.

In assisting communities to construct sewage systems, P. W. A. also aided many sanitary districts in large metro-

politan areas in completing work-creating projects launched prior to 1932 and then abandoned due to financial difficulties. Among them were the additions and extensions to the sanitary and storm sewer in the Sanitary District of Chicago. Because of various circumstances this organization was unable to complete its extensive additions in compliance with the United States Supreme Court order until it received the aid of the Public Works Administration. P. W. A. loaned \$41,363,040 and granted \$16,766,960 to the sanitary district, which today operates the largest sewage-disposal system in the world. Within the sanitary district are 61 cities and villages with a population of 4,700,000. Practically all of these communities obtain their water supply from Lake Michigan. The plant treats a total of 772,000,000 gallons daily.

Another large sewage-disposal system is that in New York City, for which P. W. A. granted \$11,360,250 for the construction of 2 system of intercepting sanitary sewers, 2 sanitary sewage tunnels, and the completion of a sewage-treatment plant at Wards Island, estimated to cost \$25,245,000. P. W. A. also assisted in building the Coney Island plant, estimated to cost \$1,868,000. As a result, 180,000,000 gallons are being treated daily. The New York plant, together with smaller plants in and around New York, has improved health conditions, which resulted in reopening several bathing beaches that had been closed because of pollution.

The problem of adequate and effective sewage disposal has been of concern to every community. An example of pollution abatement is New Jersey's Raritan Valley. Because of the raw sewage discharged into the river and industrial wastes from factories along the river, the Raritan was changed from a thing of beauty and enjoyment to little more than an open sewer, which not only was objectionable to those who lived within the vicinity but also killed fish and plant life. Sixteen communities, acting independently, obtained P. W. A. assistance. Plants estimated to cost \$4,847,000 will restore the Raritan River to practically near its original usefulness as a recreational attraction.

The P. W. A. sewer-construction program also has been of benefit to the Mississippi Valley. States from Minnesota and Wisconsin to Louisiana cooperated in a stream-pollution abatement program, long desired and made possible by P. W. A. funds. Minnesota constructed 50 disposal plants; Wisconsin, 69; Iowa, 55; Illinois, 67; Missouri, 28; Arkansas, 31; Tennessee, 9; Mississippi, 5; and Louisiana, 6. The majority of these projects were located in communities on and near the Mississippi River.

Stream and river pollution in the vicinity of the Nation's Capital has been virtually eliminated as a result of P. W. A. projects in the Potomac drainage basin and in the Washington metropolitan area and nearby sections of Virginia and Maryland.

Prior to 1933 the District of Columbia and communities in Virginia and Maryland were discharging raw sewage into the Potomac River and adjacent tributaries. As a result, according to the Board of Sanitary Engineers of the District of Columbia, the Potomac River was polluted with sewage for a distance of more than 20 miles downstream from Washington. The Public Works Administration allotted a total of \$15,600,000 for Federal and non-Federal sewer and sewage treatment projects in Virginia, Maryland, and the District of Columbia so that the wastes of more than 85 percent of the population of this area have received at least primary treatment.

Other large P. W. A. sewage-disposal projects are located in Cleveland, Minneapolis, Gary, Hartford, Providence, Indianapolis, Milwaukee, and San Francisco.

While sewage-disposal plants and sanitary sewer construction by P. W. A. during the past 6 years has done much to remedy the evil of inadequate sewage disposal facilities, there is still an estimated two and one-half billion gallons of untreated sewage being poured into the Nation's lakes and streams every day. According to the United States Public Health Service, although the population of the United States served by adequate sewage facilities increased from 35 percent in 1932 to 54 percent in 1938, nearly half of the country's population today lives in communities where these facilities are sadly lacking.

According to a report on water pollution by the National Resources Committee in February 1939, sewage from 35,000,000 people, or approximately 47 percent of the urban population, was discharged untreated into water bodies. This report also stated that approximately 2,300,000 tons of sulphuric acid are discharged into streams annually from abandoned and active coal mines.

The United States Corps of Engineers reported that the annual losses from acid pollution in the Pittsburgh, Pa., district, an area which has exceptionally acute waste problems, amounted to at least \$8,000,000 in 1925. As a result of P. W. A. sewer construction in this area, this annual loss has been greatly reduced.

The importance of safeguarding the public health by protecting the water supplies of the Nation has been recognized by virtually all of the States. Also there is greater cooperation between the State governments and the Federal Government today than at any time in the past. The State health and sanitary departments as a result of surveys have issued orders to communities to show cause why they should not dispose of municipal sewage through treatment plants. Prevented by financial considerations from proceeding with these needed developments, communities turned to P. W. A. In September 1939, of the 5,043 applications returned to public bodies by P. W. A., because of lack of funds, 209 were for sewage-disposal projects having an estimated cost of \$132,285,000.

A break-down by States of the various types of sewer construction as of December 1, 1939, follows:

	Number of projects	Loan	Grant	Estimated cost
<b>Alabama:</b>				
Disposal plants.....	7	\$158,500	\$153,909	\$396,823

# Forest Management and Forest Economics—Importance to Pacific Northwest and Southwest Washington

## EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

STATEMENT BY HON. MARTIN F. SMITH, OF WASHINGTON

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me January 8, 1940, before the Committee on Appropriations:

STATEMENT BY HON. MARTIN F. SMITH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Mr. CANNON. Mr. SMITH desires to be heard on the item providing for the Pacific Northwest Forest and Range Experiment Station.

Mr. SMITH. Thank you, Mr. Chairman. That is the main item I am interested in, but I would also like to be heard in regard to several other items of importance to the lumber and forest products industries of my district, from which we derive more than 60 percent of our pay rolls.

### FOREST MANAGEMENT AND FOREST ECONOMICS

Mr. Chairman and gentlemen of the committee, I understand that the items that I am particularly interested in come under the headings of "Forest Management" (p. 294, 1941 Budget) and "Forest Economics" (p. 297).

The Douglas fir forests of Washington and Oregon, covering some 30,000,000 acres west of the Cascades, now supply about one-third of the lumber cut for the entire United States. Intelligently handled, these forests can support permanently an extensive and varied timber industry favored by cheap power, nearness to water haul, and a sustained supply of raw material locally grown. They are the principal factors in the economy of the region.

At present every sign points to extensive depletion of this timber resource. A study recently made by the United States Forest Service shows that, of 3,000,000 acres cut over in the last 20 years, over 70 percent is barren or producing only worthless brush and weeds. The industries are anxious and willing to take any practical steps to alter their cutting practices so as to assure satisfactory regrowth and continued operation. But even the forestry experts disagree as to what needs to be done.

The great need, therefore, is additional knowledge as to just how to cut present stands so as to meet the financial requirements under which the industry must operate, and yet assure adequate forest growth, satisfactory in quantity and quality on cut-over stands.

The new introduction of truck and tractor logging permits the substitution of partial cutting for the extensive clear-cutting and broadcast-burning practices which have resulted in widespread devastation in the past. But the trend toward partial cutting has in itself introduced new questions as to just what method of management will bring the highest returns, what kinds of trees should be left for further growth, how severe will be the losses from insects and wind, what rate of growth may be expected, can the extremely heavy logging debris be so handled as to reduce fire hazards satisfactorily, will partial cutting favor the less valuable species and thus result in gradual deterioration of Douglas fir stands, etc. These are all practical common-sense questions of silviculture and economics which must be answered before the forest industries can afford to practice the conservative cutting necessary to put them on a sustained and permanent basis.

Considerable work has already been done, and definite progress made, but present funds for forest investigations, totaling about one-tenth of 1 cent per acre per year for work in forest management, fire protection, and economic problems of the kind described are far too small to produce effective results early enough to be useful. A sum of \$50,000 annually is needed, in addition to funds now available, for studies in the forest management and forest economics fields. With the committee's permission, I would like to insert in the record a letter to the Director of the Budget by Mr. George L. Drake, of Shelton, in my district, which sets forth compelling reasons for this increase.

SHELTON, WASH., November 22, 1939.

DIRECTOR OF THE BUDGET,  
Washington, D. C.

DEAR SIR: The forest regions of western Washington and Oregon present problems that are different from any other forested regions in the United States, due to the heavy stand of timber (much of which is decadent), the rough topography and large size of timber

(which requires heavy logging equipment), and the great fire hazard due to the amount of debris and the extremely hazardous weather conditions during the summer months. Consequently the Forest Service has seen fit to establish a forest experiment station in the Northwest, located at Portland. This experiment station has performed a very valuable service to the region and its forest industries in studying the local forestry problems.

There has been established an advisory council comprised of representatives of forest industries, the forestry schools of the region, and others vitally interested in the whole forestry program. This advisory council meets yearly with the staff of the experiment station for discussion of the problems considered most urgent. In this year's meeting with the experiment station there was considerable discussion of the need for immediate study of the problems of selective logging in Douglas fir, a practice that is being made possible in certain cases by new developments in logging machinery. The subject of selective logging brings to the front problems of fire risks and silvicultural effect on the stand.

The allotments that have been made to the station for research in selective logging have been very limited, and as a result there are still many questions on which there needs to be more complete information. It is strongly felt by members of the advisory council that an increase of at least \$50,000 over the item in the present Budget is necessary if this important work is to be carried on effectively. There is such urgent need for this information being made available within the near future that it should not be limited or delayed.

Your consideration of this increase in the item for research in selective logging in the Douglas fir region is therefore urgently requested.

Respectfully yours,

GEO. L. DRAKE,

General Superintendent of Simpson Logging Co. and Member, Advisory Council of Pacific Northwest Forest and Range Experiment Station.

### SOME FOREST PRODUCTS UTILIZATION PROBLEMS OF THE PACIFIC NORTHWEST

#### Pulp and paper research

The problem of utilizing the tremendous woods waste in the Douglas fir region has not received the attention which it deserves. The surface of the problem of utilizing the millions of cords of waste material for pulp and paper has hardly been scratched. Some significant progress in the pulping of Douglas fir has been made through research at the Forest Products Laboratory with limited funds, but, unfortunately, Douglas fir possesses certain fiber characteristics which do not lend themselves readily to any of the ordinary pulping procedures. This explains why the amount of fir used for pulping has remained very limited in spite of the amounts available. Leads developed indicate real promise, but, in addition to pulping, there are problems in processing and papermaking which must not be overlooked. The finding of a solution to the Douglas fir pulping problem is so important that almost any expenditure is justified, but a conservative yet reasonable appropriation of \$50,000 could be expended with excellent prospect that worth-while results would accrue. It must be emphasized that the problem is not a simple one to be overcome in a year or two of effort. It is a "long pull" job.

#### Veneer and plywood research

Plywood manufacture is one of the important and expanding industries of the Pacific Northwest depending for its raw material upon large logs of high quality, particularly Douglas fir. A shortage of such logs is already in prospect. What is needed is the development of veneer cutting and processing methods for the production of acceptable veneer from smaller logs and of lower quality and of species not now freely used. This would involve also a study of the glues used in manufacture, methods of gluing, and the properties of the plywood in order that any proposal of new species and grades as a raw material would be sure to give satisfactory service under widely different conditions. To adequately handle this study would require an annual expenditure of \$40,000 to \$50,000.

#### Stream-pollution control

Waste sulfite liquor from paper mills has been a major problem ever since the process was developed, a problem particularly acute in the Pacific Northwest. Many practical leads have been developed through research on a laboratory basis, particularly at the Forest Products Laboratory. These researches are at a point where they must be taken out of the laboratory and made a matter of national action under some cooperative scheme of demonstration and trial between industry and Government. For this a considerable sum of money will be required over a number of years, something like \$100,000 to \$150,000 per year. Government has a stake in this because a great deal of Government timber may fail to find an outlet because of local conditions, such as prevail in the State of Washington. Industry has a stake because mills may be closed down and communities impoverished if laws now on the statute books relating to stream pollution are enforced.

#### Forest-fire cooperation under the Clarke-McNary law

In Washington State we have a tremendous forest-fire problem. Here there are about 12,000,000 acres of forest land in private and State ownership which are continually subject to extreme hazard

from forest fires during the summer months whenever the air gets dry and the wind comes in from the east.

Records show that in 1938, 2,666 of these fires burned 248,000 acres. In this same year (1938) 496 fires were caused by lightning. In fact, the owners of the land are responsible for a relatively small percentage of the total number, thus indicating that the control of forest fires is to a large extent a public responsibility.

The timberland owners contribute substantially to fire control through their protective association. In 1939 the State and the timberland owners set up \$794,967 for this work, supplemented by an anticipated Federal allotment of \$158,521 (hearings, agricultural appropriation bill, 1940, p. 608).

We believe in this three-way sharing of the job by the State, the private owners, and the Federal Government, and that the Federal share should be much greater than it is. In fact we believe that Federal participation should be on a 50-50 basis, that is, 50 percent by the Federal Government and 50 percent by the States and private owners, as provided for in the Clarke-McNary Act.

Forest products are responsible for a large part of our employment and contribute in no small way to the wealth of the Nation. It is a matter of vital concern that these values be perpetuated through good management. Adequate protection is essential to continuous productivity. Without adequate protection there can be no successful management.

There are, of course, other reasons for forest protection in Washington beside safeguarding timber values. First and foremost, it is vital to our watersheds and is one of the important means of preventing erosion of our soils. Forest protection is also becoming more and more essential to the development of our great recreational interests and to the preservation and propagation of game and fish.

We in Washington State have proved that we are ready to contribute in a substantial way to get this protection job adequately handled. Such adequate forest-fire protection for all States is estimated to cost over \$18,000,000 per year (hearings, agricultural appropriation bill, 1940, p. 608). The Clarke-McNary law authorizes an appropriation of \$2,500,000. The item of this 1941 bill is \$2,200,000.

I most strongly urge that the 1941 appropriation be brought up to the full amount of the authorization, namely, \$2,500,000.

#### *Forest survey*

In my State of Washington the forest survey has finished an inventory of the timber situation. The timber-stand figures, including volume, areas cut over, extent of natural restocking, current growth and depletion, and available supplies of sawlogs and pulpwood for individual communities, must be kept up to date.

But this does not end the work any more than one inventory of a business lasts forever. Continuous supplemental study is necessary to assist in meeting problems such as the decrease of high-grade timber around Puget Sound, Grays Harbor, and lower Columbia River, where most of the mill capacity is located. Allotments to meet these needs have been all too short, which led me to inquire into the forest-survey situation for the rest of the country.

I found that there is available for this work only \$250,000, the maximum amount authorized by section 9 of the act of May 22, 1928. Work is in progress in six regions. About one-half the United States has been covered. Most of the money is needed to do just what we are doing in the Douglas fir region which means that new field work to cover the rest of the country is almost at a standstill, less than 10,000,000 acres having been cruised last year.

I am advised that to assure continuation of the forest-survey work in my State as well as provide for its extension to the rest of the country, an amendment to the act authorizing the study is needed. It encouraged me to find that identical bills, S. 224 by Mr. McNARY and H. R. 3410 by Mr. RANDOLPH, were introduced in this present Congress and if passed would open the way for satisfactory maintenance and speeding up of this very worth-while project.

In the interest of my district, I plan to follow up on these bills with the hope that this Congress will pass them so that the forest survey can go forward at a rapid rate which is fully justified by the need for accurate information, locally and regionally, on our timber resource.

I am informed, upon inquiry, that \$750,000 annually would permit finishing the survey for the entire country in 6 or 8 years. After this first inventory, probably only one-third of this amount will be needed to maintain the forest survey.

#### *National forest protection and management*

##### *Blister-rust control and tree diseases*

I understand that the Budget Bureau has allowed an increase of \$200,000 for control of blister rust on the national forests in the West. I have been unable to find a corresponding increase in the total of the appropriation and for that reason assume that the Forest Service will have to provide these increased funds for blister-rust control by reducing other activities. While I regret to see the blister-rust activity financed by making reductions in other national-forest activities, I do want to emphasize the necessity of providing additional funds for the blister-rust work. Control of this disease is of vital importance to the cities and towns in the West which are now supported by the white- and sugar-pine lumber industry.

Rapid spread of the white pine blister rust in western national forests necessitates this increase. This foreign disease is now so firmly established in the important forests of western Montana, northern Idaho, and eastern Washington that it is imperative that wild gooseberries and currants (*Ribes*) be eradicated immediately,

in order to save established crops of western white pine and to avert a major economic disaster. Some young stands are now so badly infected that many of the trees are killed. Western white pine is a valuable timber species in this region. Continued production of this species, with resultant stabilization of the lumber industry dependent upon it and employing thousands of laborers, is impossible unless the disease is brought and kept under control.

The sugar-pine region in the national forests in northern California has been invaded by the disease, which is extending to the south. Sugar pine is extremely susceptible to blister rust. Unless the disease is checked, western white pine in the inland empire and sugar pine in the Sierras are doomed. This would be a worse catastrophe than was the elimination of the chestnut in the East by the chestnut blight. Control of blister rust is, however, entirely practicable, hinging on the eradication of *Ribes* plants, the alternate host of the disease.

Initial working is imperative on about half a million acres in the national forests in the western white-pine region and a million acres of national forest in the sugar-pine region. Maintenance work (repeat treatments) is also essential on areas which have been given initial eradication, in order to destroy the relatively few *Ribes* which were missed and those which have grown up since treatment.

Preservation of existing stands of white and sugar pines and continued growth of new stands are essential to protect present values and to guarantee future usefulness of national-forest lands suitable to the production of these valuable species. The livelihood of workers, communities, and industries is at stake. Protection methods developed by the Bureau of Entomology and Plant Quarantine are used and close cooperation is maintained with that Bureau. The job is a race against the spread of the disease.

Control work is comparatively well along in the national forests in the Lake States, northeastern, and southern Appalachian regions, where the disease affects northern white pine. Efforts must be continued here to the fullest extent possible, but the far more serious situation affecting the two western national-forest regions mentioned above should have first consideration. (Also see discussion beginning on p. 632, 1940 House hearings.)

Mr. Chairman and gentlemen of the committee, I desire to thank you for your courtesy and know that you will give these important matters your usual earnest consideration.

### **Bureau of Internal Revenue Refunds \$27,390,777.03, While Additional Collections are \$250,000,000 in Back Income Taxes**

#### **REMARKS**

OF

**HON. JOHN J. COCHRAN**

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 29, 1940

Mr. COCHRAN. Mr. Speaker, the report for the fiscal year 1939 of refunds of \$500 or more of internal-revenue taxes required under the provisions of section 3, act of May 29, 1928, to be made by the Treasury Department to the Congress was made available to the press by the Committee on Expenditures in the Executive Departments today. In a memorandum I submitted at the time the report was released I made it clear that this report represents amounts that have been paid taxpayers during the fiscal year ended June 30, 1939, and not amounts that are to be hereafter refunded. The statement submitted to the committee lists only those who received \$500 or more.

I further indicated that the total amount of internal-revenue taxes refunded, inclusive of interest, was \$49,413,686.40, which included \$27,390,777.03 applicable to income tax. These totals include many amounts smaller than \$500, which are not required to be reported to the Congress. The number of taxpayers who received income-tax refunds was 136,186.

I also pointed out that the law does not require the Commissioner to submit to Congress additional collections, but while the record showed refunds of \$27,390,777 in income taxes in 1939, the Bureau of Internal Revenue actually collected during the same period over \$250,000,000 additional in back income taxes.

The press was advised that the more common errors of taxpayers which resulted in overpayments of income taxes, according to the records of the Department, were mathematical errors, the reporting of nontaxable income, failure to take credit for foreign taxes, and failure to take proper credit for depreciation and obsolescence of physical properties. The

larger refunds, to a considerable extent, are based upon final decisions of courts or the Board of Tax Appeals and/or determinations by the Treasury Department based upon decisions by courts or the Board of Tax Appeals.

Attention was called to the fact that during the fiscal year 1939 the actual cash collections on account of back income taxes amounted to \$250,641,150.52, an amount in excess of nine times the total of actual cash refunds of income taxes.

In connection with my statement that income-tax refunds for 1938 totaled slightly in excess of \$27,000,000, I pointed out that for the fiscal year 1932 the total of the cash paid out for refunds and interest was in excess of \$80,000,000; for the year 1928 it was nearly \$70,000,000; for 1930 more than \$126,000,000; and for the year 1929 more than \$190,000,000 was paid. It is my impression that the large expenditures in past years had been occasioned to a considerable extent by the relief provisions and by the complexity of the tax laws during the war excess-profits tax years, and due to overpayment because of an initial lack of understanding of the provisions of the taxing statutes enacted as an incident to the World War.

It might also be well to state the refunds to payers of processing taxes amounted to \$12,293,817.96 during the fiscal year and items of over \$500 of such taxes were included in the report.

### The 7 Lean Years of Government Spending and Debt Creation That Devoured the 7 Fat Years of Private Thrift

#### EXTENSION OF REMARKS

OF

HON. GEORGE S. WILLIAMS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

Mr. WILLIAMS of Delaware. Mr. Speaker, under leave to extend my remarks in the RECORD, I am calling special attention to a comparison which I have compiled showing how the 7 fat years of private thrift from 1923 to 1929 have been devoured by the 7 lean years of Government spending from 1933 to 1939.

#### COMPARISONS BETWEEN 1923 TO 1929 AND 1933 TO 1939

During the last long, lean 7 years, our national taxes collected averaged 21 percent higher than in the 7 reasonably prosperous years 1923-29, while our average annual Federal expenditures, excluding debt retirement, averaged more than two and one-half times as high. Further, our Federal debt, direct and guaranteed, at the end of 1939 was almost three times as high as at the end of 1929. In the earlier period we decreased our debt by almost \$1,000,000,000 per year for 7 years; in the latter period we increased our debt by almost \$4,000,000,000 each year. The real burden of debt on a family of four has increased from \$502 to \$1,703.

Yet in this promised land of futuristic financing, wholesale prices were down 21 percent, industrial production per capita was down 21 percent, factory pay rolls were down 24 percent, national income per capita was down 33 percent, new construction was down 57 percent, new corporate financing was down 84 percent, and the average number of workers involved in strikes was up almost threefold, from 443,000 to 1,190,000.

	1923-29 average	1933-39 average	Percent change, 1933-39 average over 1923-29 average
Population (thousands).....	116,500	128,400	+10.2
All wholesale prices (1926=100) <sup>1</sup> .....	98.5	77.7	-21.1
Industrial production (Federal Reserve Board 1923-25=100).....	106.3	93.0	-12.5
Per capita.....	103.3	81.9	-20.7
Manufacturing employment (wage) <sup>1</sup> .....	7,970,000	7,265,000	-8.8
Manufacturing payrolls (wage) (millions) <sup>1</sup> .....	\$10,156	\$7,689	-24.3

<sup>1</sup> United States Bureau of Labor Statistics.

	1923-29 average	1933-39 average	Percent change, 1933-39 average over 1923-29 average
National income produced (millions) <sup>1</sup> .....	\$78,254	\$57,707	-26
Per capita.....	\$672	\$449	-33
Construction contracts (millions) <sup>1</sup> .....	\$5,097	\$2,426	-57
New Corporate financing (millions) <sup>1</sup> .....	\$3,966	\$623	-84
Industrial disputes: <sup>1</sup>			
Number of strikes begun.....	1,053	2,521	+139
Number of workers involved.....	443,000	1,190,000	+168
Federal Government receipts (fiscal years begin- ning July 1) (millions) <sup>1</sup> .....	\$4,020	\$4,849	+20.6
Per capita.....	\$34.51	\$37.76	+9.4
Federal Government expenditures, excluding debt retirement (fiscal years beginning July 1) (millions) <sup>1</sup> .....	\$3,147	\$8,009	+155
Per capita.....	\$27.01	\$62.38	+131
Federal debt, including guaranteed debt, begin- ning period Jan. 1 (millions) <sup>1</sup> .....	\$22,732	\$20,805	-8.5
End of period, Dec. 31 (millions) <sup>1</sup> .....	\$16,301	\$47,592	+192
Total decrease (-) or increase (+) (millions).....	-\$6,431	+\$26,787	
Average annual change (millions).....	-\$919	+\$3,827	
Per capita national debt, end of period.....	\$133.07	\$361.50	+172
In dollars of equivalent purchasing power.....	\$133.07	\$425.80	+220

<sup>1</sup> 1923-28, National Bureau of Economic Research; thereafter U. S. Department of Commerce.

<sup>2</sup> Excluding work-relief payments averaging \$1,631,000,000 yearly, and farm benefit payments averaging \$445,000,000 yearly.

<sup>3</sup> F. W. Dodge Corporation.

<sup>4</sup> Commercial and Financial Chronicle (excluding investment trust issues).

<sup>5</sup> Annual Report of the Secretary of the Treasury and 1941 Budget estimate.

<sup>6</sup> From daily Treasury statements as published in Survey of Current Business.

<sup>7</sup> Direct debt of \$41,942,000,000 (Dec. 31, 1939), plus guaranteed obligations outstanding as of Nov. 30, 1939 of \$5,650,000,000.

### Reciprocal-Trade Agreements Cannot Be Blacked Out by False Statements

#### EXTENSION OF REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

Mr. BOEHNE. Mr. Speaker, on January 17 of this year my colleague from Indiana [Mr. SPRINGER] placed in the RECORD a bare statement, without supporting evidence, that trade agreements had injured business. His statement began:

Many matters of great importance will come before this session of the Congress, but I firmly believe there will not be a question presented which will be more important or of greater influence than the question of extending the further power to the President to make reciprocal-trade agreements with foreign powers.

I can fully agree with that sentence from his statement, but I am sorry that this is about the only sentence in the statement with which I can see eye to eye. The extension of the Trade Agreements Act is important, but I view this from the positive side. Apparently my colleague is looking at trade agreements from the wrong end of a telescope. I disagree with the very next sentence, which reads:

We are reminded that the President now has that power (authority to negotiate trade agreements under certain limitations) which was given to him by Congress in the year 1937.

I disagree because it is only a half-truth. As a matter of fact, original authority was granted to the President in 1934 and further extended in 1937.

Now, I do not have time to take up all the misstatements and half-truths placed in the RECORD by the gentleman from Indiana [Mr. SPRINGER]. I do, however, wish to cover a few of the worst errors, incomplete statements, and wrong inferences relative to trade agreements. Incidentally the Committee on Ways and Means is now holding hearings on the extension of the Trade Agreements Act for another 3 years. When the record of these hearings is available opponents of trade agreements will find some important facts which I think may change their position.

I want to deny as emphatically as language will permit my colleague's charge that agriculture has suffered greatly because trade agreements have permitted the importation of vast amounts of agricultural commodities which are competitive with products of American farms. As a matter of fact, the much-talked-of flood of agricultural imports has turned out to be a mere trickle when considered in its proper proportion. Imports are less than half what they were in the "roaring twenties." Agriculture has a greater share of the American market than it had immediately before the Hawley-Smoot wrecking crew completed its work. It should not be forgotten that the trade agreements are for the purpose of correcting the conditions in which this country found itself at the end of 1932. Agricultural income has increased from \$4,600,000,000 in 1932 to \$7,600,000,000 in 1939. My colleague asserted:

The imports have been increasing every year since the trade agreements have been in force.

Whether he meant agricultural or total imports, the statement is absolutely fallacious, as the import figures show. The total imports and the imports of agricultural products for 1929 and from 1936, when important trade agreements first went into effect, to 1939 have been as follows:

	Total imports	Agricultural imports	
		Kinds not produced in the United States	Supplementary imports
1929.....	\$4,399,000,000	\$1,201,000,000	\$1,017,000,000
1936.....	2,423,000,000	547,000,000	695,000,000
1937.....	3,084,000,000	711,000,000	868,000,000
1938.....	1,961,000,000	479,000,000	477,000,000
1939 <sup>1</sup> .....	2,071,000,000	522,000,000	476,000,000

<sup>1</sup> First 11 months.

It is seen that both total imports and imports of agricultural imports in 1939 are below those of 1936, even with a generous estimate for December 1939. As a matter of fact, the imports of supplementary agricultural imports for the first 11 months of 1939 were more than \$200,000,000 below those of the year 1936. Such statements about agricultural imports as that made by my colleague are being indiscriminately spread upon the Record almost daily. American farmers have a right to expect something nearer the truth from those purporting to represent their cause in Washington. I hope the gentleman from Indiana [Mr. SPRINGER] will take proper steps to correct his erroneous statements.

Farmers throughout the country have not the opportunity to check the bob-tailed and false statistical tables placed in the CONGRESSIONAL RECORD, and then circulated by certain sections of the press.

Let me illustrate the errors further by analyzing the table on imports presented by my colleague, purporting to show the bad effects of trade agreements. He listed the imports for 1938 and 1939 of the following items: Cattle, meat products, canned beef, oats, and wheat.

First. Now it is a fact that more than half of the number of cattle shown for 1939 were in no way affected by duty reductions under trade agreements. They were cattle on which no such duty reductions were made and which entered at the Hawley-Smoot rates. Furthermore, the mere figures of imports furnish little information as to the effects on our trade. It so happens that United States cattle prices were above parity throughout 1939. As late as October 1939, committee for reciprocity information hearings on Argentina, representatives of the cattle-raising industry admitted that livestock producers were in good condition. This is a far-reaching admission from men who assume to speak for the cattle industry, and who are almost constantly complaining about the importation of cattle constituting only a small percentage of domestic production. The Canadian agreements fixed definite quotas of certain classes of cattle which might enter at lower rates, and imports of other classes, or of cattle in excess of the fixed quotas, paid the full 1930 tariff.

Second. Likewise, more than half of the imports of meat products shown by my colleague have not been included in

any trade agreements. An honest presentation would show only those items which have been affected. As a matter of fact, the imports of both classes, those affected and those not affected, were due to increased industrial activity in the United States, with greater demand for meats and prices higher than in 1938. Let us have the separate items and see how trade agreements have affected agricultural markets.

Third. The next item, canned beef, has not been included in any trade agreement. It was included in my colleague's table purely for the political effect. Those who attempt to show effects of trade agreements with such figures, either are not informed or are attempting to deceive.

Fourth. No wheat fit for human consumption, the major portion in import figures, has been included in any trade agreement. In fact, important foreign concessions on American wheat, such as the complete removal of the 6-cent duty in the British agreement, have been obtained for the benefit of American wheat producers. The exports of wheat, shown in another table by the gentleman from Indiana [Mr. SPRINGER], amounting to 61,165,000 bushels, or six times the imports of 9,310,000 bushels, gives a better perspective of our foreign trade in wheat. Opponents of trade agreements who use these wheat figures studiously neglect to add that more than 97 percent of the wheat imported in 1939 was imported under bond to be milled in this country—giving employment to American workmen—and then reexported. Not a bushel of that wheat or a pound of the flour made from it can enter the domestic market without paying the 1930 tariff rate of 42 cents a bushel. The only wheat imported into the United States in 1939 at a reduced tariff was the 49,000 bushels of wheat unfit for human consumption imported by American farmers as feed for livestock. And even that wheat paid a duty of 5 percent ad valorem.

Fifth. That leaves oats, the duty on which was reduced in the agreement with Canada. The imports in 1939 increased over 1938 by 2,606,742 bushels. These imports were less than one-third of 1 percent of the 1939 oat crop in the United States. The 1939 oat crop in this country was 131,000,000 bushels short of the 1938 crop, and the imports amounted to less than 2 percent of that shortage. In relation to our own production, these imports are absolutely insignificant, and they represent only a little trade carried on across the Canadian border for the benefit of American farmers themselves.

The table referred to above, appearing in the CONGRESSIONAL RECORD, is thus seen to be 80 percent wrong insofar as it is supposed to show the effects of trade agreements. That is a high percentage of error. I do not believe American farmers can be deceived in any such manner. As far as I am able, I propose to expose every such falsification which I find in the Record.

In spite of the statement of my colleague the gentleman from Indiana [Mr. SPRINGER] that "the imports have largely increased under these trade agreements, and the exports have been decreased," and in spite of the partial, incomplete, and misleading statistics presented, it is a fact that some agricultural exports on which concessions were obtained from foreign countries did increase in 1939 over 1938; although, as with increased imports for the same period, this is not the final and only criterion for measuring the efficacy of trade agreements. It is not to be expected that concessions can cause increased trade from year to year in spite of all other factors involved. I list a few increased exports below, merely because my colleague gave only decreases:

	11 months	
	1938	1939
Vegetables, fresh and dried.....	\$7,186,000	\$9,555,000
Meat products.....	25,900,000	28,184,000
Lard, including neutral.....	16,737,000	18,833,000
Dairy products, except buttermilk.....	5,495,000	6,534,000
Wheat flour.....	21,402,000	22,976,000
Vegetables, canned.....	5,070,000	6,002,000
Canned fruit.....	20,120,000	24,084,000

The fact that opponents of trade agreements have to doctor up their statistics, as my colleague has done, to make a plausible case indicates what a poor case they have against this program.

The facts are against them, and they are presenting the opposite of the truth to substantiate their preconceived and erroneous ideas of the benefits of the Hawley-Smoot Embargo Tariff Act.

### Deficiency Appropriations

#### EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

Mr. COCHRAN. Mr. Speaker, when the gentleman from Missouri [Mr. CANNON] had the floor discussing this bill I asked a question and referred to the deficiency in connection with parity payments. I referred to the law which was enacted for the purpose of preventing excess expenditures and stated in my opinion the time had arrived when Congress should see that those administering appropriations should be required to pay strict attention to that law. As it is my opinion some officials in charge of disbursing appropriations never read the law, I am going to include it as part of my remarks in the hope that it will bring some beneficial results. The law follows:

SEC. 169. General.—Expenditures in excess—Voluntary services.—No executive department or other Government establishment of the United States shall expend, in any one fiscal year, any sum in excess of appropriations made by Congress for that fiscal year, or involve the Government in any contract or other obligation for the future payment of money in excess of such appropriations unless such contract or obligation is authorized by law. Nor shall any department or any officer of the Government accept voluntary service for the Government or employ personal service in excess of that authorized by law, except in cases of sudden emergency involving the loss of human life or the destruction of property. All appropriations made for contingent expenses or other general purposes, except appropriations made in fulfillment of contract obligations expressly authorized by law, or for objects required or authorized by law without reference to the amounts annually appropriated therefor, shall, on or before the beginning of each fiscal year, be so apportioned by monthly or other allotments as to prevent expenditures in one portion of the year which may necessitate deficiency or additional appropriations to complete the service of the fiscal year for which said appropriations are made; and all such apportionments shall be adhered to and shall not be waived or modified except upon the happening of some extraordinary emergency or unusual circumstances which could not be anticipated at the time of making such apportionment, but this provision shall not apply to the contingent appropriations of the Senate or House of Representatives; and in case said apportionments are waived or modified in writing by the head of such executive department or other Government establishment having control of the expenditure, and the reasons therefor shall be fully set forth in each particular case and communicated to Congress in connection with estimates for any additional appropriations required on account thereof. Any person violating any provision of this section shall be summarily removed from office and may also be punished by a fine of not less than \$100 or by imprisonment for not less than 1 month. (R. S., 3679, July 12, 1870, and act of Mar. 3, 1905, 33 Stat. 1257, as amended by act of Feb. 27, 1906, 34 Stat. 48.)

The Bureau of the Budget should see to it that, unless an emergency develops, the appropriation be allocated over a 12-month basis, as the law provides. If an emergency should develop then the Appropriations Committee, as well as the Bureau of the Budget, should be immediately notified.

Now, Mr. Speaker, I want to refer to the deficiency in parity payments. My colleague the gentleman from Missouri [Mr. CANNON] stated my remarks were not justified by the facts. Let us refer to the hearings. Turn to page 804. It seems to me, after one has read the hearings, the subcommittee was rather exercised over the deficiency although in the end the discussion centered around the failure of the spending agency to take the committee into its confidence. Reading between

the lines, I assumed the members of the subcommittee felt by reducing the amount allocated corn and cotton, the available amount would have been sufficient. The amount of the reduction would have been so small it would not have been noticeable. True, as the gentleman from Missouri [Mr. CANNON] said, more farmers took advantage of the law than they did the previous year, but surely, with the vast number of employees and agents there should be some way to learn how many farmers intend to come in. I am fully aware of the interest of those who represent rural districts in parity payments, and I have no desire to criticize any officials administering this law, but I submit, in view of the hearings, my comment was justified.

As part of my remarks I include part of the hearings dealing with this subject:

Mr. CANNON. Now, Mr. Evans, what is the amount of the deficit?

Mr. EVANS. It should be a little less than \$10,000,000.

Mr. CANNON. If you had made a proper computation, if you had been a little more accurate in your original estimates, you could have adjusted the payments to come within the \$212,000,000 allotted to you, could you not?

Mr. EVANS. Well, we have two alternatives.

Mr. CANNON. For example, I believe the amount allowed on cotton was 1.6, and what was it on corn?

Mr. EVANS. Eleven cents.

Mr. CANNON. By adjusting that to 1.5 or to 10.5 on corn, you would have had ample funds, would you not?

Mr. EVANS. Yes, sir.

Mr. CANNON. Why was that not done? That was the intention of Congress; you have voided the intention of Congress.

Mr. EVANS. As I say, we have two alternatives, Mr. Chairman. We have to set these rates a long time ahead, and we have to make a guess as to what the participation will be. Now, we can do one of two things: We can set the rates low enough so that we are sure we are on the safe side, or we can try to distribute all of this money to the farmers by trying to set our rates as close to what they will turn out to be as humanly possible for us to guess, and in this particular case we are missing it by about 4 or 4½ percent.

That is not a very wide miss in a big amount of this kind, if you take the figure over our total appropriations, the conservation plus the parity. It is less than 2 percent.

Now, I would appreciate some advice from the committee, as to what you think the Administration should do. Should we set out and say, "Well, we will turn back 10 percent of this appropriation," because we can easily do that, and we have done it in previous years.

Mr. CANNON. We expect you to be a little more accurate. Ten million dollars out of \$212,000,000 is a pretty wide guess.

Mr. Speaker, I contend this quotation from the hearings does justify my remarks.

### The Weakness of the Law

#### EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

Mr. SPRINGER. Mr. Speaker, recent reports contained in many of our outstanding newspapers have shocked and appalled our people when it was made public that a large number of professional baseball players, who draw large salaries for the few months they are engaged in their profession, have applied for, and are actually receiving, unemployment insurance. In one of the recorded instances a professional baseball player who draws an annual salary of \$8,000 made application for, and is now receiving, this unemployment assistance under the law.

It is quite apparent that such was not the intent of the law; yet the provisions of this particular statute were no doubt hastily prepared, and the due and careful consideration to which the preparation of this particular law was entitled was not given to it, and the provisions of it were made susceptible of an interpretation which was not intended by anyone. Great care should be exercised in the preparation of every law. It is quite evident that the framers of the law did not intend that professional baseball players, who draw large salaries for a part season's services, should come within

the provisions of the law and thereby be able to qualify for unemployment insurance. The very regrettable thought which emanates from this practice, which should be universally condemned, is that any professional baseball player, who depends largely upon the public for his job, would take advantage of the public and the taxpayers in such manner. Even though the law is carelessly drawn, that class of our citizens who are well provided with a position and with a good salary should never take advantage of a poor law in order to enrich themselves. The public should evidence a strong protest against such a practice—one which will not be forgotten—because of such reprehensible conduct on the part of those who are not entitled, by any rule of the game, to draw unemployment insurance.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the *RECORD* and to include therein a well-written editorial which appeared in the *Indianapolis Star* of Indianapolis, Ind., on Monday, January 29, 1940, which editorial follows:

[From the *Indianapolis Star* of January 29, 1940]  
WEAK SPOTS IN OUR LAWS

The news columns of the last few days included 2 items showing how far law may depart from common sense. Missouri reported that 10 professional baseball players in that State are collecting unemployment insurance. Some are on the rosters of the Kansas City American Association and of the St. Louis American League clubs. One of the players draws a salary of more than \$8,000 for the season. Now he is getting \$15 a week because he is not working, as provided in the unemployment insurance law.

It is perfectly clear to most people that the lawmakers had no intention of leaving such a loophole in the act. The unemployment insurance law was designed to tide over those who are out of work. It is supposed to benefit those who are in need of help and not to provide a hand-out to men who should be amply provided. The Missouri unemployment compensation commission interpreted the law as saying plainly that the ballplayers are entitled to \$15 a week. The law should be amended to say what the legislators intended.

A Seattle woman was denied citizenship because she refused to take oath that she would bear arms for the United States in the event of a war. She, of course, is not entitled to much sympathy. No possible harm could have come to her by assenting to the regulation promise. A woman should not be required, however, to obligate herself to bear arms. She never will be called on for such service and the law should be amended to excuse women from making such a pledge.

The applicant was born and reared in this country and lost her American citizenship when she married a Norwegian. She returned to this country with her four children and sought reinstatement as a citizen. She said she was willing to be a nurse or do anything else in a war but fight. She knows, of course, that she would not have to fight but was obstinate and would not take the regulation oath.

## Tariff Politics and Trade Treaties

### EXTENSION OF REMARKS

OF

### HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

Mr. KITCHENS. Mr. Speaker, the Republican Party for many years periodically and ingenuously makes political and money capital of the tariff. When nothing remains for a complaint, shibboleth, party cause, or funds, that party invariably falls back upon the tariff. The Democratic Party is not and never has been a party for a selfish few nor does it depend upon the tariff or its beneficial recipients for party funds. It does not believe in tariff subsidies so high as to create monopolies. It does believe in fair tariffs to protect the laboring man, the farmer, consumer, revenue, and the people as a whole.

The question is often asked by the high-tariff advocates, Why does not the Democratic Party, now in control of the Government, repeal the Smoot-Hawley Tariff Act if it be so contrary to best interests of all the people? The answer to that question is the Hull trade treaties are gradually pulling the fangs from that selfish, mischievous, and destructive act, truly a Frankenstein that cast our people adrift, demoralized and impoverished them, destroyed their foreign trade as well

as their trade at home, and caused more loss, unemployment, misery, economic wreckage, than ever was caused by act of man prior thereto. But it is known by some leaders that people easily forget. The Hull trade treaties are salvaging from the debris of that act some of our trade, and gradually restoring to us a little of our foreign trade, increasing our domestic trade, and putting us on a sound basis of recovery.

The slogan, "The American market for the American farmer," is most alluring and intriguing. Let us reduce that to its simple analysis and say, "The State market for its own people," "The county market for its own citizens," and, to go further, let us be truly individualistic, rugged individuals, and deal with no one. Let us be individually self-sufficient. No, the American people are more intelligent today and may no longer be deceived.

I am most pleased that the unselfish women's organizations of America and the great American farm union are now vigorously endorsing and supporting the trade treaty program of that great American, Cordell Hull. I am also most gratified to learn that the unselfish molders of public opinion, men like Hon. William Allen White, of Kansas, a great Republican, who places the general welfare of all the people ahead of the welfare of a few, warns the hardened and unregenerated leaders of his party against opposing the trade treaties of Cordell Hull, a warrior bold, tempering the destructive effects of the Smoot-Hawley tariffs. In this connection, Mr. Speaker, I ask unanimous consent to print in the *RECORD* the following editorial from the pen and brain of that great American, Hon. William Allen White, of Emporia, Kans.:

Americans might as well make up their minds to it, that the old idea of a high protection, which was merely socialistic subsidizing of various industries, is impossible in the world economy as it stands today. Some tariff? Yes, but not log-rolling high tariffs, not the Smoot-Hawley bill. One of the things that brought about the depression was the Smoot-Hawley bill. The *Gazette* said so at the top of its lungs before the Smoot-Hawley law was finally formulated, while it was passing, and after it had become a law. That tariff law was an offense against economic stability not only in the United States but all over the world. It is one of the sad, terrible commentaries on the present Democratic administration that it has neglected so long to revise the Smoot-Hawley tariff law.

The principle of reciprocal tariff to undo and offset the Smoot-Hawley tariff is entirely defensible upon the theory of our national economy. Of course, in any Congressman's district he can take counsel of his fears and vote against this tariff by scaring his constituents to death about the damage it will do to their local special industries. For instance, take cattle: The increase of the percent of total imports of cattle—say 44 percent—is frightening. But that 44 percent increase is only 8 percent of the cattle inspected and probably about 5 percent of the beef actually consumed in the United States. That is a small percent. It has not seriously affected the average annual price of cattle.

We are fundamentally in disagreement with Governor Ratner and the Kansas Congressmen and Senators who opposed these Hull treaties. For these treaties surely strengthen our national economy. They certainly bring in more business and more money to the country than they take out. Unless we see our national economy as a whole and national prosperity as a unit, we never can recover. We can't recover by patching up a hole here and plugging a hole there in our economy. We cannot recover unless we plan recovery on a Nation-wide scale.

If, for instance, the farmers of Kansas are scared of these treaties because of what they will do to the farmer, the Kansas farmer should remember that the farmer will never be prosperous until the Nation as a whole has prospered also. These treaties certainly do work for national prosperity. If, when the treaties are in force, it is found that the farmers are bearing too much of the burden, which may easily be true, then subsidize the farmers directly. But don't stop the rise of national prosperity by timidity about individual losses. If times are good, prices will be good everywhere.

Another and most vital thing: The peace of the world depends first upon the international flow of goods, to give all nations of good will access to raw materials; and, second, upon mutual economic help among nations. Economic supernaturalism has led the world into war. Unless there can be among the civilized nations of the world some basis of negotiation whereby each nation can develop its own economic strength under its own peculiar geography and in its own economic position, there is no hope for peace. National jealousy will keep on breeding international hates.

Wars will succeed wars. In the peace conference which must follow this war American influence can be potent in the struggle for world peace. But we can serve the world only if America comes with a reputation for fairness to her neighbors now. Suppose we defeat these Hull treaties. What a pie-faced old hypocrite Uncle Sam will be at that conference, counseling other nations to give up a little for the greater blessing of peace. In that hour when a lasting peace is possible for the world we shall be bound and gagged by our own selfish isolationist policies. Here in these Hull

reciprocal treaties is the hope of the United States in helping to promote a just peace in the world.

Without that just peace the tribulations of the last decade, 10 terrible years of shuddering under the threat of war, will be with us for another generation. This is no time for partisan talk of local advantage. The prosperity of our Nation depends upon the peace of the world. If America cannot take the larger view, the hope of the world is blasted. Our civilization cannot go forward along its appointed evolutionary way amid the atmosphere of international envy and the hates that grow where nations are oppressed in economic poverty.

The Republican Party is going to make a sad mistake if it goes into this campaign on an old-fashioned high-tariff platform policy. The Hull idea theoretically is right. Maybe he is not implementing it with the best instruments. But certainly he is expounding a principle that will work. It will be better for the Republicans to help him make his plan workable than to try to defeat his principle.

In the meantime, no warrior bold with spurs of gold ever went more bravely to the fray than Cordell Hull is going into this fight.

### Pending Farm Legislation

#### EXTENSION OF REMARKS

OF

HON. CHESTER H. GROSS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

LETTER FROM W. HARVEY HYKES, WAYNESBORO, PA.

Mr. GROSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. W. Harvey Hykes, Waynesboro, Pa.:

I read in some farm papers that we can expect some changes in the present farm legislation. Some writers talk of crop insurance, some talk of ever-normal granary to hold surplus crops in good crop years for use in poor crop years. They also talk of market control and crop control and the rule this fall in Kansas was to sow only 50 percent of the regular amount of land to wheat and then pay the farmer not to crop the other 50 percent.

I can't see that they have done anything yet to do the farmer much good. I will try to write a few of my thoughts about helping the farmer. I say put the tariff on United States farm products high enough to keep foreign products out and then set a price on our products high enough to give the farmer cost of production and a reasonable profit. I will take wheat, for example. I say give the farmer \$1 per bushel at threshing time, and that is a set price. But then to encourage the farmer to hold some of his wheat off the market till later in the year, make the price \$1 per bushel for the months of June and July and 2 cents a bushel more each month. That would run to \$1.10 for December or \$1.20 for May (next year). That would give the farmer 2 cents a month for storage. Then the farmer would know just how much he would get if he held his wheat a few months. He would be sure of \$1 a bushel, plus 2 cents a month for storage, or \$1.20 in the month of May. That method would serve as normal granary for 1 year.

Now, to prevent too much wheat from going to market, instead of paying the farmer not to produce, I say let him produce as much as he wants but don't let him market more than a certain amount. Take a York County farmer that usually produces from 500 to 1,500 bushels of wheat a year. That would give him about a 1,000-bushel average. So we will let that farmer market 1,000 bushels of wheat every year at \$1. But in a good season, with a few extra acres, he produces 1,500 bushels. Well, that is just fine for that farmer. He is allowed to sell 1,000 bushels at \$1 and he has left over 500 bushels of wheat. He is sure he can get \$1 for that if he keeps it till next year in good, dry condition. He knows just what to do and what to expect. He knows he will have 500 bushels of old wheat he can sell for \$1 per bushel and maybe his crop will be short of the average so he would still have his full quota to sell. This could apply to any or all crops—cotton or tobacco, just the same.

You know that a little surplus in a lot of farmers' hands would be a good asset to the farmers. It would be produce that could be sold at a good price 1 year hence, and look what a credit it would be to our Nation to know that our farmers had a surplus of grain and cotton on hand always worth a standard price of \$1 per bushel for wheat and prices for cotton accordingly.

I can't see why we farmers can't have a standard price for our produce just the same as other people in other lines of business. The storekeeper sells his goods at a profit. All officeholders get an established price. You know what you will get a year as a Congressman and all laborers have a regular price. The average day laborer gets \$4 for an 8-hour day and that is regular, day in and day out, year after year. But the farmer has no surety of anything—not even the weather. Give the farmer a set price for wheat—then the farmer will know just what to expect. The miller will know just what the price of wheat will be the year round so

he won't have any price changes to worry about. Give the farmer a standard price and let him produce all he wants, but only let him market his regular quota at a good price, and then let him create his own ever-normal granary and crop insurance, which will not cost the Government so many millions as these other new A. A. A. has been doing.

I can't see why in the heck the farmer can't be favored in a fixed price. In the fall of 1937 Kansas farmers sowed wheat which was worth on the market \$1.20 per bushel and this fall of 1938 the wheat produced from that \$1.20 wheat was sold at 60 cents. I know of farmers who have wheat to sell, but the price is around 60 cents. Their seed cost \$1.20 per bushel and labor and gas for power and implements were high. So, right now, if a farmer has wheat to sell, he doesn't know if it will pay him to hold it any longer or not. He doesn't know anything about the price of his produce. Of course, I am more interested in wheat than any other products, but the same would hold good in other products. But I, as a wheat farmer, would be too glad to have a standard price of \$1 per bushel at threshing time and 2 cents a bushel more each month for storage till May would make \$1.20, and then go back to \$1 again at threshing time and to control the supply. I say allow each farmer to market his allotted amount and make him hold his surplus over to next year at the regular price of \$1. That would create the ever-normal granary and crop insurance without any expense to our Government.

Well, I will stop writing this foolish idea, but I hope something will be done to help the farmer. The principle of curtailing production is discouraging and injurious, so, if any change in the farm program comes to your consideration I ask you to use your best judgment to advise what should be done.

Yours very truly,

W. HARVEY HYKES.

### Tribute to William McKinley

#### EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

ADDRESS BY HON. PAUL W. SHAFER, OF MICHIGAN, AT THE ANNUAL MCKINLEY CLUB BANQUET, CANTON, OHIO, JANUARY 27, 1940

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks, I desire to include a portion of a speech by my colleague the gentleman from Michigan, Hon. PAUL W. SHAFER, at the annual McKinley Club banquet, held Saturday, January 27, at Canton, Ohio. Mr. SHAFER's speech, in part, follows:

It is always a great privilege for me to pay a tribute to our martyred President, William McKinley. It is a pleasure also because I think of all the Presidents who have ever occupied the White House he was perhaps the gentlest, the kindest, the quietest, and the one whose sincerity and earnestness marked every hour of every day of his Christian life. He was a man who took his deep faith in Christianity into the White House with him, and who exercised it in every act of his official career up to the day when he became the victim of a misguided assassin.

No more beautiful chapter in American history of the private lives of her great and illustrious is to be found than in the gentle, beautiful, untiring devotion that William McKinley gave to his invalid wife during those days when he was at the head of the Government of his nation.

Although he was a genuinely great statesman, a man of real vision, forceful, courageous, and decisive at a time when he had to pilot his nation through a conflict with a foreign power, yet so gentle and patient and beautiful was his nature that he is remembered by posterity today more for those qualities than for his qualities of statesmanship and determination in national affairs.

It is singularly appropriate that we are today celebrating President McKinley's birthday, because the question of reciprocal trade is now one of the important issues before the Congress.

There has been a studied effort on the part of the administration and its spokesmen to endeavor to force the Republican Members of the Congress into a position of opposing the whole principle of trade reciprocity between nations. The Republicans do not propose to be forced into such a position, because the Republican Party is traditionally the party of reciprocity.

William McKinley himself was one of the chief exponents of reciprocity. Listen to what he said the day before the assassin's bullet cut him down at Buffalo, N. Y., in the last speech he ever made.

"By sensible trade agreements which will not interrupt our home production, we shall extend the outlets for our increasing surplus. A system which provides a mutual exchange of commodities is manifestly essential to the continued and helpful growth of our export trade."

"What we produce beyond our domestic consumption must have a vent abroad. The excess must be relieved through a foreign outlet and we should sell everywhere we can and buy wherever the buying will enlarge our sales and production, and thereby make a greater demand for home labor.

"The period of exclusiveness is past. The expansion of our trade and commerce is the pressing problems. Commercial wars are unprofitable. A policy of good will and friendly trade relations will prevent reprisals. Reciprocity treaties are in harmony with the spirit of the times. Measures of retaliation are not."

That passage, from the speech of President McKinley, if it stopped there, would cheer the heart of a new dealer. But let us go on one more sentence and see what else this great exponent of both the tariff and reciprocity said.

"If, perchance, some of our tariffs are not longer needed for revenue or to encourage and protect our industries at home, why should they not be employed to extend and promote our markets abroad?"

Now what did Mr. McKinley mean by that?

If you will read his tariff speeches and his own exposition of his foreign-trade policy, you will find that while he favored reciprocity, while he said, in so many words, that, "We must not repose in fancied security that we can forever sell everything and buy little or nothing." He at no time ever said that we should turn over to foreign producers any part of the American market which could be served by our own agricultural and manufacturing industries.

Indeed, he said further, "We should take from our customers such of their products as we can use without harm to our industries and labor."

Despite the efforts of the present administration to force the Republicans into the position of opposing the principle of reciprocity, we Republicans are standing fast on the very ground upon which stood William McKinley.

We Republicans do not oppose the principle of reciprocity, but we do oppose the New Deal method and program of reciprocal-trade treaties that are willing to trade off and give away the American markets that belong to the American farmer and the American workingman through a generalization of all concessions and advantages to all countries, except Germany, made in every treaty with each country; even those countries that are actually discriminating against us in the very hour in which we are gratuitously handing them these trade advantages over our own farmers and our own wage earners.

Perhaps I have gone further into the question of reciprocal-trade policies than I meant to on this occasion, when my intention was to pay the warmest tribute of which I am capable to a man whose life, both private and public, I have admired since I was a boy.

I want, in closing, to say that the private and public career of William McKinley will stand as an example of the highest ideal of American manhood and American statesmanship—gentle, patient, loving, yet firm and immovable for the right, so long as history shall relate the lives and deeds of men. It is my pleasure and my privilege and my honor to pay this tribute to this illustrious son of the State of Ohio, William McKinley.

### Interlocking Directorates

#### EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

#### LETTER FROM A CONSTITUENT

Mr. SHANLEY. Mr. Speaker, I have asked unanimous consent to revise my remarks and include therein a very interesting letter on interlocking directorates sent to me by a distinguished banker from my own home town of New Haven, Conn. I am sure that the subject is of interest to every one in the Congress and in the country.

The letter is as follows:

THE FIRST NATIONAL BANK AND TRUST CO. OF NEW HAVEN,  
New Haven, Conn., January 15, 1940.

HON. JAMES A. SHANLEY,  
Member of House of Representatives,  
Washington, D. C.

DEAR MR. SHANLEY: I have noticed by the newspapers that Senator GLASS has reintroduced a bill substantially in the form vetoed by President Roosevelt a few months ago, which would extend until 1944 interlocking directorships between financial institutions now lawfully existing, but which will become unlawful on February 1 of the current year, unless such extension is granted by Congress.

While this is probably the first time in my life when I have disagreed fundamentally with Senator GLASS, I do very much

hope that this legislation will not pass. I believe that the provisions of section 8 of the Clayton Act, limiting interlocking relationships between the boards and official staffs of financial institutions, should be amended only in the way of further limitations and not in the direction of so-called liberality. I believe such restrictions are distinctly in the public interest and their validity rests upon the broad principle well stated by Henry M. Dawes when he was Comptroller of the Currency:

"A man cannot serve two masters, and a trustee who will act for two conflicting interests is ipso facto incompetent either mentally or morally."

It is said that institutions where such relationships exist should be allowed further time to adjust themselves. In point of fact, they have had ample time. They were given abundant warning by the Banking Act of 1933 and the Banking Act of 1935, by various rulings of the Reserve Board since 1935, and by the recent veto of the President. Any bank which has not put its house in order can probably be relied upon to adopt the same shilly-shallying policy between now and 1944.

What I have just said has been proved by our experience here in New Haven. Four out of our five clearing-house banks had such interlocking directorships but in every instance the situation was cured at the annual elections which took place last week. I am informed that the same purifying process took place with the banks in Hartford and in other cities. In other words, those banks which attempted in good faith to carry out the provisions of the law found no difficulty in doing so. It seems to me that it is distinctly unfair to banking institutions which have cleared their skirts in good faith that banks which have fought a needed reform to the last minute should be given what both groups will regard as an advantage.

It has been said that during the banking crisis there were certain banks permitted to reorganize or permitted to reopen upon the distinct understanding that certain specified individuals would join their boards of directors and that it is unfair now that those specified directors should have to withdraw. I do not doubt that there are a few such instances but they are extremely few and a very small number of them should not be permitted to outweigh the very much larger general public interest.

It has also been said that there are communities where it is extremely difficult to get enough directors for the several institutions if interlocking directorships are prohibited. Speaking very bluntly, I do not believe it. Trace these alleged specific cases down to actualities and you will find that the individuals in question do not want to let go and that the statement that there are not enough good men is pure rationalization. There are relatively few boards of directors which would not function just as well if the numbers were reduced. Speaking very broadly, the banks, themselves, would be better off to add more younger men to their boards of directors and communities would be better off if more younger men in their midst were more familiar with the problems that face the banks. To my mind, the reluctance of bankers, where it exists, to acquiesce in the general movement toward freeing financial institutions from, what seem to me, the manifest evils of interlocking directorships is largely due to inertia. More specifically, there is an understandable but regrettable unwillingness to appraise candidly the situation in individual banks because of the reluctance to have a sound general rule applied when it happens to hit one's own institution.

To save foolish duplication of dictation, I am taking the liberty of sending this same letter to Senator MALONEY and to Senator DANAHAY.

Sincerely yours,

THOMAS M. STEELE.

### Why South Dakota's Rural Credits Failed

#### EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

EDITORIAL FROM THE SIOUX FALLS (S. DAK.) DAILY ARGUS-LEADER OF JANUARY 29, 1940

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Argus-Leader of Sioux Falls, S. Dak., for January 29, 1940:

[From the Sioux Falls (S. Dak.) Daily Argus-Leader of January 29, 1940]

#### WHY SOUTH DAKOTA'S RURAL CREDITS FAILED

Minnehaha County Republicans heard an interesting statement last week from Millard Scott, director of the South Dakota rural credits department, concerning State socialism.

Times and bad management, he said, were not alone to blame for the insolvency of the department now under his direction. Government simply can't succeed in business, he explained.

"When government steps in where private business fears to tread," Scott told his listeners, "the taxpayers are going to find themselves soon carrying a burden."

The history of the rural-credits department has been reviewed so often that it is not necessary to cite much in explanation at this time. Suffice it to say that its promoters said it would be a wonderful boon to the farmers and that "it won't cost the taxpayers a cent."

Today the taxpayers are counting their costs in millions of dollars. Before the liquidation is completed the total loss may be in the neighborhood of \$30,000,000 or \$40,000,000.

On paper, as the promoters originally figured it, no such financial calamity was in prospect. The State would borrow the money at a specified amount and lend it to farmers at a figure sufficiently higher to cover the overhead expenses.

They didn't give consideration in their paper calculations to the bad loans that would be made and to the influence that politics would have in its operation.

Now we know about these things, however. We realize that persons with poor farms and some political pull found it comparatively easy to unload their properties on the State. Some persons eliminated bad loans in a somewhat similar fashion by turning them over to the State department.

That is of the past, though, and the job today is to complete the department's liquidation and to remember the lesson the experience has provided.

Scott has been doing good work in disposing of the department's lands. Many sales were made in 1939 and many more are in prospect for 1940.

The charge is made, of course, that some lands are sold at bargain prices. This may be true. Yet everyone has an opportunity to bid for them and to overthrow any bid that has been made by a higher one.

It is easy to fall into the habit of assuming that we should wait and wait for an upturn in farm prices. But those with long memories can recall that such a cry was sounded in 1927 and 1928, when the liquidation of the department began. It was so vigorous, in fact, that little effort was applied to the business of selling lands promptly. Now we realize that a good sales program at that time would have been to our advantage.

We must remember that it costs the State money each and every year to maintain the department. The longer the lands are retained the higher price we must receive to balance the costs.

So it is better to take a low bid now than to wait for an indefinite prospect of a better one in the future.

Scott, we hope, continues to push his campaign for quick action on the liquidation of the lands. It would be unfortunate, indeed, if he should be sidetracked from his objectives as some of his predecessors have been.

## Elimination of Stream Pollution

### EXTENSION OF REMARKS

OF

### HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

EDITORIALS FROM THE CINCINNATI ENQUIRER

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I insert the following editorials from the Cincinnati Enquirer on the subject of the elimination of stream pollution.

As the people of Cincinnati and the surrounding territory are dependent upon the Ohio River and other highly polluted streams as the source of their water supply, the Cincinnati Enquirer recognizes that its readers are tremendously interested in the elimination of stream pollution and the practical solution of this problem, which means so much to their future health and happiness.

The editorials are as follows:

[From the Cincinnati Enquirer of June 20, 1939]  
TO SPORTSMEN

A comprehensive attack upon the grave problem of stream pollution by the States in cooperation with the Federal Government awaits only the approval of the House of Representatives and the President. The Barkley-Spence bill, approved by both Houses of Congress last session and passed at this session by the Senate, provides an ideal vehicle for antipollution action.

At this juncture, however, the Izaak Walton League is striving to revive an old fallacy—that a stronger bill is necessary to do

the job. Strenuous efforts are being made to convince Members of the House of Representatives that the Federal Government should thrust the States aside and force an immediate remedy of the situation.

This is precisely the argument which has maintained the status quo for years while individuals and organizations have sought to accomplish action. This is the line of reasoning which has frustrated the enactment of a Federal stream-purification bill to date; preserved a status quo of pollution which taxes the abilities of chemists in their effort to supply residents of the Ohio Valley with potable drinking water.

The alternative to the Barkley-Spence bill is a highly controversial measure of doubted constitutionality and of even more widely doubted practicability. Experience in Congress has demonstrated that it does not command a majority of support. It is, for the most part, only a means of obstructing action on the Barkley-Spence bill, which represents the best thought and agreement of the active sponsors of stream purification among the States and in the Federal Government.

It is not merely a matter of "half a loaf is better than none," even though the futility of the so-called stronger bill has been demonstrated. Actually, the Barkley-Spence bill is the more practical, the more likely to produce actual results. It provides for action, not long-drawn-out court litigation, and it seeks accomplishment in a way most likely to succeed through cooperation of the States and the Federal Government.

Sportsmen worthy of the name should not permit themselves to be regimented into a position antagonistic to the welfare of millions of people.

[From the Cincinnati Enquirer of June 30, 1939]

#### PRACTICAL PURIFICATION

A few years ago the prospect for the purification of our rivers seemed hopeless. But the last 5 years has shown such an improvement that if Congress acts to pass the Barkley-Spence legislation the future will be very bright.

The period from 1932 to the end of 1937 demonstrated that local effort with grants-in-aid from the Federal Government increased sewage-disposal facilities nearly 75 percent. In 1932 only 21,000,000 people living in urban communities treated their wastes. By the end of 1937, 37,000,000 of them were discharging their wastes through treatment plants. That is over one-half of the urban population.

Existing official estimates indicate that by 1941 over three-fourths of city dwellers can stop polluting their adjacent waters. This will require something like half a billion dollars by the former method of local construction aided by Government loans or contributions.

Though this does not include all industrial wastes, it is reassuring that a few million dollars have already cleared up one-fourth of the sulfuric-acid load of 4,000,000 tons on the Potomac-Ohio watershed.

With such encouraging news, which does not include much construction in the last year and a half, it is the irony of paradox that attempts are being made to defeat this progress, and the opposition comes not from polluters so much as from a few spokesmen for the Izaak Walton League and similar organizations. These demand a bill which would empower the Federal Government to bring suit against individual cities and businesses to enforce an ill-defined purity in streams.

Such legislation, very likely unconstitutional and so fraught with controversy as to lodge indefinitely in the courts, might stall the work of purification for years.

With such marked progress from the already proved process of local effort with national aid, it should be evident which is the practical method.

[From the Cincinnati Enquirer of August 26, 1939]

#### THE RIVER PERIL

The dimensions of the Ohio River pollution peril are indicated in a dispatch from Louisville, where city, county, and State health authorities have warned bathers that the river is "heavily charged" with organisms menacing to health. Tests showed the presence of as many as 1,000,000 bacilli coli to each 100 cubic centimeters of water tested, according to the Louisville Commissioners of Sewerage.

The "safe average" fixed by the United States Public Health Service is 5,000 bacilli coli in each 100 cubic centimeters of water. Thus, at Louisville, Ohio River water is just 200 times as heavily charged with organisms as the tolerable limit.

United States Public Health Service tests below Cincinnati have shown between one and five million bacilli coli in each 100 cubic centimeters of water, or from 200 to 1,000 times the "safe" average of pollution. This reflects, of course, the immediate result of discharging into the river the untreated sewage from a metropolitan district of 600,000 people. Though hampered as it is by chemicals and industrial wastes, the Ohio River manages to exert some self-purifying action as its water travels a hundred miles or so.

Cincinnati is both an offender and offended against in the matter of pollution, of course, as are virtually all of the river cities under present circumstances. Annually, the peaks of pollution, as measured at the Cincinnati waterworks, grow higher.

Modern filtration and purification methods have been equal so far to the tremendous task of rendering fit to drink water so heavily charged with organisms, but the situation is as dangerous as it is revolting. The Ohio Valley must insist that Congress in

January delay no longer in the enactment of the Barkley-Spence anti-stream-pollution bill, to pave the way for remedial action at the earliest moment.

[From the Cincinnati Enquirer of October 31, 1939]

OUR NOBLE RIVER

The Countess de Chambrun, in her history of Cincinnati, says that she knows of no river view "more majestic than that great double curve sweeping between the harmonious lines of the Kentucky hills and the steeple-crowned peak of Mount Adams."

Indeed, it is glorious. But the countess is candidly truthful, for she adds that it is only distance which is enchanting. When you descend to its banks the spell is broken. Then you realize how we have abused our noble river. Along our city front you can see the sewers emptying into it.

Of course, as a voracious chronicler the countess could say no less. She is still a young woman. We trust she will live long enough to see the Ohio restored to its pristine purity. In some future and revised edition of her work, we sincerely wish she will be able to say that the waters of the Ohio are sweet and wholesome—that boys and girls can swim in them and be unafraid. We trust that in a triumphant chapter she will be able to tell of the victorious battle against pollution. Then the Ohio will not only be splendid when seen at a distance; there will be no disenchantment when you come down from the hilltops and stand upon its shores.

[From the Cincinnati Enquirer of January 19, 1940]

AND NOW KENTUCKY

Alert to their responsibilities, Gov. Keen Johnson and other officials of Kentucky have announced that they will support early ratification of the Ohio Valley Stream Purification Compact. The State health commissioner, Dr. Arthur T. McCormack, has emphasized the importance of the compact, which was introduced in the Kentucky Legislature by Representative Henry T. Ward, of Paducah.

With Kentucky squared off for action, the effective date of the compact draws nearer. Last year, while the Kentucky General Assembly was not in session, the program of interstate action against stream pollution was approved by the Legislatures of Indiana, Ohio, Illinois, New York, and West Virginia. The interstate antipollution front will be complete with the addition of Kentucky, Pennsylvania, and Virginia.

The scheduled eight-State campaign against pollution, which will enforce minimum standards of stream purification, is being widely cited as an example of effective interstate cooperation. In operation the compact will serve ideally as an instrument of local action against river pollution.

The Ohio River Valley presents what is regarded as the foremost pollution problem in the Nation, from the standpoint of scope, severity, and number of persons affected. In the light of conditions, the sooner and more comprehensive the effort to purify the river and its tributaries the better. It is up to the States, individually and collectively, to demonstrate their willingness and their ability to combat pollution. The open avenue before them is the Ohio Valley Stream Purification Compact.

## Workers Dropped From W. P. A. in Accordance With the 18-Month Provision in the 1939 Relief Act

### EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 31, 1940

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following summary and report issued by the Federal Works Agency, Work Projects Administration, Division of Research:

#### SUMMARY

In July and August more than 775,000 Work Projects Administration project workers were dropped from their jobs in accordance with the 18-month provision of the 1939 Relief Act. A survey covering more than 138,000 of these workers, in 23 large and representative cities, disclosed that 3 to 4 weeks after their lay-off 7.6 percent were employed in private jobs. In November a second interview with the same group showed that 2 to 3 months after dismissal 12.7 percent, or fewer than 100,000 of the 775,000 workers, were employed in private industry. In industrial centers like Buffalo, Cleveland, Cincinnati, Detroit, and Birmingham, the proportion with jobs was about 1 in 6; in 8 of the 23 cities it was about 1 in 10.

The discharged Work Projects Administration workers have not benefited to any great extent from the industrial recovery this fall; they are not the first to be hired when business improves. Em-

ployers tend generally to recall workers recently laid off, most of whom have not yet been forced to seek assistance. When there are eight to ten million persons seeking work, Work Projects Administration and relief workers, with their longer periods of unemployment, have to wait.

Slightly more than half of the 12.7 percent who were currently employed were earning as much as or more than their former Work Projects Administration project wage. Most of these workers would undoubtedly have left Work Projects Administration voluntarily, since every month 100,000 or more Work Projects Administration workers leave of their own volition in order to accept private employment at wages which permit a minimum standard of living. The others who were employed, some 45,000 of the laid-off workers, were earning less than their former Work Projects Administration project wages. These workers were receiving substandard wages or working at part-time jobs.

By November considerably more than half of the separated workers were again dependent on public assistance. About a fourth were back on Work Projects Administration, and more than a fourth were on local relief rolls. Large numbers were living on Federal surplus commodities, because in many areas no local relief is available for employable cases.

Others, unable to find jobs or to secure public assistance, were dependent upon miscellaneous sources of income, or were without any income whatever. The small earnings of secondary-family members, categorical aid received by other members of the family, the assistance of friends and relatives—these means had to suffice to support large numbers of separated workers. Approximately 100,000 of all those cut off received no income during the 2 weeks before they were interviewed. Some were living on savings from earlier short-lived jobs or on credit extended by grocers; others were forced to sell personal property or even to beg for left-over and unsalable food.

The decrease in appropriations necessitated reductions in Work Projects Administration employment quotas at the time these lay-offs were being made. Hence, only about a fourth of the separated workers had gone back to Work Projects Administration 2 to 3 months later, though many more had been recertified as eligible for reemployment. Difficulties in assignment meant also that relatively few of those who had been awaiting assignment could be put on as replacements; it is probable that by mid-November less than half of the vacancies left by those laid off in accordance with the 18-month provision had been filled by new workers.

FEDERAL WORKS AGENCY,

Work Projects Administration, Division of Research.

#### WORKERS DROPPED FROM W. P. A. IN ACCORDANCE WITH THE 18-MONTH PROVISION IN THE 1939 RELIEF ACT

In accordance with the provision in the 1939 Relief Act which forbids continuous employment of certified workers on W. P. A. projects for longer than 18 months, more than 775,000 workers were dropped from W. P. A. employment during July and August. The proportion cut off was in some areas greater than two-fifths of all those employed on July 1, and for the country as a whole was nearly one-third.

To learn how the workers had been affected by these lay-offs, the W. P. A. Division of Research conducted surveys in 23 large and representative cities distributed throughout the country. The workers were interviewed about 3 weeks after their lay-off, and those not reassigned to W. P. A. by the end of 2 to 3 months were again interviewed in November. The survey covered a total of more than 138,000 workers, or nearly one-fifth of all those separated for this reason. Table 1 shows the cities where the study was conducted and the number of workers included.

#### THE FIRST INTERVIEW

These lay-offs brought immediate widespread distress to thousands of workers and their families. In many cases children had to be kept home from school for want of food and clothing; small insurance policies were lost; and it was no longer possible to pay for needed medical care. When interviewed about 3 weeks after their lay-off, 7.6 percent were employed in private industry, of whom considerably more than half were earning less than the W. P. A. security wage. Of all those laid off, almost half reported no cash income whatever for the 2 weeks prior to the time they were interviewed, and 90 percent received less income from all sources than they had previously earned on W. P. A. Twenty percent of those laid off had been granted direct relief. None had been reemployed by W. P. A., because the act required that they be separated from project employment for at least 30 days.

#### THE SECOND INTERVIEW

The situation of the dismissed workers was examined again in November in order to find out whether they had substantially bettered their condition several months after separation from W. P. A. It was found that the great majority had not been benefited by the improvement in general economic conditions which occurred this autumn. In November, 12.7 percent of those laid off had private employment, 28.4 percent were on local relief rolls, and 26.7 percent had been reassigned to W. P. A. (table 1). Of those not reassigned to W. P. A., 77.2 percent had total incomes which were smaller than their previous earnings on W. P. A. (table 3).

#### PROPORTION CURRENTLY EMPLOYED

The study indicates that of the 775,000 workers laid off in July and August fewer than 100,000 had jobs by the end of November. In cities such as Cleveland and Buffalo, where industry has been

stimulated by war orders, and in Detroit, where automobile manufacturing was seasonally active, about 1 out of every 6 of the workers had a private job. In Jacksonville the proportion employed was less than 1 in 14, and in Boston, Milwaukee, and Denver was about 1 in 11 (table 1). Although the workers interviewed had made persistent efforts to find jobs, in the vast majority of instances no work was to be found. One young man, experienced as a welders helper, says, "I leave at 5:30 in the mornings and come back about 1 o'clock. I've been to every junk yard and every shop. You can ask for work, but they won't give it to you. They say, 'We don't need nobody today.' Some places won't even talk to you about it. They see you coming and holler, 'We don't need nobody, boy!'"

When eight to ten million persons are seeking work, employers have their pick of workers. Their preference usually follows the principle of "last fired, first hired." In the main it is the recently unemployed, those who have not yet been forced to seek relief, who are the first to get jobs when business improves. W. P. A. and relief workers, with their longer periods of unemployment, have to wait. The return of W. P. A. workers to private employment requires a reemployment program adapted to the current employment policies of industry. Many surveys have demonstrated that individual qualifications, training, geographical differences in employment opportunities, and in the demand for specific skills must be taken into account if such programs are to be effective.

#### CHARACTER OF THE JOBS

At the time of the November interviews only 6.7 percent of all workers separated because of the 18-month provision were employed in private jobs which paid as much as their former W. P. A. jobs. Most of these workers would undoubtedly have been included in the normal W. P. A. turn-over to private employment, since each month more than 100,000 workers leave W. P. A. voluntarily to accept private employment at wages which permit a minimum standard of living.

The others who were employed—6 percent of all the workers laid off, or about 45,000 workers—were earning less than their former W. P. A. project wages; in many instances a great deal less. To cite but two examples of low earnings from among many, one man selling fountain pens at a profit of 10 cents a pen made \$2 in 2 weeks, and a huckster peddling vegetables in his home-made pushcart reported earnings of about 15 cents a day.

Variations in earnings from city to city reflect the different wage standards prevailing in various parts of the country. Average wages were found to be relatively high in Milwaukee, Buffalo, Cleveland, and Detroit, and lowest in the southern cities. In Fort Worth, for example, average weekly earnings were \$6; in Nashville, \$7.27; and in the industrial city of Birmingham they were \$8.82. For the 23 cities combined earnings of those workers who were employed averaged \$17.22. More than one-fifth were earning less than \$10 per week (table 2).

The temporary nature of much of this work is shown by the fact that 10 percent of those who were currently employed had been working for less than a week. Now, with winter coming on, opportunities for odd jobs are decreasing. As a skilled painter said, who had been picking up enough 1- and 2-day jobs to keep his family supplied with groceries, "I got one day last week and none this week, and you can't live 2 weeks on 1 day."

#### THOSE DEPENDENT UPON PUBLIC ASSISTANCE

Unable to find jobs of any kind, most of the dismissed workers again sought public aid, endeavoring to get back on W. P. A. or to get onto local direct relief rolls. Two or three months after they were separated 26.7 percent had been reemployed on W. P. A. projects and 28.4 percent were receiving local relief (table 1). Thus considerably more than half the workers were again dependent upon public aid. In areas where local relief was relatively adequate the proportion receiving these forms of public assistance was ordinarily as high as 60 to 70 percent. The proportion was highest in Milwaukee, where almost 80 percent were either back on W. P. A. or were receiving local relief.

Inasmuch as practically all of those who reapplied were in need, the proportion reemployed by W. P. A. would have been much larger had not return to W. P. A. been slowed up by certification difficulties, by the closing of many projects, and by reductions in available funds. Instead of returning to work soon after the expiration of the so-called 30-day furlough, the majority of the dismissed workers were still off W. P. A. several months after separation.

For the many who could not return to W. P. A. and who did not have jobs, the only recourse was local relief in areas where relief is provided for employable cases, and surplus commodities in those areas where employables are not ordinarily given relief. In 6 cities—Buffalo, Philadelphia, Detroit, Indianapolis, Los Angeles, and Seattle—more than 45 percent of all the separated workers were receiving relief (table 1). In the southern cities, with the exception of Fort Worth and Richmond, scarcely any workers were getting local aid, even of an emergency character. In these areas surplus commodities distributed by the Federal Surplus Commodity Corporation constituted the only relief source of any significance.

Wherever there was hope of obtaining relief, many more had applied than were currently receiving assistance; where relief is totally inadequate, there is small incentive to apply, even when need is desperate. "We would have asked for relief, but I heard from my neighbors it wouldn't do any good," is a common explanation of why even destitute families have not made application. For the 23 cities taken together, 62 percent of those not back on W. P. A. had applied for relief, as against only 40 percent who were currently receiving relief. A few (less than 4 percent) had been

granted relief at some time since separation, but were no longer receiving it.

#### THOSE WITHOUT PRIVATE OR W. P. A. JOBS AND NOT ON LOCAL RELIEF ROLLS

It has sometimes been assumed that those separated workers who have not been reassigned to W. P. A. or who are not receiving local relief are self-supporting. This survey shows, however, that over 70 percent of those without any public assistance except surplus commodities were unemployed when interviewed in November. These workers constituted nearly a third of all those separated (table 1). Two-fifths of them, or approximately 100,000 of all those cut off in July or August, received no incomes whatever during a period of 2 weeks before they were interviewed; they were living on small earnings from earlier brief jobs or were forced to rely on credit, to sell personal property, or to beg. The others were living on the small earnings of secondary members of the family, on categorical aid or C. C. C. and N. Y. A. earnings received by other members of the family, on aid from friends and relatives, and on surplus commodities.

#### FAMILY INCOMES—ALL THOSE NOT REASSIGNED TO W. P. A.

Total incomes of the families of those separated who were not reemployed on W. P. A. in November were very low. Seventy-seven percent were receiving less than their W. P. A. security wages had brought them (table 3). Weekly income varied widely from city to city, but the average was nowhere higher than \$14, and in 10 cities was less than \$5. In St. Louis, Charleston, Jacksonville, and Louisville average weekly income was less than \$2.50. For the entire group of families, average total weekly income was \$8.23 (table 4).

#### FAMILY INCOMES—THOSE NOT REASSIGNED TO W. P. A. AND NOT ON LOCAL RELIEF ROLLS

Family income of that portion of the separated workers who were not on local relief rolls was on the average considerably lower than that of the whole group not reassigned to W. P. A. At one extreme were the few families who had secured good private jobs; some of these had weekly incomes of \$25 or more. At the other extreme were the 29.5 percent without any cash incomes and an additional 19.2 percent with incomes of less than \$5 per week (table 5). Thus, almost one-half of those not dependent on W. P. A. or local relief were living on less than \$5 per week some 2 to 3 months after being separated from W. P. A.

The proportion primarily dependent on surplus commodities provides an indication of the severe decline in living standards which many of these workers and their families faced, and furnishes evidence of the lack of adequate direct relief in many areas. In Birmingham 60 percent of these families derived the major part of their income from surplus commodities, and in five other cities more than 15 percent of the families depended almost exclusively on this source of livelihood. Though essential for the existence of many of these families, surplus commodities are ordinarily not available in such proportions as to provide an adequate balanced diet. For example, in Omaha, where 16 percent of the families reported surplus commodities as their major source of income, the only commodities distributed during November were flour, apples, and onions. Most of the housewives say that the commodities have "helped a lot," but they do complain of the inadequate variety of foods. "We got flour, but what good is the flour without lard and baking powder?" one woman asks. "You can't eat it raw. And we got 5 pounds of dry beans, but I had to get a piece of meat to grease 'em with."

Families without regular incomes are, of course, finding it progressively more difficult to secure even minimum essentials. What has happened to hundreds of these families is told in the story of Joe Richards, who writes:

"The first month was not so bad. I held back the rent and used my last pay check on groceries and other necessities. The second month I could not pay the rent and used my credit for groceries and had to borrow from my friends.

"This last month I have been forced to the wall. My friends are beginning to avoid me. My creditors have closed in on me. I have been forced to break up my home, give up my children, and sell all my furniture. The prices I have had to take for my furniture have been ridiculous. It has averaged about 10 percent of what I paid for it."

Many grocers who were willing to extend credit while they believed that the workers would be reassigned at the end of 30 days shut off credit when the expected reassignments did not occur. In November only about one-fifth of the families without regular incomes reported buying groceries on credit. The curtailment of credit and the mounting unpaid bills had their effect on the storekeepers as well as the families. A report from Texas states: "These W. P. A. workers have traded regularly for merchandise and paid the bills from check to check. While the amounts bought have not been large, their inability to continue these accounts and regular payments of them has greatly reduced the income of the merchant." As a result, many merchants have called regarding possible reassignment of individual workers.

With credit exhausted, families had to make further readjustments. Many depended on loans made by friends or relatives frequently not much better off than they. Some families doubled up; other families were broken up, the children going to the country or the wife returning to her home, while the husband continued to look for work. The lay-off from W. P. A. shifted responsibility for these families directly onto other workers and their families.

#### EFFECTS ON LIVING LEVELS

The effects of the dismissals are reflected not only in the reduction of incomes but also in the general lowering of levels of living with

loss of income and resources. In many cases children have been kept out of school for lack of warm clothing, books and pencils, or even adequate food. Medical care and special diets for the chronically ill have been among the first items eliminated when expenditures must be reduced. Insurance policies have lapsed; household equipment bought on the installment plan has been lost; personal property has been sold; gas and electricity have been shut off, and many families are gathering up scraps of wood for fuel. Many families have been faced with evictions or the fear of evictions.

Securing food remains a major problem for many families even after they have cut practically all other expenditures from their budgets. In Omaha 1 family in every 19 reporting no regular income has resorted to canvassing markets, bakeries, or restaurants for left-over and unsalable food.

#### RECERTIFICATION AND REASSIGNMENT

By November 24, 64 percent of all the dismissed workers had been recertified as eligible for W. P. A. employment. (This percentage excludes New York City, where certifications are made only on requisition and where, in consequence, the proportion recertified is only very indirectly reflects need.) Referral for certification is in most cities a duty of the local agency administering relief. Hence, the large proportion recertified within 2 or 3 months after separation provides local evidence that the great majority of the separated workers continued to be in need of assistance.

The proportion recertified ran as high as four-fifths in 5 cities and was nine-tenths in Jacksonville. At the other extreme, only 31 percent had been recertified in Los Angeles and 19 percent in Buffalo. In Los Angeles no recertifications were made until October 17 because of difficulties in developing procedural arrangements with the referral agency, and in Buffalo, where the majority of recertifications are made on requisition, none at all were made until after completion of a general review of need. Less serious administrative difficulties in a number of other cities resulted in the proportion recertified, being considerably below what it would have been if recertification had been entirely open.

Reassignments did not keep pace with recertifications; only slightly more than one-fourth of the separated workers had been reassigned 60 to 90 days after separation (table 1). (A subsequent report, providing information on this point only shows that even as late as December 16 fewer than one-half had returned to W. P. A.)

The slow rate of reassignment is accounted for by the fact that in most areas, because of reductions in appropriations, quotas were reduced simultaneously with the 18-month layoffs. For the same reason the assignment of others was also impeded. It is probable that less than half of the places left vacant by the mandatory separation of those employed continuously for 18 months or longer were filled by mid-November by persons awaiting assignment at that time.

#### EFFECTS ON PROJECT OPERATION

Though this survey has concentrated on the effects of the 18-month provision on the discharged workers, these effects are by no means the only ones. State administrators have reported that the immediate effect of the requirement was to increase administrative work and to reduce project efficiency. In some areas the loss of skilled key personnel forced the suspension of certain types of projects and badly hampered the operation of many others. Some sponsors have protested that their investments in projects have been jeopardized by the substitution of new workers for personnel known to be capable of producing satisfactory results. Consideration must also be given to the possibility that these enforced layoffs may endanger some of the gains in project efficiency attained as a result of many months of steady effort.

## Neutrality—Its Importance and Difficulties

## EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD a speech, which expresses my views, on the subject of Neutrality—Its Importance and Difficulties, delivered by me before the annual convention of the American Coalition, an organization comprising more than a hundred patriotic, civic, and fraternal societies, at the Willard Hotel, Washington, D. C., Wednesday, January 31.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

My appreciation of the privilege and the honor of addressing this distinguished gathering on this occasion is overshadowed by the sadness in the realization that it came about by reason of the untimely death of my cherished colleague and friend, William E. Borah, who was to have been your speaker today.

It is no exaggeration to say that the loss which our country has suffered in his death at this critical juncture in world affairs is well nigh irreparable. For more than a quarter of a century he has been a commanding figure in our public life, and the reach of his influence in public thought as well as upon national and international affairs was beyond measure. He performed his senatorial duties with the industry, the courage, and the patriotic zeal of a soldier.

I shall resist the temptation to enter into an extended eulogy of this great American contemporary, but perhaps I may be permitted a brief personal word. During the 20 years I have been a Member of the Senate it has seemed to me that no Senator nearer approached the ideals of American statesmanship—courage, ability, personal integrity, and an impersonal approach to all public questions. And, during this period, no one surpassed Senator Borah in eloquence and effectiveness in debate.

On public questions relating to the defense of the Constitution, the preservation of our democratic institutions, and noninvolvement in foreign alliances, our political philosophy was in complete harmony. To me, as in fact to all his colleagues, his death is a keen personal loss. Of Senator Borah it may be truly said:

“ \* \* \* He held his place \* \* \*  
Held the long purpose like a growing tree \* \* \*  
Held on through blame and faltered not at praise.  
And when he fell in whirlwind, he went down  
As when a lordly cedar, green with boughs,  
Goes down with a great shout upon the hills,  
And leaves a lonely place against the skies.”

These are tragic moments in the course of human affairs, dark hours in the history of modern civilization, and fateful days for our country, our democracy, our freedom, our security.

Europe is in the devastating flames of war. No one may say how long it will continue or estimate its terrible toll in human lives

and human misery, in destruction of property, and depletion of material resources.

No man may appraise the final consequences to those nations, peoples, and governments engaged in the war; nor the consequences upon the world—indeed, the whole fabric of human society. We only know that if this war in Europe is long continued, and if it spreads, the devastation will be beyond reckoning, and, very likely, beyond repair within the span of anyone now living.

The man or woman would be indeed unfeeling who was not profoundly moved by the inhuman situation in Europe. As Americans we are imbued with the deepest sympathy for the masses of people now experiencing the horrors of war. How tragic and how helpless is their plight! Facing with fear and trembling, day after day, hostilities that would destroy their homes, lay waste their lands, visit innocent noncombatants with poverty, death, and the slaughter of their youth.

Naturally, our paramount concern in this dark hour is for safety and security of our own loved ones; for escape of our own country from this awful conflict; for the preservation of our heritage, our own democracy; and the freedom for which our forefathers fought and died a century and a half ago. In a word, our supreme duty at this moment is to keep the United States out of war. On that proposition there is no debate and no disagreement.

One question, however, continues to hover over us, namely, Can we prevent involvement of our own country in this second World War; and how shall we proceed to that end? With the utmost conviction I believe we shall succeed in keeping the United States out of this war, if we have the will to do so and if our Government takes adequate precautions, follows a prudent course, and, in truth as well as in word, maintains strict neutrality.

Neutrality is a state of mind; it operates for peace or war through mental channels. A neutrality that is honest removes animosities and hostilities. A neutrality that is merely a pretense, the use of a name, creates distrust and enmity. The slightest aggressive operation by our Navy could swiftly turn our course from peace to war. In like manner, the elements that constitute a policy of neutrality can sharply convert our attitude from peace to the role of an aggressor. It is the impairment or abandonment of a real policy of neutrality that is a basic cause of war in the world.

No guns are leveled at this Nation. No threatening demands have been made upon us. No ultimatum has been delivered. We are in the pathway of no army. We are more than 3,000 miles from the arena of war. We are a nation at peace and not at war, and every conceivable safeguard should be used to prevent our Nation from becoming involved in a war that is not of our making.

The most pernicious and dangerous thought with respect to the present war in Europe is the idea that our own involvement and our own entry into the war is somehow or other inescapable and inevitable; that whether we get in or whether we stay out, rests not with ourselves but with circumstances and events beyond our control.

I was shocked and profoundly disturbed at the outset of the war to find how prevalent in Washington was the notion of the inevitability of our involvement in the war in Europe—the notion that we were destined to be swept into it despite all efforts to stay out. In my opinion, our involvement in the war is neither necessary nor inevitable. It can be avoided. It must be escaped if we are to preserve our own Nation and our own democracy and prevent the awful sacrifice of human lives attendant with war.

Happily this feeling of the inevitability of our involvement is much less in evidence today. I believe the public discussion of neutrality, our foreign policy, and international affairs during the consideration of the Neutrality Act at the special session of the Congress last October contributed to the dissipation of this idea.

I believe the rank and file of our people are increasingly militant in their opposition to war, or to any action by our Government that may be said to tend in that direction.

I believe they are increasingly wary of any foreign entanglements and increasingly insistent upon real neutrality, and this sentiment

on the part of the public is finding reflection in Congress and with the officials of our Government.

One gratifying element which gives strength and support to the cause of peace in the United States today is the resistance of our people to propaganda. The feeble voice of the people has triumphed over any and all efforts to sway them through the power of propaganda. They have shown a determined purpose to treat the present war objectively. They have refused to become bewildered or confused, as was the case in the World War. Unorganized, humble, springing not from the countinghouses but merely from the homes, firesides, and family circles of the great masses of American people, who ordinarily have little to say about creating wars in which their sons and husbands must fight, they have instinctively come together in determined opposition to prevent the entry of America into the present European war. They have not permitted their sympathies, their hatreds for European leaders, their unfounded fears, or their personal interests to obscure the awful consequences of our participation in another European war.

The pleas to save democracy in Europe, to destroy autocratic aggressive forces in the world, or the opportunity for financial gain that wars produce, have failed to touch the hearts of the plain people of America.

This does not mean that they are callous or indifferent to the injustices to and sufferings of the people of Europe. It does mean they have learned a lesson from the last European war, and they understand the futility of America attempting to assist in the application of principles of justice, that would be understood and respected in Europe, and they realize that the greatest service that can be rendered our country at this hour is to save our own democracy, solve our own difficult domestic problems, and be in a position, after hostilities cease abroad, to try to bring the crushed and broken remnants of humanity that may be left in Europe to an understanding of the folly of their leaders; to an appreciation of peace and to give our aid in the reconstruction of civilization in Europe.

I repeat, to pursue national policies and foreign policies calculated to insure our own peace, to make ourselves secure from attack by any foreign foe, and at the same time secure from involvement in a foreign war, are today, and until the end of the European war will be the dominant questions and the most important considerations affecting our Nation.

We are taking necessary and adequate steps to strengthen our own defense on land, on sea, and in the air. We are of common mind and purpose on that objective. Our differences relate only to some of the details.

Our present danger and, in reality, our sole danger is in the realm of our Government's foreign policy, lest we allow our natural sympathies for certain belligerents, our natural abhorrence of the tyranny and war lust, and persecutions by the dictators to draw us into the maelstrom of European politics and European conflicts.

President Roosevelt, in his speech at Chautauqua in August 1936, proclaimed the sentiments of the American people. Let me recall a few of the highlights of that speech, the keynote of which was strict neutrality and noninvolvement in the quarrels and wars of other nations.

The President said, "If war should break out again in another continent, let us not blink the fact that we would find in this country thousands of Americans who, seeking immediate riches—fools' gold—would attempt to break down or evade our neutrality."

"They would tell you, and, unfortunately, their views would get wide publicity, that if they could produce and ship this and that and the other article to belligerent nations the unemployed of America would all find work."

"It would be hard to resist that clamor," the President said—"it would be hard for many Americans, I fear, to look beyond—to realize the inevitable penalties, the inevitable day of reckoning, that come from a false prosperity. To resist the clamor of that greed, if war should come, would require the unswerving support of all Americans who love peace."

"If we face the choice of profits or peace, the Nation will answer—must answer—'We choose peace.' It is the duty of all of us to encourage such a body of public opinion in this country that the answer will be clear and for all practical purposes unanimous."

The President spoke of how important are the little day-to-day decisions that may finally lead to war. "At this late date," he said, "with the wisdom which is so easy after the event and so difficult before the event, we find it possible to trace the tragic series of small decisions which led Europe into the Great War of 1914 and eventually engulfed us and many other nations. We can keep out of war if those who watch and decide make certain that the small decisions of each day do not lead toward war and if, at the same time, they possess the courage to say 'No' to those who selfishly or unwisely would let us go to war."

These sentiments and this viewpoint when spoken by the President in 1936 received wide acclaim. Has anything transpired since then to make them less true or less wise? Have we any reason to take a different view or to pursue a different policy today? On the contrary, I believe that all that has since transpired indicates the necessity of remaining neutral and keeping out of war.

Indeed, it is these small decisions from day to day that the President referred to that make for war or peace.

Many questions have been or will be precipitated by the present war in Europe. The recalling of an ambassador accredited to one of the warring nations in Europe; the giving of notice of abrogation of a trade treaty with a particular nation; the authorizing of loans to nations at war; and, the sanctioning of the purchase by any of the belligerents from private manufacturers in this country, aircraft, and other equipment and supplies.

LXXXVI—App—29

Then too, we have a multiplicity of intricate questions growing out of the administration of the Neutrality Act. Among them we had the question of keeping American citizens and American ships out of the war zone so long as the war continues. To do that meant the abandonment of the time-honored tradition of freedom of the seas. It meant the foregoing of our undeniable and theoretical right to send our ships and their passengers, as neutrals, anywhere upon the seven seas with impunity and with safety.

We had that right, but we learned from tragic experience in the previous World War that the exercise of that right has dangerous and provocative consequences.

We have the question of still further strengthening and increasing our national defense, on sea, on land, and in the air—preparedness is the popular word for it.

I shall not discuss that question today except to say that in my judgment, the American people are of one mind in the need for augmenting our national defenses and for full preparedness—not as a prelude to war, not as weapons of offense, but as an insurance against war and for our national safety and security.

We have the question of all-American solidarity, which was the subject of the Pan-American conference.

We have the problem of the inevitable readjustments in our own domestic economy in consequence of the war in Europe, and dislocation of trade and disruption of foreign markets.

We have the questions of guarding against spies and sabotage and plotters against our Government within our own land.

In approaching and settling all of the questions we need to have a clear understanding of the proper role of the United States in world affairs. There are two widely divergent concepts. One is that the role of the United States is to defend "right" against "wrong" everywhere in the world; in other words an acceptance by the United States of world moral responsibilities, and to oppose aggressors everywhere and to defend international security. Such a concept requires one kind of foreign policy. The other concept, and the one to which I subscribe, is that the proper role of the United States is to consistently refuse to participate in any international scheme that might lead to the point that war would result as a possible eventuality, and at the same time being prepared to defend itself and its neighbors in the Western Hemisphere from foreign aggressors.

There is a definite contrast between the European and American positions in world affairs. The United States has no European problem such as overpopulation; it has no desire to obtain natural resources necessary for self-sufficiency and national defense; it seeks no colonies; no longing to revenge ancient rivals. None of these European ambitions concern us, and that is why our domestic welfare prompts us to avoid war, and by a rigid policy of neutrality avoid involvement.

The United States, because of its relative physical security, is almost alone among the world powers to keep itself free from coercion to join its foreign policy to that of any other nation. The situation in Europe is very different.

European nations have been forced to make alliances and agreements under special conditions. Not confronted with the pressure that exists in Europe, the United States has avoided international alliances and agreements.

Though European nations may have no choice between war and peace, the United States' geographic position and nonalliance policy protects it from ever going to war except when attacked.

If anything in the realm of political affairs has been proved during the last quarter of a century, it is that the United States cannot promote or save democracy by fighting a war on the continent of Europe. Out of the great war for democracy came communism, fascism, and nazi-ism, and in our own country a period of political and social stagnation which brought us to the verge of economic ruin—and finally came the present war.

What are the prime elements of a peace program for the United States?

First. Absolute neutrality.

Second. Strict adherence to our national policy of nonaggression.

Third. Utter avoidance of entangling alliances.

Fourth. Be prepared to cope with any and all potential enemies by building and maintaining a strong, powerful, well-balanced navy—this because of our geographical prerogative of defending ourselves first on the sea.

Fifth. Creation and maintenance of adequate air forces and maintenance of a comparatively small but well-equipped and well-trained army, supplemented with trained reserves.

If we adhere to this program, we will be secure. If we adhere strictly to this program, we will be able to remain at peace. If war comes to us unbidden, we will be able to bring it to a quick and successful conclusion.

I place first in importance in this hour the policy of genuine neutrality. I know of no better way to define the policy of neutrality that our Nation should pursue than by quoting two phrases of the former brilliant Secretary of State, Hon. Bainbridge Colby, namely, "No discrimination between belligerents," and again, "Sincere impartiality."

There is no scourge in the world worse than war. Most world catastrophes are not of man's making—but war is. Fire, earthquakes, tidal waves, and disease epidemics are all beyond the control of man. Foreign treaties, alliances, and agreements of every nature and every policy adopted in relation to other nations at war have within themselves the seeds of war. If they discriminate against another nation; if they seek, under any pretext of fostering, an artificial friendship with one country and at the same time be antagonistic to another, they threaten the peace and security of the Nation.

My conclusion is that we would be derelict in our duty to the American people if we did not place above every other domestic and international policy the avoidance of involvement in the present European war.

### United Mine Workers' Convention

#### EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an able address delivered by the distinguished Senator from Montana [Mr. WHEELER] at the golden jubilee convention of the United Mine Workers of America on January 26, 1940, at Columbus, Ohio.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a real pleasure for me to attend this Golden Jubilee Convention of the United Mine Workers of America. This gathering marks your fiftieth year of effective efforts and liberal accomplishments—for your members—for the great unorganized mass of workers—and for democracy itself.

Within the past month or two I have addressed national conventions of organized farmers and organized industry. This afternoon I speak to you, the assembled delegates of a great labor organization. Someone remarked that it was difficult to speak to such diverse groups. It might be for some, but to me it is a signal honor, a privilege, for I speak the same language to industry and business that I speak to the farmer or to labor. I am proud to be asked to speak to you—the miners of the Nation; I know of no group more interested in the betterment of social and economic conditions in this country than you who have contributed so much.

The present position of national importance held by the United Mine Workers of America reflects the growing strength of the liberal and progressive forces in the country. There have been long bleak years in the past when the United Mine Workers of America and all labor were fighting for their very existence. Friends were few and the cause of liberalism was not as popular as it is today.

Through the years in my private and public life in Montana, and in the United States Senate, I have been identified with the cause of the miners and labor generally—and I am proud of that fact. As a practicing attorney in Montana for many years I defended labor and labor leaders. I thus came to learn a little of the practical problems which confront labor. Later, as a member of a United States Senate committee appointed to investigate the coal strike in Pennsylvania, I learned at first hand of the ruthless activities of some industrial leaders. They were attempting to destroy a labor union which was demanding nothing more than a chance to improve the living conditions of its members.

That Senate committee found appalling labor conditions in Pennsylvania and other States. We found, in many instances, the denial of constitutional liberties, of freedom of speech, and freedom of assemblage. We found suppression of practically all other civil rights. We found economic conditions in the mining industry of a character that made peons of the workers. Privately employed police were used to oppress the miners. The living conditions of their families were intolerable. These disclosures shocked the conscience of the most conservative Members of the United States Senate. Conditions such as we found are bound to destroy the confidence of the people in their government.

Through your great union you have gone far in eliminating these economic and social abuses. For this your organization and your leaders deserve special commendation. You have aided in the preservation of our democratic institutions.

The mine workers of the Nation can be justly proud of their organization. All the obstacles which have confronted the workers of any nation have been placed in your path—but you coal miners seem to thrive on opposition. A living demonstration of this fact is the present convention of the United Mine Workers of America. It marks the complete unionization of one of the basic industries.

Your leaders have been true sons of labor. They have come up the hard way—with pick and shovel. Steeled and trained in your organization, they have emerged not only as great leaders of your union but also as great Americans—contributing to the development and growth of this country. From your organization came a mine worker who became a member of a President's Cabinet and the Nation's first Secretary of Labor. It is true they had no college degrees—their theories were not obtained from textbooks; they learned their lessons from human experience.

During the past few years your union has been able to emerge into a position of security. Its continued existence is assured.

Freed from the ever-pressing threat of the struggle for the right to exist, it, and its members, have been able to participate in the affairs of the Nation. The coal miners of this country—organized into this great union—have not only bettered their own position but have unselfishly assisted the great unorganized masses of the country in achieving greater independence and better working conditions.

A deep obligation is owed to each of you—not only from those workers but also from every liberal and progressive person in the Nation.

We cannot go back to the sweatshops, to the long hours and unsafe working conditions in the mines, to unfair labor practices, or back to political and economic domination by reactionary politicians or industrialists. A growing economy is productive of new problems, and new problems require new solutions. A dynamic economy makes impossible a static society. We must go forward—not solely for labor but for the country as a whole. This creed must be followed and maintained if we are to preserve the precious heritage of free institutions.

I want to take this opportunity of assuring you that, as always, I will be found fighting to improve the conditions of the workers and the farmers.

Our Nation today is confronted with a most serious economic and social problem. There are in this country at the present time, according to our best available figures, between nine and ten million unemployed. Many States and cities are without adequate funds to meet this situation. With increasing demands for the balancing of the Federal Budget, and the Federal Government spending less and less for relief and public works, the problem becomes more acute. Either private industry will furnish work to the unemployed or the Government must.

Thousands of able-bodied Americans willing to work have been unemployed for many years, and their skill and training have been completely lost. The morale of these persons and the members of their families is distressingly low.

Production is becoming increasingly efficient, and technological unemployment is developing with increasing rapidity. Although industrial production is approaching 1929 peaks, fewer workers are required to maintain this production level. The machine is becoming the master and not the servant of mankind. Scores of communities are becoming ghost towns. They were built around plants rendered obsolete by development of more modern units elsewhere. Thousands of workers and small merchants in these communities are being left without any means of livelihood. They are unable to educate their children. The future holds little for them except public relief.

Over 3,000,000 of the unemployed are young men and women under the age of 24. They have no immediate prospect of jobs. Yet upon their welfare and morale rests the future of the Nation.

The problem of unemployment—unsolved and comparatively untouched—still remains America's No. 1 problem. There cannot be any permanent prosperity or industrial peace when millions are unemployed, facing suffering and misery.

Contrary to the belief of many people, income levels of large sections of even the employed are desperately low. For instance, the wages of almost 40 percent of the workers were less than \$500 during 1937. The wages of almost two-thirds of the workers during that same year were under \$1,000. A quarter of our population is engaged in agriculture, and the average annual cash income per farm during 1939 was \$625, and this includes the Government benefit payments.

Decent housing and medical services are not being adequately provided at the present time—either for workers or the rural population.

From the dawn of civilization until the advent of modern industrialism the No. 1 economic problem facing the world was one of production. Man wanted—and needed—more goods than could be produced. With the advent of the machine age millions have been spent in research laboratories and our energies have been devoted to production. But far too little thought has yet been given to consumption.

With this mass production there came problems—economic and social difficulties of an almost Frankenstein character. But retrogression is no solution. None of us would today trade the incandescent light for the candle.

People everywhere are rightfully asking, Why do granaries bulge when people are hungry? Why are bales of cotton piled higher and higher when people lack clothing? Why do workers walk the streets when we need more adequate housing facilities? What has created this paradox of want amid plenty? What is it that leads men to close down mines and factories when people are cold and hungry? What is it that leads man to destroy wealth to create wealth? These economic riddles came with mass production, and they will only go with mass consumption. The problem of consumption lies basically with the great underprivileged segments of American society—the unemployed, the underpaid, and the underprivileged farm group.

Unemployment and the farm problem must be solved before this Nation can prosper. The nearly 10,000,000 who lack real jobs—and agriculture with its millions of low-income farmers—must be given an opportunity to consume not only the necessities but also the luxuries of life.

I have repeatedly said that it is not necessary for business to high-pressure John Jones into buying a new automobile—he would like to have a 1940 model. You don't have to high-pressure him into buying new clothes or more food or even a new home—he wants them all. His wife wants the modern conveniences.

John Jones and his wife and 40,000,000 others lack the means to buy goods with which our markets bulge. Industry has created the demand, but neither Government nor business has provided the necessary purchasing power.

This country is neither exhausted economically nor inefficient industrially. On the contrary, we are rich in men, money, and machines. We have a potential market. But until we have also helped provide the means whereby this potential market becomes an actual market, the job is only half done. Our energies must be devoted to finding ways to give the farmers and the workers the purchasing power that will keep our factories running, not at 50 percent or 58 percent but at 100 percent all of the time.

The principles of democracy can become effective only if they prevail in the industrial as well as the political life of the Nation. As Americans we completely reject the notion that our political destiny can be controlled by any single person or group of people with special privileges. All right-thinking people have long since rejected the idea that the policies governing our industrial life, upon which jobs for millions depend, can be determined by men who are responsible to no one for their decisions.

We in this country have pursued a policy of restricting production and maintaining prices to protect profits. We have been unable to make the tremendous scientific discoveries of our age serve the welfare of the people. We have managed our economy so that it either produces too much or too little.

It is time for us to say that these economic absurdities must be solved in the interest of all the people. It is time to say that upon the wisdom and the experience of the American people we can, if we will, manage our economic life so that in the place of restriction we have expansion of production; in the place of artificial prices we have a constant lowering of the cost of living; in the place of recurrent shut-downs and unemployment we have a steady level of production and jobs; in the place of 10,000,000 unemployed we have a busy able-bodied population while our youth are educated and our aged retired to security.

Industry, as well as labor and farmers, are vitally concerned with this basic task that confronts us today. No one solution is available at the present time, nor is any one group or organization in a position to recommend a specific program to be readily accepted by all others. The Government, therefore, must assume the leadership. And to this end the national leaders of industry, agriculture, and labor should be called together to meet and confer and recommend a program by which we may achieve industrial democracy and economic and social security.

In the hearts and minds of all of you assembled here today, as in the case of every individual in this country, there looms up the single important question, Is the United States going to become involved in the wars in which Europe and Asia are engaged?

History tells us that it has frequently been a convenient device for leaders of nations—when thwarted in their attempts to solve economic problems in their country—to divert the attention of their people toward foreign affairs. Let us take this lesson of history to heart. Let us not allow foreign affairs to divert our attention away from what is far more important to us, namely, the solution of our domestic problems. I have briefly analyzed with you a few of the more important economic and social problems confronting us today. Certainly they are sufficiently serious and exacting to demand the full attention and energy of our leaders in government and private life.

It should be clear to all that if the United States permits itself to become engaged in the wars of Europe and Asia there will be a black-out of American institutions—and possibly of democracy itself. I am convinced that the people of this Nation are firm and united in their determination that we are not to have any part of these foreign conflicts. You—as men and women of labor—know only too well that in any war it is largely workers who must do the fighting—and it is largely workers who must do the dying.

The United States of America—being the mighty Nation that it is—necessarily must play a role in world affairs. But this admitted fact must not be utilized to cause the United States to become involved in any of the foreign wars.

As a candidate for reelection to the United States Senate in 1934, I stated on every public platform that there were rumors of war in Europe and rumors of war in Asia, but that as far as I was concerned I would never vote to send an American boy across the water to fight upon foreign soil. As a candidate for reelection to the United States Senate in 1940, I repeat—and give to you the same pledge—that I will never vote to send an American boy across the water to fight on foreign soil.

Under the Constitution it is Congress that declares war, and this Congress and every succeeding Congress need not be called upon to vote for war if we keep out of foreign entanglements abroad.

We have an immediate international problem. It is created for us by nature and geography. We live in the Western Hemisphere. We know that the export trade of the United States is an essential part of our economy. For this reason we should give considerable thought and attention to the problem of building up our trade with South American countries. Without involvement in any entanglements of foreign nations, without commitments to any foreign nation, the peace and security of the Western Hemisphere might thus be aided through the natural development of our markets in South America. In this manner we could build up our own domestic economy by providing greater employment and thereby increase our national income.

By building up the domestic economy of South American nations through such trade we assure the continuance of democratic institutions in the Western Hemisphere. Congress can do all this without sacrificing American industry or agriculture and without dele-

gating its powers to any department in Washington. If we in the United States devote our influence and resources to the maintenance of peaceful relations among the nations of this hemisphere—the improvement of the conditions of the people—and the elimination of exploitation and degradation of the workers—we shall indeed serve as a beacon light to the rest of the world.

During any critical period in a nation's history there is a dangerous tendency to disregard or to trample civil liberties. The result is to break down the confidence of the workers in government and make them easy prey to the demagogue who sneers at our constitutional guaranties.

The protection of the right of freedom of speech, freedom of assemblage, and labor's right to organize and bargain collectively still remains a cornerstone for the preservation of our democratic institutions. This need must be recognized not merely by way of an expression of pious hope but as an accomplished fact. There can be no repetition in this country of the coal and iron police of Pennsylvania, or the company-hired deputy sheriffs, or the massacre of steel workers who are earnestly seeking to better their conditions.

Intelligent business leaders are fully aware of the dangers which are inherent in the attempted repression of the basic rights of Americans. Labor—as well as every other group—recognizes that our Bill of Rights was adopted to protect everyone, in times of hysteria—when intolerance and bigotry sweep a nation. And it should always be remembered that intolerance—whether racial, religious, political, or economic—is dangerous to democratic institutions. The protection of civil rights for all of our people can be accomplished through the vigorous enforcement of the Federal civil rights statutes.

Organized labor, through trade-unions, has a definite and wholesome contribution to make toward preserving our democratic institutions. This very convention, with its assembled 2,500 delegates arriving at conclusions in a democratic and peaceful manner, is the best proof of the burning desire on the part of the workers in this country to preserve our freedom and democracy.

To all who seek assurance that our basic institutions will be maintained, one of the greatest guaranties is the advancement of organized labor. Stabilization in the coal industry has been achieved only through the active aid and participation of the United Mine Workers of America.

The workers and the farmers have no desire for dictatorship. They understand and appreciate that any change from our democratic way of life means forced labor, long hours of work, destruction of labor unions, lowering of wages and prices for agricultural produce, and a constant depressing of the standards of living. They appreciate that a denial of democracy means a denial of both their rights and their goal.

These are critical times. The tasks we have before us call upon our utmost strength and greatest wisdom. We must have the strength to hold fast to the convictions and professions of democracy; we must have the wisdom to find a solution of our problems. Voices will call out, seductive and entrancing, appealing to our traditions and our loyalties, but at the same time seeking to lead us to servitude.

Other voices speak with the force of hate and prejudice, appealing to the frustrations that economic misery and want produce. These voices are a challenge to us. They are a challenge that can be met in only one way, by making the free traditions of our country meaningful to all of our people, thus firmly securing their loyalties to our free institutions.

For my part, I am prepared to join forces with all those liberty-loving people who look forward to the realization of the American ideals of industrial and political democracy.

These things can be accomplished within the framework of our American form of government.

## Free Enterprise

### EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

RADIO ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered over Station WFIL, Philadelphia, January 27, 1940, under the auspices of the Business Men's Association of Philadelphia. The address is entitled "Free Enterprise."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The last decade was the first in our national history that did not record economic advancement for the American people as a whole. In more than a half century of observation of American business this is the longest and hardest pull for people as a whole I can

recall. No satisfactory explanation of our trouble can be found in laying the blame at any one point. Our ills have been a long time in the making. Finally they gathered up in one mass. All of us have suffered.

The spirit of defeat has prevailed. Too many leaders have taken the attitude that any movement up the economic ladder must be followed forthwith by a step backward. Already the prophets are saying that the productivity of the last few months will not continue long. They point to the inevitable indexes and say little confidence can be placed in the future. This lack of confidence has hurt the Nation. We need courage to believe in America and to go forward. There is nothing inevitable that dooms the new decade opening before us. With prudent national leadership and a working spirit of cooperation we can move steadily ahead. It has been estimated that the capital facilities of American industry are consumed in the ordinary course of industrial operation at the rate of more than \$8,000,000,000 per year. The mere maintenance of the Nation's industrial equipment calls for this expenditure. Advance would mean even more, and we have every reason to go forward. We have enough long-standing needs unfulfilled in the United States to give full employment to every qualified worker for the next 10 years.

The way forward is through cooperation. We banish conflict of petty factionalism and extreme partisanship from our midst. When any faction seeks to control government, labor, or business, the people suffer for it. If business ruthlessly seeks to dominate the Government, the final result is a victory for fascism. If government runs roughshod over business, the result may be communism. In any event, the dominance of any extreme point of view hurts the great majority of our people. It hurts business. And what hurts business, under our system of free enterprise, hurts labor.

Enlightened business leadership can supply the answer to our needs. The governmental problems of this decade have held the spotlight of public attention long enough. New instruments of government have been developed. A new channel has been formed through which the energies of the social and economic forces of the Nation will be poured. The time taken for the construction of the new way has long caused a stoppage of productive output. Business and labor have suffered. When production goes down, the purchasing power of the workers goes down, unemployment comes up, and an immense number of social problems emerge that put an extra strain on the Government. With necessary modifications and under competent leadership the new forms of government can be made more efficient and the way prepared for increased production. It should not now be necessary to place such heavy emphasis on governmental action. Business action is the key to the forward march of the new decade.

The cooperation of labor and business is necessary to the effective increase of production. The discord of the last few years should give way to a common recognition that the great need for all concerned is a stepping up of industrial production. Wages come only out of earnings and earnings increase when production moves forward. The unnecessary restraints of Government red tape should be eased and the way made ready for business to go ahead. America needs a strong leader who will give business steadfast encouragement and the confidence necessary to take up the slack of unemployment. The primary problems of the decade now beckoning to us are economic. The decade of high-pressure politics and extreme partisanship has passed.

During the last several years reform, so-called, has taken precedence over recovery. Vitriolic attacks have been made on business. Labor became divided. Investment in private enterprises diminished. Agriculture was regimented and restricted. Production in every phase of our national economy lagged behind, and vast pools of unemployed labor and capital have become stagnant sources of economic discontent and social degeneration.

Government has had a field day seeking to reform business. Business now is seeking a chance to balance the score. Unquestionably there has been, is now, and will continue to be need for improvements and changes in both government and business. However, the American people have nothing but a gloomy prospect before them if the chief issues of the new decade opening before us rise to no higher levels than a tug-of-war between government and business such as we have seen these long dismal years of depression.

There is a fundamental choice before us. It will be necessary for the Government to curtail sharply its expenditures or to give sufficient freedom to the productive life of the Nation so that the national income will be large enough to support growing tax bills. We cannot continue forever to try to borrow a way to prosperity. Sooner or later we shall be forced to return to a pay-as-you-go basis. Heavy Government spending and restricted private enterprise cannot go hand in hand over an extended period of time without leading headlong to dictatorship. That is the way dictatorship was started in Europe. The American people are not willing to be forced to go that way.

We have the necessary resources in land, labor, capital, and machinery to step up the productive output of America 50 percent in the next 5 years. An increase of 10 percent in business each year for the next 5 years would be well within the range of probability if we develop the spirit of cooperation. The spotlight should be taken off excessive governmental activities and put where it belongs—on the people at work, busy, productive, and at peace. The

time has definitely come for us to give up factionalism and to return to the ways of peace. There can be no lasting peace apart from economic strength and abundance.

The last decade has witnessed the mad groping of the American people for security. Never has there been less. Security is something better than a low rate of interest, which shows that money and production have little earning power. Security is something better than a relief check or a work-relief salary, necessary as they may be. Security is something better than a small Government pension, although a more adequate provision must be made through pensions for the aged and the dependent. Security is something better than a Government mortgage on your home or your farm. Security is something better than radio or newspaper ballyhoo about an abundant life that is anything but abundant. Governmental security measures can come only through increased taxation. By and large our citizens know that the Government, under our system of free enterprise, cannot and will not be able to collect enough in taxes to put everybody on a Government pay roll. That way lies more and more of the less abundant life. To give Government aid to a small fraction of the people who need it and to withhold it from the rest is basically unfair. It is politically unsound. In the end there is bound to be a sharp reaction against this extreme partisanship that seeks primarily to exchange Government benefits for votes.

In this country we want the American way of security—not the European way. In Europe, where living standards are not one-half as high as our own, there exists a low security level, which would be considered intolerable here. Our people are unwilling to accept the European system of life through Government decree and a wrecking war every 20 years. Some people may think of that way of life as secure. I do not.

Americans want security that comes with hard work and plenty of it. Down deep in our hearts we know there is no way to have things worth while unless we are willing to work and pay for them. I believe our people are now determined to take life honorably and honestly. The America we strive to build cannot be built in a day. Industrial piracy, unnecessary labor conflict, soap-box oratory exalted to heights of radio do not stand up well now. The security we now seek is the opportunity to go out and learn the benefits that come with hard work and a fair chance to keep a fair share of the earned income. Anything less than this is a false idea of security.

A great attack has been launched against our tariff protection. To those who urge tearing down our protective tariff in the interests of other nations, let me say they are about 175 years too late. They should have been around to advance their theories in that earlier era before our industries had been started. Then, for purposes of home defense and international stability, we built protective tariffs to encourage infant industries here. Our work and wage standards have been built on that basis. To overthrow the tariff would undermine the economic security of our people as a whole. Our tariff protection is our first line of defense against the encroachments of economic servitude. If we have to compete with foreign costs of production we would have to submit to their low wages and low standards of living. I am unwilling to subscribe to such a program. We must not be dragged down to the levels of living common to working classes abroad.

Much is being said of national defense from the military point of view. We should realize how great our capabilities are to inspire national defense from the standpoint of morale and sound thinking. We should be false to our American heritage if we did not put these first. For we must ever realize that the greatest protection for our people is to be found not in the instruments of war but in the instruments of peace. While we are busy planning to spend great sums for antiaircraft guns which are now lacking, for defense planes, and naval equipment, we should not neglect the expenditures necessary for the maintenance of labor, agriculture, and business prosperity.

While we pray for peace in Europe and Asia, let us not be blind to the causes of war in our own midst. War comes from within people. War is the people in the mad chaotic mission of death. We must not be under the delusion that war can be avoided by anything less than a strong spirit of discipline and restraint among the people. Children raised in homes where there is too little food, clothing, and essential comforts of life, will unwittingly seek a sterner solution for their problems in the path of war. Consciously or unconsciously a great host of American children are on this terrible road to war. The failure to meet the home and domestic problems of American children pushes us along that road lined with the ghastly skeletons of the social failures of other nations. In altogether too many American homes there is such misery and want that the adventure of war seems more attractive than the dull monotony of scarcity and human need.

Let us believe that the people of the world want peace—not war. Let us believe that this fundamental striving for peace on the part of the people will lead to peace. Let us believe that peace can come to Europe before Berlin, Paris, London, Rome, and Moscow are bombed and burned. Let us believe that sanity and business intelligence in America and other lands will point irresistibly to the way to peace. Let us realize keenly and thoroughly that peace is good business and that the highest dividends come when humanity has laid aside the weapons of combat and has taken in hand the instruments of full production and peace.

# Annual Meeting of National Public Housing Conference

## EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

LETTER BY THE PRESIDENT AND ADDRESSES BY HON. ROBERT F. WAGNER, OF NEW YORK, AND HON. NATHAN STRAUS

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed by the President to Miss Helen Alfred, executive director, National Public Housing Conference, and also a speech delivered by my distinguished colleague, Mr. WAGNER, and a speech delivered by Hon. Nathan Straus, Administrator of the United States Housing Authority, at the Hotel Willard, Washington, D. C., on the occasion of the dinner of the conference.

There being no objection, the letter and the speeches were ordered to be printed in the RECORD, as follows:

THE WHITE HOUSE,  
Washington, January 22, 1940.

MISS HELEN ALFRED,  
Executive Director, National Public Housing Conference,  
122 East Twenty-second Street, New York, N. Y.

DEAR MISS ALFRED: Once again it is with a very real sense of satisfaction that I extend greetings to the National Public Housing Conference at its ninth annual meeting. Each of these conferences, particularly over the past 5 years, has been a marker in the development of a more adequate national-housing policy for the lowest income third.

Beginning with the first P. W. A. projects, and extending to the projects of local authorities assisted by the United States Housing Authority now opening every month, the public-housing program has progressed consistently toward lower rents, lower income groups served, lower construction costs, increasing decentralization, and community responsibility, and above all the needs of a larger number of families are being met. Last year, for the first time in about half a century, the slum areas in our country as a whole commenced to shrivel rather than to expand. Through public and private endeavor, this tendency should continue until decent housing for the lowest income third becomes the established rule rather than an almost nonexistent exception.

I am especially gratified by the vital interest now being shown in improving housing conditions in rural areas. The projects which the United States Housing Authority is helping to develop in widely scattered farm localities with the cooperation of the Department of Agriculture justifies the manifest interest of your conference in this challenging problem this year. The program for helping urban families of very low income to obtain release from the slums, though still young, will be given even better balance by the development of the still younger program to help rural families afflicted by the same evil conditions. Joined together, the rural and urban housing programs together should continue to grow.

With sincere best wishes for continuing success,

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

ADDRESS BY HON. ROBERT F. WAGNER, OF NEW YORK

My friends, friends of the National Public Housing Conference, we meet tonight with the full satisfaction of great achievements in the cause of public housing.

Fifty years have gone by since Jacob Riis turned the searchlight of national attention on how the other half lives—in the slums. Society knew then, half a century ago, the lesson it has learned over and over again in the years which have intervened—that decent housing encourages good citizenship, and slums tend toward bad citizenship; that decent housing means better health and slums mean more disease; that decent housing reduces the cost of community protection against fire, crime, and delinquency, and slums take a heavy toll of life, property, and moral values; that decent housing means the American standard of living and slums represent a mode of living abhorrent to us all.

This was the challenge of the urban slum conditions which I knew in my own boyhood. For decades the challenge went unanswered. The occasional attempts of public authorities to regulate the slums, where effective at all, only intensified the horrors of overcrowding. The most sincere efforts of private enterprise were unable to provide any substantial number of decent homes within the slum dwellers' means to pay. After 50 years, the best evidence of the need for a new and more vigorous approach was the slums

themselves, in the city and on the farm, spreading wider and wider their misery and blight, more menacing to the well-being of our people and our Nation than ever before.

Within the short space of 2 years this tragic picture has been transformed into a new and pleasing prospect, a prospect of healthful, low-rent homes for millions of American families rescued from the shadow land of the slums. It has been transformed by operation of a single, simple act of Congress, the United States Housing Act. Once the forlorn hope of a few advanced reformers, the United States Housing Authority is now among the most popular of Federal agencies, counting its adherents in every section and in every party, among social workers, labor unions, bankers, teachers, religious leaders, investors, and industrialists.

Combining Federal aid with local initiative, operating through the normal channels of the private construction industry, this program has the financial sinews, the sound public policy, and the broad humanitarian support to see this job through to a successful finish.

When I watch thousands of families moving from the slums into these new low-cost homes throughout the country, when I see the eager, happy faces of their children at play in the sunlit grounds, then I give thanks that our democracy has been wise enough and rich enough to preserve its human resources in this truly democratic way. Then I further resolve to press forward until the blight of the slums is no more, until every humble family, every mother, and every child can enjoy the simple comforts and the spiritual solace of a decent American home.

As we move for the necessary expansion of this Nation-wide program, the most fantastic stories are being spread about its cost to the American taxpayer. If we want to find out what the program costs, let us read from the document which surely reflects every item of Federal expenditure, the Budget of the United States.

When we examine the President's Budget message for the coming year, what do we find? The construction loans authorized under the program do not enter into the Budget or national debt at all. These loans require no taxes and call for no appropriations; they are financed through sale of Housing Authority bonds to the investing public, on which the Authority now makes a substantial interest profit.

Read the Budget through from cover to cover and you will find only two items concerning the housing program. The first item authorizes the Housing Authority to make available from its own funds the sum of \$4,500,000 for administrative expenses. In other words, Congress does not have to appropriate a single dollar for the expenses of the Housing Authority, because those expenses will be covered by the earnings of the Authority in its lending operations.

The second and last item in the Budget message pertaining to the housing program is the following: "For the United States Housing Authority, \$15,000,000 will be required out of the general fund of the Treasury for the payment of annual contributions to public housing agencies in accordance with the United States Housing Act."

In short, the greatest possible cost of the program to the Federal Government next year, the only cost chargeable to the taxpayer and entering into the national debt, is \$15,000,000. Indeed, the House of Representatives has just found that an appropriation of only \$10,000,000 will be necessary at this time. In England, with a population less than one-third our own, the national subsidies for all types of public housing last year came to \$75,000,000 notwithstanding a staggering burden of rearmament and the menacing shadow of the European war.

The annual Federal cost of the present United States housing program is indeed a modest one—\$28,000,000 at the maximum and about \$25 net for each person rehoused. These costs represent the Federal pay-as-you-go contribution, needed to bring the rent level in low-cost housing down to the income level of those now living in slum shacks and tenements. The Federal subsidies, together with the substantial contributions by the localities themselves, bridge the gap between vague talk about housing and doing something effective about housing. They represent the difference between good intentions, surveys, and blue prints on the one hand and actually rehousing slum families on the other.

If Federal subsidies are stopped, the whole program stops, and with it ends the hope of millions for a healthier and a happier life. If more subsidies are authorized and the construction loan fund is doubled, the expanded program will rescue 2,000,000 persons from the slums. At the same time it would tap a vast pool of idle private capital and provide a year's work for almost 1,000,000 men. These benefits are well within our reach, for the necessary legislation, sponsored by Congressman STEAGALL and myself, has already passed the Senate, and will shortly be considered by the House.

When the Housing Authority was first established, 2 years ago, I said at a great dinner meeting held by the National Public Housing Conference: "The fruits of liberalism are stolen only when its guardians go to sleep—only when there is creeping complacency in the face of continuing social injustice." In the public housing movement today I find no relaxation of vigilance or complacency of outlook, but rather a militant determination to keep moving ahead, in the full inspiration of the great work that remains to be done. You and I know that a Nation-wide slum-clearance and low-rent housing program for the lowest income groups has not been completed; it has only been started. The normal expansion of that program has first claim upon our support and our collective efforts. With our ranks swelled by millions of forward-looking citizens, I have confidence in the early attainment of a goal that will enrich our national heritage and fortify our cherished democracy.

ADDRESS BY NATHAN STRAUS, ADMINISTRATOR, UNITED STATES HOUSING AUTHORITY

Time is a relative concept. We reckon time not in the abstract but in relation to something concrete. To a geologist, 8 or 10 years would probably sound too fractional to be worth bothering about.

Yet that comparatively short time spans the entire history of the public-housing movement in this country from birth to ever-increasing maturity.

There are some here this evening who can remember, as I do, the ice age of public housing—all of 8 years ago.

There are many here who have fought on behalf of public housing for more than 2 years. They are, indeed, veterans of the ancient wars—as time is measured in the public-housing movement. For such veterans there are no cash bonuses, but there are the almost equally consoling pensions of "we told you so."

They (that catch-all pronoun which describes the opposition at the bridge table as on the battlefield)—they said, "You will never be able to build homes within the low limits of costs imposed by the United States Housing Act; besides, you will never get your rents low enough so that families in the lowest income group will be able to live in the homes you build, and worse than that, you will never eliminate any slums or areas of blight." We refused to heed these dire predictions. We made bold to contradict them. We veterans of the housing movement said 2 long years ago that we would do all those things. It is my pleasure to say to you tonight that we, you and the U. S. H. A. together, have done so.

In cities of less than half a million population the average cost of dwelling facilities per dwelling unit under the U. S. H. A. program is \$667 less than the \$4,000 top limit imposed by the Housing Act; the average cost of dwelling facilities per room is \$199 less than the limit imposed by the Housing Act. In the larger cities the average dwelling facilities cost per dwelling unit is \$1,359 less than the limit of \$5,000 imposed by law, and the average per room is \$373 less than the limit, \$1,250 per room, set forth in the law.

Let's go on to the second movement in the symphony of costs and get a variation on this same theme. If we subtract the cost of dwelling equipment and other items chargeable to dwelling facilities, there is left net construction cost. That is the cost of building the house, including plumbing, heating, and electrical installation. That net construction cost is readily compared with the cost of building by private owners and private capital, because it includes the same items that are included in the figures published monthly by the Bureau of Labor Statistics of the Department of Labor. Such a comparison shows that, although homes built under the U. S. H. A. program are constructed for a life of at least 60 years and are built by labor paid the full prevailing wage, the average net construction cost is \$705 less than the same average for private residential construction. Let me emphasize that the comparison I am making is a comparison between the average cost of private residential construction and the average cost of construction under the public-housing program of the U. S. H. A., and I am making that comparison for the same localities in the same months.

Now as to rents: On November 26, 1938—in the dim, dark ages of public housing time—the Saturday Evening Post said:

"In a radio address on September 13, 1938, Nathan Straus, Administrator of the U. S. H. A., said that in some parts of the South he believed that the new projects were going to be so economical that rentals for a small dwelling unit might be brought down to pretty close to \$12 a month, possibly be actually \$12. He was very much pleased with this hope. He did not compare it with the approximately \$5-a-room program of the Housing Division of P. W. A."

In other words, ladies and gentlemen, less than 16 months ago, a rental of \$12 a month for a home was so far beyond the imagination of the writer that he was inclined to sneer at the prediction.

Yet today there are projects in the South where shelter rent is less than \$7 a home a month, some between \$8 and \$9, many between \$10 and \$11. These, let me emphasize, are not estimates. They are not guesses. They are not hopes. These figures that I am quoting are rents fixed by local housing authorities and now being charged in public housing projects which are open and occupied.

The Annual Report of the United States Housing Authority to Congress for the year 1939 has just been completed. Those of you who recall the 1938 report may remember that we pointed out then, in January 1939, that there was every reason to believe that the estimates of rents, embodied in that report, would be lowered when the projects were completed and actual rents, based on actual costs, were set.

When the U. S. H. A. Annual Report for 1939 was completed a few days ago, a comparison was made of some of the figures with those in the 1938 report. Here is what we found: On 17 projects, for which final rent and income limits have been approved, the actual figures average 16 percent lower than the estimated rents, as embodied in the 1938 annual report. Achievement has again not only matched but has outrun prediction.

Rentals within the financial means of the lowest income group are a reality. In fact, today we are confronted with an interesting question: Should subsidies be used to lower rents still further, so as to give families of small means better housing than they ever had before, at rents lower than they have paid before, or should we be satisfied to equal the rents now paid by these low-income families in the slums, which would permit substantial reduction

in annual subsidies? This is a new question, a new challenge to the public housing movement. It is a question for which we must look to the local housing authorities for an answer. The fact that this question has arisen, however, is another indication of the ages that have passed since, 2 short years ago, when almost no one believed that public housing would ever be able to achieve rents low enough even to match those charged in the slums.

Some have feared that public housing could not eliminate the slums. Some have believed that, because not all public housing is built in the slums, the public-housing program, while it might provide good low-rent homes, would not eliminate the old, unfit dwellings. Those who made that prediction may be forgiven because they probably failed to read the provision of the United States Housing Act which requires "the elimination by demolition, condemnation, and effective closing, or the compulsory repair or improvement of unsafe or insanitary dwellings, situated in the locality or metropolitan area, substantially equal in number to the number of newly constructed dwellings provided by each project." Had they read that provision of the law, they would have realized that slum elimination is always an accompaniment of building under the United States Housing Authority Act. As a matter of fact, more than 12,000 miserable, decaying, foul city tenements and small-town shacks have already been permanently closed to human habitation or have been so repaired and improved as to make them habitable and healthful homes. Under the present program of the United States Housing Authority, a total of about 160,000 new low-rent homes will be built and a total of about 160,000 unfit, disease-breeding slum dwellings will be eliminated.

By any measure that can be applied, public housing is an established success. We have applied the test of low construction cost, and public housing has measured up to it. We have applied the test of low rents. Public housing has stood that test. We have applied the test of slum elimination. Public housing is eliminating the slums.

Apply any other test and the result is the same. Does public housing interfere with private building, you may ask. Apply the test and you will find that, just as public housing in England stimulated the greatest boom in private residential construction in the history of Great Britain, so today in our own country the vicinity of public-housing projects gives every indication of a similar result. Public housing ignites the spark that stimulates the private building industry.

Can public housing stand the acid test of economy? Is public housing compatible with that scrutiny of every item of Federal expenditure toward which Congress and the public are now turning? Yes; because public housing stimulates more employment, confers more benefits on business and on labor, than any other equal expenditure of public funds. Pending legislation will open the doors to 500,000 jobs for 2 years—and these jobs will be real, old-time jobs at prevailing wages (for all building done under the public-housing program is done by private builders employed by local authorities after competitive bidding). Measured by the test of Government economy and benefit to business, public housing again comes out on top.

When any enterprise is successful, it is time to go slow in making changes. Progress in wiping out the Nation's slums is made only when it is steady, uninterrupted, and cumulative. Let us beware against tinkering with that successfully functioning mechanism known as the United States Housing Act. The real friends of public housing in this country will be wary of suggested changes in that act designed to make it a cure-all. Public housing is not a cure-all; it was never meant to be. The Wagner-Steagall Act was designed to wipe out the slums of America and to provide decent homes for the families of the lowest incomes. It was designed to do this at the lowest possible cost to the taxpayer. The Wagner-Steagall Act is doing all of those things for which it was designed—and at an even lower cost to the taxpayer than was anticipated when the law was written.

## Reciprocal-Trade Agreements

### EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

RADIO ADDRESS BY HON. ALVA B. ADAMS, OF COLORADO

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address on the subject Reciprocal-Trade Agreements, delivered by my very able colleague, Mr. ADAMS, last night over the blue network of the National Broadcasting Co. The address is a very clear-cut statement in opposition to the extension of reciprocal trade agreement treaties without Congress exercising its constitutional duties.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The founders of the Constitution, in accord with the lessons learned from English history, reinforced by the American Revolution against an English King who attempted to deny to the colonists the rights which English citizens had won, placed the power of taxation in the Congress. The establishment of tariffs is an exercise of the taxing power. In Congress, and in Congress alone, is vested under the Constitution the power to establish tariffs.

All the power which the executive department exercises in the making of so-called reciprocal trade agreements comes to it by delegation from Congress. Every change in a tariff rate is an amendment of a law. The 22 trade agreements which have been entered into, if valid, have amended acts of Congress many hundreds of times.

It is an accepted principle of law that Congress can delegate to executive or administrative officials power to administer a law in accord with standards or rules set up by it, but cannot delegate power to enact legislation.

The former flexible tariff act authorized the President to make changes in tariff rates to equalize the difference between the cost of production at home and abroad. While often a difficult rule to apply, yet it was an understandable and applicable rule or standard. The law was declared by Congress; its administration only was left to the Executive.

The reciprocal trade agreement law gives no practicable rule or standard by which changes in any tariff rate can be determined. In effect, this law declares that the President may enter into foreign trade agreements changing existing duties whenever he decides that such changes will expand foreign markets or be of domestic advantage. The decision as to the making and the details of trade agreements are left to his uncontrolled discretion.

The only limit on the President in this act is that he may not increase or decrease any duty by more than 50 percent. Under this act 22 agreements have been entered into changing the tariff rates on over 1,000 items.

The act provides that if in any trade agreement a change is made in the tariff on any item, the same change in rate shall apply to all foreign countries.

Thus a reciprocal trade agreement with one country where tariff concessions by us are compensated by tariff concessions from such other nation produces tariff concessions to other countries which are not reciprocal or in any way compensated. Such policy seems of doubtful fairness, both to producers in the United States who are affected by the reductions in tariff and to the country which has made concessions in exchange for the reductions in rate upon its products.

So far as I am advised, every change in tariff rates upon the more than 1,000 commodities affected has been a reduction. Every reduction may involve a lessening of our customs income and may bring competition to American products and American labor from products of lands with lower living standards.

It is, of course, the hope that the lowering of foreign tariffs will afford markets for increased American production. This is probably true, but it is little consolation to an industry and its employees that is crippled or destroyed by the foreign competition admitted by the trade agreement that some other industry in some other section of the country is profiting by the trade agreements.

The industries, and, indeed, the economic life and prosperity of many sections of the United States, may be promoted or destroyed by favorable or unfavorable tariff legislation.

It has been the constant effort and desire of our citizens to maintain and, if possible, to raise American standards of living. As a result of the better wages paid our workmen, the shorter hours of labor, and better working conditions it is not possible for industry in the United States to produce goods as cheaply as in countries with lower wages, longer working hours, and inferior living and working conditions. For the purpose of protecting American industry from destructive competition from importation of products of cheap labor, tariff laws have been enacted by the Congress. Whatever may be the defects in our tariff legislation it has been enacted in a constitutional way. The representatives from every section have not only been heard but have had a vote. Tariff laws enacted by Congress give first consideration to domestic industry and commerce. Congress may underestimate the value of foreign trade but it is far wiser to overvalue domestic than to overvalue foreign trade. The advocates of the reciprocal-trade laws have not only overestimated the value and importance of foreign trade but have also greatly overestimated the benefits received by the United States from the trade agreements. Many gains in the economic life of our country due to the general improvement in conditions have been ascribed to the effect of the reciprocal-trade agreements.

Of course, when the United States enters into a trade agreement concessions must be given as well as received. There are and can be no agreements under which we receive all the benefits.

The articles upon which the foreign nations seek and secure reductions are frequently also produced in our country. In many instances the trade agreements have reduced duties on foreign products coming in direct competition with American products.

Let me illustrate from the experience of my own State, Colorado: One of our more important industries is cattle raising. The reciprocal agreement with Canada lowers the duty on cattle. We are told that the number which can be imported at the reduced rate is limited to 225,000 head of one weight and 100,000 head

of another weight. We are told that we have not been hurt, that the number coming in under the lowered tariff is but a small percentage of the American consumption. Unless the law of supply and demand has been repealed by the negotiators of the treaties, every animal added to the supply without a corresponding addition to the demand inevitably tends to lower the price which the producer would otherwise receive. Naturally, the Canadian shipper will send in his cattle when prices are favorable and leave the market to the American producer when prices are low.

Beet sugar is one of the chief agricultural crops of many Western States. By a trade agreement with Cuba the tariff was lowered from \$1.50 per hundredweight to 90 cents. Even though there are quota limitations the natural result is to lower sugar prices in the United States. Moreover, the agreement requires the United States to fix quotas on its sugar production in order to maintain quotas on Cuban importations.

Colorado is a great producer of potatoes. The Canadian agreement lowers the duty on potatoes.

Colorado produces many sheep and much wool. The British trade agreement reduces the tariff on certain woolen fabrics. These fabrics will now replace American fabrics made of American wool to the detriment of the American producer of sheep and wool. Furthermore, unemployment in the woolen mills will ensue to the extent of the replacement.

The producing of cattle and sheep provide a market for a large amount of feed crops which will be lessened by the importation of Canadian cattle to the detriment of American farmers.

There have naturally been some benefits derived from 22 trade agreements, but so far as Colorado and the West are concerned these benefits are small in comparison with the detriments.

Only recently the West was threatened with reductions in tariffs on some of its other chief agricultural and mineral products by a proposed trade agreement with nations whose major products are the same as those of our Western States.

That the President, in whom the authority is vested, and Secretary Hull, a statesman of the highest integrity and courage, by whom the authority is in fact exercised, are conscientious in endeavoring to promote the welfare of the United States in making these agreements is, of course, beyond question.

My criticism is not of those who administer the law but of the law itself which takes from the elected representatives of the voters their constitutional duty and powers and makes one man an absolute dictator of the economic welfare of American agriculture and of almost every important industry.

Today the power may be used with judgment and produce on the whole good results; tomorrow it may be so applied as to bring disaster. The welfare of American industry should not depend on the decision or the life of one man. Who knows into whose hands the executive power may go in future years? Who knows what economic or political theories will dominate the executive office tomorrow? Regardless of changes in the executive, the Congress will always represent all sections of the country and all groups and interests. No individual no matter how many aids or assistants he may employ can have the grasp of national interests and problems possessed by Congress composed as it is of representative men from every section of the land in constant touch with every group and interest. It probably will be less efficient than a wise and benevolent dictator, but in its cumbersome way it will safeguard the rights and welfare of all parts of our country. The history of the past and the events of today confirm the wisdom of vesting the power of levying taxes and spending the people's money in a representative assembly.

There is involved in the reciprocal trade law an issue of greater importance than the mere changing of tariffs. It involves our faith in some of the great fundamentals of our Government. First, the Constitution places the exclusive power to levy taxes and determine tax policies in the Congress. Second, the Constitution provides that revenue bills shall originate in the House of Representatives. Third, the Constitution requires all treaties to be ratified by the Senate.

Reciprocal-trade agreements are an exercise of the taxing powers. They are revenue bills. They are moreover, definite binding agreements with foreign nations affecting for a fixed time the commercial relations of the citizens of the respective countries. They amend existing law and become the supreme law of the land. They are treaties.

The reciprocal trade agreement law, therefore, offends against all three of these fundamental provisions of our Federal Constitution.

The blame for this law rests not upon the President nor upon Secretary Hull, who are but endeavoring to carry out the law enacted by the Congress. Whatever blame there is rests upon Congress. It is not a case of usurpation but of abdication.

However, criticism may justly be made of those in the executive department who insist that this unconstitutional grant shall be renewed and declare that if the agreements are to be subject to Senate ratification disaster will follow and the foreign-trade structure of the United States will be ruined.

I believe in the policy of reciprocal-trade negotiations between nations. I recognize that Congress is not the agency best equipped to conduct such negotiations but, as under the Constitution the authority of the executive to conduct negotiations is derived from the Congress, the executive should both as a matter of duty and of choice refer its completed work back to the Congress for approval or rejection.

The Senate upon the submission to it of an agreement would not have open to it an opportunity to amend individual items

of the agreements. Its duty, as in the case of other treaties, would be to approve or reject the agreement as a whole.

Opposition to referring back for ratification to the Senate their work is either a reflection on the Senate or the assumption of a very great superiority on the part of the negotiators. In making these agreements the executive according to its own theory acts solely under congressional authority and in accord with rules laid down by the Congress. Why should an agent be so reluctant to report to his principal what he has done under his authority? What would we think of an attorney who was unwilling to report back to his client what he had done with his business? And what would a client think of a lawyer who was unwilling to account to him or to submit his work for the client's approval? If they fear to submit their agreements to the Senate they should not make them. If they are for the good of the country, the Senate will ratify them; if they are not, they should not be ratified.

## National Grange Legislative Program

### EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

#### SUMMARY OF REPORTS AND RESOLUTIONS ADOPTED BY THE NATIONAL GRANGE

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD the National Grange legislative program. The copy I am sending to the desk is a summary of the reports and resolutions adopted at the Seventy-third annual convention of the National Grange, held at Peoria, Ill., November 15 to 23, 1939, furnished me by the Washington representative of the National Grange, Mr. Fred Brenckman.

Mr. President, the National Grange is the oldest and one of the most useful of the national farm organizations. During all its history, reaching back almost three-quarters of a century, the Grange has held firm to fundamentals in its consideration of the problems for agriculture.

The Grange believes in agriculture as a way of life as well as a way of making a living. It believes in the family-sized farm; in the American market for the American farmer; in giving agriculture its fair share of the national income through creating wealth, through finding new industrial uses for farm products, through increasing the market for farm products instead of through reducing production to meet a small market. I commend the Grange program to the careful consideration of the Senate.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

#### NATIONAL GRANGE LEGISLATIVE PROGRAM

##### 1. GENERAL FARM POLICY

In the development of a sound farm policy, we must keep in mind the fundamental American principles of self-help, equality of opportunity, and independence of thought and action. Agriculture asks for fair treatment, rather than special privilege. It seeks economic justice rather than subsidy.

We favor adherence to the following principles:

- (a) Give agriculture its fair share of the national income, in order that it may be raised to a position of equality with other groups.
- (b) Give the American farmer the American market to the limit of his ability to supply it.
- (c) Speed national recovery by removing unnecessary restrictions from business, increasing employment in private industry, and reducing the relief burden, recognizing that the benefits that will accrue will be shared by agriculture and the Nation as a whole.
- (d) Maintain the family-sized farm as the standard of American agriculture and discourage large-scale or corporation farming, thus upholding America's greatest bulwark of democracy.
- (e) Continue soil-conservation program, but never as a means of crop control, or requisite for benefit payments; continued support for the present forestry and wildlife program.
- (f) Place farm program on voluntary basis, administered in accordance with democratic principles, with compensatory payments continued until farm prices reach parity; all benefits to be

paid within the year earned, and not contingent upon compliance in future years.

(g) Create a nonpartisan board, responsible to Congress and representing both producing and consuming interests, with power to regulate imports. Terminate all reciprocal-trade agreements now in force which are injurious to agriculture.

(h) Encourage sound cooperative marketing of agricultural commodities.

(i) Remove discriminatory and punitive taxation on all legitimate forms of distribution. Remove unnecessary trade barriers between States.

(j) Encourage research to find new crops and new uses for farm products, in line with chemurgic program.

(k) Promote a more satisfactory rural life through development of educational facilities, good roads, and rural electrification.

(l) Encourage cooperation, good will, and understanding between agriculture, labor, and industry to promote the common welfare.

##### 2. THE AMERICAN MARKET

Since many artificialities and restrictions have been imposed upon our system of free enterprise during recent years which operate to increase our cost of production and of doing business, and since it is useless to attempt to maintain these artificial standards while permitting unrestricted competitive imports from countries where substandard labor conditions exist, and where costs of production are lower than the United States, it is manifest that proper steps must be taken to protect American interests. Under prevailing conditions, we favor the levying of excise taxes on all imports on the dutiable list when the landed cost of such goods falls below the American wholesale selling price. Provided, however, that this rule should only apply to imports of commodities that are commercially available within the United States.

##### 3. RECIPROCAL-TRADE AGREEMENTS

The reciprocal trade agreements program has caused serious damage to American agriculture. It has depressed farm prices by encouraging imports of competitive products from countries where substandard labor conditions prevail. It is wrong in principle and violates the Constitution. It should not be renewed when it expires by its own limitations on June 12, 1940.

##### 4. FARM CREDITS

We advocate the restoration of the independent status of the Farm Credit Administration and favor the creation of a bipartisan board, with staggered terms, to administer its affairs. Our farm-loan system was established as a cooperative enterprise, in which farmers have invested huge sums of their own money.

Continuity of policy and sound management are necessary if funds are to be available at reasonable rates of interest. All these ends cannot be attained if the system becomes the prey of political manipulation and is subjected to the uncertainties of frequent changes.

We consider it sound policy that low interest rates should be continued until normal farm income is restored.

We likewise favor the extension of the Frazier-Lemke Farm Mortgage Moratorium Act under present economic conditions.

##### 5. NEW USES FOR FARM PRODUCTS

The Grange commends Congress for the establishment of the four regional research laboratories, and we trust that these laboratories, as well as those that are privately owned, will put forth their best efforts to find industrial uses for farm products. The Grange favors specific appropriations to State experiment stations to develop new crops which can be profitably grown by farmers.

##### 6. FORESTRY AND CONSERVATION

We recommend the adoption of a comprehensive Federal program relating to forestry and conservation, and embracing:

- (a) Encouragement and assistance to private owners in the extension of farm forestry and in the adoption of practices for sustained timber production.
- (b) Giving more adequate protection from fire to both public and private forest and range lands, with greater emphasis on the control of insect pests, diseases, and the prevention of floods and erosion.
- (c) Providing for public acquisition of forests and other lands not suitable to private ownership, with adequate reimbursement to counties in lieu of taxes during a readjustment of the tax program.
- (d) The Forest Service should remain in the Department of Agriculture and the administration of the Taylor Grazing Act should be transferred to this department.

##### 7. RAILROADS

We favor continued private ownership and operation of the railroads. Under existing conditions, we believe that it would be good policy to liberalize railroad regulation so far as it can be safely done without jeopardizing the public interest. We believe this would be a more enlightened approach to the solution of our transportation problems than to impose unnecessary regulation on other forms of transportation in order to equalize conditions for the benefit of the rail carriers.

We are opposed to the repeal of the long-and-short-haul clause of the Transportation Act.

##### 8. MOTOR TRANSPORTATION

We approve of the appropriations made by the Federal Government for highway construction and advocate a larger proportion

of such funds for the improvement of farm-to-market and post roads.

The interest and safety of the public require enforcement of proper restrictions regarding the size, weight, and speed of all motor vehicles moving over the public highways. Such regulations should be uniform as between the several States, and there should be reciprocity between the States based upon such uniformity.

Every special tax collected for highway improvement should be conserved for that purpose alone. No diversion of such funds should be allowed.

No taxation or regulation of motor vehicles should be permitted which has for its purpose any increase in cost or restriction of use in order to equalize competition between motor transportation and other forms of transportation.

We oppose the establishment of ports of entry and State-line barriers. We likewise oppose Federal regulation of private motor trucks, including farm trucks.

#### 9. INLAND WATERWAYS

Since the Federal Government, over a period of many years, has expended large sums of money for the development and improvement of our inland waterways, we are opposed to the adoption of any policy which would destroy the value of this wise investment. Our water-borne commerce should not be hindered or restricted by unnecessary regulation and interference on the part of the Government, since no question of monopoly is involved.

We favor the early completion of the St. Lawrence seaway project. We are opposed to any "pork barrel" schemes for the improvement of streams that were never intended to be navigable.

#### 10. RURAL ELECTRIFICATION

We heartily approve the efforts of the Government to promote the cause of rural electrification through the agency of the R. E. A., and we favor proper appropriations to further this work.

In the making of loans, the present policy of giving preference to public power districts and nonprofit cooperative associations should be continued.

#### 11. TAXATION

Excessive taxation is in large measure responsible for many of our national ills, including unemployment.

It should be clearly recognized that spending borrowed money means the same thing as deferred taxation. The Federal Budget should be balanced at the earliest practicable date.

We oppose a general sales tax, because it is a tax upon the necessities of the people, and ignores the principle of ability to pay. We favor an amendment to the Constitution, forbidding the issuance of tax-exempt securities.

We are opposed to the levying of processing taxes of the type already declared unconstitutional.

The heavy taxes now levied by the Federal Government constitute a growing threat to the sovereignty of the States, drying up the sources of revenue upon which they must depend to finance their activities.

#### 12. AGRICULTURAL EDUCATION

We approve of proper appropriations for the land-grant colleges and for the support of extension work in agriculture and in home economics, together with adequate funds for the State experiment stations. We likewise approve of the expanded program for vocational education and for 4-H Club work.

Extension workers should be paid entirely from public funds, leaving them free to serve the people without favoritism or discrimination. Under no circumstances should any farm organization be allowed to graft itself upon the Extension Service, nor dominate it to serve its own ends.

#### 13. RECLAMATION

We protest against bringing any more land under cultivation by irrigation and reclamation at Government expense so long as the surplus problem presents one of the chief difficulties with which agriculture is confronted.

#### 14. TRUTH IN FABRICS

The fact that during the past 6 years 600 million pounds of reclaimed wool or shoddy has been sold to American consumers as an undisclosed substitute for virgin wool makes it imperative that proper labeling legislation should be enacted by Congress without further delay.

#### 15. FARM TENANCY

The Grange favors continued efforts for the further development of a sound program for the relief of farm tenancy. In attacking this problem, proper emphasis should be placed upon the correction of conditions which annually cause many thousands of home owners to slip into the tenant class.

#### 16. INDUSTRIAL-MOBILIZATION PLAN

Since it is a matter affecting the entire population, we advocate that full publicity be given to the industrial mobilization plan, which is to be made effective in the event of war. This plan should be in accord with the principles of our democracy, and agriculture should be given proper representation on all boards and commissions dealing with the farming industry.

#### 17. LABOR AND INDUSTRY

It has been fully demonstrated that there is urgent need for revamping and amending Federal legislation with reference to the relationship between agriculture, labor, and industry. The Wage-Hour Act should be clarified and agriculture given the exemptions

to which it is clearly entitled. The National Labor Relations Act should be made a two-way act instead of a one-way act, as it now is, while the Labor Relations Board should be reconstituted, so as to give proper representation to labor, industry, and the general public.

While recognizing and endorsing the inherent right of labor to strike, labor unions and their members should be held responsible for unlawful and unwarranted acts occurring in this connection.

#### 18. IMITATION DAIRY PRODUCTS

It is of vital interest to the dairy industry, as well as the consuming public that all legislation for the control and regulation of manufacturers of and dealers in imitation dairy products should remain in full force and effect.

We approve of the action of Congress in placing an excise tax on certain imported oils used in this country in the making of butter substitutes and for many industrial purposes. We advocate the extension of this tax to all imported oils that come into competition with the products of the American farm.

#### 19. IMPORTED STARCHES

Since nearly a half billion pounds of Asiatic starches, produced by coolie labor, entered this country duty-free during a single recent year, we favor adequate excise taxes on such products, which compete with domestically produced starch made from corn, potatoes, and rice.

#### 20. PREDATORY ANIMALS

We favor legislation providing for joint appropriations by the Federal Government, together with the States and counties, for the eradication of predatory animals in sections where such animals are a serious menace to agriculture.

We also advocate more vigorous measures for the control and eradication of insect pests.

#### 21. STOLEN LIVESTOCK

The Grange favors renewed efforts to secure the early enactment of legislation making it a Federal offense to transport stolen livestock in interstate commerce.

#### 22. ARGENTINE SANITARY PACT

Since American agriculture in the past has suffered heavy losses from the foot-and-mouth disease, brought in from other countries, we are opposed to the ratifications of the so-called Argentine Sanitary Pact.

#### 23. SUGAR ALLOTMENTS

With the United States proper producing less than 30 percent of the sugar consumed domestically, we favor larger and more equitable allotments to American growers.

#### 24. CROP INSURANCE

We favor the continuance of the Crop Insurance Act, together with its extension to other crops besides wheat, so far as conditions warrant.

The granting of this insurance should not be contingent upon compliance with Government-control programs.

#### 25. CONTROL OF MONOPOLY

It is manifest that the blessings of political liberty cannot be fully enjoyed under a system which permits monopolistic practices to rob the people of the fruits of their toil. We, therefore, favor more adequate enforcement of the antitrust law.

#### 26. SOCIALIZED MEDICINE

While approving group health insurance on the voluntary basis, we are opposed to what is commonly known as State medicine.

#### 27. PACKERS AND STOCKYARDS ACT

We advocate the amendment of the Packers and Stockyards Act to provide for more effective regulation by the Department of Agriculture of the marketing of livestock. Direct buying by the packers, merely to evade the law and depress prices, should not be tolerated. Buyers or factors at public stockyards should be licensed for the protection of the producer.

#### 28. MOTION PICTURES

The Grange advocates the enactment of legislation prohibiting block booking and blind selling of motion pictures.

#### 29. LOTTERIES AND GAMBLING

We ask for the strict enforcement of the law against lotteries, whether foreign or domestic, and oppose gambling in all its forms.

#### 30. REGISTRATION OF ALIENS

Since there are several million aliens in the United States who have manifested no intention of becoming naturalized, with many burdening the relief rolls and engaging in subversive activities, the Grange advocates legislation calling for the registration of all immigrants, with payment of a proper fee. Those who refuse to become naturalized within a reasonable length of time, together with those who have entered the country illegally, should be deported.

#### 31. UN-AMERICAN ACTIVITIES

We favor continuance of the congressional committee investigating un-American activities, with an adequate appropriation for its use.

#### 32. TRADING IN FUTURES

The Grange is opposed to gambling in the necessities of life and advocates the vigorous enforcement of the Commodities Exchange Act, together with any amendments that may be needed to make it effective.

## 33. CENTRALIZATION OF GOVERNMENT

The Grange reaffirms its stand against overcentralization of government, which violates the wholesome American principle of home rule in local affairs.

We are opposed to all legislation, rules, or regulations that would abridge the rights of the States to control their own affairs within proper limits, or that would impair the legitimate rights of the people in matters relating to local self-government.

## 34. TEMPERANCE

We recommend that Granges throughout the land join with other organizations in a campaign of education, calling attention to the evils of strong drink, and emphasizing the truth that decency and sobriety are virtues that bring their own reward.

## 35. KEEPING OUT OF WAR

We approve of proper appropriations for national defense, and favor adherence to a sound neutrality policy that will save America from becoming entangled in foreign wars of greed, hatred, and aggression. We must take the profits out of war.

Upon us rests the responsibility of protecting and preserving our free institutions of government and of doing all in our power to restore the blessings of peace to a war-torn world.

## Dinner in Honor of Minister to Finland

## EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

ADDRESS BY HON. FRANK KNOX

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Hon. Frank Knox at Chicago, Ill., on January 12, 1940, on the Finnish question.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Your Excellency, the Minister of Finland, ladies and gentlemen, world history provides few great epics:

The Greeks at Marathon.

Sobieski and Hunyadi Janos at Vienna.

William the Third and the Dutch against Louis XIV.

Washington at Trenton.

The Texans at the Alamo.

And today the Finns in their heroic stand against Stalin's Russian hordes.

Each of these great epic struggles had tremendous consequences. Each marked a turning point in human affairs. An inscrutable Providence appears to permit the dark forces of reaction, the malignant power of brute force, the thrusts of benighted ignorance to extend their sway for a time, and then—in its own good time—it likewise provides a counterbalance. It raises up a race of men of heroic mold, superbly led, who, with incredible courage, smash their way to victory and save human progress and civilization.

We are living through such an epoch right now.

We have, all of us, thrilled as we read of that meager band of Greeks who met the Persians beside the Aegean, and saved that incomparable thing which was Greece for the ages.

Some of us have stood outside the walls of Vienna and swept with our eyes the field where stood Sobieski, the Pole, and Hunyadi Janos, the Hungarian, who flung back the Turkish horde that threatened a Christian civilization.

We have turned the pages of Motley's Rise of the Dutch Republic, and felt something of the spirit of William the Third as he battled Louis the Fourteenth, and gave a new meaning to liberty. What American is there who does not glow with patriotic fervor as history tells the glamorous story of Washington and his ragged Patriot Army crossing the Delaware to attack Trenton and make ultimate victory for the American Colonies certain? Who can read of the desperate band of Texan heroes who held the Alamo until the last one was sacrificed on the altar of country and not be a better patriot?

Today we read of Mannerheim and the Finns as they battle for their homeland in the snows of Arctic winter against the conscript millions of a Stalin, with the same surge of admiration, the same thrill of pride in human courage, the same sense of epic achievement as that which flooded our hearts as we read of other heroes of other days.

No man may measure now the full significance of what is happening today on the border of Russia, where the fighting manhood of Finland is mobilized, and where already thousands of Russians have fallen before the mighty prowess of a little nation, fighting for its own, armed with the courage that will not know defeat.

Already the guns of the Mannerheim line, the rifles of the ski-ing patrols, the machine guns that swept the frozen surface of Lake Ladoga have punctured the fiction of Russian military power. The "red" army, apparently menacing as it marched in serried ranks through the Red Square of Moscow, is shown to be a helpless, leaderless mob in the field, confronted by a determined, well-led, disciplined foe. No longer need the rest of the world fear Russia militarily—that bogeyman of international chancelleries has been vanquished by the resolution and the rifles of Finns defending their country from spoliation.

Outnumbered fantastically, facing attack from the best troops that Russia could command, little Finland has made giant Russia give ground, until today the Russians are driven back to their own lines on their own soil, and most of Finland is freed of the invader.

Your Excellency, Chicago pays homage to you as the splendid, typical representative of small but heroic Finland. We are honored to have you as our guest. We say to you that your brothers in arms who fight with Mannerheim and his commanders are fighting the battle of human freedom for all of us. We cherish the record you are making. We would aid you in every way that we can. Already a generous public is contributing to funds for Finnish relief. This will continue so long as your need may require. We delight to bring help and succor to those who cannot fight but only suffer behind your lines.

But some of us are not satisfied to give aid solely to your civilian population. We know that your land does not lack the ordinary needs of peacetime living. We know you for a self-supporting, self-respecting, self-contained people who pay your debts. But we know also the needs of that thin line of men with rifles and machine guns in their hands who man your trenches and face the full force of enemy fire.

We know these men need ammunition, need shells for their artillery, need planes to meet the attack from the air, need bombs for the planes to drop on enemy objectives. We know you want military material far more than you want food or supplies for the civilians.

The American people, in my judgment, want their Government to find a way to help you win. If we can continue to supply 85 per cent of the import needs for military uses of a Japan, using our American-made planes, equipped with American-made bombs, to ruthlessly slaughter defenseless Chinese women and children, surely we can find a way to help gallant Finland, fighting the cause of human liberty, confronting the red monster of communism against frightful odds.

Men will prate of neutrality, but how can we be neutral in our attitude when on one side we see a monstrous, tyrannical, bloody-handed dictator attempting to impose his will by brute force in order to destroy a free people; and on the other side we see a little nation of free men, outnumbered a hundred to one, fighting for their homes, their firesides, their national existence, and their liberties?

Shame on any American who can make himself be neutral in his thinking under such circumstances. He would be a poor American even for the defense of his own land and his own liberty.

There is a proposal now pending in Congress for the extension of a loan of many millions to your country. We helped you before with a sizable loan to help defray the cost of your fight for freedom a generation ago. You have met every obligation you then incurred, despite the fact that others, more able to pay than you, defaulted. We know your honor as a debtor, no less than we know your valor as a people. The granting of additional credits to you now will meet with overwhelming popular acclaim. And we must find a way to turn those credits into the military supplies you most need. In that way alone can we make our words of praise for your bravery truly meaningful.

Your Excellency, not Chicago, not Illinois, not just the United States; but the whole world—wherever men are free—and prize their liberty; wherever liberty maintains its altars; wherever tyranny is hated; and good will and peace are exalted; there you will find the friends of Finland. There you will encounter the sentiments to which I am trying to give feeble expression. There you will meet with the acclaim which the imperishable deeds of your soldiers deserve. And everywhere you are honored as representing men who choose rather to die as free men, than to live as slaves. Your cause cannot fail. We hail you victorious.

## Tributes to the Late Senator Borah

## EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

EDITORIALS FROM THE MONTGOMERY (ALA.) ADVERTISER  
AND THE BIRMINGHAM (ALA.) NEWS

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the RECORD two editorials on the late Senator

BORAH, one from the Montgomery (Ala.) Advertiser and the other from the Birmingham (Ala.) News.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Montgomery (Ala.) Advertiser of January 21, 1940]

#### THE DEATH OF A GREAT SENATOR

WILLIAM EDGAR BORAH was one of the greatest parliamentarians and debaters that have served any democracy in the world since March 4, 1907, when first he came out of the far West to take his seat in the Senate of the United States.

BORAH was the beau ideal of aspiring young statesmen. He was an inspiration to youth, an inspiration to libertarians of every age, an inspiration to all who honor valor and genius in a human being. In the long story of the United States Senate few men have been his superiors, fewer still his equals. In the end he must be bracketed with Webster, Calhoun, Clay, Edmunds, Morgan, Lamar, Ben Hill, J. P. Doliver, Oscar Underwood, and Joe Bailey.

Mr. BORAH represented a small constituency to which he was very close, especially in his earlier days. Because of his gifts it soon appeared that he was an ornament to the State of Idaho. Actually he was much more famous than his State. For these reasons it was easier for him to be consistently independent and audacious. Had he represented a large and more complex constituency he might have encountered political difficulties that he never had to meet in little Idaho. His people were so proud of him that they would not turn against him even when they did not agree with him, as often they did not.

Mr. BORAH was a classic example of the scholar in politics. No other Senator since March 4, 1907, had been a more industrious student of the world's best literature. He was acquainted with philosophy and political history to a degree that often confused his opponents and always delighted his admirers, among whom should be included the Washington newspaper writers. No other Member of Congress was more highly esteemed by the press corps than Mr. BORAH. He was frank and honest with them, to be sure, but he was something more—he was stimulating and challenging. An interview with BORAH was something that all followers of Washington news could be expected to read. BORAH was the toast of every working newspaperman in Washington. He never repudiated an interview, he never lied to the reporters, he never blamed them for his own vagaries and aberrations. He never whined. Always he delighted them with what he had to say. Partly in consequence of this camaraderie BORAH was page one news for more than 30 years.

The historian will have to take into account the fact that BORAH's extraordinary genius as scholar and thinker was thrown against the ideal of a workable international world order. He would not leave the shores of his native land, although once he was the weighty chairman of the Senate Committee on Foreign Affairs. He never traveled except between Idaho and Washington. The capitals of the Old World never saw him, never heard him. He never had the benefit of adequate contacts with human beings from other societies. He was an ardent, adamant isolationist.

He was by far the most brilliant of the American isolationists in Congress. But the Advertiser has ever regretted that BORAH was a physical isolationist. It has long thought, it still thinks, that he should have let himself go in the Old World, that he should have traveled extensively and met the statesmen in the far places of the earth. But travel never appealed to him, and so, so far as we know, he never in his life left the borders of the United States. We think that his spirit will have to reckon with historians because of his outmoded isolationist point of view.

Even so, it must be owned that WILLIAM EDGAR BORAH was the greatest prophet of isolation that ever sat in Congress. He was terrible in debate, and it is as a debater that he will be long remembered. There was no match for this man in Congress when his heart was stirred. He was ever the captain of his soul. He was above the reach of Presidents, but ever the servant of the common man. He was as brave a man as ever lived in politics, and one of the greatest debaters ever known to a free parliament.

The story of BORAH will fascinate our children for generations to come.

[From the Birmingham (Ala.) News of January 21, 1940]

#### THE LION OF IDAHO

America has lost a great statesman. The word too often is loosely used, and some are called great who are simply men of exceptional ability and high attainments, but not of real greatness. The qualities of true greatness are rarely found. That Senator WILLIAM E. BORAH had these qualities is universally acknowledged. He was truly a great man.

The dean of the Senate in point of service, Senator BORAH had been a member of the greatest deliberative assembly in the world since 1907, nearly 33 years. It will be generally agreed that he was the most distinguished figure to sit in that body during his time. There have been many able Senators during this third of a century, and a few great ones; but no other has been of equal stature to BORAH, of Idaho.

The name of no other Senator has been so well known throughout the length and breadth of the land, and over the rest of the world. No other Senator of his time has exerted so vast and far-reaching an influence on the larger affairs of the United States, both at home and abroad. None has been more respected, inside or outside of the Senate. On the Senate floor or in the Nation at large,

Senator BORAH always held the admiration and respect of those who disagreed with him as well as those who shared his views.

What were the qualities which made Senator BORAH a great statesman? They were several in number, and they blended so well that they added strength one to another.

First, he had a powerful intellect. He was a keen student, but he was much more than that; he was a first-rate thinker. He not only learned but he thought for himself. He had a great capacity for reasoning, which accounted largely for the strong appeal which his words usually carried in speeches and debates. When he argued a cause it was not easy to answer him, even when he was on the side of a question that was adjudged wrong by the majority of people, as he sometimes was. For intellectual capacity and authoritative knowledge he had few equals during his time in the Senate.

Next, he was one of the finest orators in the history of the Senate. He had a powerful and pleasing voice to give expression to his strong intellect. This was one of the ways in which his qualities blended to strengthen one another. A good orator without BORAH's intelligence might be only a windbag. A keen intellect without BORAH's power of expression might be an ineffectual statesman. The happy combination of these two superior qualities made a WILLIAM E. BORAH.

There was something else that contributed greatly to both of these qualities in making Senator BORAH a distinctive figure. It was his striking appearance. He looked the part of the statesman that he was. He was physically a powerful man, with a fine head and ruggedly handsome features adorning a large frame. He was well named "the lion of Idaho." His leonine mane was becoming to him, giving him a picturesque appearance without seeming disproportionate.

Much else, however, besides his intellectual and physical endowments went into the making of Senator BORAH. He had character—character exemplified in simple virtues which in him were unusually intensified.

One of these was his utter sincerity. In him this quality was a burning thing. Where other men might be sincere to a degree, Senator BORAH was sincere all the way.

Another was his superb courage. No matter whether many stood with him or none, Senator BORAH never failed to take his stand and speak his mind. He never hesitated to uphold a cause in which he believed because it happened to be unpopular. For courage he has not been surpassed in the public life of our time.

Still another quality was his kindness, which in personal relations was exemplified in unflinching courtesy, and toward society in the profound feeling he had for the welfare of his fellow beings which made him a great liberal.

There was also his remarkable independence of spirit, which often made him a political insurgent. Senator BORAH was so independent, sometimes seemingly so inconsistent, that he was usually unpredictable. Years ago Walter Lippmann wrote of him that there was no accounting for Senator BORAH, but that he simply had to be accepted, "like the weather and the universe."

Senator BORAH's chief concerns and major battles in the Senate are too well known to need recounting here. Sometimes he was proved right, and sometimes wrong. But always he was a powerful influence.

He now belongs to history; and it is certain that history will place the name of BORAH alongside those of Calhoun, Clay, and Webster among the men who achieved greatness in the United States Senate.

### Aims of Agriculture

#### EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

STATEMENT BY M. W. THATCHER

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement issued by Mr. M. W. Thatcher, national legislative representative of the Farmers' Union, with reference to the views, aims, and wants of agriculture.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The 1938 Farm Act is furnishing substantial assistance to agriculture. However, it fails to provide the objective for parity of income. Too, it does not cover many of the important agricultural commodities.

#### AGRICULTURAL INCOME

Through further legislation, more effective use of the present act, together with certain sound tax impositions, Congress can find ways and means to produce the revenue required to make the 1938 Farm Act fully effective. Agriculture fully expects the Congress to keep faith with its legislation.

We are supporting the income-certificate plan for wheat, cotton, and rice, and such other commodities as may prove properly applicable to such protection. The certificate plan is the employment of an internal tax to cover the gap between the cash farm price and the declared fair price. Therefore, it is not a regressive sales tax, but, rather, a deficiency tax to establish a fair, stabilized price.

We intend to support a unified agricultural front as a means of protection for the whole farm family producing the important agricultural products.

#### AGRICULTURAL PRICES

The great majority of representatives of the agricultural trades, organized labor, and agriculture do not expect any substantial increase to agricultural prices arising from war conditions. If, however, prices should rise to parity, appropriated funds for parity payments would be returned to the Treasury.

Substantial increase in the national income will have practically no effect upon the price of such surplus crops as wheat, rice, tobacco, cotton, etc., when there is an excessive world supply of such commodities. Those who contend otherwise qualify as members of the ostrich class.

#### RECIPROCAL-TRADE TREATIES

We support the philosophy of reciprocal-trade agreements as the most likely assurance to bring international cooperation and peace, but we insist that, in the consummation of such agreements, necessary safeguards must be employed to protect parity prices for domestic agricultural products efficiently produced.

We are opposed to log-rolling tariff legislation which has historically betrayed American agriculture.

#### GOVERNMENT IN BUSINESS

We vigorously oppose any department of Government encroaching upon the field of agricultural distribution when facilities and service charges are otherwise available at reasonable rates.

#### NATIONAL DEFENSE

Adequate armaments to maintain defense of our country meets our hearty approval, if the appropriations therefor are to be covered by revenue arising from additional Federal income taxes; provided, however, this character of expenditures is not made at the expense of health-sustaining assistance to deserving and unfortunate American citizens without self-means.

Part of the national defense for efficient, industrious, and honest farm families is provided for in our farm-debt adjustment bill now pending before the Congress. It would require no additional appropriation for many years, if ever, and would assure such farmers their first line of defense against the many troubles which erode them. Those who would conserve capitalism should pull their heads from the sand and insist upon a farmer-owned and operated agriculture, the foundation of capitalism.

#### FARM CREDIT ADMINISTRATION

We are most grateful for the tardy transfer of Farm Credit Administration to the Department of Agriculture. We hope the Secretary of Agriculture will soon be able to furnish a report of the administration of the Federal Land Banks, Intermediate Credit Banks, Federal Farm Mortgage Co., and production credits and collections, with its consequent ill effects upon agriculture.

Based on many years of experience with boards in control of agricultural credit, we will vigorously oppose any legislative proposal which again seeks to board it up.

### The Far Eastern Situation

#### EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR OF  
JANUARY 30, 1940

Mr. SCHWELLENBACH. Mr. President, there is pending before the Congress the very important question of the situation in the Far East. In view of that fact, I feel that the article which I send to the desk, appearing in the Christian Science Monitor of January 30, 1940, should be of interest to Members of Congress. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of January 30, 1940]

JAPANESE URGE UNITED STATES PUBLIC TO DEMAND TREATY—AGENTS FLOOD MAILS WITH PLEAS TO PUT PROFITS ABOVE MORALS TO FORCE WASHINGTON TO ACT

(By a staff correspondent of the Christian Science Monitor)

WASHINGTON, January 30.—Japanese propagandist agencies in the United States are appealing over the heads of the American Government to urge the American people to ignore the moral issues of the Sino-Japanese War and to renew the trade treaty which was allowed to expire last week.

Magazines, illustrated brochures, and pamphlets which the Japanese are mailing to all parts of the country are advising public opinion that the concern which the United States should have in the Far East is whether its commerce in war supplies to Japan is good business, and are counseling against letting any consideration of "ideology" influence "economy."

"From time immemorial," says one of the latest of the Japanese information bureau statements, "peoples have traded everywhere with other peoples whose philosophies and habits varied to the extreme. Always they carried on their commerce for the sake of the benefits it brought. In all history, trade has suffered and standards of living have fallen whenever national ideology or politics have been confused with economy."

#### WARNS AGAINST CHANGES

"In troubled times there is a special temptation to bend the laws of economics to serve purposes entirely outside of the field of economy. Any tendency to yield to that temptation at this time would be contrary to the best interests of the peoples of the United States."

To persuade Americans that it would be in their interests to encourage Congress and the administration to renew the Japanese-American commercial pact and oppose any embargo on strategic war materials which Tokyo needs, there are now three main propaganda agencies in different parts of the United States actively engaged in preparing and distributing literature along these lines. Each is called a "Japan foreign-trade bureau" and is manned by Japanese representatives and financed by Japanese funds. One is located in San Francisco, another in Chicago, and a third in Houston, Tex.

Much of the material which emanates from these bureaus first go directly to American businessmen specifically engaged in some branch of export or import trade with Japan who, in turn, see that it reaches Government officials and others who may be expected to be more favorably impressed by its receipt from American than directly from Japanese sources.

At the office of the Senate Committee on Foreign Relations it was stated that literature from these bureaus has been retransmitted to various members of the committee in the hope of influencing their action and that letters relating to it have been received by them.

The origin of the Japan foreign-trade bureaus' "information" pieces is clearly identifiable and there is no effort to conceal their source or hide their purpose. The unusual feature of the propaganda, however, is the extent to which it goes in directly advising American opinion what considerations should be ignored and what considerations should be controlling in deciding the next step in its Far Eastern policy.

In many ways this literature is more candid than the official statements of the Japanese Government since, contrary to Tokyo's formal position, one tract frankly admits that "Japan is engaged in a war" and asks Americans to overlook its "regrettable" effects upon American trade.

"Much as they would prefer it otherwise, nations at war," explains a pamphlet called Trade with America's Third Best Customer, "perform must subordinate even their popularity abroad to military necessity. Under such circumstances, it is a regrettable fact that abnormal restrictions have been imposed, which have been disagreeable, at all times actually unfavorable, to individual trade interests of friendly nations."

These "abnormal restrictions" by Japan on American trade should not be the cause of abnormal restrictions by America on Japanese trade, the pamphlet argues, and goes on to urge that American businessmen, workers and consumers be alert to the vital need of a new commercial treaty or at least a temporary agreement looking forward to such a treaty.

Ironically, one reason offered by the Japan foreign trade bureaus' literature why the United States should be more attentive to Japanese trade and less concerned with its Chinese trade is that since 1932 American sales to China have declined 38 percent. No mention is made of what country contributed most to China's decreasing trade with the United States during this period.

The technique of the publicity which the Japanese in the United States are putting out is to appeal not to administration and congressional officials who would normally deal with these matters, but to those sections of the population whose livelihood is in one way or another affected by trade with Japan. The pamphlets are directed to telling domestic opinion what its concern should be and to arousing American opinion to demand the continuance of the same trade conditions between the two countries as under the expired treaty. Americans are asked to appraise Japanese-United States commerce apart from the political issues and effects of the far eastern war.

Thus the Japanese propaganda appeals to the hundreds of thousands of wage earners employed in the manufacture of silk hosiery and textiles, to the West Coast States which "have the greatest dependence on direct trade with Japan, to the hundreds of thousands of workers in the cotton fields of the South, in the oil fields of California, the lumber camps of the Northwest, the manufacturing plants of the East and Middle West who earn a living because the products of their labor are sold to Japan, and to the farmers, mechanics, and stevedores who are employed because of Japanese trade.

"We would like to point out that Japan is living in a difficult world with many internal and external problems," one of the Trade Bureau pamphlets says with reference to the war in China. "Certainly, the Japanese with their long experience of friendly trade relations with America would be the last country to use wanton methods against their commerce."

The use by Japan of wanton methods against American civil and commercial rights in China is the issue which caused the United States Government to abrogate the 28-year trade treaty and is the issue which lies behind the two embargo resolutions now before the Senate Committee on Foreign Relations. The Government has deliberately given Japanese-American trade the uncertainty of a day-to-day basis and has invited Tokyo to give grounds for removing that uncertainty.

Opposition to either a permissive or a compulsory embargo on American war supplies to Japan was expressed by three prominent Senators today, GERALD P. NYE, Republican, of North Dakota; ROBERT F. WAGNER, Democrat, of New York; and BURTON K. WHEELER, Democrat, of Montana. Senator NYE announced himself as unalterably opposed to any embargo; Senator WAGNER cautioned against hasty action; and Senator WHEELER said he did not wish to stir up Japanese ill feeling against the United States.

#### MEXICO IN LINE

MEXICO, D. F., January 30.—A group of Mexican officials have been invited to study Japan's industrial and economic life as guests of the Japanese Government, it was learned here today.

The Tokyo invitation, it was understood, was extended about a month ago, when Japan started a study of means to expand trade with other nations in the face of the expiration of the United States-Japanese commercial treaty. The invitation was made to various cabinet officers and other government officials, it was learned. One Mexican official said no reply had been made. Official advices are that several Japanese trade delegations are en route to Mexico.

#### JAPAN CUTS OIL

SAN PEDRO, CALIF., January 30.—Japanese tankers, which have been loading oil at southern California ports on the average of five a week, have only three sailings scheduled next month. Shipping sources could offer no reason for the abrupt drop. An agent for a number of the tankers, confirming a scarcity of bookings, said he had received no explanation.

#### PRESSURE IN WEST

(By a staff correspondent of the Christian Science Monitor)

SAN FRANCISCO, January 30.—Japanese propagandists are busy on the Pacific coast with efforts through every available channel to persuade individuals and groups to bring pressure on Washington for a renewal of the Japanese commercial treaty.

Its purpose is to insure the sending of telegrams, letters, post cards, and group resolutions to the Department of State and Congress favoring retention of the commercial treaty.

Japanese statistics released from the Bank of Japan report "that an increasing amount of new capital is going into various industries \* \* \* showing there is an added rosy tint to Japan's foreign affairs which has created an element of optimism in Japanese markets."

Chambers of commerce on the west coast, and the marine exchanges and foreign trade groups are backing water on their earlier trend to surge directly ahead for renewal. The statement of the Seattle Chamber of Commerce—which went through quite an internal debate before releasing its sentiment—gives the cautious far western trend generally accepted today. The Seattle chamber said it had considered the problem at hand and urged early action on a treaty with Japan.

### Philippine Independence

#### EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

ARTICLE FROM THE WASHINGTON POST OF JANUARY 28, 1940

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an article from the Washington

Post of January 28, 1940, on the subject of Philippine Independence.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 28, 1940]

#### KEEP THE PHILIPPINES

Your proposal to fling the Philippines to the Japanese, and 6 years ahead of schedule, is astonishingly magnanimous for a paper claiming Japan our mortal enemy.

Do you not perceive the wasted effort in abandoning to orientalism a country we have spent 42 years making American in government, economy, and culture? If not, please consider the possible outcome of discarding so choice a colonial tidbit.

First, the Philippines would prove a bonanza for any country as hard pressed for raw materials as is Japan in her current war. The islands have the largest chromium deposits in the world and creditable reserves of iron, copper, manganese, silver, lead, zinc, molybdenum, coal, petroleum, asphalt, gypsum, salt, sulfur, building materials, lumber, sugar, abaca (manila hemp), coconut, tobacco, rice, corn, fruit, livestock, fish, and many others. The gold production alone in 1938 was estimated at \$32,500,000.

With such resources on tap any long-distance blockade by the United States and Great Britain or any failure by this country to renew trade agreements would hardly prove disastrous to Japan.

However, the loss of Philippine trade would, without a doubt, be a blow to our national economy. For a number of years the islands have been the best customer of certain American products. In total amount of products consumed it is the fifth best customer of the United States.

If Japan ever secures China and the Philippines, then God help America; for in that day even our national "ostriches" (including the species known as editorial writers) will lose considerably more than just their tail feathers.

K. BRUGH MADARANG.

### Secretary Hull and Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

EDITORIAL BY WILLIAM ALLEN WHITE

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial by Mr. William Allen White, entitled "A Warrior Bold."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 28, 1940]

#### "A WARRIOR BOLD"

(An editorial by William Allen White in the Emporia (Kans.) Gazette)

Americans might as well make up their minds to it, that the old idea of a high protection, which was merely socialistic subsidizing of various industries, is impossible in the world economy as it stands today. Some tariff? Yes; but not logrolling high tariffs, not the Smoot-Hawley bill. One of the things that brought about the depression was the Smoot-Hawley bill. The Gazette said so at the top of its lungs before the Smoot-Hawley law was finally formulated, while it was passing and after it had become a law. That tariff law was an offense against economic stability not only in the United States but all over the world. It is one of the sad, terrible commentaries on the present Democratic administration that it has neglected so long to revise the Smoot-Hawley tariff law.

The principle of reciprocal tariff to undo and offset the Smoot-Hawley tariff is entirely defensible upon the theory of our national economy. Of course, in any Congressman's district he can take counsel of his fears and vote against this tariff by scaring his constituents to death about the damage it will do to their local special industries. For instance, take cattle: The increase of the percent of total imports of cattle—say 44 percent—is frightening. But that 44-percent increase is only 8 percent of the cattle inspected and probably about 5 percent of the beef actually consumed in the United States. That is a small percent. It has not seriously affected the average annual price of cattle.

We are fundamentally in disagreement with Governor Ratner and the Kansas Congressmen and Senators who opposed these Hull treaties. For these treaties surely strengthen our national economy. They certainly bring in more business and more money to the country than they take out. Unless we see our national economy as a whole and national prosperity as a unit, we never can

recover. We can't recover by patching up a hole here and plugging a hole there in our economy. We cannot recover unless we plan recovery on a Nation-wide scale.

If, for instance, the farmers of Kansas are scared of these treaties because of what they will do to the farmer, the Kansas farmer should remember that the farmer will never be prosperous until the Nation as a whole has prospered also. These treaties certainly do work for national prosperity. If, when the treaties are in force, it is found that the farmers are bearing too much of the burden, which may easily be true, then subsidize the farmers directly. But don't stop the rise of national prosperity by timidity about individual losses. If times are good, prices will be good everywhere.

Another and most vital thing: The peace of the world depends, first, upon the international flow of goods, to give all nations of good will access to raw materials; and, second, upon mutual economic help among nations. Economic supernationalism has led the world into war. Unless there can be among the civilized nations of the world some basis of negotiation whereby each nation can develop its own economic strength under its own peculiar geography and in its own economic position, there is no hope for peace. National jealousy will keep on breeding international hates.

Wars will succeed wars. In the peace conference which must follow this war American influence can be potent in the struggle for world peace. But we can serve the world only if America comes with a reputation for fairness to her neighbors now. Suppose we defeat these Hull treaties! What a pie-faced old hypocrite Uncle Sam will be at that conference, counseling other nations to give up a little for the greater blessing of peace. In that hour when a lasting peace is possible for the world we shall be bound and gagged by our own selfish isolationist policies. Here in these Hull reciprocal treaties is the hope of the United States in helping to promote a just peace in the world.

Without that just peace the tribulations of the last decade, 10 terrible years of shuddering under the threat of war, will be with us for another generation. This is no time for partisan talk of local advantage. The prosperity of our Nation depends upon the peace of the world. If America cannot take the larger view, the hope of the world is blasted. Our civilization cannot go forward along its appointed evolutionary way, amid the atmosphere of international envy and the hates that grow where nations are oppressed in economic poverty.

The Republican Party is going to make a sad mistake if it goes into this campaign on an old-fashioned, high-tariff platform policy. The Hull idea theoretically is right. Maybe he is not implementing it with the best instruments. But certainly he is expounding a principle that will work. It will be better for the Republicans to help him make his plan workable than to try to defeat his principle.

In the meantime, no warrior bold with spurs of gold ever went more bravely to the fray than Cordell Hull is going into this fight.

### Trade Relations With Japan

#### EXTENSION OF REMARKS

OF

HON. JAMES M. SLATTERY

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

LETTER FROM DR. QUINCY WRIGHT

Mr. SLATTERY. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed to me by Dr. Quincy Wright, of the University of Chicago Norman Wait Harris Memorial Foundation in International Relations. The letter has to do with trade relations with Japan.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE UNIVERSITY OF CHICAGO,  
NORMAN WAIT HARRIS MEMORIAL FOUNDATION  
IN INTERNATIONAL RELATIONS,  
January 29, 1940.

The Honorable JAMES M. SLATTERY,  
The Senate, Washington, D. C.

DEAR SENATOR SLATTERY: Now that the treaty with Japan has expired, the United States is free to take appropriate measures to end our participation in Japan's aggression in China. There are of course a number of forms which this could take, such as, a resolution directly prohibiting the export of war materials to Japan because of her violation of the Nine Power Treaty, or an embargo upon the export of war materials from the United States in order to conserve supplies for our own purposes. The latter would of course have the disadvantage that it might apply also to European countries. Finally, there are of course certain powers

which the Executive already has under the tariff acts which could be used to control or limit imports from Japan, thus reducing her credits and indirectly affecting exports.

I am inclined to think that a direct embargo would be the best as it would at the same time reiterate our attitude against treaty violations and clear us of any charge we ourselves are contributing to aggressions in China contrary to our obligations under the Nine Power Treaty.

In any case I think you would agree with me that a strong policy is called for. Japan is attempting to modify her policy already, but if we should weaken it would undoubtedly play into the hands of the military party in that State. Furthermore, a strong policy would be the best way of preventing an alignment between Japan and Soviet Russia. Any act which might be interpreted as appeasement of Japan on our side would be likely to induce Russia to make an agreement with that country. We must recall that as long as the western powers were standing firmly by international obligations, the Soviets were with them, but after the appeasement at Munich in September 1938, Russia immediately began to change her policy, and presently made a virtual alliance with Hitler. I think the same line of conduct should be anticipated in the far eastern situation. As long as Russia thinks the western powers are supporting China, she will do so also, but if she thinks there has been a weakening and that they are now going to support Japan, she will be inclined to get on the bandwagon, particularly because of her present involvement in Finland. Undoubtedly a Soviet-Japanese alliance would be hostile to American interests, and in order to avoid that, a strong policy should certainly be pursued at this time.

Sincerely yours,

QUINCY WRIGHT.

### Relations With South America

#### EXTENSION OF REMARKS

OF

HON. LEWIS B. SCHWELLENBACH

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

EDITORIAL BY EDWARD C. JOHNSTON AND EDITORIAL FROM  
THE READING (PA.) TIMES

Mr. SCHWELLENBACH. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the current issue of Boletim Linotipico by Edward C. Johnston, vice president of the Western Newspaper Union, and an editorial from the Reading (Pa.) Times of January 13, 1940, both on the question of our South American relations.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From Boletim Linotipico, the Portuguese edition of the Linotype News]

(By Edward C. Johnston, vice president of Western Newspaper Union)

The press in the United States is rapidly growing conscious of a marked increase in reader interest in things Latin American, and especially Brazilian. Clearly, I think, this reader interest recently was stimulated by the splendid exhibits in the Brazilian Pavilion at the New York World's Fair. Under the capable direction of your popular commissioner general, Dr. Armando Vidal, the pavilion created much favorable comment. Moreover, this increase in reader interest in things Brazilian and Latin American flows from a natural and proper desire on the part of our people to get better acquainted with their neighbors to the south.

It was my good fortune, while in Brazil, to meet and renew personal friendships with many of your representative publishers. And, without exception, they told me of the great interest on the part of their readers in things North American. Apparently the same urge to get better acquainted with their neighbors to the north is held in common. Now, publishers must recognize their responsibility to furnish these interested readers the information they seek.

There is the familiar anecdote about Charles Lamb, who said, "I dislike that man." "But," came the reply, "you do not know him," and Lamb answered, "Of course I don't know him. If I did, I could not dislike him."

Someone has said "we are apt to suspect those we do not know."

Publishers in the United States generally agree with their colleagues in Brazil and Latin America that there should be a mutual effort to disseminate knowledge of each other's civilization. We need to share each other's knowledge of our history, our cultures, our fundamental institutions, our significant and historic personalities.

As I flew over Brazil last fall in the airplanes of that developer of better relations, Pan Air, the speed achieved in travel shocked me. It forced the realization of how much smaller the world now seems.

The world has shrunk. Ideas which peoples of one country have held about peoples of another country, however distant, must now be adjusted at a much faster tempo, not leisurely and over decades. Never before has mass thinking altered so quickly; reacted with such speed to current events and stimuli.

Admittedly, radio is an effective medium for quick dissemination of "spot news" bulletins and for various kinds of entertainment, but the printed word is still the best medium for appeal to man's reasoning powers and in forming his convictions.

Increasingly, I am glad to say, the schools and universities in the United States are making available courses of study in Portuguese, and Spanish languages and literature. Our own national heritage from the Hispanic cultures is realized and appreciated.

This enthusiasm for educating ourselves more about Brazil and the other Americas is not solely to achieve the satisfaction of greater knowledge. It flows from the urge of the individual citizen to contribute as best he can to making a better world through a progressive realization of the ideals that good neighbors among nations must have in common.

There is a fair flow of "spot news" by cable and radio in both directions—north and south. But this much is certain. In the columns of our newspapers and yours there is a dearth—almost a total absence of authentic, background feature articles, appropriately illustrated, which constructively interpret to the readers the fundamental institutions, cultural and material, of our respective countries. Along this line the surface has scarcely been scratched.

But a two-way channel is needed!

Recently, representative Brazilian and North American publishers with whom I have discussed the subject expressed a keen desire to collaborate in a reciprocal exchange of factual, authentic background feature material. Such an exchange as proposed would make this material available on a mutual and nonprofit basis to the publisher groups in our respective countries.

Would not the cumulative effect of such a reciprocal program contribute most effectively to that cultural exchange and to the development of that mutual understanding which is so necessary between "good neighbors"?

[From the Reading (Pa.) Times of January 13, 1940]

#### LOOKING TOWARD THE SOUTH

With Europe at war, Uncle Sam's face has been turned to the south instead of the east.

That is to say that the people of the United States have been thinking more and more in terms of South America and less in terms of Europe.

Consequently, new impetus has been added to improving pan-American relations and on this side of the Gulf we have been realizing just how close are the interests of the North and South American peoples.

But just how much do we know, even now, of South American affairs? Do we really understand their culture, their economics, their politics, their industry? Is the "good neighbor" idea, at the present time, much more than a friendly impulse, a sincere hope? It may be suspected that it is not, and that it is to the task of making the "good neighbor" policy a practical, realistic instrument of mutual welfare that we are under a real obligation to dedicate ourselves.

In the current issue of Boletim Linotípico, the Portuguese edition of the Linotype News, Edward C. Johnston, vice president of Western Newspaper Union, really gets to the heart of the "good neighbor" impulse and points the way to a practical implementation of the pan-American ideal.

After noting the fact that the press of the United States is rapidly becoming conscious of a marked increase in things Latin American and especially Brazilian, Mr. Johnston says:

"There is a fair flow of 'spot news' by cable and radio in both directions—north and south. But this much is certain: In the columns of our newspapers and yours there is a dearth, almost a total absence, of authentic, background feature articles, appropriately illustrated, which constructively interpret to the readers the fundamental institutions, cultural and material, of our respective countries. Along this line the surface has scarcely been scratched. But a two-way channel is needed.

"Recently representative Brazilian and North American publishers with whom I have discussed the subject expressed a keen desire to collaborate in a reciprocal exchange of factual, authentic background feature material. Such an exchange as proposed would make this material available on a mutual and nonprofit basis to the publisher groups in our respective countries.

"Would not the cumulative effect of such a reciprocal program contribute most effectively to that cultural exchange and to the development of that mutual understanding which is so necessary between good neighbors?"

Mr. Johnston's idea is obviously sound. Cooperation between the United States and great South American republics must be based on deep mutual understanding of each other's culture, economics, politics, problems, and methods in every field. And genuine understanding can be based only on accurate and complete information. An exchange of such information would be not only beneficial but is also absolutely essential.

## Recovery Versus Higher Taxes

### EXTENSION OF REMARKS

OF

### HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I will deliver tomorrow evening, January 31, 1940, over the coast-to-coast blue network of the National Broadcasting Co. from station WMAL, in Washington, D. C.:

The books have been closed on 1939, but many of its troubles still confront us. Foremost are the problems of recovery and unemployment. The record for 1939 reveals that Congress showed its desire to cooperate with businessmen by enacting a number of measures they had demanded as necessary for recovery. From the taxpayer's viewpoint the most important contributions were as follows:

The undistributed-profits tax was repealed; taxation on capital gains and losses was liberalized; the corporation-tax structure was improved in several other ways; the increase of one-half of 1 percent in the old-age pension levies, effective January 1, 1940, was postponed for 3 years; and payments in excess of \$3,000 per person employed were eliminated from the taxable pay roll of wage and salary payments. This indicated a happy tendency to place emphasis on recovery rather than reform. All these were hailed by business as favorable to recovery.

No one denies that the action of Congress in revising our tax structure and in removing certain tax deterrents helped immensely in the recovery that took place during the latter months of 1939. Also, there is now general recognition that only better business and greater employment of capital and manpower can produce greater Government revenue. In view of this obvious truth, it is clearly imperative that the present business recovery be encouraged to proceed. After 10 years of the most severe depression in the history of this country the business machine seems finally to be gaining momentum. Common sense dictates that every assistance should be given to accelerate its forward movement.

No sensible man would apply the brakes to his automobile when approaching the top of a steep grade when he knows that to do so would stall the machine and prevent his reaching the top. It might even cause him to slide back to the bottom of the hill. Yet that is exactly what is now proposed to be done to the business machine. Instead of lightening the burden, it is proposed to increase the load. Instead of feeding the machine gas, it is proposed to apply the brakes.

Before the 1939 Revenue Act is given a chance to prove its worth, at a time when, in fact, inducements should be made to investors to put their capital back into productive undertakings, new proposals are submitted to Congress to increase our tax bill by nearly one-half billion dollars. This, in spite of the fact that many sources of wealth have been taxed to extinction and at many junctures taxes have long passed the point of diminishing returns, so that we have clearly consumed many of our tax reserves. We have, in fact, used up our "seed corn."

One plan suggested to raise this one-half billion additional taxes, which seems to be regarded with favor in some quarters, is to impose a super-tax of 10 percent. The taxpayer would compute his tax in the usual way and then add 10 percent to the total. This may prove to be the proverbial straw that will break the camel's back. This is a cute plan "to get the most feathers with the least squawking of the goose." The goose in this case happens to be the day-in and day-out American taxpayer. Let us not be fooled by promises that this super tax will be a temporary measure. The record discloses that these temporary taxes always become permanent.

Business may be able to adjust itself to the present staggering tax burden, but it cannot adjust itself to the suspense, uncertainty and confusion by constantly changing tax laws. The present agitation, adding uncertainty to confusion, will bring stagnation to the field of investment, and frustration of individual initiative, with their related problems of unemployment and still further depression. We have been told that savings and investment capital are "on strike." The truth of the matter is that money is not "on strike." It has been retired without a pension, in spite of everything the owners can do, because borrowers do not want this money since they cannot find reasonably safe and profitable outlets for its use. Without confidence, dollars will not go to work and employment can be created only by forced and artificial means.

The limited time at my disposal this evening prevents a discussion of capital investment, but let me call your attention to

the fact that individual savings have been limited and in many cases dissolved by excessive taxation of income, especially in the higher brackets whence considerable capital for new enterprise formerly came. Even death is no solution, for similarly high estate taxes necessitate the postmortem dissolution of the owner's property. Business savings have suffered a somewhat similar fate through governmental pressure on surpluses, forcing them out into private hands where they can be confiscated through individual levies.

These savings were used formerly to create large-scale employment. Their use represented the difference between prosperity and depression. Money spent for the purpose is "high powered" money. By contrast, pump-priming money is "low powered" money, because it is mostly distributed to individuals and directly spent for consumers' goods instead of for capital goods.

Little progress has been made in solving the Nation's No. 1 problem—unemployment. Both the Government and business have made mistakes, but business has not had a fair chance. Impractical theorists, who never had to meet a pay roll, have put business and its leaders on the spot. These theorists have been suspicious and in some instances ruthless in their methods. The unemployment problem can be solved, but only if business is afforded the opportunity to operate with confidence and under a permanent policy which recognizes that this is a business country and must continue as such if we are to put our idle workers back to gainful employment.

This can be done without forcing a single American to go hungry or a single worker now on relief to lose such help until he can get a job. As pointed out by that well-known writer, David Lawrence, it can be done by following a plan that permits an increase in profits of American business and reasonable reduction in Federal expenditures. The President, in his recent budget message, wisely suggested the necessity for economy in appropriations, and congressional action in the present session indicates that the majority are economy minded. Reduction in Government expenditures will take place automatically, because under this plan the increase in private employment will be sufficient to make unnecessary at least one-third of the money now provided for work and other relief.

The first steps that should be taken are:

- (1) Reduce the present surtax rates from the maximum of 75 percent to the 20 percent in effect in 1926 on incomes of \$100,000 or over.
- (2) Estate and gift taxes should be reduced to a maximum of 25 percent.
- (3) Repeal outright or modify substantially the present capital gains and losses tax.
- (4) Make further adjustments in the present pay-roll taxes under the Social Security Act.
- (5) Remove all the tax deterrents which interfere with business growth and reemployment. These deterrents are now known and every one of them should be removed from the revenue law. They include:
  - (a) The capital-stock and excess-profits taxes should be repealed.
  - (b) Intercorporate dividends should be exempt from taxation.
  - (c) Corporate dividends should be exempt from individual normal taxes.
  - (d) These are but a few; there are many other well-known tax deterrents that must be eliminated.

We need a national income of \$80,000,000,000 to meet Federal expenditures and balance our Budget. Our national income will reach that figure and probably exceed \$100,000,000,000 within a few years, if private capital is permitted to function. Out of such an income we can furnish jobs for everybody who wants to work and we can collect all the taxes we need to carry on the necessary functions of government.

You may be skeptical and demand proof that such a national income can be realized. Let me refer you to the record of what happened in 1926 when American business produced a net income from corporations of \$9,760,000,000, but even this figure was exceeded by the returns of 1929, which exceeded \$11,650,000,000. The 1937 Treasury figures, which indicate the best year of business in the last decade, show the net income of corporations was only \$6,914,000,000. The answer to these figures may be found in the tax rates in effect in those two periods.

The individual incentive which made America prosperous in 1926 was encouraged by a maximum surtax of only 20 percent, which was applied at \$100,000 net income. This obviously spurred individuals and corporation executives to investment and to take risks in creating jobs. In 1926, also, corporate taxes were collected on the basis of a flat rate of 13½ percent. By contrast, in 1937, the maximum surtax rates were 75 percent, plus a normal tax of 4 percent, making a total of 79 percent maximum on individual incomes. In 1937, also, corporations paid a normal tax of from 8 percent to 15 percent and an undistributed-profits tax ranging from 7 to 27 percent.

The 1937 recession, which was reflected in the 1938 tax receipts, came after the undistributed-profits tax and high surtax rates had virtually wrecked the profit-making economy and dried up the sources of risk capital and high-powered money in the United

States. Study the tax history of this country and you will find that whenever we have had low surtax rates we have had prosperity and relatively no unemployment. Whenever business has had a flat rate on corporate net income it has prospered to a much greater extent than when rates were indeterminate or destructive of savings or investment.

In 1938 the tax bill amounted to about \$15,000,000,000. This meant in 10 years an increase of five and a half billion dollars. It also meant that the Government took 22½ percent of the annual income. Ten years before (1928) the Government only took about 11 percent. No business can long stand such a large share of earnings being taken away from it in the form of taxes. The investor folds his arms and says the game is not worth the candle. If the investor has money in some business and is unsuccessful, he bears the entire loss. If the business succeeds, the Government takes the greater share of the profit. It is not even a 50-50 chance.

That this doctrine is subscribed to by the American public is indicated in a recent Nation-wide poll, which showed that 79 percent of those questioned favored helping business by reducing taxes, rather than increased public spending for relief and public works.

Roswell Magill, former Under Secretary of the Treasury, a few days ago declared:

"Expenditures must be further cut, following the lead the President has taken in his latest Budget message, to a total of \$7,000,000,000 or \$7,500,000,000, and Federal revenues must be increased to a similar level. To accomplish the result will require a really thorough pruning of expenditures. An intelligent overhauling of the tax system, not merely a blanket increase in rates, is essential. The first necessity is to improve the general fairness of the system to insure the maximum productivity with the least dislocation of the business and social structure."

Also, in a recent public statement, John W. Hanes, lately resigned Under Secretary of the Treasury, expressed the earnest belief that a reduction in personal-income and estate taxes would lay the foundation for a real business upsurge. Mr. Hanes said:

"It is my belief that the highest rate of taxation upon the taxpayer does not always produce the maximum revenue. I am convinced that the Treasury of the United States will collect a larger total of dollars with a tax bill that takes into broad consideration the effect of the dollars it will leave the taxpayer for expansion and development. It is my earnest belief that if we would approach our tax problems honestly, reducing the high rates, both upon personal incomes and estates, business would be encouraged to go ahead at a more rapid rate. It is possible that a foundation for a real business upsurge would be laid."

That, ladies and gentlemen of the radio audience, is the considered opinion of the man who played a prominent part in the tax revision embodied in the 1939 revenue measure. He resigned as Under Secretary of the Treasury several weeks ago after directing one of the most comprehensive tax studies ever undertaken by the Federal Government. This study included the thinking of not less than 5,000 of the best minds in the country—many of whom presented their views personally while others filed briefs. I submit the considered conclusions of such a man, who for many years has been a successful businessman, cannot be ignored when the subject of taxation is under discussion.

Those who are enthused with the idea of taxation for reform, or even more taxation for defense, sometimes forget that there is the principle of diminishing returns. This simply means that (as at present) you can boost the tax rate so high that you curtail the enterprise and the activity which produces the money with which to pay taxes, and so get less rather than more revenue. Thus, with higher tax rates, more factories close and consequently more men become jobless. It is simply killing the goose that lays the golden egg. To vary the simile, greater taxation would make the business engine, already spluttering, hit on fewer and fewer cylinders and finally stall.

We have tried many ways—spending, borrowing, pump-priming, and taxation—for reform, to say nothing of other regulatory laws that have tended to hamstring the capitalistic system. The only alternative remaining seems to be to build America's national income by letting American business build it. The one thing needed is some sort of guaranty that the era of economic vivisection is over, so that enterprises can get up off the floor, dust itself off and go to work, without the ever-present fear of being blackjacked.

The course we should follow is clear. Past experience points the way. The record I have just cited is a complete answer to those who are constantly clamoring for new and increased taxes, whenever additional revenue is required. There are none so blind as those who won't see. Are we going to continue to close our eyes on past experience, or are we going to give the profit system another chance? It is high time to undertake the task of removing or amending the governmental actions and policies that are checking the flow of capital into industry and retarding full economic recovery. If we, as a Nation, have the courage and wisdom to follow this policy, better days will be in store for us all.

**The One Hundred and Fiftieth Anniversary of the  
First Session of the Supreme Court of the United  
States**

**EXTENSION OF REMARKS**

OF

**HON. SOL BLOOM**

OF NEW YORK

**IN THE HOUSE OF REPRESENTATIVES**

*Thursday, February 1, 1940*

ADDRESS BY THE HONORABLE CHARLES EVANS HUGHES,  
CHIEF JUSTICE OF THE UNITED STATES, AT THE EXERCISES  
IN THE SUPREME COURT CHAMBER, FEBRUARY 1, 1940

Mr. BLOOM. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein the address delivered by the Honorable Charles Evans Hughes, Chief Justice of the United States, on Thursday, February 1, 1940, in response to the addresses made by Mr. Attorney General Jackson and Mr. Charles A. Beardsley, president of the American Bar Association, in recognition of the one hundred and fiftieth anniversary of the first session of the Supreme Court of the United States.

There being no objection, the address of the Honorable Charles Evans Hughes, Chief Justice of the United States, was ordered to be printed in the RECORD, as follows:

Mr. Attorney General and Mr. Beardsley, the Court welcomes the words of appreciation you have spoken in recognition of the one hundred and fiftieth anniversary of the day appointed for the first session of this tribunal. We are highly gratified at the presence of distinguished Senators and Representatives—the members of the Judiciary Committees of the Houses of Congress and of the special joint committee appointed in relation to this occasion. We trust that what has been said echoes a sentiment cherished in the hearts of the American people. They have again and again evinced the sound instinct which leads them, regardless of any special knowledge of legal matters, to cherish as their priceless possession the judicial institutions which safeguard the reign of law as opposed to despotic will. Democracy is a most hopeful way of life, but its promise of liberty and of human betterment will be but idle words save as the ideals of justice, not only between man and man, but between government and citizen, are held supreme.

The States have the power and privilege of administering justice except in the field delegated to the Nation, and in that field there is a distinct and compelling need. The recognition of this anniversary implies the persistence, through the vicissitudes of 150 years, of the deep and abiding conviction that amid the clashes of political policies, the martial demands of crusaders, the appeals of sincere but conflicting voices, the outbursts of passion and of the prejudices growing out of particular interests, there must be somewhere the quiet, deliberate, and effective determination of an arbiter of the fundamental questions which inevitably grow out of our constitutional system and must be determined in controversies as to individual rights. It is the unique function of this Court, not to dictate policy, not to promote or oppose crusades, but to maintain the balance between States and Nation through the maintenance of the rights and duties of individuals.

But necessary as is this institution, its successful working has depended upon its integrity and the confidence thus inspired. By the method of selection, the tenure of office, the removal from the bias of political ambition, the people have sought to obtain as impartial a body as is humanly possible and to safeguard their basic interests from impairment by the partiality and the passions of politics. The ideals of the institution cannot, of course, obscure its human limitations. It does most of its work without special public attention to particular decisions. But ever and anon arise questions which excite an intense public interest, are divisive in character, dividing the opinion of lawyers as well as laymen. However serious the division of opinion, these cases must be decided. It should occasion no surprise that there should be acute differences of opinion on difficult questions of constitutional law when in every other field of human achievement, in art, theology, and even on the highest levels of scientific research, there are expert disputants. The more weighty the question, the more serious the debate, the more likely is the opportunity for honest and expert disagreement. This is a token of vitality. It is fortunate and not regrettable that the avenues of criticism are open to all whether they denounce or praise. This is a vital part of the democratic process. The essential thing is that the inde-

LXXXVI—App—30

pendence, the fearlessness, the impartial thought and conscientious motive of those who decide should both exist and be recognized. And at the end of 150 years this tribunal still stands as an embodiment of the ideal of the independence of the judicial function in this, the highest and most important sphere of its exercise.

We cannot recognize fittingly this anniversary without recalling the services of the men who have preceded us and whose work has made possible such repute as this institution enjoys. This tribunal works in a highly concrete fashion. The traditions it holds have been wrought out through the years at the conference table and in the earnest study and discussions of men constantly alive to a supreme obligation. We do not write on a blank sheet. The Court has its jurisprudence, the helpful repository of the deliberate and expressed convictions of generations of sincere minds addressing themselves to exposition and decision, not with the freedom of casual critics or even of studious commentators, but under the pressure and within the limits of a definite official responsibility.

To one who over 29 years ago first took his seat upon this bench, this day is full of memories of associations with those no longer with us, who wrought with strength and high purpose according to the light that was given them, in complete absorption in their judicial duty. We pay our tribute to these men of the more recent period as we recognize our indebtedness to their eminent predecessors. We venerate their example. Reflection upon their lives brings emphasis to the thought that even with the tenure of the judicial office, the service of individuals however important in their day soon yields to the service of others who must meet new problems and carry on in their own strength.

The generations come and go but the institutions of our Government have survived. This institution survives as essential to the perpetuation of our constitutional form of government—a system responsive to the needs of a people who seek to maintain the advantages of local government over local concerns and at the same time the necessary national authority over national concerns, and to make sure that the fundamental guaranties with respect to life, liberty, and property, and of freedom of speech, press, assembly, and religion shall be held inviolate. The fathers deemed that system of government well devised to secure the blessings of liberty to themselves and their posterity. Whether that system shall continue does not rest with this Court but with the people who have created that system. As Chief Justice Marshall said, "The people made the Constitution, and the people can unmake it. It is a creature of their will, and lives only by their will." It is our responsibility to see that their will as expressed in their Constitution shall be faithfully executed in the determination of their controversies.

And deeply conscious of that responsibility, in the spirit and with the loyalty of those who have preceded us, we now rededicate ourselves to our task.

**Hon. William Irving Sirovich**

**EXTENSION OF REMARKS**

OF

**HON. ADOLPH J. SABATH**

OF ILLINOIS

**IN THE HOUSE OF REPRESENTATIVES**

*Thursday, January 25, 1940*

Mr. SABATH. Mr. Speaker, "He was a good man, and a just."

Mr. Speaker, I join in the estimates of the late Dr. WILLIAM IRVING SIROVICH which have been so eloquently pronounced by ripe scholars; and I share in the general grief caused by the premature closing of a career which only a few weeks ago was so rich in achievement and full of promise for the future.

It is no mean achievement to serve as a civic and political leader in city, county, and State and to represent an intelligent and important constituency in the National House of Representatives for 13 years. Such is the enviable record of Dr. SIROVICH.

During his active and useful career our departed friend witnesses the mightiest strides in material development the world has ever seen. He saw the Republic grow from the chaos of civil war to its present commanding place among the important nations of the earth. He saw the great Empire State, of which he was a son by adoption, leap forward with giant bounds, valiantly maintaining her place at the head of the mighty procession of the States of our

majestic Union. His pride in the forward strides of the State and the Nation was justified, for in the upbuilding of both he played the part of an active, earnest, and public-spirited citizen.

Neither a laggard nor a drone, for more than 35 years he was in the thick of the conflict which accompanies and stimulates progress. Throughout his whole life Dr. SIROVICH was a popular type of the American optimist, and he imparted confidence and enthusiasm to all within the influence of his delightful, magnanimous personality. Industrious and successful in private enterprise, he was alert and influential in public affairs, and he ably contributed to that ceaseless mental combat and attrition of thought whose constant flashes light the guiding torch of civilization that illumines the pathway of liberty and law.

His impulses were generous, his sympathies broad, his intellect keen. Wherever this good man was, in whatever sphere he moved, the friendless had a friend, the fatherless a father, and the poor man, though unable to reward his kindness, found an advocate.

It was when the rich oppressed the poor; when the powerful menaced the defenseless; when truth was disregarded or the eternal principles of justice were violated—it was on these occasions that he exerted all his strength; it was on these occasions that he sometimes soared so high and shone with a radiance so transcendent, as filled those around him with awe and gave him the force and authority of a prophet. His voice was virtue's consolation. At his approach oppressed humanity felt a secret rapture, and the heart of injured innocence leaped for joy.

Dr. SIROVICH was a patriot. He understood and loved his country and its institutions. For many years, at great personal and domestic sacrifice, he gave loyal, generous, and disinterested service to his country's honor. He had an illimitable faith in the Republic for which he did so much and which did so much for him; he had unwavering confidence in his fellow countrymen and in their attachments to the principles of liberty and their capacity to right wrongs and uproot evils. In their active, watchful, and vigilant patriotism he saw the best security against the evils that beset all governments. His best tribute was the repeated expression of confidence and approbation that came to him by way of election and reelection from his fellow citizens in New York City, who knew him so well and valued his character and attainments so highly.

The promptness and fairness of his dealings here were no small contribution to the expedition of important public business, and the lucidity with which he revealed his exceptional, encyclopedic knowledge of a great, intricate world, its history, and its complex affairs was a constant source of pleasure and satisfaction.

In his expoundings on this floor and before his committees he employed the purity, grace, and exactitude of Addison; the richness, splendor, eloquence, and music of De Quincey; the fluency, flexibility, and finish of Lamb.

I knew Dr. SIROVICH well from the day he became a Member of this House until he passed away. Our relations were very intimate, and I was always inspired by his selfless constructive plans. He was an indefatigable worker, as if he had a premonition that his days on earth would be shortened, as they were, and he must work exceedingly hard to accomplish many important things that rested near his heart. Measured by the most exacting standards, our honorable dead was a very useful, good citizen and a sagacious legislator. He never became weary in well-doing.

When in a narrow circle of friends our departed friend was, in addition to being courtly, grave and reflective. He was an enviable entertainer, ranging widely and deeply in subjects proposed for discussion.

This good man was devoutly religious, and methinks that his illumined spirit now whispers from the heaven, with well-known eloquence, the solemn admonition, "Mortals, hastening to the tomb, and once the companions of my pilgrimage, take warning and avoid my errors; cultivate the virtues I have recommended; choose the Saviour I have chosen; live

disinterestedly; live for immortality; and, would you rescue anything from final dissolution, lay it up in God."

Let us believe that such teaching and influence have not been ineffective, but death has made them more solemnly impressive and has added a kind of consecration to the lofty example which we have too listlessly seen build in our midst. If we may hope that this teaching and example have been endued by death with new potency, as forces creating better and purer citizenship, with graver import as instrumentalities in the creation, stimulation, and harmonization of patriotic ideals, and if we may hope that our countrymen will with sincerity heed the way of duty they point out, we may not only be doubly assured that our dead is not lost to us but may confidently renew our faith in the American people as custodians of their scheme of free government.

In conclusion, let us realize our obligation to make safe and secure the government of the people which has been committed to our keeping. Let us remember that it can thrive and grow only in an atmosphere of popular devotion and unselfish attachment and, above all things, let us open our hearts to such influences and teachings as emanate from the life and death which we today memorialize.

### Reciprocal-Trade Treaties

#### EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

LETTER BY O. GLENN SAXON, FINANCE COMMISSIONER OF THE STATE OF CONNECTICUT

Mr. MILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by O. Glenn Saxon, finance commissioner of the State of Connecticut, which was published in the Hartford Courant for January 22, 1940:

[From the Hartford (Conn.) Courant of January 22, 1940]

DEMOCRATIC DEFENSE OF RECIPROCAL TRADE TREATIES HELD MISLEADING—FINANCE COMMISSIONER SAXON ANALYZES THE RESULTS OF THE HULL POLICY AND FINDS THEM UNSATISFACTORY IN PROMOTING COMMERCE

TO THE EDITOR OF THE COURANT:

The recent editorials which the Courant has carried on the reciprocal trade agreement program of the present administration have disturbed me greatly. On the other hand, I am greatly surprised at the attitude which the Courant has taken on this subject because the entire problem is extremely technical and, quite apparently, it is misunderstood by the press generally, as well as by the public. This, unquestionably, is due to the fact that editorial writers, and especially the public, have not had an opportunity to study either the results of the trade-agreement program or the fundamental issues underlying the program itself. They have been inclined to accept without reservation public statements made by administration officials and statistical data contained in them as a full and fair presentation of the facts and principles involved. They have ignored the fact that these statements, even those made by Secretary Hull, are necessarily colored by their zeal for the administration's program, and in many respects have been tainted with partisan objectives.

As you know, from 1919 through 1931 I was actively engaged in foreign trade and became thoroughly familiar with foreign-trade channels and technique. In more recent years, and particularly since 1935, I have made a careful and continuous study of the trade-agreement program. In view of this background, may I request that you give publication to the data submitted below, with the assurance that every figure quoted is obtained from the reports of the United States Department of Commerce and cannot be questioned as to correctness.

#### REPUBLICANS AND RECIPROCITY

In the first place, may I point out that the Republican Party originated the doctrine of reciprocity. Between 1855 and 1890 a number of reciprocal-trade agreements were negotiated by Republican administrations under the general treaty-making power of the President and were confirmed by the Senate as required by the Constitution.

In 1932 the Republican platform carried the following plank:

"We point to the success of the Republican policy of reciprocity, under which our export trade has vastly increased and new and enlarged markets have been opened for the products of our farms and workshops."

This statement was made with respect to the achievements of the Harrison administration under the McKinley Tariff Act of 1890.

The theory of reciprocity has never been stated more clearly than by President McKinley in his last speech delivered on September 5, 1901, when he said:

"By sensible trade arrangements which will not interrupt our home production, we shall extend the outlets for our increasing surplus. We must not repose in fancied security that we can forever sell everything and buy little or nothing. We should take from our customers such of their products as we can use without harm to our industries and labor. The period of exclusiveness has passed. The expansion of our trade and commerce is the pressing problem."

The Republican platform of 1936 again carried a plank advocating the adoption of a sound policy of reciprocity under the Constitution, pointing out the Republican objections to the reciprocal trade agreement program of the Roosevelt administration.

In 1937 the Republican members of the Ways and Means Committee of the House reaffirmed the party's position in these words:

"We wish it to be distinctly understood that we are in no way criticizing the doctrine of genuine reciprocity with foreign nations."

They reiterated the objections of the Republican Party to the present program as follows:

#### DELEGATION UNCONSTITUTIONAL

First, the reciprocal-trade program delegates to the Executive, contrary to the Constitution of the United States, the tariff, taxation, and treaty-making powers of Congress. This is not merely a technical objection. It goes to the very essence of democracy. The Constitution provides that treaties shall be approved by the Senate, and the taxing power is vested in both branches of Congress. To permit these powers to be exercised by a single individual or a bureau is to acknowledge that dictatorship is preferable to democratic principles. The Constitution contemplated that these powers be exercised by representatives of the people. The charge is made that, if the trade treaties are submitted to the Senate for ratification or to the Congress as a whole, logrolling will be revived. It is rather amusing to find the New Deal, which has insisted upon the fullest publicity in all other fields, demanding that these treaties be consummated by star chamber processes and that the representatives of the people, elected to perform their constitutional functions, should not be permitted to ratify and confirm these agreements as the Constitution requires. Dictatorship may be more efficient, but it certainly is not democratic nor constitutional in its processes.

The second point made by the minority group of the Ways and Means Committee in 1937 is that the Trade Agreements Act takes away from American producers the rights which they previously had, under section 516-B of the Tariff Act of 1930, to take to the courts of the country matters arising out of the trade agreements, including the question of constitutionality. In other words, the New Deal has eliminated in this field, as in other fields, the right of appeal to the courts, and no way has been found as yet by which the issue of the constitutionality of these agreements can be tested in the courts. Just as important, however, is the right of individual citizens to appeal to the courts for protection of their private rights from unconstitutional actions of the administration with respect to the trade agreements. This deprivation of the right of American citizens to appeal to the courts is not a technical objection, but goes to the very roots of democracy.

#### CONGRESS HAS NO VOICE

The third objection raised by the Republicans is that the program denies an opportunity to Congress to approve or reject the trade agreements in light of the effects of specific agreements upon domestic producers.

The fourth objection is that the program ignores the principle of adequate protection for American agriculture, industry, and labor in that it permits the altering, by the State Department, of tariff rates fixed by Congress, without adequate consideration of domestic production costs and without adequate opportunity to American producers to be heard on the specific terms of the trade agreements before they become operative.

Finally, the Republicans made the point that the trade-agreement program provides for the general extension of the concessions made under a trade agreement with a single country to all other countries in the world having trade treaties with the United States, notwithstanding the known existing discriminations against American commerce by many foreign countries. The Republicans do not object to the principle of the most-favored-nation clause, whereby the concessions in one treaty are extended to other nations, but this generalization should not be granted to those countries which definitely discriminate against American interests by quotas which exclude American products by unfair shipping and exchange subsidies and by granting more favorable refunding operations to citizens of Germany and England than are granted to citizens of the United States. These discriminations have been practiced for years by foreign nations against American interests and, in spite of the existence of these discriminations, the State Department has generalized the treaties in practically every instance except in the case of Germany. If

these treaties were referred back to Congress for approval, not only would these generalizations to such discriminating nations be eliminated, but, more importantly, the discriminations themselves would probably be eliminated by the discriminating nations in order to obtain the benefits of the American trade treaties.

#### WHAT ARE RESULTS?

The above objections relate to the methods of administration and negotiations of the treaties rather than to the principle of reciprocity. It is just as important, however, that we consider the actual results of the trade treaties. A careful examination of the figures with an unprejudiced mind discloses a situation quite different from that received from a casual reading of the statements made by administration officials. The figures I give you below are from the Department of Commerce annual reports.

In 1929 the United States had the largest foreign trade of any single area in the world. In 1932 our percentage of the total world exports (gold-value basis) had dropped from 15.6 percent in 1929 to 12.2 percent, while our proportion of world import trade fell from 12.2 percent in 1929 to 9.5 percent in 1932. It is interesting to note, however, that our share of the total world trade at the end of 1938, in spite of the trade agreements, had not increased over 1932, but had actually declined one-tenth of 1 percent over that period. The decline, however, can be attributed to a drop in our share of world imports of 1.4 percent since 1932.

The Reciprocal Trade Agreement Act of 1934 really became operative only in 1935. Prior to 1935, under the stimulus of general world trade recovery since 1932, our exports in dollar value had already increased by 1934 over 1932 to the extent of 32.4 percent, and in the same period our imports had increased by only 14.2 percent, giving us a favorable trade balance in 1934 of \$469,797,000.

The trade agreements became progressively effective in the year 1935 through 1939. It is interesting to note that the 1937 exports increased over 1934 exports by 54.5 percent, while imports in the same period increased by 84.1 percent, with a trade balance in 1937 of only \$282,429,000, a reduction in the trade balance of 1934 of 43.2 percent. It may be pointed out further that in the year 1936 there was an unfavorable import balance of \$4,579,000 instead of the usual favorable export balance. This unfavorable balance in 1936 was the first the United States had sustained since 1893. It is only fair, however, to state that the effect of the droughts on our foreign imports should not be overlooked as a part explanation of the above figures. However, by 1938 the effects of the droughts had been dissipated. In that year (1938) it is interesting to note that our exports showed a decline of more than \$200,000,000 from 1937, though imports showed decline of \$1,062,727,000, resulting in a favorable trade balance in 1938 of \$1,144,335,000.

#### IMPORTS INCREASE

If we take the first 8 months of 1939 so as to eliminate the effects of the war on our foreign trade, we find that exports for the first 8 months of 1939 were 7.5 percent below exports for the same period in 1938. On the other hand, imports for that period in 1939 increased by 12.8 percent over the same period in 1938. More significant is the fact that our trade balance for the first 8 months of 1939 declined by 41.1 percent over the corresponding period for 1938.

In an effort to determine the effects of the trade-agreement program on our foreign trade, the administration likes to compare our trade with trade-agreement countries with our trade with non-agreement countries. By taking selected years they can show a greater expansion in exports to trade-agreement countries than to nonagreement countries. If we study the over-all figures, however, a different story is told. From 1932 through 1935, before the trade agreements became effective, our exports to countries with which we subsequently made trade agreements increased by 35.6 percent, while our exports to countries which have not as yet consummated trade agreements with us increased by 45.6 percent in the same period, and our total export trade in that period increased by 42.3 percent. Thus it is readily seen that previous to the trade-agreement program our export trade made substantial advances over the 1932 level.

From 1935 through 1938 our exports to trade-agreement countries increased by 55.3 percent and to nonagreement countries by only 29 percent, while our total export trade increased 37.9 percent. Thus it appears that the increase in our export trade was much more rapid between 1932 and 1935, when the trade-agreement program was not operative, than in the period from 1935 through 1938.

On the import side of the picture, imports from countries with which we subsequently made trade agreements increased by 45 percent from 1932 through 1935, and from countries with which we did not make trade agreements imports increased in the same period 61.7 percent, our total import increase during this period being 54.1 percent. It should be remembered, however, that the increase in imports during this period was largely due to agricultural imports resulting from the drought years.

In the period during which our trade agreements have been operative, from 1935 through 1938, imports from trade-agreement countries increased 1.7 percent, while imports from non-trade-agreement countries declined by 8.9 percent, and our total import trade declined by 4.4 percent.

#### EXPORTS DECLINE

For the first 8 months of 1939 our exports to trade-agreement countries declined 18 percent from the level of exports to non-agreement countries, that is, countries which gave us no concessions during that period—actually increased 14.3 percent in the first 8

months of 1939 over the same period in 1938. The relative importance of the agreement countries in our total export trade is shown by a drop of 7.5 percent in our exports to all countries in the first 8 months of 1939.

The import side of the picture tells, likewise, an interesting story as to trends. Here we find that imports from agreement countries in the first 8 months of 1939 were 15 percent greater than for the same period in 1938. Imports from nonagreement countries showed an increase of but 9.5 percent, while total imports for that period increased 12.7 percent.

If we take the years 1929 and 1938 for comparison we find the following: Exports to agreement countries declined in 1938 from the 1929 figures by 38.8 percent. The decline in the same period in exports to nonagreement countries was 40.7 percent. On the other hand, imports from agreement countries in 1938 had fallen only 47.9 percent compared with 1929, whereas imports from nonagreement countries had fallen by 60.6 percent.

#### FARMERS SUFFER

One of the most significant and unfortunate results of the trade-agreement program relates to agricultural exports. One of the outstanding features of the trade statistics is the large increase in exports of all commodities since 1932. In fact, total exports from the fiscal year 1932 to the fiscal year 1939 increased from \$1,908,000,000 to \$2,885,000,000, or 51.2 percent. Agricultural exports, on the other hand, during this same period, have declined from \$752,000,000 in 1932 to \$683,000,000 at the end of the fiscal year 1939, or a decline of 9.2 percent since 1932. In other words, exports of American agricultural products in the seventh year of Mr. Roosevelt's administration were 9.2 percent lower than they were in 1932, the bottom of the world-wide depression. In fact, agricultural exports as a percentage of our total exports reached a low of 2.3 percent in the fiscal year 1939, the lowest for any fiscal year for which records are available.

In comparing 1935, the year that the reciprocal-trade agreements became effective, with 1939, the picture is not greatly improved. Here we find that from the fiscal year 1935 to the fiscal year 1939 agricultural exports have risen from \$669,000,000 to \$683,000,000, or only by 2.1 percent. During this same period exports of all American products rose by 38.4 percent. In other words, the agreements have not been successful in moving our agricultural surpluses. When we examine the trade statistics of wheat, flour, meat products, cotton, and tobacco, we find that in the majority of cases exports to all countries from 1935 to 1938 have increased, while exports to concession countries have either decreased or shown much smaller increases over the same period. When it is realized that these five farm products annually comprise 65 percent to 75 percent of our total agricultural exports, the failure of the trade-agreement program, as it affects the farmer, becomes obvious.

The above data is highly statistical, but it has been boiled down with a view toward making it readily understandable to anyone who has a desire to go below the surface of the problem.

May I close in saying that the Republicans do not oppose reciprocal trade in principle, but object most vigorously to the undemocratic and unconstitutional methods of administration and, at the same time, they point out vigorously that figures claimed by the Administration as proving the efficacy of these agreements do not hold water on examination.

O. GLENN SAXON.

Hartford.

#### EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

EDITORIAL FROM THE EMPORIA GAZETTE OF JANUARY 29, 1940

Mr. REES of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including herein an editorial of my fellow townsman, the eminent and nationally known editor, William Allen White, in the Emporia Gazette, under date of January 29, 1940, concerning our distinguished minority floor leader, the gentleman from Massachusetts, JOSEPH W. MARTIN, Jr.:

[From the Emporia Gazette of January 29, 1940]

BR'ER MARTIN

In the old story of Br'er Rabbit and the tar baby, the phrase "Br'er Fox, he lay low. Tar Baby, he say nothing," occurred with rhythmic frequency. Someway, JOE MARTIN, Republican leader of the House of Representatives at Washington, reminds us of Br'er Fox. He "lay low." He seems to have a cinch on a goob job, no matter which way the wind blows.

It looks as though we should have a Republican House of Representatives next year. If so, JOE MARTIN certainly will be the Speaker. As Speaker of the House he will have a place more powerful than any Cabinet member wields, much more powerful than the Vice President. If, on the other hand, he is nominated for President of the United States by his party, he has a good chance of winning. He might easily be President of the United States.

To change the figure from Br'er Fox and the tar baby, it may be said with absolute truth that no matter who has the lead in the Presidential race now or in June, no matter how the favorite sons sniff the battle from afar and champ at the bit, the one real dark horse in this whole situation is JOE MARTIN. He is likely to be nominated if the balloting lasts more than 2 days in the Republican convention. He will make an industrious, far-visioned Speaker, or if the dice roll right—a liberty-loving President.

It looks as though all the gods of politics were grinning at JOE MARTIN, ready to crown him with laurels this fall.

#### Parity and the Farm Program

#### EXTENSION OF REMARKS

OF

HON. DAVID D. TERRY

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

LETTER FROM EDWARD A. O'NEAL TO HON. EVERETT M. DIRKSEN, OF ILLINOIS

Mr. TERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed by Edward A. O'Neal, president of American Farm Bureau Federation, dated January 31, 1940, to Hon. EVERETT M. DIRKSEN, of Illinois, on the agricultural program.

AMERICAN FARM BUREAU FEDERATION,  
Washington, D. C., January 31, 1940.

HON. EVERETT M. DIRKSEN,

House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN DIRKSEN: My attention has been called to your remarks on the floor of the House yesterday, in which you referred to my statement before the Agricultural Appropriation Subcommittee 3 weeks ago, in which I called attention to the fact that agriculture lacks \$1,800,000,000 of having parity income.

You expressed your belief that "something else has to be done about this thing; that we are not getting to the heart of the problem or finding the solution by constantly doling money into all kinds of payments, only to find after 6 or 7 years that we are still \$1,800,000,000 from parity. \* \* \*

The agricultural appropriation bill, as it stands, cuts agricultural appropriations \$500,000,000 below the level of the present fiscal year.

I note that you expressed yourself in favor of parity for agriculture, but by your statements on the floor of the House you have implied that you are not only in favor of these cuts, but that you want to abandon the present farm program and start over with something else. In effect, then, you are saying that because farmers are still \$1,800,000,000 short of reaching the top, they should be allowed to slip back to the bottom and asked to start all over again.

It is true that agriculture lacks \$1,800,000,000 of having parity of income with the rest of the public, but nevertheless its income is \$4,000,000,000 greater than it was in 1932. Certainly a program is not a failure when it has raised the average farm price of cotton from 5 cents to 10 cents per pound; wheat, from 30 cents to 73 cents per bushel; corn, from 15 cents to 47 cents, with a value of 57 cents for cooperators; butterfat, from 15 cents to 28 cents per pound; tobacco, from 6 cents to 15 cents; and hogs, from \$3 to \$6 a hundred. If we did not have the present farm program, there is no question but that farmers would be getting less than 6 cents per pound for cotton, less than 30 cents for wheat, less than 20 cents for corn, around \$4 for hogs, and several cents per pound less for butter.

The position of the American Farm Bureau Federation is that the present farm program is working well within the limitations of the appropriations that have been provided. The program has been of enormous benefit to agriculture, and all that is needed to make it fully effective is for Congress to find a satisfactory way to raise the necessary funds.

The farmers have done their part. Nearly 6,000,000 farmers, with 85 percent of the farm land, are participating in this program. The Government should do its part. Farmers will resist to the utmost short-sighted economy at the expense of agriculture.

For generations farmers have paid the penalty of the tariff on everything they buy. After long years of struggle, they at last won from this Government a plan which promised a tariff equivalent

which would give agriculture the benefit of the American protective system.

These drastic cuts in appropriations will nullify the gains that have been made and set our basic industry back 20 years. I do not believe Congress will be so short-sighted as to follow the apparent policy of the economy bloc to sabotage the farm recovery program.

Farmers want a balanced Budget, but they insist it be balanced in a constructive way by raising national income to a level at which it can be balanced. I submitted detailed information in my testimony, which you did not mention in your address to the House, which showed that the restoration of complete parity to agriculture would strike the most telling blow to unemployment and restore the national income to a level sufficient to balance the Federal Budget at present tax rates.

It is inconceivable that Congress will carry out this threat to American agriculture. The millions of farmers who are cooperating in this program are looking to Congress to redeem, before adjournment, the pledge of parity payments it made in the Agricultural Adjustment Act of 1938.

Perhaps I have misunderstood your position, and you are in favor of continuing and strengthening the farm program. If not, and since you apparently are in favor of lopping at least \$500,000,000 off from the farm appropriation, may I inquire what you have in mind as a substitute farm program or an alternative way of strengthening the present farm program in order to bring agriculture to complete parity?

Sincerely yours,

EDW. A. O'NEAL, *President.*

### Our Gold-Buying Policy

#### EXTENSION OF REMARKS

OF

#### HON. CLYDE WILLIAMS

OF MISSOURI

#### IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

Mr. WILLIAMS of Missouri. Mr. Speaker, the subject which I shall talk about is a sure cure for insomnia for those who desire to halt and consider, and its mere announcement will add speed to the wings of those who wish to move on. In as plain a way as possible I intend to discuss our gold-buying policy.

The hope to find the mythical pot of gold at the end of a rainbow is the stimulant that has led people in all ages and climes in search for this precious metal. The mad rush for gold in 1849 led many pioneers to take that long trek with covered wagons drawn by oxen. They endured the hardships and sufferings of privation and the ravages of disease and death. The desire to possess gold seems to be firmly fixed in the mind of man. This intense longing has come down to us through the ages with all its allurements and intriguing influences.

Much has been written and spoken about the gold policy of this Administration. There has been a great deal of confusion and misunderstanding. Some who have attempted to discuss the subject have approached the matter with such a fund of misinformation as to inspire wonderment and awe. I lay no claim to profound understanding about this matter and have no intention of discussing the merits or demerits, the wisdom or folly of our gold policy, but rather, in as plain language as I can command, to give at least some of the facts concerning this very important and more or less mysterious subject.

This Administration has made at least three important changes in policy affecting gold.

First. Reduced the gold content of the dollar thereby increasing the price of gold from \$20.67 per ounce to \$35.

Second. Placed the title to all gold in the United States Treasury subject to certain conditions to be prescribed by the Secretary of the Treasury.

Third. Created the stabilization fund.

At the beginning of 1934 the world monetary gold supply was about \$12,500,000,000 at \$20.67 per ounce or \$21,157,000,000 at \$35 per ounce, and it is now \$28,500,000,000 at \$35 per ounce. Six years ago there were 604,500,000 ounces of gold; now there are 814,300,000 ounces in the world supply. While the

monetary gold in the United States has greatly increased during the last 6 years there still remain among the other nations of the world at the present price about \$11,000,000,000. Six years ago we had \$4,000,000,000, and we now have \$17,800,000,000 at \$35 per ounce, or an increase of \$13,800,000,000.

What elements go to make up this rather alarming increase? First, the increase resulting from the revaluation of the dollar. Under the law the President was given the authority by proclamation to fix the weight of the gold dollar at not less than 50 percent or more than 60 percent of its former weight. He fixed that weight at approximately 59 percent, or a reduction of 41 percent, resulting in an increase of the stated price of gold from \$20.67 to \$35 per ounce. At the time this proclamation was issued the general gold price was around \$35. This increase in stated price to \$35 based on the supply we then had resulted in an increased value of about \$3,000,000,000. This did not increase our stock of gold a single ounce. Deducting this \$3,000,000,000 as a result of revaluation from the total increase during this period of \$13,800,000,000 leaves a balance of \$10,800,000,000 actual increase in our stock of gold based on the present price.

Then what are the items that make up this \$10,800,000,000 increase of our gold supply? How does it come that our supply of gold has increased over \$10,000,000,000 in the last 6 years? There are three main avenues through which this increased stock of gold has come:

First. Domestic production and what might be called scrap or used gold to the amount of about \$900,000,000.

Second. Payment of international trade balances representing the excess of our exports over our imports, \$2,200,000,000.

Third. Flow of capital to this country in the shape of bank deposits, stocks and bonds, and property investments to the amount of some \$7,700,000,000.

The sources, then, are domestic production, payment of trade balances, and flow of capital to us, with some other rather unimportant miscellaneous items. In this connection there are two general propositions that must be definitely established, concerning both of which there is much confusion and about which many misstatements have been made. None of this gold comes to the United States because a better price is paid here than abroad. There is a world market, and the price is the same. If a party in France wanted an ounce of gold, he would have to pay for it the same number of francs that it would take to buy \$35. If an Englishman wants an ounce of gold, he would have to pay for it as many pounds as he could exchange for \$35. It is perfectly obvious that an Englishman would not pay for an ounce of gold an amount in pounds equal to \$35 and then ship it and try to sell it over here where he could get only \$35. He would not do that simply to be buying and selling gold. The price is the same everywhere. No more is paid for gold in this country than elsewhere, and we do not get additional gold because \$35 an ounce is paid for it.

The United States does not buy an ounce of foreign gold as such. The miner of gold in South Africa or Russia does not offer his gold for sale to the United States Treasury. If he did, it would not be accepted. Neither does the United States buy gold from any foreign government. Not an ounce of foreign gold goes into the United States Treasury except as the result of some business or commercial transaction.

Gold of domestic production is, of course, bought by the Government because no one else under the law can deal in it here.

How, then, has practically \$10,000,000,000 of foreign gold got into the United States during the last 6 years? What are the mechanics by which this vast hoard of gold has actually reached here and how has the title become vested in the United States? We have already said some of it comes as payment of trade balances and some as bank deposits and capital investments. The gold is actually shipped from foreign ports to the United States to carry out the above-mentioned transactions.

How do we get gold in settlement of trade balances? An example: J. D. Davis, a stockman in Missouri, ships a carload of mules to Smith Bros. in England. Smith Bros. buy a draft

from the Midland Bank of England drawn on the Chase National of New York and send it to Davis in payment of the mules. He deposits the check in his bank and the check is cleared. That is the end of the transaction so far as the parties to the sale and purchase are concerned.

A cotton company in Texas sells a thousand bales of cotton to a cotton mill in England. The mill company buys a draft from Midland on Chase National and sends it through in payment of the cotton, just as in the case of the mules.

A farmer in Kansas sells a carload of wheat to a flour mill in England. The company buys a draft from Midland on Chase National to pay for the wheat and it goes through and is paid. These transactions go on day after day. The Midland Bank has had a balance with the Chase National. At last, however, after continually drawing upon that account it is exhausted. What does the Midland do? It may go on the market or may go to the Government and purchase, say, \$1,000,000 of gold, and it then ships it to the Chase National to build up its balance with that bank, and for which it is given credit, and against which it can check.

What is true of the Midland Bank is true of all foreign banks that have balances in banks in the United States and upon which they must draw to pay for trade transactions between citizens of this country and the nationals of other countries. It is very plain that when we sell abroad more than we buy, then that difference must be paid to us by the foreign purchasers, and in order to do that the foreign banks must have a balance to their credit here upon which to draw, and that balance is created by the shipment of gold to this country, not by one bank alone but by all who need the balance.

Through this process of settling trade balances during the last 6 years \$2,200,000,000 in gold have reached the Treasury. Every dollar of it represents a business transaction. Not a dollar of it was bought from England or any other nation and not an ounce bought simply to acquire the gold as such but to help carry on the export trade of the farms and factories of the country. It does not seem that we should want to lessen this item. As long as we sell our goods abroad those to whom we sell must have some means of paying for them. This can be done only by an exchange of products or by paying for them in gold or by both methods. Trade cannot all move in one direction. If our foreign markets are to be expanded and an outlet provided for our surplus products, we must accept an equal amount of imports or receive payment in gold of the difference between our exports and our imports. If our export trade were exactly balanced by our import trade, then there would be no difference to be paid in gold and our stock of gold would not increase on account of our trade transactions with other countries. Who is there that wants to curtail or destroy our export trade? As long as gold is the medium of international exchange and as long as we have a balance of trade in our favor, then we must have a flow of gold to this country in payment of that balance. That is fundamental and inescapable. To repeat, our supply of gold has been augmented during the last 6 years to the amount of \$2,200,000,000 on account of our exports exceeding our imports and the shipment of that amount of gold to this country to pay the difference.

This leaves almost \$8,000,000,000 increase of gold in the last 6 years to be accounted for. How did it get here? As before stated, that principally represents a flow of foreign capital to this country in the shape of bank deposits and investments in property and securities. What is the process by which gold actually reaches this country on account of any of these transactions? The mechanics are just the same as in the case of shipment of gold to take care of trade transactions. As an example: A bank in England as a matter of security and convenience wants to transfer \$1,000,000 which it has on deposit with the Midland to the National City Bank of New York. It buys a draft on the Chase National payable to the National City for \$1,000,000. It then sends it through. Chase National receives the draft

and honors it. It debits the Midland's account with \$1,000,000 and National City credits the English bank with a like amount. The English bank now has \$1,000,000 on deposit in the National City Bank of New York. Of course any bank in England could purchase gold and ship it to the National City Bank of New York direct and thus acquire a balance upon which it could draw.

A group of London businessmen decide to buy a block of common stock of General Motors, some preferred stock of Bethlehem Steel, some Great Northern Railway bonds. They buy a draft from Midland on the Chase National payable to their broker in New York and send it through. The amount is deducted from Midland's account and the broker given credit, who in turn uses the credit in the purchase of stocks and bonds in the name of the London businessmen. These various transactions go on until, as in the case of the trade transactions, the account of the Midland with Chase National is exhausted. Again the Midland must procure gold and ship it to Chase in order to build up a balance upon which it can draw.

Thus to furnish foreign depositors and investors the means by which they may transfer their bank deposits here and make investments in our securities, it has been necessary during the last 6 years to ship almost \$8,000,000,000 in gold to the United States, which necessarily found its way into the Treasury. It may be of interest to know that the amount of foreign bank balances and foreign investments in this country at the present time are about \$9,000,000,000. If a further break-down is desired, there are in round numbers \$3,000,000,000 in bank balances, \$4,750,000,000 invested in stocks, \$600,000,000 in bonds, and some \$700,000,000 as miscellaneous, principally trust funds. There may be some question as to whether this is a desirable tendency, but these are the facts. Is it healthy that foreign bank balances and foreign investments in our securities should continue to increase? If not, what is to be done about it?

All the above figures and discussion do not take into consideration the fact that foreign governments have approximately \$1,000,000,000 of earmarked gold in this country. This gold is supposed to be in the Federal Reserve banks and is not included in any of the figures given. This amount, taken with the private investments and bank balances, would make available for foreign use in case of need \$10,000,000,000 in the United States. The foreign governments, in case they needed it, could take over from their nationals their deposits and investments in accordance with the laws and decrees of the different countries. This is an important matter, in view of world conditions and the need of cash for the purchase of our products to be exported. Thus foreign governments have available in case of necessity some \$10,000,000,000 with which to purchase our goods.

How does the Treasury buy the gold that is shipped here by foreign banks in settlement of trade balances and for deposit and investment by foreigners? As an example, go back and take the case where Midland Bank of England shipped \$1,000,000 in gold to the Chase National in order to build up its balance. The Chase National receives the shipment, but under our law, not being able to hold the gold, delivers it to the Federal Reserve Bank of New York, where it receives a check drawn on the Treasury's account with the Federal Reserve bank for \$1,000,000, and the gold is turned over to the Treasury. The Treasury then issues the New York Federal Reserve Bank a gold certificate in the sum of \$1,000,000. Now, what is the situation? Midland Bank has obtained credit with the Chase National in the sum of \$1,000,000 for the gold which it shipped. The Chase National has increased its deposits \$1,000,000 with the Federal Reserve bank by endorsing and depositing the check which it received for the gold. The Treasury has the \$1,000,000 in gold, and the Federal Reserve bank has a gold certificate from the Treasury for \$1,000,000. The Treasury has paid for the gold by issuing a gold certificate to the Federal Reserve bank. Upon the security of this gold certificate the Federal Reserve bank can issue Federal Reserve notes, which are legal-tender money.

On account of this transaction, how has the financial statement of the New York Federal Reserve Bank changed? By paying out of the account of the Treasury \$1,000,000 for the gold it has decreased its liability in the first instance to the Treasury by that amount. Then the Treasury issues and delivers to the Federal Reserve bank a gold certificate for \$1,000,000, which is the same as cash. The bank gives the Treasury credit for this amount, which makes its liability to the Treasury just what it was before the transaction, and it then places the gold certificate in the assets just the same as cash.

As a result of the entire transaction the liability of the bank to the Treasury is just what it was before; the assets of the bank have been increased by \$1,000,000 represented by the gold certificate, and the liability of the bank has increased \$1,000,000 by reason of the deposit of the check received by Chase, and the placing of that amount to its credit. The issuance and delivery of the gold certificate bought the gold. It did not cost the Government a dollar. The deposit of the check by Chase, which it received in payment for the gold increased its reserves. Largely by this process throughout the Nation, the member banks reserve accounts have been built up to over \$11,330,000,000. Much of the money received by member banks on account of gold bought by the Treasury has been left on deposit with the Federal Reserve banks just as in the case above cited, and their reserves have thus grown to the above unprecedented amount, and excess reserves have increased to the sum of about \$5,200,000,000.

These large excess reserves in the banks create the possibility of a large credit expansion which might develop into an inflation movement. There is no indication of such a movement at present. If it should develop to any alarming extent, the Federal Reserve bank, through its open market operations, its control over discount rates and reserve requirements could check such a tendency. If necessary greater powers could be given the board over reserve requirements and any run-away inflation could be checked. For my part, at the present, I am not disturbed about inflation and am firmly convinced that a liberal expansion of credit would stimulate industrial activity, increase employment, and lead to general improvement and progress.

There has been much talk about the use to make of this \$17,800,000,000 of gold in the Treasury. It must not be forgotten that the gold has been bought by issuing gold certificates or giving the Federal Reserve banks credit for gold certificates. Upon these certificates the Federal Reserve banks may issue Federal Reserve notes which are the obligations of the United States. These gold certificates are the assets of the Federal Reserve bank, and are a lien against this stock of gold in the Treasury. Over \$15,500,000,000 of gold certificates are carried as assets on the books of the Federal Reserve banks. This is five-sixths of their entire assets. These certificates, with the reserve, redemption and the stabilization fund make up the entire gold stock in the Treasury, except some in the general fund. In fact, the gold certificates and the stabilization fund make almost \$17,500,000,000 of the total gold stock.

Congress could abolish the stabilization fund and use that gold to retire that much of the national debt. In my opinion, it should not be abolished, but it seems that it could with safety be reduced, as it appears only \$200,000,000 of it has been used. By as much as the fund was reduced by Congress, that amount of gold would be released and could be used to reduce the public debt.

It has been suggested in some quarters that the Treasury issue legal-tender money against this stock of gold and use the money to redeem Government bonds. This suggestion loses sight of the fact that the Federal Reserve banks who have the gold certificates hold a first lien against this gold. An attempt by the Treasury to issue money on the security of this gold would be exactly like a farmer selling a horse at full value to his neighbor when the bank holds a mortgage on

the horse for all it was worth. Go back to the example given when the Chase National sold \$1,000,000 of gold to the Treasury. Who paid for it? The Federal Reserve Bank of New York either paid cash or gave the Chase National credit for that amount. In order to repay the bank, the Treasury gave it a gold certificate for \$1,000,000, which the bank put into its assets just the same as cash. Now, if the Treasury should issue money against that \$1,000,000 in gold which the Federal Reserve Bank of New York bought for the Treasury, it would have to deliver that money to the bank to replace the gold certificate and the money which the bank paid for the Treasury when the gold was bought. In other words, all the money which the Treasury could issue against this gold stock would have to go into the Federal Reserve banks and take its place there as assets instead of the gold certificates. If the Treasury had issued \$1,000,000 in money at the time the gold was bought, and delivered it to the New York Federal Reserve Bank, then the bank would have the \$1,000,000 in money instead of the gold certificate. If the Treasury issues the money a year or two later, it must still deliver it to the bank to take the place of the gold certificate, which is part of the bank's assets. Then if all the money which the Treasury could issue against this gold must go into the Federal Reserve banks to replace the gold certificates which they hold, none of it could be used to retire the Government obligations and reduce the debt. If these gold certificates, which represent \$15,500,000,000 of their assets, were withdrawn from the Federal Reserve banks without anything to take their place, it, of course, would completely and absolutely destroy their solvency and result in disaster.

The possession and ownership of this large supply of gold need not cause uneasiness or alarm. The time may come when the current in the flow of capital will be reversed. It has happened in the past. During the period from 1928 to 1934 there was a flow of capital away from this country to the amount of almost \$3,000,000,000. It had reached such proportions that there was apprehension and fear in many quarters. If that time comes again, we will have the gold to meet such demands without any dislocation of our domestic affairs. It has been the dream of governments and individuals to acquire gold. Now, since we have it we should not become stampeded or alarmed. It is a mighty convenient article to have around and it seems to me we should be proud of it. It takes no stretch of the imagination to envision other nations of the world looking with wistful eyes upon our gold supply and hoping for the time when they might be placed in such an enviable position.

It is not desirable for the United States to own practically all the monetary gold stock of the world. No one would like to see it go to that extreme. It may be necessary to discourage the flow of capital to this country by placing a substantial tax on foreign investments in American securities and thereby check the inflow of gold for that purpose. With the nationalization or commandeering by the belligerent governments of the securities held by their nationals, the flow of gold here for investment purposes will likely cease. These foreign investments may to some extent have stimulated domestic industry and in a small degree tended to bid up the price of American securities. However, their influence on our economic life is of small and doubtful value and, if practical, this activity could well be dispensed with. If possible, the further purchase of gold by the Treasury to enable foreigners to invest in income-yielding securities may well stop. If this is feasible, it could be done without any great shock to our financial and economic order. On the other hand, it would not be desirable to entirely stop the purchase of gold by the United States. It would completely disarrange our international exchange system and seriously cripple our export market. So far as it is needed to help encourage and expand our export trade, the buying of gold by our Government should go on. The whole policy may require careful and thorough consideration at a time in the not distant future.

## Loans to Small-Business Men

## EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

LETTER FROM MR. CLOYD W. MILLER, OF MINERAL CITY, OHIO,  
TO HON. JESSE JONES

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Cloyd W. Miller, president of the Hickory Clay Products Co., of Mineral City, Ohio, to Hon. Jesse Jones, of the Reconstruction Finance Corporation:

MINERAL CITY, OHIO, January 17, 1940.

Hon. JESSE H. JONES,

Federal Loan Administrator, Reconstruction Finance Corporation, Washington, D. C.

DEAR MR. JONES: Coming back from Washington I carefully reviewed the circumstances surrounding our interview last week. You had been advised that I expected to be in Washington—I had written you I wanted to see you and what I wanted to talk about. When I phoned Wednesday morning for an interview, your secretary was not encouraging, but promised to phone and let me know whether I could see you. I received no call. I thought no more about this, because you are the master of your time. The next day, when Director Husbands asked me whether I wanted to see you, I said I did and remarked that I thought I ought to pay you a courtesy call. It is embarrassing to ask a Congressman to assist one in getting an interview with you or be granted one because of a spread of five pages in the CONGRESSIONAL RECORD. Getting interviews by pressure is not satisfactory.

Having written you about transportation and building economics as related to our application, your reception of my introductory remarks was surprising. If men are to deal with one another, there must be mutual respect; I was a guest in your office. You are so cloistered I do not think you know what is going on in your office or have correctly appraised my relations with it.

You talked about our having made no profit for 5 years, which was the reason given for turning down our request for money four times; but that has been water over the dam for some months now, because we have been offered a loan of \$20,000 to \$25,000 since this reason was used. If this reason was valid in the first place, it is still valid. Really it never had controlling validity, which the record amply sustains. Our profit record is fully explained by the fact that our plant has been down most of the time during the last 5 years.

You, nettled, said: "You want to write your own ticket," which you evidently feel transgresses your prerogative. It seems to me that you overemphasize your power to write "the ticket." You pertly told me that it is your directors who are delegated with the responsibility to make these decisions. I am aware that you have the power and authority and quote what I said to Congress about this on January 2, 1940: "The R. F. C. stripped of everything by facts and argument is left only with the power to deny." The expression of this power by cutting down reasonable applications and tripling the needed security may disclose or cover grave weaknesses in your administration, and this is beside viciousness that might be practiced against a borrower by and through such action. "My ticket" is now available in five pages of the Appendix of the CONGRESSIONAL RECORD, volume 86, pages 104-109, plus your decision of July 5, 1939, declining the loan, and my brief of July 8, 1939, answering that decision in detail. The latter two documents are not in the CONGRESSIONAL RECORD. If you will take the time to read this record in full, maybe you will agree that this loan ought to be made as we have requested it. I believe the public and Congressmen who read it will agree with me. If my horse is in first place, "my ticket" should pay off.

I realize this discussion has been uncomfortable. This has been indicated right along. R. F. C.'s officiousness, ill will, bad temper, and manners have interested me; they are something new in government; are in such complete contrast with what one expects from public servants. Director Sam Husbands is a refreshing exception. The only conclusion one can come to about such blameworthy conduct on the part of these public officials is that our facts and answering arguments have real merit and discredited the administration of R. F. C. There has never been a question about the merit of this application for money under the act. I am certain that were it possible to present this matter in court and you were

obliged to brief your position and make it stand before an impartial body that I would get the loan on "my ticket." I would lay a wager on that and give odds.

The question arises why we have been turned down. It is partly, I suppose, because I have written against the New Deal. Too, publicizing this record and criticizing is laesa majestas. In the earlier stages the difficulty was both lack of information and carelessly reached conclusions—a lack of comprehension of the problem. This, coupled with the arrogant and saucy attitude frequently asserting itself with "you must do this or that," prevented the exercise of reason or intelligent consideration of the facts.

There has been objection to my suggestion that there is too much politics played by your organization.

(1) Politics in our case was confirmed by the fact that I was given a copy of your decision of July 5, 1939, by a member of the Board. I did not ask for the copy; it was voluntarily handed to me without a word as to what I should do with it. All I did was answer it, courteously, intelligently, and properly. It contained errors of fact and many erroneous conclusions.

(2) As a further example of politics of much greater importance I want to call your attention to the press release that you, Senator WAGNER, and Emil Schram, R. F. C. Chairman, after a conference with the President, gave to the Associated Press during the last 3 days of the last regular session of Congress. It went out to the country that you all favored the Mead bill and that it would probably be passed as a rider on the \$2,800,000,000 lending measure that was going through Congress at that moment. This release was put out ostensibly to encourage small-business men, but, in my opinion, the subsequent facts I relate indicate it was to deceive them. I was in Washington on Monday and Tuesday of that week. The release came out in the evening papers on Tuesday. On those 2 days I had contacted Senator MEAD's office. He was in New York, but I talked half an hour with SMITH, who is in charge of this legislation for Senator MEAD. Mr. SMITH was interested in my problem, but told me that this legislation was buried in committee and there was not a chance in the world to get it out or that the legislation might be passed during that session. It seems obvious that if there was any chance of this legislation being handled, as suggested by this press release, Senator MEAD would not have been in New York. You can imagine my surprise when I got on the train Tuesday evening with two Washington evening papers in hand and on the front page of each read your press release, which misrepresented the immediate possibilities for this legislation. I was indignant. I am a small-business man, and it was clear to me that you high officials of the Government were simply throwing a sop to small-business men by this release and making suckers of us. The problems of small-business men are much too serious to be played with by big politicians on this scale.

(3) Your press releases from time to time over quite a period about loans to railroads also have political implications which are unsatisfactory to shippers being charged unfairly high freight rates.

I have tried to keep this discussion on a high plane. Your handling of our application has forced my hand and made it necessary for me in carrying out my responsibilities to my stockholders to use everything at my command to break down what is your unfairness toward our company. Your own engineer-examiner has approved my plans. Your organization knows that no one can carry out the plans approved by your engineer with half the money needed. You, no more than I, know what was in the minds of your subordinates who suggested that we be offered this amount. If they were angry and prejudiced when they made this offer, it may thus be accounted for. It has the earmarks of a subtle plan to squeeze the present ownership of this property. It is not necessary for me to charge that R. F. C. is guilty of an overt act of this nature, but you should be concerned with the fact that this might be true; we are dealing with human beings. The idea occurs to me because of the anger, bitterness, and intolerance that was displayed toward me by members of your staff.

This letter on the whole is in a serious vein—to retain our sense of proportion let us lighten it. I never intended to make laughing stock of your agency. A Congressman's secretary suggested this and said I would never get my loan at this rate, and she was sincerely bothered. I have more confidence than she has in government. Power easily acquires a touch of God, sure, but its sense of humor blasts that daily. "My ticket" is a blue chip, yours is colorless. I sincerely believe your sense of sportsmanship will rescue both of us from the dilemma which stubborn personalities in both camps have created. I have no monopoly on pigheadedness.

As this application for money has grown in importance, I now feel that you and Schram and possibly other directors ought to get on the train, come to Mineral City, Ohio, and confirm what Mr. R. A. Mitchell, your engineer-examiner, saw when he was here and his report to you. Of course, if you are now ready to make the loan as we have requested it, that would be a happy conclusion, save the face of a sovereign citizen, a thing politicians like for themselves, and carry out in the public interest the purpose of the act. May I hear from you promptly?

With kindest personal good wishes, I am,  
Sincerely,

CLOYD W. MILLER,  
President, The Hickory Clay Products Co.

**The One Hundred and Fiftieth Anniversary of the  
First Session of the Supreme Court of the United  
States**

**EXTENSION OF REMARKS**

OF

**HON. SOL BLOOM**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

ADDRESS BY HON. ROBERT H. JACKSON, ATTORNEY GENERAL  
OF THE UNITED STATES

Mr. BLOOM. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein the address delivered by the Honorable Robert H. Jackson, Attorney General of the United States, at the exercises held in the Supreme Court chamber today in commemoration of the first session of the Supreme Court of the United States.

There being no objection, the address of the Honorable Robert H. Jackson, Attorney General of the United States, was ordered to be printed in the RECORD, as follows:

Mr. Chief Justice and Associate Justices of the Supreme Court of the United States, the bar of the Supreme Court, including those who here represent the executive branch of the Government, desires to observe with you the one hundred and fiftieth anniversary of this Court's service. We do so in a spirit of rededication to the great principles of freedom and order which come to life in your judgments.

The Court as we know it could hardly have been foreseen from its beginnings. When it first convened, no one seemed in immediate need of its appellate process, and it adjourned to await the perpetration of errors by lower courts. Errors were, of course, soon forthcoming. The Justices who sat upon the bench, although not themselves aged, were older than the Court itself. The duration of an argument was then measured in days instead of hours. All questions were open ones, and neither the statesmanship of the Justices nor the imagination of the advocate was confined by the ruling case. Some philosophers have so feared the weight of tradition as to assert that happy are a people who have no history. We, however, may at least believe that there was some happiness in belonging to a bar that had little occasion to distinguish precedents or in sitting upon a Court that could not be invited to overrule itself. Few tribunals have had greater opportunity for original and constructive work, and none ever seized opportunity with more daring and wisdom.

From the very beginning the duties of the Court required it, by interpretation of the Constitution, to settle doubts which the framers themselves had been unable to resolve. Luther Martin in his great plea in *McCulloch v. Maryland* was not only an advocate but a witness of what had been and a prophet of things to come. He said: "The whole of this subject of taxation is full of difficulties, which the Convention found it impossible to solve in a manner entirely satisfactory." Thus, controversies so delicate that the framers would have risked their unity if an answer had been forced were bequeathed to this Court. During its early days it had the aid of counsel who expounded the Constitution from intimate and personal experience in its making. They knew that to get acceptance of its fundamental design for government many controversial details were left to be filled in from time to time by the wisdom of those who were to follow. This knowledge made them bold.

The passing of John Marshall marked the passing of that phase of the Court's experience. Thereafter the Constitution became less a living and contemporary thing—more and more a tradition. The work of the Court became less an exposition of its text and setting and purposes and became more largely a study of what later men had said about it. The Constitution was less resorted to for deciding cases, and cases were more resorted to for deciding about the Constitution. This was the inevitable consequence of accumulating a body of judicial experience and opinion which the legal profession would regard as precedents.

It would, I am persuaded, be a mistake to regard the work of the Court of our own time as either less important or less constructive than that of its earlier days. It is perhaps more difficult to revise an old doctrine to fit changed conditions than to write a new doctrine on a clean slate. But, as the underlying structure of society shifts, its law must be reviewed and rewritten in terms of current conditions if it is not to be a dead science.

In this sense, this age is one of founding fathers to those who follow. Of course, they will reexamine the work of this day, and some will be rejected. Time will no doubt disclose that sometimes

when our generation thinks it is correcting a mistake of the past, it is really only substituting one of its own. But the greater number of your judgments become a part of the basic philosophy on which a future society will adjust its conflicts.

We who strive at your bar venture to think ourselves also in some measure consecrated to the task of administering justice. Recent opinions have reminded us that the initiative in reconsidering legal doctrine should come from an adequate challenge by counsel. Lawyers are close to the concrete consequences upon daily life of the pronouncements of this Court. It is for us to bring the cases and to present for your corrective action any wrongs and injustices that result from operation of the law.

However well the Court and its bar may discharge their tasks, the destiny of this Court is inseparably linked to the fate of our democratic system of representative government. Judicial functions, as we have evolved them, can be discharged only in that kind of society which is willing to submit its conflicts to adjudication and to subordinate power to reason. The future of the Court may depend more upon the competence of the executive and legislative branches of government to solve their problems adequately and in time than upon the merit which is its own. There seems no likelihood that the tensions and conflicts of our society are to decrease. Time increases the disparity between underlying economic and social conditions, in response to which our Federation was fashioned, and those in which it must function. Adjustment grows more urgent, more extensive, and more delicate. I see no reason to doubt that the problems of the next half century will test the wisdom and courage of this Court as severely as any half century of its existence.

In a system which makes legal questions of many matters that other nations treat as policy questions, the bench and the bar share an inescapable responsibility for fostering social and cultural attitudes which sustain a free and just government. Our jurisprudence is distinctive in that every great movement in American history has produced a leading case in this Court. Ultimately, in some form of litigation, each underlying opposition and unrest in our society finds its way to this judgment seat. Here, conflicts were reconciled or, sometimes, unhappily, intensified. In this forum will be heard the unending contentions between liberty and authority, between progress and stability, between property rights and personal rights, and between those forces defined by James Bryce as centrifugal and centripetal, and whose struggle he declared made up most of history. The judgments and opinions of this Court deeply penetrate the intellectual life of the Nation. This Court is more than an arbiter of cases and controversies. It is the custodian of a culture and is the protector of a philosophy of equal rights, of civil liberty, of tolerance, and of trusteeship of political and economic power, general acceptance of which gives us a basic national unity. Without it our representative system would be impossible.

Lord Balfour made an observation about British government, equally applicable to American, and expressed a hope that we may well share, when he wrote:

"Our alternating Cabinets, though belonging to different parties, have never differed about the foundation of society, and it is evident that our whole political machinery presupposes a people so fundamentally at one that they can afford to bicker; and so sure of their own moderation that they are not dangerously disturbed by the never-ending din of political conflict. May it always be so."

**Fix Your Ramparts**

**EXTENSION OF REMARKS**

OF

**HON. HARRY SANDAGER**

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

EDITORIAL FROM THE PROVIDENCE (R. I.) JOURNAL OF  
JANUARY 31, 1940

Mr. SANDAGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Providence Journal of Wednesday, January 31, commenting on the speech of the gentleman from Massachusetts, the Honorable JOSEPH W. MARTIN, Jr., at Topeka, Kans. The editorial follows:

[From the Providence (R. I.) Journal of January 31, 1940]

**FIX YOUR RAMPARTS**

It is Mr. JOSEPH MARTIN's idea that a nation's defensive forces, however strong and well equipped, are no better than the ramparts they watch. Hence, in his Kansas Day speech he said: "The gravest

danger to the peace and security of the United States is not from some foreign invasion but from allowing pressing home problems to go unsolved." In other words, our first line of defense is neither the Rhine nor the Atlantic and Pacific coasts nor the Panama Canal nor Pearl Harbor but "the farm gate and the factory door."

There is much euphemism in this but, at bottom, it remains a realistic expression of America's vital need today. An unprecedented public debt of about \$45,000,000,000, coupled with Federal taxes completely out of proportion to the productive wealth which must support them, certainly is a national rampart undermined by the rot of Government neglect and Government inefficiency. An unemployed roll of more than 9,000,000 is another rampart extremely dangerous to the national superstructure, political as well as economic. The growing restrictions of national control, as manifested in the processes of an administrative bureaucracy rapidly become "the new tyranny," have weakened the rampart of the American economic system so greatly that today it threatens the existence of that system as it has been known for a century and a half.

These weakened and now treacherous ramparts constitute a grave danger to the Nation. The danger lurks within the country far more than it does outside. Destroy them completely and the American system is destroyed. Destroy them, and we get a totalitarian state, the very thing against which the democracies of Europe are presently fighting. That is all Mr. MARTIN has in mind when he says neglect of domestic problems is far more dangerous to our peace and security than foreign powers.

And when he says neglect, he speaks advisedly and truthfully. The administration has neglected them for several years. It has failed to solve the problems it faced when it came into power. It not only has failed to solve them, it has intensified them.

No amount of talk about the international situation, however important and necessary, can obscure this fact. And no foreign policy should be allowed to obscure it. If Mr. Roosevelt thinks that concentration on foreign matters, as necessary as it is important to the security of the country, will hide his failures in the domestic field, Mr. MARTIN and his conferees will be ready to remind him to the contrary. So will the American people.

### Advice to the G. O. P. on Trade Pacts

#### EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

EDITORIAL BY WILLIAM ALLEN WHITE

Mr. HENNINGS. Mr. Speaker, it is encouraging to see that Secretary Hull's trade policies, as implemented through the various reciprocal trade agreement pacts, have met generally with approval which transcends party lines. The following editorial by the "Sage of Emporia," Mr. William Allen White, an adherent of the Republican Party but a great American liberal, is most appropriate at this time. The editorial, reprinted by the St. Louis Post Dispatch, follows:

[From the St. Louis Post-Dispatch]

ADVICE TO THE G. O. P. ON TRADE PACTS

Disagreeing with Kansas Governor and Congressmen who oppose Secretary Hull's pacts, newspaper says tariff treaties are defensible in terms of national welfare; farmers' fear unfounded, it finds; urges Republicans to help make reciprocal trade principle work

(From the Emporia Gazette)

Americans might as well make up their minds to it, that the old idea of a high protection, which was merely socialistic subsidizing of various industries, is impossible in the world economy as it stands today. Some tariff? Yes; but not logrolling high tariffs, not the Hawley-Smoot Act. One of the things that brought about the depression was the Hawley-Smoot Act of 1930.

The Gazette said so at the top of its lungs before the Hawley-Smoot law was finally formulated, while it was passing and after it had become a law. That tariff law was an offense against economic stability not only in the United States but all over the world. It is one of the sad, terrible commentaries on the present Democratic administration that it has neglected so long to revise the Hawley-Smoot tariff law.

The principle of reciprocal tariff to undo and offset the Hawley-Smoot tariff is entirely defensible upon the theory of our national economy. Of course, in any Congressman's district he can take counsel of his fears and vote against this tariff by scaring his constituents to death about the damage it will do to their local special industries.

For instance, take cattle: The increase of the percent of total imports of cattle—say 44 percent—is frightening. But that 44 percent increase is only 8 percent of the cattle inspected and probably about 5 percent of the beef actually consumed in the United States. That is a small percent. It has not seriously affected the average annual price of cattle.

We are fundamentally in disagreement with Governor Ratner and the Kansas Congressmen and Senators who opposed these Hull treaties. For these treaties surely strengthen our national economy. They certainly bring in more business and more money to the country than they take out. Unless we see our national economy as a whole and national prosperity as a unit, we never can recover. We can't recover by patching up a hole here and plugging a hole there in our economy. We cannot recover unless we plan recovery on a nation-wide scale.

If, for instance, the farmers of Kansas are scared of these treaties because of what they will do to the farmer, the Kansas farmer should remember that the farmer will never be prosperous until the Nation as a whole has prospered also. These treaties certainly do work for national prosperity. If when the treaties are in force, it is found that the farmers are bearing too much of the burden, which may easily be true, then subsidize the farmers directly. But don't stop the rise of national prosperity by timidity about individual losses. If times are good, prices will be good everywhere.

Another and most vital thing: The peace of the world depends first upon the international flow of goods, to give all nations of good will access to raw materials, and second upon mutual economic help among nations.

Economic super-nationalism has led the world into war. Unless there can be among the civilized nations of the world some basis of negotiation whereby each nation can develop its own economic strength under its own peculiar geography and in its own economic position there is no hope of peace. National jealousy will keep on breeding international hates.

Wars will succeed wars. In the peace conference which must follow this war, American influence can be potent in the struggle for world peace. But we can serve the world only if America comes with a reputation for fairness to her neighbors now.

Suppose we defeat these Hull treaties! What a pie-faced old hypocrite Uncle Sam will be at that conference, counseling other nations to give up a little for the greater blessing of peace. In that hour when a lasting peace is possible for the world we shall be bound and gagged by our own selfish isolationist policies. Here in these Hull reciprocal treaties is the hope of the United States in helping to promote a just peace in the world.

Without that just peace the tribulations of the last decade, 10 terrible years of shuddering under the threat of war, will be with us for another generation. This is no time for partisan talk of local advantage.

The prosperity of our Nation depends upon the peace of the world. If America cannot take the larger view the hope of the world is blasted. Our civilization cannot go forward along its appointed evolutionary way, amid the atmosphere of international envy and the hates that grow where nations are oppressed in economic poverty.

The Republican Party is going to make a sad mistake if it goes into this campaign on an old-fashioned, high-tariff platform policy. The Hull idea theoretically is right. Maybe he is not implementing it with the best instruments. But certainly he is expounding a principle that will work. It will be better for the Republicans to help him make his plan workable than to try to defeat his principle.

In the meantime, no warrior bold with spurs of gold ever went more bravely to the fray than Cordell Hull is going into this fight.

### America's Home Problems Must Come First

#### EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

ADDRESS BY HON. JOSEPH W. MARTIN, JR., BEFORE THE KANSAS DAY CLUB AT TOPEKA, KANS., ON MONDAY, JANUARY 29, 1940

Mr. HOPE. Mr. Speaker, annually, on January 29, the Republicans of Kansas observe the birthday of the State by a great get-together meeting and rally at Topeka. These meetings of the Kansas Day Club are always interesting and colorful. This year the interest and enthusiasm manifested were indicative of the feeling that 1940 will be a great Republican year in Kansas and in the Nation. The principal speaker on this occasion was our able and popular

minority floor leader, the gentleman from Massachusetts, JOSEPH W. MARTIN. The constructive, forward-looking, and statesmanlike address which he made on that occasion outlines a program which, if adopted, will lead this country back to a sound and lasting recovery. It ought to be read by every Member of Congress and every thinking American. For that reason I offer it for printing in the RECORD, as follows:

As a native son of Massachusetts, I come to Kansas with a deep sense of the many ideals these two great States have in common. Men and women from the land of the Pilgrims and the Puritans were among the early settlers in Kansas. They helped implant here the American tradition of freedom under law. History shows that the men and women sent by New England to your State were in no small measure helpful in developing that sturdy independence and robust Americanism which is the hallmark of Kansas citizenship today. In its infancy, when bleeding Kansas held the center of the national political stage, it was Charles Sumner, of Massachusetts, who championed the free-soil cause in the forum of the United States Senate.

When I was invited to come out here, I hesitated, because my work in Washington is so exacting it is not possible for me to make many excursions afield; but the urging of my many warm friends here in Kansas and in the Congress was irresistible. I am happy to be here and to join in these festivities and ceremonies which mark the anniversary of the admission of Kansas into the Union.

At the time Kansas became another shining star in the constellation of States, the Nation was in a critical period. The very existence of the Union hung in the balance. We may all thank God we weathered that crisis.

Today no one questions the absolute necessity of the 48 States working harmoniously together.

This realization of our common interests is manifest more and more among the men and women in Congress. Today we see men of the East, far removed from immediate contact with the acute farm problems, constantly seeking to aid in bringing new security and more happiness to those who till the soil on our great western farm lands. We see thoughtful men in New England eager to help the South emerge from its economic difficulties and advance to a higher plane in our national life. We see southern statesmen, mindful of the needs of the East and the West, wanting to help those sections go forward to better days.

As we approach again the birthday anniversary of Abraham Lincoln, well may we rededicate ourselves once more to the great truth of history which his life demonstrated—the perpetual unity of the several States in one mighty nation. Policies and programs which advance one State or one geographical division at the cost of other States are not the policies and programs of sound Americanism. Under the protections of the Constitution and the Bill of Rights, we are truly a united people—and that fact, above all others, is the beacon light of our national hope today.

But some political gentlemen preach the doctrine of despair. In America today there is no justification for such a doctrine. Faith, courage, and resolute determination will carry us beyond the present frontiers into vast new areas of achievement, stability, security, and orderly progress.

Agriculture has been the guinea pig for too many experiments in the past 7 years.

The welfare of the rural sections depends as much upon the interests of the farmers as consumers as it does upon the interests of the farmers as producers.

There are several ways in which the farmer may be hurt—by low prices or lack of markets for his products, by increased costs of the things he buys, and by burdensome taxes.

Now in 1930 those taxes bearing most heavily upon the wealthy contributed more than 68 percent of the National Government's revenue, while other taxes bearing most heavily upon the consumer contributed only about 32 percent of such receipts.

According to a statement by the Secretary of the Treasury just before Christmas, those taxes bearing upon the consumer are now contributing 60 percent of the Federal Government's total income, while the taxes bearing most heavily upon the wealthy are contributing but 40 percent. This after 7 years of the New Deal.

In the hope that we shall be able to contribute something toward improving the condition of the farmer, the Republicans in Congress are diligently studying agricultural problems. With that purpose in mind, we named a special committee comprising Representatives from the farm sections, who are wholeheartedly seeking a sound and effective program. One of your own splendid Representatives, CLIFFORD R. HOPE, of Garden City, is chairman of that special committee, and your other Republican Representatives are also members.

We know the answer to the farm problem must be found in sound policies honestly administered. Fair interest rates, lower taxes, better distribution of goods, crop diversification, new types of production, protection of the home market, the wider use of agricultural products in industry—these are all obvious ways in which we can help the farmer.

If part of the money recklessly squandered during the last 7 years had been expended for intelligent research for new uses for agricultural products, we would today be further along the road toward recovery. This is evident from the remarkable progress

already made in the field of chemistry toward the utilization of farm products as raw materials for manufacturing industries.

But the most urgent task is to protect the rich American market for our own farm products.

You have been told that agricultural imports constitute a very small percentage of our domestic consumption. The fact remains—and the American farmer knows it—that these imported products tend to beat down the domestic price structure.

The record discloses, of course, that the promises of the new dealers that their reciprocal-trade program would increase agricultural exports has, like so many other New Deal promises, failed to materialize.

Another urgent need of American agriculture today is less Government spending and lower taxes; I might add—fewer Government employees and more efficiency, as well. We are far away, indeed, from that 25-percent reduction in governmental expenditures we heard so much about in the campaign of 1932.

The present administration has imposed new taxes every year since 1933, while creating new deficits, and is back again asking for \$460,000,000 more taxes.

Federal extravagance and waste undoubtedly are holding back recovery all along the line. These huge annual deficits are a pall over our whole economic life.

We have been told constantly for 7 years that these spendthrift policies would bring eventual recovery. But we are now up to the statutory debt limit of \$45,000,000,000, despite trick bookkeeping and fancy figuring, and the demand now comes for more taxes to keep the 1941 deficit down to two and one-half billions of dollars.

The New Deal has evaded the problem year after year until now the Nation is demanding that the issue be faced. Seven years of this sort of thing have demonstrated that we can't lift ourselves by our bootstraps. We cannot borrow and spend ourselves back into prosperity. The solution may be a little old-fashioned—indeed, it may be another relic of the horse-and-buggy days—but it is common-sense economy in the administration of the public business.

Of course, no responsible person has ever suggested or implied that any real need be ignored or neglected, or that any citizens be allowed to suffer because of inability to get jobs. But we on the Republican side have insisted—and we still insist—that tremendous savings could be realized by the elimination of waste, extravagance, political racketeering, and wanton squandering in thousands of items of Federal expenditures.

Sound budget administration could be made a great contribution to both agricultural and industrial recovery. Such policies are long overdue in Washington.

One extravagance which is particularly un-American and especially vicious is the vast New Deal propaganda machine maintained at public expense, not only in Washington, but in every State as well. The cardinal theme of all of this great propaganda machine is that the Republican Party has no constructive program. Also that there is but one individual in the United States capable of being President. I might say that there is some diversity of view concerning that question also.

The fact is, of course, that the Republican sweep in the 1932 congressional elections resulted in the country's immediately feeling the beneficial results. As early as April 1939 the Republicans in the House presented a 12-point recovery program. We are still fighting for this program, and we will carry it to accomplishment after the great national victory which our determined and aggressive patriotism will bring to the Republican banners in November 1940.

Those 12 points of a constructive, forward-looking, thoroughly American program which guide our congressional leadership can well be enumerated here:

1. Keep this country out of war.
  2. Move immediately to curb unnecessary, wasteful, and reckless spending.
  3. Repeal all repressive or harassing taxes restraining business, large and small.
  4. Revise the remainder of the Federal tax structure to eliminate or modify provisions retarding business recovery.
  5. Repeal the dangerous discretionary authority which the President now has over the Nation's monetary system.
  6. Amend the National Labor Relations Act by clarifying the mutual obligations of worker and employer and the duties of both toward the public in order to end the present paralyzing discord.
  7. Define specifically the area of governmental competition with private enterprise so that business may be able to create jobs with some certainty as to the future.
  8. Restore American markets to the American farmer and wage earner and develop new markets for agricultural products.
  9. Adopt immediate legislation to rehabilitate the railroads and make secure the jobs of many hundreds of thousands of workers and the investments of savings banks and life-insurance companies.
  10. Create a special committee of the Congress to inquire into the effects of the reciprocal trade agreement policy on American industry and agriculture.
  11. Clarify Federal rules and regulations so industry and business may know what to expect.
  12. Reject all experimental legislation not clearly helpful in promoting recovery, or which would subject agriculture, labor, or industry to compulsory decrees of a Federal bureaucracy.
- No one can honestly say this is not a constructive program. Put it into effect and you will restore confidence, courage, and prosperity to the American people.

The enormous growth of executive power during the last 7 years is of itself a steady march toward state socialism. As the power of the executive department has increased, as regulations have multiplied and restrictions have been expanded, there has come a corresponding decline in the morale and the opportunities of the individual.

We must not forget that it is the individual citizen who makes the wheels go 'round—and pays the costs.

In recent months there has been what I believe to be a studied effort on the part of men in high places to divert the attention of the Nation from the failures of the New Deal, and to focus public discussion upon the wars abroad.

Of course we all have a deep interest in those tragic struggles. Our sympathies go out to nations and peoples who are fighting heroically against the aggression of dictators. Nevertheless, our sympathies and emotions must be kept within the bounds of neutrality.

In order to be able to help rescue the world from a chaos which may result from these wars, and to assure our own safety, we must remain at peace, solve our own problems, and restore our internal economy. We must do more than merely profess in words our intention of staying out of war. We must guard against being led unwittingly into the paths which will make it impossible to remain at peace. We must remember that if we go into the war to preserve freedom and democracy abroad, our first act will be to extinguish freedom and democracy at home—to set up a military dictatorship exceeding in power any of the dictatorships abroad which we might seek to oppose.

As a great Nation with world-wide interests, we cannot be isolated, but we can be intelligently nationalistic. We want to do everything within our power to help bring peace to a world which is moving rapidly toward the destruction of all of those values which make life worth while. Any contribution the United States can make toward peace without involving us in war should be made, and would have the warm approval of the American people.

We cannot tolerate any partisanship in our foreign affairs. Our foreign relations must be considered with the single objective of the best interests of our country. I can assure you there is no disposition on the part of the Republicans in the House of Representatives to bring politics into foreign affairs.

This, however, does not mean to say we are compelled to follow blindly every suggestion that is made. We will support those policies which we honestly believe are best for the Nation; we shall not hesitate to oppose any proposal we believe might lead us into war, or which might be detrimental to our national interest. This, it seems to me, is what people living under a Constitution have a right to expect of their Representatives.

We must not allow any group to distract our attention from our first objective, which is to solve our domestic problems. We must put our 9,000,000 of unemployed men and women back to work.

The gravest danger to the peace and security of the United States today is not from some foreign invasion, but from allowing pressing home problems to go unsolved.

A recent survey shows that there are 4,000,000 young men and women between the ages of 18 and 24 who have never had a regular job. This condition is more menacing to the United States than all the armies and navies so often pictured as ready to span the seas and destroy us.

We must get back to our problems at home. Our front line is not on the Rhine, nor is it anywhere in France. It is at the farm gate and the factory door. We must solve the problems of agriculture so the farmer can secure his fair share of the national income. We must put the unemployed in our cities back to work in private enterprise at decent American wages. We must put our national finances in order and avoid the ruin of inflation and bankruptcy. We must rescue the small farmer and the small employer from the domineering Federal bureaucracy which bestrides them like an "old man of the sea." We must restore the vivid spirit of national contentment and solid progress. America still is a land of hope and unmeasured promise. We have only to free the energies of our people and fire anew the unconquerable spirit of achievement to dispel any threat from false and hateful "isms" from abroad.

And let me say further to you, that the Republican Party does not believe that we have to go into a war to restore business and agriculture in this country, and that we do not have to go down in defeat, nor do we have to surrender our liberties under the Constitution to find the answers for our problems.

I have seen thousands of letters from all parts of the country during the last few months. In them I find a deep undercurrent of abiding faith in the American system of orderly and balanced constitutional government, and in our American system of private enterprise.

The last 7 years have been a terrible test of men. But the deep spirit of America has rededicated itself to the fundamentals of the American faith—rededicated itself to freedom, order, and progress.

That is my message today. America has made up her mind to be free again—free to prosper according to the bounty which a kindly Providence has entrusted to our hands.

Let me give you this parting picture.

The United States contains 6 percent of the world's area and 7 percent of its population. It normally consumes 48 percent of the world's coffee, 53 percent of its tin, 56 percent of its rubber, 21 percent of its sugar, 72 percent of its silk, 36 percent of its coal, 42 percent of its pig iron, 47 percent of its copper, and 69 percent of its crude petroleum.

The United States operates 60 percent of the world's telephone and telegraph facilities, it owns 80 percent of the motorcars in use, operates 33 percent of the railroads. It produces 70 percent of the oil, 60 percent of the wheat and cotton, 50 percent of the copper and pig iron, and 40 percent of the lead and coal output of the world.

The United States possesses about 17 billion dollars in gold, it has two-thirds of civilization's banking resources, and the purchasing power of its population is greater than that of 500,000,000 people in Europe, and much larger than that of more than a billion Asiatics.

A leadership which in 7 years cannot translate such a rich economy into assured prosperity is destitute of capacity. Yet pompous statesmen, looking over the Nation, solemnly declare that the methods by which all this was created are all wrong, ought to be abandoned, and that the time has come to substitute political management for individual initiative and enterprise.

I say no! Such a proposal is nonsense.

It was under the Bill of Rights, and the protection of the Constitution, that the individual initiative and courage of the people wrought the glory and the grandeur of the United States. With liberty came opportunity. Of justice was born initiative. Blessed with the great heritage of freedom on this continent, we have achieved the greatest measure of happiness and prosperity ever enjoyed by any people in the history of the world.

America can if she so wills return to prosperity, help restore and maintain the peace of the world, and in doing that job I am certain the good citizens of Kansas will be found in the vanguard.

## The One Hundred and Fiftieth Anniversary of the First Session of the Supreme Court of the United States

### EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

ADDRESS BY HON. CHARLES A. BEARDSLEY, PRESIDENT OF THE AMERICAN BAR ASSOCIATION

Mr. BLOOM. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD and to include therein the address delivered by the Honorable Charles A. Beardsley, President of the American Bar Association, at the exercises held in the Supreme Court Chamber today in commemoration of the first session of the Supreme Court of the United States.

There being no objection, the address of the Honorable Charles A. Beardsley, president of the American Bar Association, was ordered to be printed in the RECORD, as follows:

Mr. Chief Justice and the Associate Justices of the Supreme Court of the United States, I appreciate this opportunity, which has been accorded to me as the representative of the American Bar Association, to participate in this commemoration of the one hundred and fiftieth anniversary of the first session of this honorable Court.

It is most fitting that this event should be commemorated. Its commemoration may well serve to recall to the minds of the American people the purposes of the founders of our National Government, and the part, in the fulfillment of those purposes, that this Court was intended to take, has taken, and will take in the years to come. And this commemoration may well serve, further, to challenge the American people to dedicate themselves anew to the fulfillment of those purposes.

In the preamble of our Constitution, its framers recited the purposes to attain which the Constitution was to be ordained and established. In this recital, the purpose to "establish justice" is second only to the purpose "to form a more perfect Union."

Daniel Webster reminds us that justice is "the ligament that holds civilized beings together," and "the greatest interest of man on earth."

To the end that they might "establish justice," to the end that they might provide "the ligament that holds civilized beings together," to the end that they might strengthen the foundation of civilization on the North American continent, and to the end that they might serve "the greatest interest of man on earth," the framers of the Constitution provided therein for a Federal judiciary, with this Court as its head, to administer "justice" under and pursuant to law.

In the words of President Washington this Court was intended to be "the keystone of our political fabric." And it was intended to be the protector of our Constitution and of the inalienable rights of a free people.

Gladstone's characterization of our Constitution as "the most wonderful product ever struck off at a given time by the brain and purpose of man" is justified by the fact that, for 150 years, this Court has approached, as near as any human institution might well be expected to approach, the fulfillment of the purpose of the framers of the Constitution, to "establish justice" for the American people.

We may properly take pride in the extent to which this Court has approached that fulfillment, realizing as we do, as Addison reminds us, that to be just "to the utmost of our abilities is the glory of man," and that "to be perfectly just is an attribute of the Divine nature."

Not only is it permissible on this occasion for us to recall that this Court is a human institution, but it is also desirable for the American people to recall on this occasion that this human institution will endure, and that justice, under and pursuant to law, will be preserved for the American people, only so long as the American people, by their alertness, fidelity, and sanity, cause them to be preserved and to endure.

For there are forces at work in the world today that are inimical to the continued fulfillment by this Court of the purpose for which it was created.

As a result of the workings of these forces in substantial parts of the world, national temples of justice are no longer honored or worthy of honor, and international morality and law are giving ground to international immorality and anarchy. And many hundreds of millions of people are engaged in war, seeking to settle their differences not according to justice but by force—by the use of a means that is calculated to bring victory to the strongest or to the most unscrupulous, of the contending peoples, wholly regardless of justice.

And, even within our own borders, there are forces at work that are inimical to the principles upon which our Government is founded, including the principle of justice under and pursuant to law.

Thus, there is a tendency among groups of employers and employees to use physical force as the means of settling differences instead of being willing to use the administration of justice—the institution devised by man, when he was emerging from barbarism, as a substitute for combats, for fights, and for wars—an institution that is calculated to bring victory to the contending party who has the most justice on his side, regardless of the relative physical strength of the contending parties.

Also, we have among us many people who are eternally striving to inculcate doctrines that in other parts of the world are producing international lawlessness, anarchy, and war; doctrines that in other parts of the world are destroying temples of justice; and doctrines that in other parts of the world are depriving the people of their liberties and of their lives.

And, finally, there is an all-too-widespread inclination to disregard the fundamental principles upon which our Government and our civilization are founded, and an all-too-general disposition to ignore the historic warning that "eternal vigilance is the price of liberty."

For 150 years the American people have honored, respected, and sustained this Court, and through the years this Court has gained for itself the gratitude and affectionate regard of the American people, because the American people have been steadfast in their devotion to the fundamental principles upon which our Government is founded, and because the American people have seen in the record of this Court the evidence of the striving by its members to be just "to the utmost of their abilities."

This Court has gained, and has retained, this honor, this respect, this gratitude, and this affectionate regard, although, in the words of a nineteenth-century publicist, this Court has no "palaces or treasures, no arms but truth and wisdom, and no splendor but the justice and publicity of its judgments."

On this occasion, as we commemorate the one hundred and fiftieth anniversary of the first session of this Court, we dedicate ourselves anew to the task of defending our Constitution, to the task of guarding our liberties, and to the task of strengthening, defending, and preserving this Court as "the keystone of our political fabric," as the protector of our Constitution, and as the guarantor of justice for the American people under and pursuant to law, not only for another 150 years but also for all time.

## A Republican Program

### EXTENSION OF REMARKS

OF

HON. WILLIAM E. HESS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. ROBERT A. TAFT, Senator from Ohio, before the Republican

Club, Boston, Mass., on December 12, 1939, entitled "A Republican Program":

It is a real pleasure to return to the State of Massachusetts, where I spent 3 years at the Harvard Law School and learned the principles of American constitutional law, of which so many have become obsolete. It is a pleasure to come to a great Republican State in the midst of Republican New England. No State had more to do with the formulation of the American system of government or the American system of private enterprise. In the early days of the Republican Party Massachusetts was in the lead in advancing the principles of freedom and equality, for which the Republican Party has always stood; and today no State has been quicker to appreciate the unsoundness of New Deal principles than has the Commonwealth of Massachusetts.

We are looking forward today to the political campaign of 1940. The American people are vitally concerned with events in Europe. They do have a great interest in the outcome of the present war. They bitterly resent the recent attack of Russia on the honest and courageous Republic of Finland. To remain neutral in spirit is contrary to human nature. But because we cheer for one football team, we don't rush out in the field and carry the ball. We don't have to go to war because we favor one nation. The American people have shown clearly their determination to remain neutral in European contests. We may sympathize but we cannot understand all the complications of European politics. We cannot hope by our intervention to solve the problems of Europe. There were many differences in Washington as to the best method of keeping out of war, but it was made clear to Congress and the President alike that 90 percent of the American people were determined to stay out. From a political standpoint, therefore, we can assume that we will not be involved in war during the 1940 campaign.

The issues of the next session of Congress will again be domestic issues. Under the cloak of preparedness, every public spending project which has been rejected by Congress during the past 5 years is about to be revived, and we may see an attempt to stir up public opinion against alleged monopoly and profiteering. But these attempts to divert public attention from the failure of the New Deal are not likely to change the people's present views. After critical study and analysis an adequate defense program will be adopted. There is not likely to be any great change in price levels during this year. The great question before the American people is whether we continue the New Deal administration or return to the basic principles which have guided every Republican and Democratic administration prior to 1933. On that question more than any other depends the future happiness and actually the freedom of the American people.

Everywhere in the United States people realize that the New Deal has only achieved failure. It promised prosperity and a higher standard of living. It promised a balanced Budget and a sound currency. It promised higher farm prices and improvement in the condition of the underprivileged. Today there are still more than 9,000,000 people unemployed. In spite of the dispensation of billions of dollars of Government money, there are more underprivileged than there were under the last Republican administration. Their position is more hopeless and the orthodox New Deal theory now is that they are going to remain unemployed and underprivileged the rest of their lives. We can never be prosperous with 9,000,000 people out of work, and unless that condition can be cured, the desirability of the American system itself is questionable. Farm prices, before the war boom, which was perhaps more psychological than real, were lower than they were in October 1933, when none of the New Deal control measures had been put into effect. The national income is about \$65,000,000,000, whereas in 1928 it was \$80,000,000,000 and there were 10,000,000 fewer people among whom it had to be divided. The average income, and therefore the average standard of living, is about 20 percent less than it was in 1928, whereas in every past depression we have always come back to a higher standard of living and a higher national income than before the depression began. Of course, times are hard, and they will remain so until most of the unemployed are returned to work.

The New Deal promised, above all, carefully planned Government policy to cure our economic ills yet there is utter confusion in dealing with the very matters in which the New Deal has the most interest. The present division of relief responsibility between the Federal Government and the States is most unsatisfactory and produces those situations like Cleveland where every agency blames the other. The Federal Government, working on the supposed theory that they will employ all employables who cannot get work in private industry, is completely failing in its announced purpose. In spite of the expenditure of billions on W. P. A., it is throwing back on the States and localities the relief of millions of employables as well as all the unemployables, in some cases beyond the financial resources of the States and localities. Yet there are few States which could not handle the entire relief problem, employables and unemployables alike, on the money which the Federal Government is spending on W. P. A.

In the housing field we have four separate Federal agencies administering different kinds of housing. Each agency is critical of the other. The administration has refused to proceed with an intelligent, impartial study of the whole problem to develop a consistent housing policy at reasonable expense.

In the vital field of finance, the Treasury and the Federal Reserve Board are hopelessly divided; on the open-market policy relative to Federal bonds, on the theory of spending the Government into prosperity, and on the question of encouraging or discouraging thrift.

In the matter of the production of raw materials, farm products in particular, Secretary Hull's policy is at absolute variance with that of Secretary Wallace. The reciprocal-trade treaties reduce the price of farm products. Secretary Wallace is spending millions to maintain it. Secretary Wallace's price program deprives the American cotton farmer, for instance, of his foreign market and reduces the international trade that Secretary Hull is trying to promote. There is hardly a field of Government activity in which there is not only duplication but a basic conflict of policy.

And finally, we have a deficit in operations and an increase in public debt which is a damning indictment of any organization or administration. An ability to make both ends meet has been considered an absolute essential in every form of human organization, and the new dealers are utterly unable or unwilling to accomplish this purpose. A deficit policy is an insane policy which can lead only, as it has elsewhere, to inflation, national bankruptcy, and the destruction of the very basis of the American system of thrift, industry, and private enterprise.

There are sections of the New Deal of which everyone can approve. There are departments which are well run. There are humanitarian purposes with which we may all sympathize. But the purposes themselves seem to have been forgotten in an earnest desire to change the basis of the entire system by which private enterprise has developed this country. No person can impartially review the results without concluding that after 6 years of unlimited power there has been a complete failure to carry out the announced purposes of the New Deal itself.

We hear today from Washington from all the New Deal apologists the stock answer of those who have failed, "But what would you do?", and "What is the Republican program?" Surely if an administration has plunged the country into hopeless debt, has left millions of people unemployed and left every Government policy in doubt and confusion, that is reason enough to turn for guidance and advice to a party which has conducted America through many of its greatest crises and contains leaders of outstanding ability. But that party has definite principles and can interpret those principles into a definite program.

I find very little difference between Republicans as to what the principles of that program shall be. Many of the details are complicated and must necessarily be left for actual administration, but the main principles may be stated as follows:

First, to take every possible measure to encourage the development of private enterprise through a repeal or revision of the regulatory measures which have prevented its growth, through a friendly administration of the regulations like monopoly control, which remain necessary, and by the revision of the tax system to encourage thrift and investment and production.

Second, to cut Government expenses so that there shall be no deficit, and repeal the inflationary powers to devalue the dollar and issue greenbacks, so that the slide toward bankruptcy may be checked, stability and confidence restored.

Third, to continue those humanitarian activities like relief, old-age pensions, unemployment insurance, and housing and medical aid to the poor, but revise the administration so that it is intelligent, economical, and fair not only to those who receive aid but to those who are working hard to get on without that aid.

Fourth, to aid business and agriculture through measures of different kinds designed to build up private enterprise without regulation, and curtail all extension of Government activities in competition with private enterprise.

I should add that in foreign policy we favor an adequate preparation for defense and the keeping out of war, but on these principles there is no present conflict with the New Deal administration.

It is easy to state a general criticism of New Deal policy. It is not quite so easy to state the general principles of Republican policy. It is much more difficult to interpret that policy into specific proposals to deal with the many problems facing any administration. It requires an actual knowledge of the things which are being done today and of the complications which every solution may produce. I am going to suggest a number of specific policies which represent my own conclusions today, but I quite realize that there may be differences of opinion and that the final Republican program must represent the considered conclusion of a large number of party leaders rather than any individual. The very essence of party government consists in a willingness to accept the advice and conclusions of others, even against one's own opinions, if they do not affect the basic principles of party policy.

I have suggested that the first item on our program should be the reduction and modification of regulatory measures which have discouraged private enterprise. America was built up by the constant encouragement of thousands and millions of men to spend their time and money in activities which both improve their income and position and put many other men to profitable work. During the twenties, all over this country thousands of men every day started out on such enterprises. Many fell by the wayside. Others started with one or two employees, then ten, then a hundred, and in some cases thousands of workers. The same process took us out of every past depression and restored us to a condition where every man who wanted a job could get a job. Today, every small business man is discouraged by government regulation, government reports, and government inspection. Where a man originally could hope that his own efforts might enable him to improve his own condition, educate his children, and leave his family better off, today success seems to depend entirely upon government policy.

I believe that we should gradually abandon all price-fixing programs, because the effort to fix prices of basic commodities inevitably involves the gradual regulation of all practices which affect prices and the extension of price fixing from basic commodities to all incidental commodities. This applies to the fixing of farm prices, coal prices, sugar prices. I do not object to general effort to improve prices by policies which do not involve a regulation of the individual farm or business. It means the modification of the wage and hour law or its administration so that it becomes what it was originally intended to be, a minimum-wage law protecting employees against oppression where the normal processes of collective bargaining are not effective. I believe that the National Labor Relations Act should be amended so that it carries out its real purpose of permitting employees who wish to organize and bargain collectively, without the slightest compulsion from their employers. The amendments proposed by the American Federation of Labor are reasonable and, in addition to those, I believe that the prosecuting and judicial functions of the Board should be completely separated. The hearings before our Committee on Education and Labor show that the act as written could have been administered by a fair board without serious complaint, but the discretion given to the Board is extremely wide and it has been abused in such a way as to produce the greatest miscarriages of justice which this country has ever seen. Today, therefore, the Board's powers will have to be more circumscribed, but an impartial administration is the most essential single change.

The regulation of hours, I believe, should also be modified in many industries, particularly those relating to agriculture. Hour regulation for the purpose of preventing injury to health and lack of time for recreation is certainly justified, but the use of hour regulation to spread work and indirectly affect wages in the long run does employees no good and actually checks employment.

Policies of farm regulation insofar as they involve regulation of every individual farm should certainly be modified, though production-control plans are complicated and cannot be abandoned overnight. In some agricultural industries it may be possible to work out a successful control; in others they should be gradually abandoned. But we must remember that each farm industry is really an independent industry, with problems of its own. But today the farmer is unquestionably at a disadvantage compared to the city workman who has a job, and until that balance is restored assistance must be given through soil conservation benefits or other measures. Whether any device can be worked out to give the farmer the benefit of the higher prices incident to the American market without depriving him entirely of a foreign market I do not know, but if it can be done without involving a regulation of the individual farm I believe it should be attempted.

In the end the principal necessity is the administration of all laws regulating business, including those which properly prohibit monopoly and unfair competition, in a spirit of real friendliness to private enterprise, and in an earnest desire to accomplish the purposes without interfering with the operation of each business. The present administration has not been inspired by either of these purposes. It is full of administrators who at heart are opposed to the entire profit system and convinced that the Government should have its hand in every policy and regulate every detail.

The second section of the program I suggest is the reduction of Government expenses and the repeal of measures which constantly threaten inflation. There is not the slightest reason today why the President should have power to devalue the dollar. The price of \$35 an ounce which we are paying for gold has brought to this country \$17,000,000,000 out of a total world supply of \$27,000,000,000 of gold. If the war continues for 4 or 5 years, we will have it all, and it may not be worth \$35 an ounce. Certainly it would be idiotic to increase the price further. We should stop at once the purchase of foreign silver, which has no conceivable purpose except to let the Government play politics in Mexico. Incidentally I wonder if we could not help Finland by refusing to buy silver or gold of Russian origin. We should certainly repeal the provision which authorizes the President to issue \$3,000,000,000 in greenbacks. If we definitely stabilize the American dollar we will make it the single standard of all world trade and give a stability which will do more to promote that trade than any reciprocal trade treaty policy.

Of course the Budget should be balanced, and by the reduction of Government expenses. We cannot go on with deficit and debt. We are always met by the demand that we state exactly what activities are to be curtailed. The effort to return to sanity in government is going to require the reduction of expenses by every department and a sacrifice from every group drawing financial benefits from the Federal Government. I believe there will be no serious objection if the effort to prevent national bankruptcy is a cooperative effort by all who are affected. People are willing to accept, and even to demand, benefits, simply because others are receiving them. If all can be sure that all are participating in the sacrifice, there will be little objection to such reductions. No one has ever better stated the case than Franklin D. Roosevelt himself in 1932 before he was elected President. He said on July 30, 1932, "Revenue must cover expenditures by one means or another. Any government like any family can for a year spend a little more than it earns; but you and I know that a continuation of that habit means the poorhouse."

And again, "Too often in recent history liberal governments have been wrecked on the rocks of loose fiscal policies, we must avoid this danger, we must move with a direct resolute purpose now. The Members of Congress and I are pledged to economy."

A careful study of the Budget indicates that it could be balanced in about 2 years at a figure of approximately \$7,000,000,000. This would be twice the expenditures of the Hoover administration, surely not an unreasonable goal. The Government has been administered for 6 years on the theory, promulgated by Mr. Eccles, and gleefully accepted by every department head, that deficits are a blessing in disguise. Many activities of government could be eliminated without one citizen in a thousand knowing they had disappeared. Many others can be curtailed. It will require courage and determination on the part of the executive, the party, and the Congress. The administration apologists always say that the Budget cannot be balanced. There is only one conclusion found to that argument. That conclusion is national bankruptcy and inflation, the destruction of the American system of private enterprise and probably the destruction of democracy itself. That is what happened in Germany and Italy and Russia. It is an unthinkable alternative.

The third section of the program I suggest is the continuation and reform of the humanitarian activities of the Government. The administration of work relief, in my opinion, should be returned to the States under a plan by which the administration of work relief and direct relief be administered entirely by the State or local authorities, under a plan conforming to Federal law and approved by the Social Security Board. Because of the limited taxing powers of States and local governments, the Federal Government should make a grant of two-thirds of the total amount of money expended for work relief and direct relief. A condition of this grant should be provision of one-third of the total cost from State or local funds. One of the requirements should be that the State plan be administered by a board acting under civil-service restrictions so that State politics be not substituted for national politics. Such a plan would eliminate the situation which has arisen in Cleveland, because the State plan would have to be adequate and approved in principle by a Federal board. The distinction which the Federal Government pretends to make between employables and unemployables is utterly unsound, and is not really the basis of the W. P. A. W. P. A. is merely an expensive Federal work program not much related to relief or the actual needs of any community, not related at all to the amount of money the community itself is prepared to advance. In Cleveland today if the local authorities had available the money which is being expended on W. P. A. in that city, they could satisfactorily handle the entire relief problem with a smaller local contribution than they are now making. It is my conviction that the total amount of money which the Federal Government would have to provide under such a system would be substantially less than they are now spending. The local authorities would determine who is entitled to relief, the amount of work relief, the character of work relief projects, and they would certainly assure a much more equal distribution of relief than is secured today.

While the unemployment insurance provisions of the security act are still in an experimental stage, the general principle seems to be working out satisfactorily. The old-age pension provisions, on the other hand, are extremely confused. All pensions paid up to date are paid under the noncontributory plan, and in most States are larger than they will be for many years under the contributory plan. I believe the whole reserve system with its compulsory deductions from pay roll should be reexamined, that we should have a pay-as-you-go system without deficits on the one hand or the accumulation of unnecessary reserves on the other. These reserves are now invested in Government bonds which means that they are used to finance New Deal deficits. The truth is an entire nation cannot build up a reserve. Under any system they will have to raise the money by taxation at approximately the time it is to be paid out. We might as well recognize that only those who are working at or about the same time can support those who are not working at that time.

The burden of these humanitarian activities is bound to fall on every man who is earning money. Our total Government expenditures—national, state, and local, today are so great, amounting to \$18,000,000,000 or nearly 30 percent of the national income, that the amount required can only be secured by imposing a universal burden. If all individual income over \$10,000 was confiscated entirely, it would not produce enough to run government for 6 months in any year. The average workman today pays 15 percent of his income in taxes directly, or indirectly through prices of the goods he buys. He is the man who has to pay any increased bill for relief to the unfortunate. I believe he is willing to do so. I believe that we have all recognized the obligation to assist those to whom our system does not afford a job at a wage that will reasonably support a family. But I believe also that such assistance must be afforded with as much regard for those who are paying the bill as for those who are assisted. It must be administered with the thought that those receiving assistance shall not be better off than men who are earning their own living, providing their own homes, and raising their own families. It must be administered in such a way that we do not make permanent paupers of the recipients of assistance. Up to this time each department has apparently felt concern only for its wards and has regarded the Federal Treasury as a bottomless barrel. The time has come to review carefully all of these humanitarian activities and place them on a businesslike, equal, and economical basis, with as much decentralization to local government as possible.

The housing program should certainly be restudied. The United States Housing Authority theory of providing all low-income groups

with housing in Government-owned apartment houses is extremely expensive, so much so that it cannot reach more than a small proportion of those who need assistance. It prevents home owning, which has always been considered an American ideal. Some slum elimination and Government housing is desirable, but it should be coordinated with the Federal Housing Administration plan of financing private residences, with the Federal Home Loan Bank system of financing through private building and loan associations, and a definite policy established whose cost we can predict.

There should be some extension of the present Federal aid to the health of the poor, but the present Wagner bill is not only extremely complicated and hopelessly expensive but also looks toward a system of socialized medicine without any right on the part of individuals to select their own physicians. The Federal Government should interest itself financially in the question, but not through the Wagner Act in its present form.

The fourth section includes many possible aids to agriculture and business. I believe that the Government can assist private enterprise without the evils of regulation. It can assist the farmer through soil-conservation payments. It can assist housing through methods similar to the Federal Housing Administration. It can assist in providing better foreign markets for American products. It can assist the American farmer in retaining his home markets. It can find new uses for agricultural products. It can interest itself in preventing monopoly and protecting small industry against unfair methods of competition. Undoubtedly, the Federal Government today has a much broader field than it once had. Business has grown to such an extent that such controls as are necessary must be Nation-wide under Federal administration if they are to be effective at all. Such activities should be conducted for the general purpose of building up private enterprise and building up private employment. We cannot solve our problems without putting people back to work. We can only put people back to work in private enterprise. The New Dealers have done their little best. They have increased the Federal pay roll from 563,000 to 932,000—more than we had even at the peak of World War activity—but this is merely a drop in the bucket. Private enterprise made America what it is today, the greatest and most powerful, yes, and even today the most prosperous nation in the world. We are the same people. We face substantially the same conditions we have faced for the last 50 years. This is not a new era any more than 1929 was a new era. The American people can be as thrifty and industrious and prosperous as they ever were. Physical frontiers may be gone, but they have been gone for 50 years, and we have had many years of prosperity since then. There are plenty of economic and scientific frontiers to overcome. America is not finished.

We have come out of every past depression to a higher standard of living and higher national income than we ever had before, and we have come out under Republican administration without planned economy and without a vast public debt. It can be done again, but it cannot be done unless we reverse the whole basic principles of present administration policy.

## Extension of the Reciprocal Trade Agreement Act

### EXTENSION OF REMARKS

OF

HON. JERE COOPER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

STATEMENT BY EDWARD A. O'NEAL, PRESIDENT, AMERICAN FARM BUREAU FEDERATION

Mr. COOPER. Mr. Speaker, under leave to extend my remarks in the Record, I include the very able and splendid statement of Hon. Edward A. O'Neal, president, American Farm Bureau Federation, at hearing before the House Ways and Means Committee on House Joint Resolution 407, to extend the Reciprocal Trade Agreement Act, Washington, D. C., January 25, 1940.

The statement is as follows:

I have come here today to give you the views of the American Farm Bureau Federation on the question of extending the Reciprocal Trade Agreement Act, as provided in House Joint Resolution 407 introduced by Chairman Doughton, of the Ways and Means Committee.

The American Farm Bureau Federation, at its annual meeting in Chicago recently, went on record in favor of continuance of this program, under proper safeguards.

The present position of the American Farm Bureau Federation is in line with the position it has taken ever since it was founded 20 years ago. The American Farm Bureau Federation has steadily

worked for measures which would restore equality to agriculture, by control and disposal of surpluses, and by making the tariff effective for agriculture. We have tried to bring agriculture within the protective system of controlled prices and bargaining power which has proved so beneficial to other groups.

The first World War brought a big expansion of agricultural production in the United States. When the war came to an end, a large part of the foreign demand ceased. Surpluses piled up in this country, and farm prices were drastically reduced. The index of prices received by farmers fell from 213 in 1919 to 125 in 1921. But the index of prices paid by farmers fell much less. From 202 in 1919, it went down only to 152 in 1921. The result was that per capita farm income from production was reduced by 60 percent. Not only that, but farm income went way down as compared with nonfarm income. In 1919 the per capita farm income from production available for family living was 54 percent as great as the per capita nonfarm income. But by 1921 the per capita farm income was only 21 percent as great as the per capita nonfarm income.

Farmers found that they were completely deflated. But industry and labor were protected against the full effects of the post-war deflation by tariffs, wage laws, and the corporate form of business organization. Farmers naturally demanded that they too be included in the protective system. This demand for equality was one of the principal reasons for the organization and growth of the American Farm Bureau Federation.

In step with this demand, the American Farm Bureau Federation immediately threw its support behind measures to protect the domestic prices of farm products. We felt that the world would take our surpluses, but we had to have some way to protect the domestic price. We thought, at that time, that we could accomplish this result through the tariff and through the control of domestic supplies by farmers' voluntary cooperative marketing organizations. We thought if we could only get rid of the exportable surpluses we could make the tariff work for agriculture. Our slogan was "Tariff for all or tariff for none."

That is why we supported the Emergency Tariff Act of 1921 and took part in the National Agricultural Conference called by President Harding in 1922, which recommended further tariff revision. We then supported the increase in tariffs provided in the Fordney-McCumber Act of 1922.

We, apparently along with everybody else at the time, failed to realize that the change of this country from a debtor status to that of creditor called for a new foreign policy. We just didn't appreciate the significance of this change, and apparently some people don't appreciate it even now.

Meantime the surplus problem was ever present, and we supported a whole series of measures and proposals intended to cope with it.

One of the very first projects sponsored by the American Farm Bureau Federation was the gift of over 400 carloads (roughly equivalent to a half million bushels) of surplus corn for the relief of suffering people in Belgium, Poland, and the Near East in 1921. This corn was donated by farmers, who felt that it was simply weighing down prices in this country and would fill a real need overseas.

In 1921 we supported the extension of the powers of the War Finance Corporation, enabling it to lend up to \$1,000,000,000 to farmers, and later, authorization for it to make advances to foreign purchasers of our surplus agricultural products.

We worked actively for lower freight rates so as to facilitate the movement of our surplus products abroad. We also supported expansion of the American merchant marine with the same end in view. We favored the Great Lakes-St. Lawrence Waterway and the development of the Missouri, Ohio, and Mississippi Rivers so as to cut down the cost of getting our wheat into the Liverpool and other foreign markets.

Still we were plagued with a surplus. We then threw our weight behind the McNary-Haugen bill, under which a Government export corporation would have been set up to dispose of our surplus farm products in foreign markets in such a way as to give our farmers the benefit of the world price, plus the tariff, in their own markets. The principal aim of the McNary-Haugen bill was to make the tariff effective on our farm products. This proposal, although enacted twice by Congress, was blocked twice by Presidential veto and was never carried into effect.

The McNary-Haugen fight was an 8-year fight. The cities were prosperous, but agriculture was depressed. We fought continuously to achieve control of surpluses and to bring agriculture into the American protective system. Farmers in the corn and wheat areas, joined by their neighbors in the Cotton Belt of the South, became thoroughly aroused.

As a substitute for the McNary-Haugen plan, farmers in 1929 were given the Agricultural Marketing Act. We did not recommend this plan, but we cooperated in every way possible to give it a full and complete trial.

The experience of the Federal Farm Board under the Agricultural Marketing Act demonstrated the futility of trying to control surpluses and make the tariff effective without Government help to farmers in the control of their production. The Farm Board found that even through the use of subsidies it was extremely difficult to get rid of the surpluses in foreign markets. In its annual reports the Farm Board frankly confessed the futility of this type of operation, unsupported by production control.

During the decade of the 20's there had been a gradual but slight improvement in the farm situation. A few moments ago I

pointed out that in 1921 the per capita farm income was only 21 percent as great as per capita nonfarm income. By 1929, it was 28 percent as great as nonfarm income.

But the stock market crash in 1929 ushered in a new and even more serious emergency for agriculture and the Nation. For years the cities had thought they could keep on being prosperous without a prosperous agriculture. We had repeatedly warned that the Nation could not continue half boom and half broke. At last the storm hit the cities and the farms both.

Farm income was dealt another staggering blow. The incumbent administration proposed another revision of the tariff. In desperation the farmers joined in with this movement. The American Farm Bureau Federation supported the upward adjustment of agricultural rates, hoping thereby to get farm prices up to parity with industry. We did not, however, approve the upward adjustment of nonagricultural tariffs. Our Washington representative, Mr. Chester H. Gray, testifying before the Ways and Means Committee of the House on January 24, 1929, clearly brought out this point in answering the questions of Representative Cordell Hull, then a member of the committee.

Mr. Gray said: "I pointed out, I believe, the first day I appeared before the committee, on behalf of schedules we were seeking, that the adjustments of tariff rates this time were to equalize agriculture with industry. If that were done, we would have no assault to make on the industrial fabric, unless the industrial duties should be sought to be raised so inordinately, or so far beyond what we are seeking, as to make it entirely out of proportion. Then we would have to make a fight, and we would make a strong one, to bring those schedules down."

That was the position taken by the American Farm Bureau Federation at the time the Smoot-Hawley Act was under consideration. In the spring of 1929 a special session of Congress was called for the specific purpose of enacting farm legislation and a limited revision of the tariff to help agriculture. But what happened? The action that started out as a limited revision became a general revision, in spite of the insistence of the President and friends of agriculture in Congress. Almost every special interest in the manufacturing field demanded a share of the tariff gravy that was being dished out. Agriculture got quite a number of increases in agricultural tariff rates; but for every increase the farmers got, industry got several times as many. After a year of old-fashioned tariff logrolling, the Smoot-Hawley Act was passed by Congress and signed by the President. It embodied the ultimate extreme in high-tariff protection in the history of the United States. It contained over 4,900 dutiable items on which the average ad valorem duty, computed at 1930-32 values, was 57 percent.

Actually, the protection given most agricultural prices in the Smoot-Hawley Act was only a mirage. This was especially true for the export commodities, on which tariffs were not effective because the exportable surpluses forced the domestic price down to the world level. During the years immediately following this period, this fact became more and more evident as the prices of our staple farm commodities fell lower and lower. By 1932 farmers were getting 30 cents a bushel for their wheat, in spite of the fact that they enjoyed a wheat tariff of 42 cents a bushel. They were getting only 10 to 20 cents a bushel for their corn, even though the tariff on corn was 25 cents a bushel. They were getting only 15 or 16 cents a pound for their butterfat, even though the butter tariff was 14 cents a pound. They were getting only 9 cents a pound for their wool, even though the wool tariff was 24 cents a pound.

Industrial prices did not decline nearly as much as farm prices, because industrial tariffs were more effective and because industry operated under monopolistic controls. Thus, the disparity of agriculture with industry was greatly increased.

The great rank and file of farmers at last had their eyes opened to the inadequacy of higher tariffs as a means of coming within the American protective system. They became convinced that every time they were lured into the tariff game they got traded out of their shirts. Their painful experience with the Smoot-Hawley Act demonstrated to them, once and for all, that higher tariffs were not the solution to their surplus problem. Farmers at last realized, probably more fully than ever before, how they were penalized under the tariff system. Despite the higher tariffs and despite the stabilization operations of the Farm Board, which was doing the best it could with the machinery it had, the surpluses of farm products piled up and the bottom dropped out of farm prices, while the prices of things farmers had to buy were maintained at much higher levels.

The Federal Farm Board, in its desperate efforts to dispose of surpluses, sold seven and one-half million bushels of wheat to a German importer whose notes were guaranteed by the German Government. The price was \$3,912,000, of which \$1,276,000 is still unpaid. The Farm Board also sold 15,000,000 bushels of wheat to the Chinese Government and took notes for \$9,212,000, of which only \$6,000,000 has been paid. It gave 85,000,000 bushels of wheat to the Red Cross.

Thus the tariff did not solve our domestic price problem and accentuated the disparity between the farmer and the rest of the public. Incredible as it seems, by 1932 the per capita farm income was only 12 percent as great as the per capita nonfarm income.

That was the climax of the 10 years of effort by the American Farm Bureau Federation and by Congress to give equality to agriculture under the old-fashioned tariff system.

Not only did the tariff fail to help American farmers out of the depression, but it actually injured them severely, and greatly intensified the effects of the depression. When the United States imposed these high industrial tariffs, other countries soon retaliated against our products, particularly our farm products, and cut off to a large extent our already dwindling foreign outlet.

For example, Cuba, our second largest market for lard, angered by our high duty on sugar and following our example of intense nationalism, boosted the duty against our lard to over \$9 a hundred, and added a consumption tax of practically 10 percent. How could we hope to sell our surplus lard to Cuba under such conditions?

Similarly, in the case of wheat, Germany, France, and Italy, who were among our best customers, boosted their tariffs to more than \$1.50 a bushel. How could we sell them any wheat under such conditions.

The worst damage to American agriculture came when the United Kingdom, which had long been our greatest market for farm surpluses, abandoned her traditional free-trade policy in favor of Empire preference. This dealt a heavy blow to our exports of lard, pork, beef, wheat and flour, apples, tobacco, and other American farm products. The whole world became a veritable jungle of trade restrictions and trade barriers of every kind. These barriers, together with the other nationalistic policies which many countries had adopted after the first World War, strangled trade, threw millions of people out of work in the United States, and caused enormous surpluses of farm products to pile up in our domestic markets, wrecking farm prices and bankrupting thousands of farmers.

The disastrous results of the Smoot-Hawley Act showed that some better method of tariff making would have to be adopted. That unfortunate experience proved that whenever Congress undertakes a revision of the tariff the country is then at the mercy of logrolling, vote-trading blocs which without regard to the general welfare seek to further their own special interests.

Many years before, the shortcomings of the old method of tariff making had begun to be realized by even the advocates of the protectionist philosophy. In the Fordney-McCumber Act, Congress recognized the need to get away from the old method of making revisions. For this purpose it established the Tariff Commission and provided for a flexible tariff, which people hoped would take the tariff out of politics and out of the congressional logrolling, and provide for scientific tariff readjustments based on factual studies. This action was supported by the American Farm Bureau Federation. It was predicted at that time that the Fordney-McCumber Act would be the last general revision by Congress.

Looking back now, how the farmers wish it had been. The flexible provision, however, proved to be very cumbersome and slow, and failed to provide a satisfactory method of tariff adjustment. With the exception of a few commodities, the adjustments were inconsequential to the point of absurdity, and practically all of the changes were upward.

In the light of the Nation's experience under these various tariff acts, and profiting from the lessons learned during the depression, Congress in 1934 passed the Reciprocal Trade Agreements Act. One of the main purposes of this act was to reopen export markets for American farm products. This act set up machinery whereby our Government could induce other countries to scale down their trade barriers against our farm and industrial products.

Meanwhile, the cutting off of our export outlets, resulting from the trade barriers throughout the world, forced American farmers to develop an effective mechanism with which they could adjust their acreage and production in line with available markets—domestic and foreign. The loss of our foreign outlets made it necessary to reduce the production of surplus crops by 30,000,000 acres. Through the Agricultural Adjustment Act of 1933 farmers had the aid of the Government in making this adjustment.

Both the agricultural-adjustment program and the trade-agreement program were supported by the American Farm Bureau Federation. Since that time we have heartily supported the Soil Conservation Act and the Agricultural Adjustment Act of 1938. The farm program and the trade-agreement program are not contradictory but actually dovetail together in working toward the objective of bringing parity to the American farmer. Under the one program, farmers are keeping their production in line with existing demand, and under the other program the Government is attempting to regain foreign markets so that farmers can produce more at profitable prices.

The Nation has now had nearly 6 years of experience with the Reciprocal Trade Agreements Act. The program carried out under that act has been almost constantly the subject of intense controversy. There have been repeated charges that under the trade agreements "farmers have been sold down the river." On the other hand, friends of the trade-agreement program have claimed that it is of substantial benefit to agriculture.

In order to get at the real effects of this program without regard to partisan politics or preconceived economic theories, the American Farm Bureau Federation enlisted the cooperation of one of the leading agricultural colleges of the United States, Iowa State College. Under the direction of Prof. T. W. Schultz, head of its economics department, this college, during the last few months, has carried on a comprehensive study of the program. We wanted facts and not propaganda.

In this study Professor Schultz and his assistants sought the answers to these and other questions:

Have the American farmers been hurt by increased imports under the trade-agreements program?

Have the American farmers been helped by increased exports under the trade-agreements program?

Have the American farmers received benefit from increased industrial exports under the trade-agreements program?

What has been the over-all effect of this program upon American agriculture?

Based upon the results of the Iowa State College study and factual information made available from other sources, the delegates representing farmers from 39 States, at the annual meeting of the American Farm Bureau Federation at Chicago in December 1939, without a dissenting vote adopted a resolution declaring as their conviction that the net effect of the trade-agreements program had been helpful, rather than harmful, to American agriculture, and favoring the continuance of the trade-agreements program with proper safeguards. They felt that the farm program and the trade-agreements program, working together, provide the greatest hope not only for a balanced economy in America but for strengthening this Nation's position as the world's foremost Christian democracy.

The resolution adopted was as follows:

"Recognizing the fact that our tariff policies had failed to protect the domestic price of basic farm commodities generally produced in surplus volume in this country and, further, that such policies had contributed to the disparity that had developed between farm prices on the one hand and industrial prices and wages on the other, the American Farm Bureau Federation in 1934 authorized its board of directors to support legislation permitting the negotiation and consummation of reciprocal-trade agreements with other nations; insisting, however, that in negotiating such agreements no concessions be made which might have the effect of reducing or holding the domestic price of any agricultural commodity below the parity level.

"The Federation recently sponsored a study by recognized economists of the economic effects of all important existing trade agreements. This study seems to reveal that there has been a substantially larger increase in exports to agreement than to non-agreement countries, and that there has not been any appreciable difference in the percentage of increase in imports from agreement and non-agreement countries. Many factors have no doubt contributed to this increased trade, including our gold policy and a general upturn in world business. From all facts thus far available, it appears that while the greatest portion of increased exports has been in industrial products, from which agriculture has only indirectly benefited, yet this study, together with other information available to the Federation, reveals that the net effect of the agreements has been helpful rather than hurtful.

"In giving our support to the continuance of reciprocal-trade agreements, we renew, with increased emphasis, our demand that no agreement be consummated, the effect of which might be to force or hold domestic prices for any farm commodity below parity level. Any other course would justify the condemnation of and opposition to such agreement by all agricultural groups.

"We further insist that in the negotiation of trade agreements, economic factors be given consideration equivalent to the weight accorded to the factors of diplomacy and statecraft. To this end we urge that the Reciprocal Trade Act be amended to provide that no agreement be consummated unless unanimously approved by the Secretaries of State, Commerce, and Agriculture."

In another resolution the delegates called attention to the danger to agriculture in the proposed trade agreements with Argentina, Uruguay, and Chile. This resolution was as follows:

"With respect to the proposed Argentine trade agreement, we believe that it will be extremely difficult to negotiate an agreement with the Argentine which is not fraught with grave danger to American agriculture, for the reason that the bulk of Argentine exports are directly competitive with the products of American farms. A similar principle is involved in the proposed trade agreements with Chile and Uruguay.

"We again direct the attention of the State Department to our brief on this subject, filed by the American Farm Bureau Federation with the Committee for Reciprocity Information on October 4, 1939, in which we insist that no concessions be granted to the Argentine which might reduce or hold the domestic price of any agricultural commodity below the parity level. To do so would force American farmers to condemn such an agreement and would seriously detract from their otherwise support of this fundamental policy of foreign trade."

What are the facts on which the position of the American Farm Bureau Federation is based?

Have American farmers been hurt by increased imports? The facts show that the volume of agricultural commodities from trade-agreement countries has not increased to any greater extent than the volume of such imports from nonagreement countries. Furthermore, the total volume of all competitive farm imports is substantially less under the present trade-agreement program than it was during the period 1924-29. Careful analysis fails to disclose any measurable injury to American agriculture chargeable to trade agreements.

The State Department has wisely pursued a cautious policy in making concessions to other nations, frequently resorting to quota restrictions to protect our domestic markets against excessive supplies of imported commodities. Furthermore, Secretary Hull, in his address at the American Farm Bureau annual meeting, gave his own personal assurance of his deep concern in the welfare of farmers

and his intention to safeguard and promote their welfare. He said, "Let me say to you in perfectly plain language that if there were the slightest suspicion in my own mind that farmers in this country were being hurt rather than helped by the trade-agreements program, I would be the first to favor dropping it. But the facts tell a different story."

Subsequently, President Roosevelt, responding to my letter transmitting our resolutions on the trade-agreements program and the Argentine agreement, also gave definite assurance that the welfare of agriculture would continue to be zealously safeguarded. His letter reads as follows:

"Thank you for your letter of December 15, 1939, enclosing the summary of a study made by Dr. Schultz, of Iowa State College, of the effects of the trade-agreements program upon agriculture.

"The results of this careful and unbiased study afford a perfect illustration of what happens when the reckless and irresponsible charges that have been made against the trade-agreements program are properly sifted and exposed to the test of facts. Every effort has been made, and will continue to be made, to safeguard the interests of agriculture.

"The evidence that agriculture has been helped, rather than hurt, by this program seems unanswerable, and I congratulate you and the American Farm Bureau Federation for the splendid stand which you took on this vital question at your recent annual meeting in Chicago."

Since these assurances were given, an announcement has been made of the abandonment of the proposed agreements with Argentina and Uruguay, due to the insistence of our Government upon adequate safeguards to protect our farmers, especially on flaxseed and canned beef, and the refusal of Argentina to accept an agreement containing such safeguards. The willingness of our Government to scrap these agreements rather than sacrifice the welfare of our farmers is greatly appreciated and is ample evidence of the good faith of both President Roosevelt and Secretary Hull.

Have Americans farmers been helped by increased exports of their farm products? The facts show that exports of farm products to trade-agreement countries from 1935-36 to 1938-39 increased 15 percent, while exports of farm products to other countries decreased 19 percent. Important concessions were made by Great Britain, France, and other countries on American wheat, American pork and lard, and a wide range of fruits, vegetables, and other products. This certainly is strong evidence of the effectiveness of these agreements in restoring our export trade.

We recognize that, world conditions being what they are, the trade-agreements program by itself has not been able to restore the American farmer to his former position in the world market. On certain commodities, particularly wheat and cotton, our Government has proposed special international agreements which would assure our farmers of their share of the world market. Pending the completion of such agreements, it has been necessary for our Government to subsidize the export of wheat and cotton. During the wheat-marketing year, which ended last summer, we were able to export more than 100,000,000 bushels of wheat. The current cotton-export program already assures that during the present marketing year cotton exports will total 6,000,000 bales or more. Both the trade-agreements program and the export-subsidy programs demonstrate the beneficial effects on farm income of the disposal of a relatively small portion of these commodities in the export market. The total cost of last year's wheat-export program was about \$25,000,000, and that of this year's cotton-export program about \$40,000,000, whereas the increase of farm income which has resulted is several times as great.

Have American farmers benefited from an increase in industrial exports resulting from the trade-agreements program? There is strong evidence that they have so benefited. Under the Canadian trade agreement alone industrial exports have increased by almost \$100,000,000. This increase in industrial exports is reflected in a larger volume of factory pay rolls in the United States. These larger factory pay rolls in turn are reflected in increased income received by the producers of livestock products, dairy products, poultry products, and fruits and vegetables.

The Iowa State College study indicates that the over-all result of the trade agreements has been a benefit to American agriculture. Professor Schultz in his report says: "There have been positive gains to agriculture from the trade agreements. Though possibly less substantial than many had hoped for, the gains have been real and in the right direction."

It should be made clear that the American Farm Bureau Federation is not asking for an income for agriculture above the parity level. There is no just reason for complaint about imports of a commodity the price of which is above parity. Our farmers, for example would be glad to admit Argentine corn if the price of corn were above parity. A few years ago when drought cut down our domestic corn crop by a billion bushels, our members had under consideration a recommendation that the tariff on corn be temporarily reduced. But the American Farm Bureau Federation does favor tariff and other policies which will place agriculture in a fair-income relationship with the rest of the public.

We feel that the slogan used in some quarters, "The American market for the American farmer," does not by any means indicate what the farmer really wants. The American market alone is not nearly enough for the American farmer. What the American Farm Bureau Federation stands for is: "An American standard of living for the American farmer."

An important aspect of this whole tariff- and trade-agreement question is the effect of the tariff and other policies on the farmer as a consumer. Agriculture is an important part of the American

market for industry. There are 10,000,000 farm people in the South dependent on cotton and 5,000,000 farm people in the Corn Belt dependent on corn and hogs. All these farmers are producing for export and their income and purchasing power is directly affected by the opportunity to sell their products in world markets at profitable prices.

The farmer as a consumer is affected not only by his own income, but by the price of things he has to buy. For a long time he has had to pay higher prices by reason of the tariff on manufactured goods. If the tariff duties on products the farmer consumes were completely effective in raising prices, the tariff on goods they used in 1935 would have cost American farmers \$681,000,000, according to a recent Department of Agriculture estimate. This amounts to \$108 per farm family. Though the duties were not, in fact, completely effective in raising prices, the actual cost of tariffs to farmers was still a substantial portion of these estimates and amounted to a noticeable item in the farmer's budget that year. For goods used in family living on the farm, tariff costs, on the basis of the same estimate, would have amounted to \$510,000,000 in 1935 and, for goods used in farm production, \$171,000,000. These costs average \$81 and \$27 per farm family.

We hear a great deal these days about taxes that are said to be taxes on consumption. But farmers, who receive so little benefit from the tariff and who must pay tariff-protected prices on purchases to supply their everyday needs, are undoubtedly the chief victims of such consumption taxes. Here are a few articles farmers must buy, and the rate of the tariff tax on them: Shoes, 20 percent; axes, 45 percent; stoves, 70 percent; rope, 30 percent; skillets, 60 percent; suspenders, 35 percent; tooth brushes, 172 percent; tooth paste, 75 percent; padlocks, 253 percent. When you consider the high tariff tax farmers must pay on almost everything they buy, it is little wonder that their total cost of living is increased by hundreds of millions of dollars because of the tariff.

Behind the shelter of sky-high tariff walls, numerous American industries have been able to carry on monopolistic practices and monopolistic price fixing. A notorious instance of this was uncovered by the Federal Trade Commission when, on July 2, 1937, it issued a complaint against the Cement Institute charging it with price fixing, price discrimination, and violations of antitrust laws. The Federal Trade Commission found that the cement industry, the bulk of which was concentrated in two or three giant corporations, maintained a rigid price scale through a "multiple basing point system," and that in order to maintain its price scale, had consistently fought to keep out any competition from abroad.

I cite the case of the cement industry because it is typical of what happens in many tariff-protected industries. Monopoly finds its greatest stronghold in those industries which are the most impregnable citadels of tariff protection.

Reports of the Temporary National Economic Committee show that some of these industries, through their legally sanctioned corporate power, buttressed by tariff laws and other governmental devices, have made trade agreements of their own against the public interest in the form of national and international cartels. Through these controls they have become more powerful than the governments which created them and they fix their own prices to the disadvantage of agriculture, labor, the consuming public, and that portion of business which is unprotected.

The American Farm Bureau Federation is against monopoly and is on record in favor of the Government's efforts to combat violations of the antitrust laws, whether they be in agriculture, industry, or labor. But we recognize that in many cases letting in some competitive imports is one of the most effective ways of enforcing these laws.

Under the Government's legitimate trade-agreements program it is possible to bring some real competition into such industries as the cement industry and thus get some genuine enforcement of the antitrust laws. No consumer group in the United States has more to gain from the restoration of such competition than the farmers.

The claim is sometimes made that high industrial tariffs are necessary to maintain the wage scales of industrial workers. But studies have shown that it is the protected industries that pay the lowest wages. The efficient industries, meeting the competition of the world, are the ones that on the average can pay the best wages to their workers.

Confirming this point, my good friend Charlton Ogburn, counsel for the American Federation of Labor, wired me on January 18 as follows: "In 1929 a survey showed that annual wages paid average worker in 36 typical tariff-protected industries were \$595 less than wages to worker in 36 typical export industries."

From an economic standpoint alone there is ample justification for continuing the trade-agreement program, but in the present state of world affairs, we must keep larger considerations constantly in view. Does the trade-agreement policy make a contribution toward the restoration of orderly relationships among the peoples of the world? It is our belief that it does make a substantial contribution. Suppose the war in Europe should end this year. Upon what basis would our country be able to regain its place in the world-trade picture if our trade-agreement policy is scrapped?

It is absolutely impossible for the welfare of American agriculture to be preserved if we should attempt to reorganize our affairs on a nationalistic basis. Our cotton producers, our tobacco producers, our wheat producers, our hog producers, our fruit producers are all dependent on the foreign market. Suppose the cotton and tobacco producers lost their foreign market completely. They would immediately go into competition with the corn and

hog and beef and dairy producers. The largely imaginary competition which some people claim faces these producers through the trade-agreements program, would be replaced with real competition of tremendous scope within our own country.

The statement has been made that 97 percent of the market for American farm products, with the exception of cotton and tobacco, is right here in the United States. From this the conclusion is drawn that we don't really have to worry about the export market for agriculture.

I want to say to you gentlemen right here and now that the American Farm Bureau Federation does not subscribe to any such fallacy as that. We are out to protect the interests, not only of the cotton and tobacco farmers, but also the wheat and hog farmers, and the producers of other farm commodities, who for many years have been on the export market. And we are out to protect the interests of the dairy farmers and the cattle farmers, for we realize that they too will suffer if the farmers now producing for export are forced into competition with them. Because of the opportunity of farmers to shift from the production of one commodity to another, no one branch of agriculture is immune from the effects of misfortune to any other branch. The truth is that, directly or indirectly, all of agriculture is on the export market.

Some people claim that chemurgy is going to open up new markets for farm products in industry. We all hope that real progress along this line can be made, but sober common sense tells us that we cannot expect any sweeping results overnight. There isn't any magic way out for the American farmer. He must work for markets abroad if he is going to have any chance at all of disposing of his surplus production.

The prosperity of the dairy and cattle producers is related to that of the cotton, tobacco, wheat, and hog farmers in another way. When the farmers of the South, for example, who constitute 47 percent of the 32,000,000 farm population, and whose prosperity or lack of it determines the economic condition of one of the great regions of the United States—when these people are lacking in purchasing power, they cannot buy the butter or beef produced by the dairymen and cattlemen. Neither can they buy the products of industry. And when industry slackens off and factory pay rolls decline, the dairymen and cattlemen are immediately hurt.

The American Farm Bureau Federation stands for unity in agriculture and consistently fights for the best welfare of agriculture as a whole and of every one of its branches.

The American Farm Bureau Federation also stands for national unity and national balance. At our annual meeting a year ago, our members adopted a resolution vigorously supporting measures which will promote a better balance in our national life and strengthen our national democracy. In this resolution they said:

"America needs an economic balance which will assure security for labor, stability for industry, and parity for American agriculture."

It is because we believe the trade-agreement program contributes to that better balance in our national life that we have consistently given it our support.

It all comes down to a question of what is the best method of tariff making. We have the tariff and no one wants to get rid of it so suddenly as to upset the country, but we want the tariff to work for us and not against us. We want to be able to adjust it up or down, according to the interests of the entire Nation. One method which has been proposed is that trade agreements be made subject to Senate ratification. We respect the far-seeing wisdom of the Members of the United States Senate, but as I have shown, it is impossible to safeguard the fundamental interest of the general public when Congress concerns itself with the details of tariff making. The record over the last 20 years shows that that system, as far as agriculture is concerned, is a complete failure. Senate ratification of trade agreements would mean a return to the old system of logrolling. We might as well repeal the law altogether as to have that.

The American Farm Bureau Federation feels that substantial progress has already been made under the trade-agreement program and, if world conditions permit, much greater progress can be made in the future. Therefore, on the basis recommended in our resolution, we favor a continuation of the Reciprocal Trade Agreements Act.

## Appropriation for Dry-Land Agriculture

### EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

### TELEGRAMS FROM CONSTITUENTS

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tele-

grams received by me with reference to the work of the dry-land stations:

HAVRE, MONT., February 1, 1940.

Congressman JAMES F. O'CONNOR,  
Washington, D. C.:

Met with various organizations this afternoon. Believe they are wiring their reaction. M. A. Bell, former superintendent of this station, is in Washington. Can be reached by telephoning Bureau of Plant Industry, Dry Land Agriculture. He can give you all the material you want, having been at this station 16 years.

FRED S. WILLSON,  
Superintendent.

HUNTLEY, MONT., February 1, 1940.

Hon. JAMES F. O'CONNOR,  
House of Representatives, Washington, D. C.

Appropriation for dry-land agriculture at Huntley, Mont., \$4,800. This station for 28 years has been a source of reliable basic agricultural information to farmers and stockmen. Long range and wide scope of research in crop rotations, tillage, regrassing, crop improvement, pasturing, climatic soil moisture, and conservation is yielding increasingly valuable information each year toward sane development of Montana agricultural resources.

A. E. SEAMANS.

BOZEMAN, MONT., January 31, 1940.

J. F. O'CONNOR,  
Member of House of Representatives,  
Washington, D. C.:

Without the supplemental funds provided by H. R. 2422, passed last year, restoring reductions in extension funds, this work would have suffered serious curtailment in Montana. Many people, both urban and rural, deeply appreciated your efforts in support of this bill and trust it will be continued for renewal of this appropriation for next fiscal year. No doubt this is under consideration now, along with other appropriation measures. Renewal of item is vital to maintenance of extension work in this State at present level. Letter dated February 18, 1939, explained need in detail.

J. C. TAYLOR,  
Director, Montana Extension service.

BOZEMAN, MONT., January 31, 1940.

JAMES J. O'CONNOR,  
House of Representatives, Washington, D. C.:

Am disturbed by reports on Budget reductions, Department of Agriculture, as affecting Montana. Cooperative relations between Montana agricultural experiment station and Department involve Bureaus Agricultural Economics, Animal Industry, Dairy Industry, Entomology, Forest Service, and Plant Industry, including Divisions Cereal Crops, Dry Land Agriculture, Forage Crops, Irrigation, Agriculture, and Soil Survey. Do proposed Budget reductions affect only Montana or are they aimed at the West as was true several years back?

CLYDE MCKEE, Director.

HOBSON, MONT., February 1, 1940.

Hon. JAMES F. O'CONNOR,  
House of Representatives, Washington, D. C.:

Do all in your power to amend appropriations bill eliminating Moccasin Experiment Station. This station of vital interest not only to central Montana but the entire Nation as well, for its data on crested wheatgrass and other forage crops. The hardy variety of crested wheatgrass developed at Moccasin station prevents soil erosion and plays an important part of soil conservation.

Senator R. DALE WOODS,  
President, Hobson Commercial Club.

LEWISTOWN, MONT., January 31, 1940.

Congressman JAMES F. O'CONNOR,  
Washington, D. C.:

If production of Montana's high-protein milling wheat, value of her federally sponsored grazing districts, benefits of range-control program, national economic importance of her cattle, sheep, and wool industry, and the very existence of her many communities dependent upon these things is to be maintained, then the 30 years' experiment and research work of Moccasin Experiment Station must be made possible of continuation by Federal support. Urge you extend efforts to secure appropriation for this station.

CENTRAL MONTANA CHAMBER OF COMMERCE,  
HALL CLEMENT, Secretary.

HAVRE, MONT., February 1, 1940.

JAMES O'CONNOR,  
Member of Congress,  
Washington, D. C.:  
Resolution

Whereas the experimental station of the Division of Dry Land Agriculture is conducted at Havre, Moccasin, and Huntley, Mont., by the Bureau of Plant Industry, United States Department of Agriculture; and

Whereas the experimental station has rendered invaluable service in developing and establishing adapted varieties of grain and other

crops, proper tillage practices, as well as in the demonstration of sound farming methods; and

Whereas the work that has been done by these stations have had a sound and constructive influence on the development of dry-land agriculture and the proper utilization of land in Montana; and

Whereas the results of these stations have been widely used by the newer action agencies created to bring about the conservation of natural resources, and proper adjustment in land use; and

Whereas the nature of the experimental and demonstration work carried on by these stations is such that any discontinuance thereof, even for a short period, would, to a considerable extent, nullify the result of the experiments which have been under way for many years, thereby causing irreparable loss to the State; and

Whereas the committee recommendation presented to the Seventy-sixth Congress of the United States does not provide funds for the continuance of the work referred to: Be it therefore

*Resolved*, That the undersigned protest against the discontinuance of this experimental program and ask that provision for its continuance be included in the Budget; be it further

*Resolved*, That a copy of this resolution be sent to the Director of the Budget, Secretary of Agriculture, Senators B. K. WHEELER and JAMES E. MURRAY, and Representatives JAMES O'CONNOR and Dr. THORKELSON, all at Washington, D. C.

HILL COUNTY AGRICULTURE  
CONSERVATION ASSOCIATION,  
By F. B. PURDY, *Chairman*,  
HAYRE KIWANIS CLUB,  
Dr. J. A. WRIGHT, *President*,  
HAYRE ROTARY CLUB,  
By F. S. MARION, *President*,  
HAYRE LIONS CLUB,  
By JESS L. ANGSTMAN, *President*,  
FARMERS GRAIN EXCHANGE,  
By ARTHUR R. POTVIN, *Manager*,  
HAYRE CHAMBER OF COMMERCE,  
By ELMER HANSON, *President*,  
HILL COUNTY PLANNING BOARD,  
By JOHN OSTNESS, *Chairman*.

BOZEMAN, MONT., January 31, 1940.

Congressman J. F. O'CONNOR,

Washington, D. C.:

Budget reductions proposed for Division Dry Land Agriculture will eliminate crop and soil research from dry-land experiment stations at Havre, Moccasin, and Huntley. Means closing Moccasin station and elimination of crop and soil investigation at Havre and Huntley. Would seriously handicap development permanent agriculture in Montana. Farm people place much dependence on results from these stations in planning land use for future. Hope you can urge restoration of funds for Dry Land Division, Department of Agriculture, as it means much to all of Montana east of Continental Divide.

CLYDE MCKEE,

Director, Experiment Station, Bozeman.

GREAT FALLS, MONT., January 31, 1940.

Hon. JAMES F. O'CONNOR,

United States Congressman,

Washington, D. C.

Reliably informed that appropriations for Montana experiment stations being withdrawn. Of the same opinion as several years ago when we and practically entire State protested vigorously against this. Any such elimination would be disastrous. Experiments at Moccasin alone regarding winter kill of wheat saved farmers of State many times appropriation. Hope we may have your best cooperation.

BULEN AND BREITEN CHAMBER OF COMMERCE.

LEWISTOWN, MONT., January 31, 1940.

Congressman JAMES F. O'CONNOR,

Washington, D. C.:

Montana is a large State with a wide variety of soils and with climatic conditions which are highly variable, both as to location and season. No one station alone, without or within the State, can render adequate service regarding research needed for so large an area. There are no federally owned dry-land agronomic stations in Montana, although most State stations have cooperative agreements with various Federal agencies. There are four State-owned experiment stations within Montana where agronomic studies are conducted: Bozeman, the central agency, and the three branch stations: Moccasin (in the center of the State), Huntley (in the southeast area near Billings), and Havre (in the northeast).

The results of the central Montana branch station, which is located about 30 miles west of Lewistown, is representative of the largest part of the dry-land agricultural area of the State. As it is run under a cooperative agreement between the Division of Dry Land Agriculture, Bureau of Plant Industry, Washington, D. C., and the Montana Experiment Station, its success depends upon this agreement. At present 50 percent of the funds are supplied by U. S. D. L. A. appropriations. The Government at present furnishes the technical staff for this Moccasin station, funds for its own project of tillage and methods of seeding of about 200 rotations which have given data over a continuous period of 31 years, one of the longest in the Northwest. This

cooperative agreement also assures the continued operation and cooperation with other agencies such as the Cereal Crops and Diseases, Forage Crops and Diseases, Soil Conservation Service, etc. The results of some of the stations' work will be related later to emphasize the need of Federal funds to keep the continued record of our crops, of which we now have 31 years' results.

The work of the Division of Dry Land Agriculture should be maintained at least at one place in Montana in order that continued studies may alleviate some of future crop problems. The Central Montana Branch Station, located at Moccasin, should be one of or the one station in Montana for the following reasons:

1. It is most representative of all the dry-land stations in Montana and is located in the approximate center of the State.

2. Experiments have been conducted continually for more than 30 years and results are applicable to a large portion of the dry-land areas of the State.

3. The continued cooperation between the State and Federal agencies will allow the continuance of important studies which would be curtailed if the Federal assistance is withdrawn.

4. The success at present of the central Montana branch station is linked with the Federal cooperation and appropriations.

It has been estimated by the economics department that between three to four million acres of land in Montana is known as restoration land. This land, it is agreed by most authorities, should be returned or in grass. Overproduction of wheat has caused other agencies to recommend a marked reduction in the acreage of small grains. During the past 5 years it has proved to be a somewhat difficult task yet fair progress has been made. Each acre taken out of grain production must be properly taken care of or we will increase our conservation problem even greater than it is at present and thereby have more soil, water, and wind erosion. One of Montana's greatest problems is to take proper care of its marginal, restoration, and tillable lands. Thirty years of results and experiments at Moccasin will furnish convincing proof that no other experimental agency has the possibilities of being more helpful in solving our restoration problems. Montana has three and one-half million problem acres.

One of the greatest contributions of the Department of Agriculture regarding the restoration of eroded dry-land soil in the northern Great Plains area is its introduction and development of crested wheatgrass. The Moccasin station has grown this species for 25 years, has recommended it for dry-land use for 20 years, has established stands which have been in production for 15 years, and obtained much data concerning its uses. The future possibilities of this grass are even yet not fully known. No place in Montana or in the Northwest has proven to be better adapted for the growth, production, and use of crested wheatgrass than in central Montana.

Some of the outstanding contributions and work with crested wheatgrass at Moccasin are as follows:

1. Date, rate, and method of seeding and production of seed.
2. Data on the carrying capacity of crested wheatgrass pastures.
3. Comparison of crested wheatgrass pasture with brome and native grass.
4. Preliminary winter-feeding trials comparing the feeding of crested wheatgrass hay with various levels of cheap protein supplements and the pasturing of uncut mature crested wheatgrass.
5. Studies in the change of feed value of crested wheatgrass by chemical analysis during the grazing season.
6. Studies of the ground cover of crested wheatgrass, brome grass, and native grass, as affected by grazing.
7. Determining the number of pounds of beef produced by pasturing crested wheatgrass in comparison to native grass pasture.
8. Date, method, and cost of seeding crested wheatgrass on abandoned crop land.
9. Data on the spreading characteristics of the crested wheatgrass plants in abandoned land plantings.
10. Data regarding the use of crested wheatgrass with or without nurse crops and in mixtures with other grasses and legumes.

The station has approximately one-half of its 800 acres of land in crested wheatgrass which are available for further studies such as:

1. Extended feeding trials with crested wheatgrass hay cut at various stages.
2. Continued rotation, tillage, and crop seedings on land which has been in crested wheatgrass from 1 to 15 years.
3. Future feeding trials using crested wheatgrass straw obtained from fields which produced seed.
4. Future trials with other livestock in the pasturing of crested wheatgrass.
5. Further studies regarding the use of crested wheatgrass in the crop and pasture management of Montana farms.
6. Provide other agencies with long-time data from larger and more practical acreages of grasses, especially crested wheatgrass.

The many future possibilities of crested wheatgrass remain unknown. Continued study is imperative and no station has a better foundation, for such research.

Most of the buildings of the Moccasin Experiment Station are located on the southeast quarter of section 16, township 15 North, Range 14 East. This quarter of land was given to the State of Montana for experimental research as long as the U. S. D. L. A. cooperated in experimental studies but will automatically revert back to the estate should the Federal agencies withdraw their appropriations.

RALPH M. WILLIAMS,

Superintendent, Judith Basin Branch Station,  
Moccasin, Mont.

## Yankee Traders—From Clipper Ships To Clippers

## EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

RADIO ADDRESS BY HON. CARL HINSHAW, OF CALIFORNIA

Mr. HINSHAW. Mr. Speaker, under leave granted to extend my remarks in the Record, I include the following address delivered by me over the Mutual Broadcasting System, originating in their studio at Washington, D. C., February 1, 1940:

I was eating a sandwich in the cloakroom of the House of Representatives the other day when I overheard one of my colleagues from New York tell another that he was going "way out West" to make a speech. He said he was going to Missouri. That struck me as very funny, and I laughed. He turned and said "What's so funny about that?" So I told him about a friend of mine who lives in my home town of Pasadena, Calif., and whom I hadn't seen for several weeks, and when he finally showed up, I asked him where he had been. He said he had gone East on business, and when I asked him where, he answered, "New Mexico." Then we all laughed. Albuquerque, N. Mex., is about as far east of Pasadena, Calif., as St. Louis, Mo., is west of Washington, D. C. This is a big country, in case anyone should inquire. Let me tell you something amazing about it. In this great country we are so busy making things and growing things, and exchanging our products with each other, that our transportation facilities are called upon every year to move for every man, woman, and child in the United States, a ton of freight a distance of 435 miles. Think of it. Think of the enormous amount of business that represents.

Here in the United States we have an abundance of nearly everything we need without having to worry much about what goes on abroad. To be sure, we do need to buy rubber and tin and silk, coffee, tea and spices, perfumes and some vegetable oils and other things, from other parts of the world, but 95 percent of our wants and needs can be satisfied right at home. Our foreign trade amounts to less than 5 percent of our national income, while for England, it is nearly 20 percent. (Figures 1937.)

Last year we heard Mr. Hitler say that Germany must export or die—and he meant it—he was right. Neither Germany nor any other European nation is so fortunate as we. They can't even grow enough food to adequately feed their own people. They all buy food and raw materials in large quantities. The only way they can pay for it all, without paying in gold, is to sell or export their manufactured products and services. And that is where the fighting begins. That is where it has started for centuries past, and for how long in the future, nobody knows.

Fortunate we all are to live in one great country, each part of which contributes of its work and wealth toward a well-rounded whole. Way back 200 years ago when the various parts of this country were still colonies of some European nation, this was a farming and hunting country. We shipped out cotton, corn, tobacco, and furs to Europe, and Europe shipped manufactured goods back to us. Europe was bleeding our country of its wealth, as our Old World rulers would not allow us to manufacture things from our own raw materials without paying a heavy tax. That "taxation without representation" brought on the Revolution, which gave birth to the United States of America. Europe still needs colonies, and for the same reasons as of old. She needs food and raw materials to feed her people and give them employment. And that is what most of the fight is about in Asia too—raw materials—employment—and the more abundant life.

We need some raw materials also—but we aren't fighting about it. Just because we need rubber, we aren't trying to grab the Malay Peninsula from England, and we don't intend to subdue Brazil in order to get coffee. That would be ridiculous. We offer our goods and services in exchange on the markets of the world. It is not necessary for us, as a Nation, to export or die. We export to pay for the things we need and can use from abroad. In fact, we could sit down and just about figure out how much of these various items we should buy from abroad, add it up, and say that the total value is about what we can hope to export every year to pay for these things we need and can use.

But that doesn't seem to be the theory of this administration. In fact, the big brains here in Washington seem to be divided in their counsel. One group seems to believe that the more importing and exporting we do, the better off we are, and another wants "free trade." Those two ideas, when boiled down in the same kettle, make one of the most poisonous concoctions ever fed to American labor, farming, and industry.

Let's see how it works. In the first place, there is no sense in trading just for the sake of trading. Swapping dollars for dollars

or doughnuts for doughnuts isn't what you could rightly call doing business. A good Yankee trade is one in which each side obtains a fair advantage. There is no sense in selling American corn abroad, and at the same time, buying Argentine corn, nor in selling beef cattle to one foreign country, and then buying beef cattle from another. That isn't what could be called a profitable trade. A really good deal is one where we trade corn, oranges, and automobiles for coffee, rubber, and silk. Both sides can benefit from such trading. Each side receives something it needs and can use. That is genuine reciprocal trade. But there is a limit to the amount of genuine reciprocal trading that we can profitably do. That limit can be found by summing up the total value of the foreign products we need and can economically use. If we go beyond that, and bring in products that directly compete with our own home products, we gain nothing. We lose instead. Would you guess that we have been allowing the importation of some of the farm products of which we have such large surpluses already that the market has had to be supported by crop loans and Government surplus purchases? Look at the record. It is almost unbelievable, but quite true.

That seems to be linked somehow with the old idea of "free trade." The idea of world trade without tariff protection comes from two schools of thought. First, we have the internationalists who look upon the other nations of the world as loving brothers of ours and say, in effect, that we in America should be willing to make sacrifices in order that the rest of the world may have peace and prosperity. That's fine; but I am still waiting to meet the unselfish foreigner who wants to help the United States. We do all the helping, while they help themselves. If we can keep peace at home and improve the lot of our own people, we shall be doing well. I like the foreigners, but it seems that when we are invited to help them, they always contrive that we pay the bill. They are expert fumblerers.

In addition to the internationalists, we have the old-fashioned variety of free traders. They mostly come from the Old South, and they have had a legitimate reason for wanting free world trade. For 200 years they have grown twice as much cotton as could possibly be consumed domestically. It has meant that half their crop had to be sold on world markets in competition with the other low-wage, low-standard-of-living cotton-growing sections of the world. And right there is a perfectly good example of what our whole country would be forced to suffer if we went on a free-trade basis all around. The lowest income groups, the lowest standards of living in the United States have persisted in the Old South. Their whole argument for free trade is that they are forced to sell cotton on world markets and buy their supplies on protected markets. Their entire economy has had to be built around cheap labor and low-living standards for their workers, in order to compete with the world. I can speak freely and feelingly on that subject, because while I am a Californian, I am also a grandson of Tennessee and the Carolinas.

It is now too late to benefit the cotton plantation owners by having free trade. In fact, they are likely to be coming to Congress and asking for a tariff on cotton any day now, because Brazil can deliver cotton to our mills cheaper than most of our South can afford to grow it. The South will have to turn to diversified farming and the processing of their raw materials in local factories, some of which have already been built. Cotton grown and consumed in the United States must receive an American price—not a price set by standards of peon labor in Brazil, Russia, and China. The sooner that fact is fully realized, the better for the whole United States. When the average income of the South is raised to equal that of the rest of the United States, we will all be benefited. Free trade should be a dead issue, but a courtly representative of the Old South graces the chair of the Secretary of State, and now guides the foreign-trade policies of our country. "Shall we renew his power to reduce tariffs?" is a question before the Congress. He has already reduced our protection on over 1,000 items, about 200 of which have been tariffs on farm products that compete with our own, such as cattle, pork, cereals, birds, eggs, potatoes, a long list of fruits and vegetables, both fresh and preserved; honey, hay, straw, etc. All this by the misnamed "reciprocal trade agreements" process.

To my mind there isn't any sense in encouraging the importation of such things into our country, regardless of how small the quantity may be. But, although the administration tries to make light of it, they have to admit that we imported last year competing farm products to the tune of \$500,000,000 worth. But that value of imports is figured at foreign prices. If you translate that into American farm prices, it would amount to nearly \$700,000,000 worth of importations to compete with American farmers.

Now, let's see what the effect of that is. It simply means that, if that produce had been raised at home, it would have required the use of about 35,000,000 acres of American farm and range land and all the labor necessary to work it. But we didn't use it, so we have to pay the foreigners for the produce and then spend millions more in supporting idle American farmers and farm labor on relief. We have had to pay a double penalty for that tragic folly. We are going broke fast doing that.

To American industries and industrial labor this means that while they have this foreign market of \$500,000,000, if our own farmers could have grown these products, they would have provided a \$700,000,000 market for such products right at home and saved money to everyone by reducing the relief rolls and increasing county tax collections.

It seems outright lunacy to me for us to restrict crops to help raise prices to parity and then turn right around and allow the importation of the very same crops from abroad. It is bound to suppress the rise in prices, and subsidies for parity payments become a big help to foreign agriculture. If that isn't just plain cockeyed, I don't know what to call it.

Our Secretary of Agriculture has been running from fence post to barn door trying to find some satisfactory method of raising farm prices. He has tried plowing under, acreage allotments, processing taxes, soil conservation, international crop control, export subsidies, erosion control, and now he has a new panacea out of the medicine chest called the certificate plan. Give him credit for having a well-fertilized brain anyway—he can sprout a new idea every year—and his heart is still on the left side. He has tried nearly every scheme he could think up to raise farm prices except the one right under his nose. He could go down the street and ask the Secretary of State to cancel the reductions he has made in tariffs on competing agricultural products, and he might even ask that some of them be raised higher yet. But will he do that? He will not, because the big brains in the New Deal are working toward free trade.

Let me tell you something very interesting. You and all of us have heard a lot of bellowing around about how terrible was the Smoot-Hawley Tariff Act of 1930, haven't we? They blame all our misfortunes and the troubles of the whole world on it. But they haven't repealed it. The Smoot-Hawley Tariff Act is still on the statute books after 7 years of opportunity to repeal it. There are 2,500 tariff items in that act. No doubt some of them needed reduction, but under the Reciprocal Trade Agreements Act of 1934 they have reduced 1,004 of those tariffs through 22 trade agreements that apply to all countries alike when the agreement was made with one. One thousand five hundred Smoot-Hawley tariff rates still stand untouched. But here is the funny thing about it all. Under the Smoot-Hawley Tariff Act, nearly two-thirds of all our imports come in free of duty. They are the things like rubber and coffee and tin and spices that we need and can't produce at home. But give them more time and they will get all the rates down. The average reduction is 38 percent already. About that time we will buy everything we use from abroad and all go on relief. Won't that be dandy.

And that reminds me of what our great President said a long time ago, 1932, in Baltimore. He said: "I know of no effective excessively high tariff duties on farm products. I do not intend that such duties shall be lowered. To do so would be inconsistent with my entire farm program, and every farmer knows it, and will not be deceived."

Well, my friends, over 200 such duties have been lowered, so what? How long will it be before the great mass of intelligent citizens of this country begin thinking for themselves again, instead of trusting in such promises, like a lot of dumb sheep being led to slaughter. You answer that.

### President's Message for Hospitals in Needy Areas of the Nation

#### EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

Mr. KITCHENS. Mr. Speaker, on January 30, the President, in keeping with his humanitarian thought, efforts, and purposes, as always, for those of our people needing unavailable help, recommended the construction of small hospitals in needy areas of our country. None are recommended where private institutions are already available to the people in need of service even if the private institutions are not of the best standards.

Mr. Speaker, I deem the message one of the finest and most constructive for the general good of our people ever delivered to Congress. It remains for us to carry out that message. In my campaign for membership in this honorable body I advocated the establishment of such hospitals. Now, we have one of the greatest of opportunities to render a service to the people for which we will have their everlasting gratitude.

We appropriate for defense every year millions upon millions, yea, billions, for our Army, Navy, Marine and Air Corps. Likewise, we spend many millions to combat pests, diseases of plants and animals. We spend billions for other purposes. Let us not forget it takes strong, healthy, able, and educated men and women to plan, produce, equip, administer, and control all such agencies. We may surround our country with battleships and fill it with soldiers, equipment, and munition factories, but that really will not make us a

strong nation. That is merely a mechanical and superficial preparation of instruments for use in our defense.

To have a strong nation we must have a healthy, contented, educated, and prosperous people. To have a healthy people we must care for, protect, and cure those who are sick, weak, disabled, deformed, and diseased, mentally and physically, and who are without means and facilities for their own rehabilitation. To have an educated people, owing to unequal distribution of wealth, the Federal Government must assist to equalize the opportunities for an education. To have a contented people we need internal improvements and the benefits of modern inventions and civilization made available to all the people. To have a prosperous people we must first be made well, content, and have fair opportunities for an education and decent living and be given an equal opportunity in life under all law.

A bill to carry out our Chief Executive's recommendation in his message as to hospitals is now before the proper committee. The message has my full endorsement. I shall cooperate fully to make it effective.

### Judicial Review in Taxation

#### EXTENSION OF REMARKS

OF

HON. GEORGE L. RADCLIFFE

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, February 1, 1940

ARTICLE BY GEORGE STEWART BROWN

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting and informative article by George Stewart Brown, Esq., on Judicial Review in Taxation. The article was published in the Georgetown Law Journal for November 1938, and reprinted in the Baltimore Daily Record of January 3, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JUDICIAL REVIEW IN TAXATION A NECESSITY IN A GOVERNMENT OF LAW

(By George Stewart Brown<sup>1</sup>)

In the general discussion over administrative law now going on, it may be profitable to consider the origin, history, and development of the judicial review of the legality of a tax. This arose and was fully developed before the expression "administrative law" was ever used in this country.

In the first place the term "administrative law" may be somewhat misleading. It simply means "public law," that which grows out of litigation between the citizen and his Government, as distinguished from "private law," the law which controls litigation between private individuals.

To the casual person the term "administrative law" may falsely suggest the idea of a court performing some part of the administration of government. That is a complete misconception. For clarity, then, the term "public law" is greatly to be preferred in any discussion of the subject of whether or not, and if so to what extent, the action of governmental administrators should be subject to court review.

When government was simple, before it assumed its present multitudinous duties and all-pervading control of social problems, the suits between the citizens and their government arose principally concerning the incidence, and application, of tax laws. The administrative action of Government officials in applying, assessing, and levying taxes was the principal administrative action which citizens desired to have reviewed by the courts.

As the sovereign government was not suable directly without statutory permission, and as, at that time, there were no statutes giving such review, it required the ingenuity of the common-law lawyers to invent remedies to meet the situation and to promote the ends of justice.

It was always plain that when an administrative official misapplied a tax law, by including within the tax subjects or persons

<sup>1</sup>A. B., Johns Hopkins University (1893), LL. B., University of Maryland (1895). Judge of United States Customs Court since 1913. Author of: The United States Customs Court (1933) 19 A. B. A. J. 333; Judicial Review in Customs Taxation (1933) 26 Law. and Bank. 263.

not intended by the legislature, or by imposing a rate or amount of tax higher than the law authorized, either by misapplying the facts which made the law apply, or by misconstruing the terms of the law itself, an injustice was done and the Government Treasury was enriched at the expense of the citizen by taking something which did not belong to it.

The common-law writs of mandamus and prohibition, the writ of right, and the equitable writ of injunction, all invented or applied by the courts to control the illegal acts of public officials, as well as the illegal acts of individuals, did not fully meet the situation. They generally lay in the discretion of the court, and the court could not review a discretion in the official expressly granted by the statutory law, but could only correct an arbitrary abuse of such official discretion. For the purpose of giving a judicial review of the administrative act of collecting an illegal rate or amount of tax they were not fully effective. Something more had to be done.

The common-law courts came to the rescue by sustaining the common-law action against the tax collector himself, which compelled him to pay to the citizen the amount of an illegal tax collected by him, whether it arose through his mistake in finding the facts which made the law applicable, or his mistake in construing the law. The former, of course, was just as vital and necessary as the latter.

In the United States, following settled British precedents<sup>2</sup> the doctrine was first declared in its fullness by the Supreme Court in *Elliott v. Swartwout*.<sup>3</sup> The court here points out that, if in making payment to a collector, notice is given to him that the duties charged are too high, and that the party paying did so only to get possession of his goods, and a declaration is made by such party that he intends to sue the collector to recover the amount erroneously paid and so the collector should not pay it over to the Treasury, then certainly the party in question should have an action against the collector.

To hold otherwise would mean that no action would lie against a collector to recover excess duties paid to him, but that recourse must always be had to the Government for redress. This would be carrying the exemption of public officers too far.<sup>4</sup>

Later in *Bend v. Hoyt* the Court concludes in effect that the law must be where an agent illegally demands and receives money, and then pays such money over to his principal, after notice not to do so, he is nevertheless personally liable for such money as was paid to him illegally.<sup>5</sup>

Mr. Justice Cardozo made some interesting comments regarding the historical development of the judicial remedy in taxation in *Moore Ice Cream Co. v. Rose, Collector of Internal Revenue*,<sup>6</sup> wherein he stated that, at common law, and under the Federal Statutes for many years, protest at time of payment was a condition precedent to the recovery of taxes.<sup>7</sup> This rule was finally abolished by the Revenue Act of 1924 which applied to all future suits (but not to suits pending). He pointed out further that this requirement of protest, when it was in effect prior to the statute, applied to suits against the Government itself as well as the collector of internal revenue and that in the latter case the United States was usually the genuine defendant, the liability of the nominal defendant being only a formality. Thus the Government was unjustly enriched at the expense of the taxpayers when it held on to moneys collected illegally, with or without protest.<sup>8</sup> It is to be noticed that Judge Cardozo refers to customs

cases and income-tax cases interchangeably, rightly considering the principles equally applicable to both.

The trouble with those who maintain that the finding of the facts which make the tax applicable by the administrative officials should be binding on the reviewing court if there is any substantial evidence to support it (and there usually is some) is that they practically propose that the party defendant (or his subordinates, which amounts to the same thing) may bind the plaintiff taxpayer as to the facts without effective judicial review. That is obnoxious to the most elementary principles of justice. It violates the principle that no one can be both actor and judge in his own case. The judicial review remaining, whenever the case turned upon a mixed question of law and fact, which is generally the case in customs taxation and frequently true in other taxation, would be a sham and a farce.

Only in those rare cases where the facts are admitted and the litigation turns solely upon the construction of the language of the law would the citizen's rights be protected and preserved.

Those early Supreme Court cases where the principle was declared involved customs taxation, then the main source of our Federal revenue. The principle necessarily applies, however, to all forms of taxation. It carries with it a right to a jury trial on the facts.

While statutory remedies have succeeded it since 1890 in customs taxation<sup>9</sup> by direct suit against the United States, an equivalent action to recover illegally collected income, estate, and other taxes with a jury trial may be brought in the United States district courts today.<sup>10</sup>

Thus the public law to permit review of governmental action in levying illegal taxation developed early as a substantive proposition in a class by itself. Such judicial review is vital in a government of law constitutional in form, as distinguished from a totalitarian government where the citizen has no rights which the government is bound to respect.

Without it, Frank J. Goodnow, former president of Columbia University and of Johns Hopkins University, says that constitutional government is impossible.<sup>11</sup>

The judicial review from the findings of the so-called independent agencies of Congress, such as the Interstate Commerce Commission, the Federal Trade Commission, the Labor Relations Board, the Tariff Commission, and the like, is very limited in scope. This is because they carry out delegated powers legislative in character. They fill in the legislative details and apply to particular situations a legislative discretion in furtherance of the general indefinite legislative policy declared by Congress.<sup>12</sup>

Judicial review of the action of the above agencies and their factual determinations is usually confined to constitutional questions, which are few; and to violations of the statutory requirements in procedure, including a fair hearing. The courts cannot review the weight of the evidence upon which their findings are based but can only set them aside as being purely arbitrary.

Whatever justification there may be for that limited review, on principle it cannot apply to the administration of a tax law. The administration of tax laws consists simply in collecting the rate or amount of taxes which the legislature has imposed. The tax collector does not act under a delegated power, legislative in character, to levy taxes as the agent of Congress under a delegated congressional rule, as does the tariff commission under the flexible tariff and the President in negotiating a reciprocity treaty. The collector simply collects the taxes in rate or amount as fixed by Congress in the law itself. He does not make the law. He does not change the law even in the remotest detail.

If then his discretion in construing it, or in finding the facts which make it applicable, is binding, without any right to the disgruntled taxpayer to a day in court to test the accuracy of his findings, both as to law and fact, before a court independent in tenure of the executive, which must weigh the evidence as well as construe the law, the tax collector becomes an autocrat instead of an administrator. The taxpayer has no protection from the collector's illegal action whatsoever. The taxpayer in such circumstances must pay what the official demands from him whether the legislature has taxed him or not.

As La Ferrière says, before the official the citizen can only beg and complain. Any relief he obtains is a matter of favor and grace. When he gets before a court, however, he asserts a right to be treated according to the terms of the law and according to the facts which make the law applicable, and demands that his rights be respected by a judgment of the court in his favor.<sup>13</sup>

<sup>2</sup> *Irving v. Wilson* (4 T. R. 485 (1791)).  
<sup>3</sup> "The suit was originally instituted in the superior court of the city of New York by the plaintiff against the defendant, the collector of the Port of New York, and was removed by certiorari into the circuit court of the United States." (10 Pet. 137 (U. S. 1836).)

<sup>4</sup> 10 Pet. 137, 156 (U. S. 1836).

<sup>5</sup> In *Bend v. Hoyt*, 13 Pet. 263, 267 (U. S. 1839), Justice Story said, "As to the first question, there is no doubt that the collector is generally liable in an action to recover back an excess of duties paid to him as collector where the duties have been illegally demanded and a protest of the illegality has been made at the time of payment or notice then given that the party means to contest the claim whether he has paid in the money to the Government or not."

<sup>6</sup> 289 U. S. 373, 375 (1933).

<sup>7</sup> *Elliott v. Swartwout*, 10 Pet. 137, 153 (U. S. 1836); *Curtis's Adm'x. v. Fiedler*, 2 Black 461 (U. S. 1862); *Chesedborough v. United States*, 192 U. S. 253 (1904); *United States v. N. Y. & Cuba Mail S. S. Co.*, 200 U. S. 488 (1906).

<sup>8</sup> 289 U. S. 373, 378 (1933). Justice Cardozo continues on p. 380:

"As the law stood before later statutes, the taxpayer's protest was notice to a collector that suit was about to follow, and was warning not to pay into the Treasury the moneys collected. *Elliott v. Swartwout*, *supra*; *Smetanka v. Indiana Steel Co.*, 257 U. S. 1, 4. Statutes first enacted in 1839 (act of March 3, 1839, c. 82, sec. 2, 5 Stat. 348) and progressively broadened (R. S. sec. 3210, c. 26 U. S. C. sec. 140), made it the duty of the collectors to pay the money over to the Government, whether there had been protest or no protest. At first this was thought to have relieved them from personal liability (*Cary v. Curtis*, 3 How. 236; *Smetanka v. Indiana Steel Co.*, *supra*), but later acts of Congress establish a different rule, though maintaining the duty to make remittance to the Treasury. *Philadelphia v. Collector*, 5 Wall. 720, 731; *Curtis's Adm'x. v. Fiedler*, 2 Black 461, 479; *Collector v. Hubbard*, *supra*; *Arnson v. Murphy*, 109 U. S. 238, 241; 5 Stat. 727; 12 Stat. 434, 725, 729; 12 Stat. 741, sec. 12; 13 Stat. 239; 14 Stat. 329, sec. 8."

<sup>9</sup> See the writer's *The United States Customs Court* (1933), 19 A. B. A. J. 333, 82 CONGRESSIONAL RECORD, pt. 3, Appendix, December 11, 1937, at 411.

<sup>10</sup> *McCaughn v. Real Estate Co.*, 297 U. S. 606 (1936); *Higgins v. White*, 93 F. (2d) 357 (1937).

<sup>11</sup> Goodnow, *Principles of Constitutional Government* (1st ed. 1916), 244.

<sup>12</sup> *Norwegian Nitrogen Products Co. v. United States*, 283 U. S. 294 (1933); *L. & N. Ry. v. Garrett*, 231 U. S. 293, 305 (1913); *Simpson v. Shepard*, 230 U. S. 354 (1913). *Arizona Grocery v. Atchison Ry.*, 284 U. S. 370 (1932), at p. 386 Mr. Justice Roberts says: " \* \* \* it speaks as the legislature, and its pronouncement has the force of a statute."

<sup>13</sup> La Ferrière, *Traité de la Jurisdiction Administrative et des Recours Contentieux*, pp. 6, par. 2 (1896).

That denotes the difference between a government of law and a government of men, between a free government and one under which the citizens are not free.

Denial of the judicial review in taxation would set up autocracy in its worst form, applying the principles of a totalitarian government. It would amount to taxation by administrative fiat instead of by law. As taxation is the power to destroy it would indeed establish a supreme omnipotent bureaucracy. This is equally true no matter what supposedly expert advice the tax administrator takes before acting and no matter how full and free a hearing he, or his subordinates of limited tenure, vouchsafe to the begging and complaining taxpayer.

After all he, or his subordinates acting for the Government, are virtually the defendants when the matter gets into court, and so far and to the extent that his action on either law or fact binds the court and limits the review, he becomes actor and judge in his own case.

The dangerous ground which we are approaching is vividly set forth by Coleman Silbert in the January 1933 Georgetown Law Journal in an article entitled "Federal Taxation Remedies and the Doctrine of Sovereignty." At page 224 he mentions the recent suggestions of some legal writers that the remedies of all taxpayers be curtailed. This would be a calamity. The public should be aroused to the danger thus threatened, presumably in the name of fancied efficiency in government.

No government could be described rightly as either efficient or honest which denies to its citizens all legal remedy for the return of illegally collected taxes. It is admitted that believers in a totalitarian form of government would not concur in that statement.

As the functions of government continue to increase, and new forms of taxation multiply, the question of the judicial review of administrative action, and particularly the question of maintaining in their full integrity the legal remedies to compel the return by government of illegally collected taxes becomes of tremendous importance in a government of law such as ours.

The denial of a full, adequate, and complete judicial review of either questions of law or questions of fact in taxation cases becomes more disastrous in its effects upon the citizens of a free, democratic State as governmental functions continue to expand and multiply.

The fact that under the doctrine of sovereignty the Government may have the "power" to deny such relief to its citizens is not a sound public reason for exercising such tyrannical power. It is hardly a question of policy or expediency, as some seem to think. It seems to the writer to be a simple question of right and wrong.

Mr. Justice Story stated in effect in *Cary v. Curtis*<sup>14</sup> that the most important power of a free people is that of levying taxes and duties; that if this power is to rest simply with an executive functionary of the Government, who has discretionary powers from which there is no appeal to any judicial tribunal, then certainly there is no security whatsoever for the rights of citizens. Furthermore, if Congress can, within its constitutional authority, vest such arbitrary power of interpretation in an executive functionary, there is hardly a limit to the scope of legislation which may give further such power to the executive department, even to the Executive himself. Certainly it was not the intent of Congress to deprive the citizen of such an important remedy and so leave him without any adequate protection.

Justice Story points out further that in such a case the only place of appeal will be to the Secretary of the Treasury. None of the rules of law will apply, and even though the Secretary acts in a fair and just manner, as he naturally would, there is nevertheless a usurpation of judicial authority by the executive branch of the Government. In a sense one entire field of controversy will no longer be tried by the law courts, but rather be decided by a single man. And lastly, discounting all of the above, the question arises, can one man decide a problem so fraught with difficulties, and in which the line of demarcation between various articles and fabrics, for instance, is so fine and sometimes obscure? Certainly in such complicated matters a judicial inquiry is more fitting than the discretion of one man.

Justice Story summarizes in his conclusion, that it is a known fact that the Secretary of the Treasury issues his instructions in detail to the various collectors of the customs setting out his interpretation of the various revenue laws. Therefore, the right of appeal to the Secretary is fruitless, as he has already made known his ideas and in the great majority of the cases the collectors follow his instructions in detail. Thus everyone knows in advance how the Secretary will decide. And since the Constitution looks to the courts for the interpretation of the laws, it is illogical now to rest that right in an executive officer. In the opinion of Justice Story, Congress never intended to pass any statute by which the courts of the United States and the courts of the several States should be excluded from all judicial power in the interpretation of the revenue laws, and substituted for these courts an executive functionary. This would in effect deprive the citizen of rights,

privileges, and liberties to which he is entitled under our system of government.

Although what Justice Story had to say in the above opinion was filed as a dissent it became the law by declaratory action of Congress 36 days after its delivery. It is the most forceful statement of the absolute necessity of an independent judicial review in taxation to be found anywhere.

Dr. Frank J. Goodnow, former president of Columbia University and former president of Johns Hopkins University, also adds weight to the argument that the reviewing court must be independent of executive control if constitutional government is to be preserved:

"We may say, then, that one of the fundamental principles of constitutional government, as seen in the law of modern European states is:

"First. The existence of judicial bodies independent in tenure of the executive, which shall

"Second. Apply the law regulating the relations of individuals one with another—usually called the private law—by deciding the cases brought before them; and

"Third. Shall apply in the same manner the law regulating the relations between officers of the government and private individuals—usually called the public or administrative law.

"Whether a formal distinction is made between the private and the administrative law, and whether these two functions are discharged by the same courts, are matters of comparatively little importance. The important thing is that the courts which have these powers shall be independent of the executive. Without such independence it may be said that constitutional government is impossible."<sup>15</sup>

In conclusion, Woodrow Wilson in his lectures at Princeton stated the necessity of such an independent judicial review in a fashion which seems to be a prophetic answer to the present-day advocates of an authoritarian, as distinguished from a constitutional, form of government.<sup>16</sup>

"A man is not free through representative assemblies; he is free by his own action, in his own dealings with the persons and powers about him, or he is not free at all. There is no such thing as corporate liberty. Liberty belongs to the individual, or it does not exist. And so the instrumentalities through which individuals are afforded protection against the injustice or the unwarranted exactions of government are central to the whole structure of a constitutional system. From the very outset in modern constitutional history until now it has invariably been recognized as one of the essentials of constitutional government that the individual should be provided with some tribunal to which he could resort with the confident expectation that he should find justice there, not only justice as against other individuals who have disregarded his rights or sought to disregard them, but also justice against the government itself, a perfect protection against all violations of law. Constitutional government is par excellence a government of law."

## The Outlook in the Near East

### EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 25, 1940

ADDRESS BY PROF. WILBUR WHITE

Mr. SHANLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Prof. Wilbur White:

Back in 1913 when William Miller published the first edition of his book on the Ottoman Empire, he began it as follows: "The near eastern question may be defined as the problem of filling up the vacuum created by the gradual disappearance of the Turkish Empire from Europe." Although our current view of the near eastern question covers somewhat more territory than Turkey in Europe, the essential fact of the struggle for the distribution of the spoils of the "Sick Man" continues to be important. Miller's study was chiefly of the nineteenth century, beginning with the Treaty of Kutchuk Kainardji in 1774 when, as Bernadotte Schmit has put it, Turkey "made its bow on the stage of western European diplomacy." During the period that Miller covered two answers were provided to the question of what was to succeed the Ottoman Empire—answers which found their way into the title of another penetrating study, that by Hans Kohn, which was published in 1931 and called in the English translation, *Nationalism and Imperialism in the Hither East*.

<sup>15</sup> Goodnow, *Principles of Constitutional Government* (1st ed., 1916), 244.

<sup>16</sup> Wilson, *Constitutional Government in the United States* (1st ed., 1908), 16, 17.

<sup>14</sup> *Cary v. Curtis*, 3 How. 236, 254, 256, 257 (1845). The details are given in the writer's *The United States Customs Court* (1933), 19 A. B. A. J. 333, 416; and *Judicial Review in Customs Taxation* (1933), 26 Law. and Bank. 263. See also *DeLima v. Bidwell*, 182 U. S. 1 (1901); and *United States v. Schiesinger*, 14 Fed. 682, 683 (1882).

The answer of the great powers was imperialism, and few of the great states of Europe failed to take advantage of Turkish decrepitude to enlarge their respective empires. In this policy of imperialistic land grabbing, friction occurred from time to time between the great powers, culminating occasionally in wars and threats of war. From the time of Napoleon through to the World War the Near East periodically became a focus of imperialistic conflict.

The subject peoples of the Turkish Empire, on the other hand, provided a second and very different answer to the near eastern question. Their answer was that of nationalistic self-determination, which, in turn, involved for them a series of conflicts. The first and most obvious was with the parent state. Another was a conflict between themselves in the settlement of their mutual boundaries. But equally important was a third conflict which involved their relations to the great powers whose own interests were projected into the area which the smaller groups had hoped would be their respective national domains. The total picture thus produced involved an amazing complexity of international ambition, with great powers set against great powers, small states set against small states, and a bewildering array of smaller states sponsored by great powers struggling against other great powers or small states backed by great powers.

At the risk of putting undue emphasis on the historical background, it may be well to review briefly certain objectives of the foreign policies of the states involved in the near eastern question to the extent that they became traditional. Such a one is the drive of Czarist Russia for an ice-free port which made Russia vitally interested in the Black Sea, and access to the Mediterranean through the straits at Constantinople. The result has been recurring conflict between Russia and Turkey, a conflict that was consistent though intermittent until 1917. Another power adjacent to the area and vitally interested, particularly in the Balkans, was Austria-Hungary, which from time to time attempted to extend her power by occupation, annexation, and the acquisition of spheres of influence in southern Europe. Prior to the World War this was greatly augmented by the *Drang nach Osten* of Germany and its challenging Berlin-to-Baghdad dream.

France also had interests in the Near East, which Napoleon attempted to materialize, and although the French were for some time excluded from the area as far as possessions were concerned, their cultural influence has been strong even in countries other than Syria and the Lebanon, over which France was granted a mandate after the World War. Great Britain came into the picture by forcing Napoleon out of Egypt, and by a policy of guaranteeing that no other great power should detach the Arab sections of the Ottoman Empire. In 1882 the British occupied Egypt, having been drawn in to a considerable degree because of their interest in the Suez Canal, toward which the British attitude went through more or less the same stages as Pope ascribes to man's view on vice:

"Vice is a monster of so frightful mien  
That to be hated needs but to be seen,  
Yet seen too oft, familiar with her face,  
We first endure, then pity, then embrace."

After occupying Egypt, Britain extended her interests in the area (Aden was acquired in 1839), and she became the self-appointed protector of the small states bordering on the Persian Gulf and developed an oleaginous interest in Mesopotamia. Italy was a late-comer in Mediterranean imperialism, having been crowded out of Tunis by France in 1881, but she acquired Tripoli after the war with Turkey in 1912, which time also dated her occupation of the Dodekanese Islands off the southwest coast of Turkey. The combination of these imperialistic policies was a contributing factor to the World War, in which Britain, France, Russia, and later Italy joined in checking the German-Austrian attempt to gain the hegemony of the Near East.

During the same period the Balkan peoples had been struggling among themselves for the succession to the Ottoman domains, and, if one omits Macedonia, independence had been achieved by the World War by all the Balkan states except Albania, which itself had acquired a degree of self-government. The peace conference following the World War set up a new status quo in the area. In spite of the defection of Russia, the Allies had thwarted the designs of Germany and Austria. Austria and Hungary were cut down and separated, and Germany was put in a position in which she could not soon repeat her threat to Anglo-French domination of the Near East. France was aided by the Little Entente. Italy was given title to the Dodekanese Islands, and England and France were given control of certain of the Arab countries under the new system of mandates.

Since the World War the pattern of progress in the international relations in the Near East has apparently been more simple than it was in the century and a half before the war. No threat to the new status quo was observed on any dangerous scale on the part of any great power for some 15 years. This obviated one of the main dangers of war which had been present during and immediately after the nineteenth century, namely, that conflicting imperialisms would burst into open flame. The second threat of conflict, that between the subject people, did, however, continue, particularly in the Balkans, and we find Bulgaria especially maintaining what she considered legitimate territorial demands against all of her neighbors. At the same time Hungary continued to press her claims for Transylvania, which Rumania had acquired, and Russia refused to recognize Rumania's acquisition of Bessarabia.

Such irridentism was less important in the Arab countries, and the problem of the Turkish boundaries, except for Alexandretta, seemed not to be one which would produce conflict. The chief point of friction was that between the subject peoples and the great powers which held varying degrees of overlordship over them. The small states demanded their independence, and the process of acquiring that independence resulted in rioting, unsettled conditions, and more or less bloodshed in Egypt, Iraq, Syria, and Palestine. In the two decades which have followed the World War, however, the same general tendency which was followed in the Balkans has been observable also in these Arab states, namely, in the direction of independence. Iraq was the first state to achieve this legal status, which she was granted in the treaty of 1930. Egypt followed by a similar procedure in 1936. The French have been more reluctant to grant this step to Syria and the Lebanon and have found numerous excuses for dividing the country and forestalling complete independence. Palestine also, due to a considerable degree to the fact that she had two conflicting nationalities within her borders, has also been unable to achieve self-government.

It may be, of course, argued that Iraq and Egypt do not have complete independence. That is quite often the case where such small states are within the sphere of influence of great powers. Great Britain has been adept, however, at doing in these countries a thing which is somewhat similar to that which she has done in the Dominions. She has not forced compliance to the strictest dependence upon the sovereign ties, but has rather granted the wishes of these other parts of the Empire, depending upon a community of interests to hold the sections close to her. In Egypt and Iraq, of course, there were stipulations which varied from the dominion relationship in certain legal servitudes, such as the maintenance of bases and the passage of troops. Britain has discovered, however, that by granting these small states the trappings of independence and by having them agree to grant her what she deems necessary for the sake of her imperial communications and economic good, and then setting the whole relationship up in the form of an alliance, both she and the small states have achieved a maximum of advantage from a relationship which they, hardly less than she, would desire to sever. France has not learned this lesson as rapidly or as well as Great Britain, but in Syria and the Lebanon she is, at least theoretically, committed to the principle of such action. The result has been what might be called a relaxing or decreasing imperialism on the part of Great Britain and France, which, if other factors had not intervened, might well have been expected 5 years ago to culminate in the relatively peaceful acquisition of independence by the Arab peoples.

This post-war tendency of simplification of the near eastern problem has broken down in the last 5 years in the face of the threat of increasing imperialism on the part of certain other great powers. Italy's acquisition of Ethiopia and her more or less unofficial claims, including not merely Sardinia and Tunisia but a share in the Suez Canal and rather vague assertions toward expansion in the eastern Mediterranean and in Africa, challenged the trend which had involved merely a settlement of the question of future independence between the subject peoples and the withdrawing imperialism of Great Britain and France. The challenge was twofold. The threat was recognized not merely by the Turks and the Balkan and Arab peoples, the last of which had no desire to jump out of the British or French frying pan into an Italian fire; it challenged also the assumptions of Britain and France in regard to the post-war status quo in this area. The claims of Italy were presented up to the middle of this last year rather vociferously, and even recently they have been vaguely referred to as being still valid. Since 1938, however, an even greater potential threat has come from Germany, who, in taking Czechoslovakia and applying economic pressure throughout the Balkans, has been feared as an even more powerful example of imperialism which desires to expand into the Near East.

As we approach 1940 and attempt to project the lines of policy which have been observable in the recent past, a number of general plans which have operated previously comes into view. On the one hand, there is a considerable amount of strength on behalf of the status quo. In the first place, most of the small states highly favor a continuation of the present set-up as opposed to the possibility of their being returned to a smaller degree of independence by one or another of various great powers who have been developing, expanding, rather than relaxing policies of imperialism. In the Balkans, except for Bulgaria, most of the strictly Balkan states are definitely opposed to any major revision. Hungary, which borders on the Balkan area, may be classed with Bulgaria as one of the two revisionist states in the Balkans which have such important territorial claims against their neighbors that they might possibly view with some pleasure the forcing of their claims by some great power sponsor. Hungary and Bulgaria, however, have been placed in the very painful dilemma of having to decide whether their revisionist claims are worth the price of the existence of their own governmental regimes which would almost certainly be endangered by calling in the Nazis or the Soviets to help them establish their claims. Turkey and the Arab countries are essentially in the same position as the majority of the small states of the Balkans, and much prefer their own existing positions to anything which might be offered by Germany or Russia, or even Italy. It is typical, for example, that criticism of Great Britain from Palestine has been almost entirely replaced by loyalty since the war opened.

Not merely do the majority of these small states take a stand upon the status quo independently; they have banded together in small-state groupings for their mutual defense. The Balkan states of Greece, Yugoslavia, and Rumania have been tied to Turkey in the so-called Balkan Entente since 1934. This group directed its energies chiefly against expansion on the part of other Balkan states, mainly, of course, Bulgaria, and after Greece established the principle that she would not necessarily be drawn into a war with Italy should Yugoslavia fight that state back in 1936, one can hardly predict to what extent the Balkan Entente would operate against great powers, as, for example, Germany or Russia. Another grouping of the small states though on a nonaggression rather than a mutual-defense basis is that of the near eastern group—Turkey, Iran, Iraq, and Afghanistan—set up by the treaty of July 8, 1937.

Perhaps even more important in the defense of the status quo in the Near East is the commitments of England and France to the small states in the area. Under a system of mandates, alliances, mutual-assistance pacts, and guaranties, the British and the French have committed themselves to the defense of a large number of the countries in the area. Great Britain has alliances with Iraq and Egypt, and the mandate over Palestine, and looks upon most of the Arabian Peninsula, except perhaps for the Yemen, where the Italians are interested, as her special sphere. France is much less well represented among the Arab states, but maintains a mandate over Syria and the Lebanon. More recently Britain and France have further committed themselves by the mutual assistance pact with Turkey of October 19 and even earlier guarantees extended to Greece and Rumania. While it may be doubted whether France and Great Britain would ever uphold these commitments to their largest interpretation, it is nevertheless clear that in a number of these cases the French and British interests so closely parallel the interests of the small states that these great powers might well be willing to fight against an attack which would threaten to disturb their existing relations. One might question whether Britain and France would care to fight to maintain Rumanian control of Bessarabia, for example, should the Soviet Union advance across the Dniester River. But no less an authority than Maj. George Fielding Eliot has intimated that the British and French military officials might well be far from averse to forcing the Germans to fight on two fronts, which if this is the case, might definitely bring Britain and France into the Balkans to prevent German extension in that direction.

Italy, within recent weeks, has had a change of heart, and after having acquired some of her aims in the Balkans by the acquisition of Albania, now gives the appearance of favoring the status quo in that area insofar as she is averse to seeing Russian power extend in that direction. From her pronouncements rather than from her commitments, which are chiefly on a basis of friendship and trade, Italy might well be expected to take more offense at Soviet expansion into the Balkans than Great Britain or France.

On behalf of the change of the status quo there are similarly found interests of both small states and large. Austria-Hungary as such is out of the picture, but Hungary as recently as November publicly claimed that she could take no part in the establishment of a Balkan bloc barrier to either Germany or Russia unless certain of her long-standing claims, presumably chiefly those regarding Transylvania, were taken care of first, a point of view to which the Rumanian Government could not accede. Bulgaria, as has been almost always the case in the last 60 years, has revisionist claims, at present directed primarily against Rumania, perhaps to a slightly less degree against Greece, and to a minor extent against both Yugoslavia and Turkey.

One of the most important questions in regard to this whole problem is the possibility that Hungary and Bulgaria might join some kind of a Balkan bloc, or, on the other hand, the danger that they will call in Germany or Russia to exploit a situation which they have long felt unjust. Both are aware of the danger of the importation of Nazi-ism and the current variety of Communism, but the problem is, of course, being weighed very seriously in each country. Up until August it seemed the greatest threat came from Germany, who, in taking Czechoslovakia and Austria, had driven a wedge in the direction of the Balkan states. The German attack on Poland did not help matters from the point of view of the Balkan states, who well feared that they might be next in line, particularly Rumania. With the rapprochement between Germany and Russia the Balkan peoples have been no more happy. A combination of those two states driving into the Balkans would make a very serious change in the situation existing in that area. The extent to which Russia has been acting against Germany rather than with her along the Baltic, however, has raised the question as to the degree of cooperation that might be expected in the Balkans from those states. There is no doubt that currently thoughts in the Near East have turned to Russia rather than to Germany, and the big question mark for the coming year in the international politics of that area is, "What will the Russians do?"

The essential question in regard to Russian foreign policy is this: Has it changed to such an extent so that it is, in spite of protestations of the past years, definitely committed to a policy of imperialism? Insofar as the Russians may be convinced of the necessity of their Baltic acquisitions as defensive against Germany, Russia may perhaps not be a true threat to the Balkans and the Near East. If, on the other hand, the long-standing Russian desire for an ice-free port and its concomitant objectives

are dusted off and revived by the Communists, that is an entirely different matter.

At the beginning of this paper I mentioned in passing the long-time aims of the Czars toward the south. If those are to be revived, no Balkan state is safe. Istanbul is an important objective, as the control of the straits is practically as important as a frontage on the Black Sea. The Persian Gulf and the oil fields of Iraq and Iran also beckon, and, if not the sky, at least the southern seas are the limit of these ambitions. The moves on the near eastern chessboard have been extremely complicated, but the threat of Russia, or the possibility of the threat of Russia, seems at the close of 1939 to be the matter of largest importance for 1940 in the Near East.

Senator William E. Borah

## EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

Mr. SHANLEY. Mr. Speaker, I think no more fitting poem has ever been written to characterize Senator BORAH's life than that of Amos Bronson Alcott on Wendell Phillips:

People's Attorney, servant of the Right!  
Pleader for all shades of the solar ray,  
Complexions dusky, yellow, red, or white;  
Hast only questioned, What will Duty say?  
And followed swiftly in her narrow way:  
Tipped is thy tongue with golden eloquence,  
All honeyed accents fall from off thy lips,  
Each eager listener his full measure sips,  
Yet runs to waste the sparkling opulence,  
The scorn of bigots, and the worlding's flout.  
If Time long held thy merit in suspense,  
Hastening repentant now, with pen devout,  
Impartial History dare not leave thee out.

Dedication of Woodhaven Branch of Jamaica, N. Y.,  
Postoffice

## EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

ADDRESS BY HON. EUGENE J. KEOGH, OF NEW YORK, AND  
PROGRAM OF CEREMONIES

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks, I include a speech I made at the dedication of a new Federal post-office building at Woodhaven, N. Y., together with the program of the ceremonies and certain small excerpts in connection therewith:

ADDRESS BY HON. EUGENE J. KEOGH, OF NEW YORK

Mr. Chairman, Postmaster Rosenquest, reverend clergy, invited guests, and friends, the drabness of the day should not, and I am sure will not, mar the joy that is properly yours on the occasion of the dedication of the new building for the Woodhaven Branch of the Jamaica Post Office. It is indeed a pleasure and a privilege for me to join with you this day. The beautiful building that from now on will serve this community is one of which we may all be proud. Its construction and completion are a testimonial to the fine spirit of cooperation and assistance rendered by the high-ranking officials of the Post Office and Treasury Departments, under whose supervision public buildings, such as this, come, especially Postmaster General Farley and Fourth Assistant Postmaster General Purdum. Proper construction was assured when the contract was awarded to a builder of national reputation, Thomas G. Sperling & Co., of New York.

I am sure that my distinguished predecessors, David J. O'Connell and Stephen A. Rudd, are looking down upon us today, sharing the gratification that comes only with the fruition of an idea. Their untiring efforts in your behalf have been brought to complete success and this occasion would indeed be incomplete if I, as their successor, were not publicly to acknowledge the untiring efforts

expended by them in the promotion of this project. I, as your Representative, have been the beneficiary of those efforts.

Your community is entitled to have these more adequate facilities so that Postmaster Rosenquest and his faithful corps of post-office employees, who daily come into contact with more people than any other group, will the better be able and swifter to complete their appointed rounds. These quarters will, I know, be a source of encouragement to them, and I take this opportunity to assure them that any action I may take in their behalf or for their benefit I shall be most happy to take.

This day should, too, in the history of Woodhaven, mark another milestone in the effectiveness of public-spirited groups and individuals in instituting and completing movements designed to improve the public service, the civic welfare, and communal interests of all the people who reside in this neighborhood. These civic and political groups were, I know, greatly aided by the fine helpfulness of the local newspapers, particularly the Leader-Observer, the Chat, and Long Island Press. The leaders of these organizations have my deep appreciation for their counsel and advice during all the preliminaries leading up to this occasion. I should indeed be happy to set forth their names to you, but to do so would be most difficult at this time. You know who they are, and their efforts and the results of their hard work are fittingly exhibited by this edifice which from this day on will stand as a permanent and silent witness to the fact that we are privileged to live under a representative democratic form of government, where the will and needs of the people are recognized and respected by the Government.

This building was needed by Woodhaven, and Woodhaven has obtained it. My sincere hope is that it will serve you people usefully and efficiently for many years to come.

May I extend to you my good wishes and assure you that, as your Representative, it has been an honor for me to work with you.

#### DEDICATION EXERCISES OF NEW FEDERAL POST OFFICE BUILDING, WOODHAVEN, N. Y., JANUARY 13, 1940, AUSPICES ALLIED ASSOCIATION OF WOODHAVEN

##### OFFICERS

Hon. Eugene J. Keogh, Member of Congress; Hon. Gilbert W. Rosenquest, postmaster at Jamaica, honorary chairmen.  
John Pasta, general chairman.  
Louis A. Liebs, Mrs. Emma V. Baxter, vice chairmen.  
Harry L. R. Clapp, treasurer.  
Thomas P. Ohlert, secretary.  
Mrs. Cornelius G. DeLoca, recording secretary.

##### GUESTS

Hon. James A. Farley, Postmaster General.  
Hon. Ambrose O'Connell, Executive Assistant to the Postmaster General.  
Hon. Smith W. Purdum, Fourth Assistant Postmaster General.  
Hon. Gilbert W. Rosenquest, postmaster at Jamaica, N. Y.  
Hon. Eugene J. Keogh, Member of Congress, Ninth District, New York.  
Hon. William B. Barry, Member of Congress, Second District, New York.  
Hon. George U. Harvey, president of the Borough of Queens.  
Hon. James A. Roe, representing Democratic organization of Queens.  
Hon. Warren B. Ashmead, representing Republican organization of Queens.  
Hon. Joseph P. Teagle, member of assembly, sixth district, Queens.  
Hon. John A. Ferril, member of assembly, fifth district, Queens.  
Hon. William N. Conrad, member city council, Queens.  
Hon. James A. Burke, member city council, Queens.  
Hon. Gustav W. M. Wieboldt, justice, court of special sessions.  
Fred W. Piderit, chief banking examiner, bank department, State of New York.  
Hon. Edward H. Potter, assistant district attorney, Queens.  
Hon. H. W. Krogmann, assistant district attorney, Queens.  
Hon. Moses Symington, postmaster at Long Island City, N. Y.  
Hon. Joseph A. Doyle, postmaster at Flushing, N. Y.  
Hon. Euphemis Fitter, postmaster at Far Rockaway, N. Y.  
Dr. Eugene A. Colligan, president, Hunter College.  
Ernest A. Tobin, superintendent of the post office at Woodhaven, N. Y.  
Emil F. Kabus, superintendent of the post office at Richmond Hill, N. Y.  
William A. Fox, superintendent of the post office at Ozone Park, N. Y.

##### PROGRAM

Star Spangled Banner: Blanche Zuber.  
Flag raising and massing of colors:  
Woodhaven Post, No. 118, American Legion.  
Whiting Post, No. 59, Veterans of Foreign Wars.  
Woodhaven Post, No. 16, Catholic War Veterans.  
Richmond Hill Post, Jewish War Veterans.  
Pledge of allegiance: Boy Scouts of America—Ralph B. Moore and O. William Wolber, Neighborhood Commissioners, District No. 8.  
Invocation: Rabbi Arthur H. Neulander, Temple Beth Israel.  
Reading of scripture: Rev. James F. Laughton, Woodhaven Baptist Church.  
Remarks: John Pasta, general chairman.

Address: Owen Keen, Chief Clerk, Post Office Department, representing the Postmaster General.

Address: Alfred J. Ball, publisher of the Leader-Observer, speaking for the community.

Music: Band of St. Thomas the Apostle Roman Catholic Church.

Address: Hon. EUGENE J. KEOGH, Member of Congress, Ninth District.

Introduction of distinguished guests by Thomas F. Thornton, Law Assistant to the Surrogate of Queens County.

Presentation of keys of new post office building by architect to Hon. Gilbert W. Rosenquest.

Benediction: The Right Reverend Monsignor Metzger, St. Thomas the Apostle Roman Catholic Church.

America: Band of St. Thomas the Apostle Roman Catholic Church.

##### ASSOCIATIONS PARTICIPATING

American Legion, Woodhaven Post, No. 118, and Ladies' Auxiliary.  
Anti-Viaduct Association of Woodhaven and Ozone Park.  
Atlantic Avenue Improvement Association and Ladies' Auxiliary.  
Boy Scouts of America, Queens Council.  
Catholic War Veterans, Woodhaven Post, No. 16, and Ladies' Auxiliary.  
Catholic War Veterans, Queens County Chapter, and Ladies' Auxiliary.  
Christ Congregational Church.  
Companions of Foresters of America.  
Congregational B'nai Israel of Woodhaven.  
Daughters of America, American Eagle Council, No. 60.  
Equity Taxpayers Association.  
Fathers' Club of Boy Scout Troop No. 29.  
Fifth Assembly District Independent Forum and Ladies' Auxiliary.  
Forest Park Reformed Church.  
Emanuel Evangelical Reformed Church.  
Knights of Columbus, Woodhaven Council, No. 1866, and Ladies' Auxiliary.

Lions Club of Woodhaven.  
Mothers' Club of Public School No. 65.  
Woodhaven Methodist Episcopal Church.  
Parent-Teachers' Association of Public School No. 97.  
Queens Elaine Council, Foresters of America.  
Red Cross Auxiliary, Woodhaven Chapter.  
Round Table Club of Woodhaven.  
Shoard Moore Circle, Foresters of America.  
St. Matthew's Episcopal Church.  
St. Thomas the Apostle Roman Catholic Church organizations.  
St. Luke's Evangelical Lutheran Church.  
Union Course Civic Association.  
Woodhaven Baptist Church.  
Women's Republican Association of Woodhaven.  
Women's Woodhaven Democratic Club, Inc.  
Women's Woodhaven Regular Democratic Club, Inc.  
Woodhaven Branch of the Queensboro Home for the Blind, Inc.  
Woodhaven Civic Association.  
Woodhaven Regular Democratic Club.  
Woodhaven Exempt Volunteer Firemen's Association.  
Woodhaven Non-Partisan Association, Inc., and Ladies' Auxiliary.  
Woodhaven Republican Association.  
Yarmouth Regular Democratic Club of Woodhaven.  
Veterans of Foreign Wars, Whiting Post, No. 59.

##### COMMITTEES

Guests' committee: Thomas F. Thornton, chairman; Fred George; Mrs. Lillian Leach; Miss Irene Doyle; Carlye L. H. Hutzelman; William Burke; Mrs. Irene Fifer; John S. Siegelach, Jr.  
Reception committee: Edwin C. Morsch, chairman; Joseph P. Teagle; Alfred J. Ball; Mrs. Margaret L. Fanning; Mrs. Claire L. Siegelach; Mrs. Helen Reid; James Pasta; John Lutz; Mrs. Mathilda Stutz; Mrs. Mildred Klarman; Mrs. Cornelius G. DeLoca; Edward J. McCarthy; Mrs. Anna Duer; Emil F. Kabus; Edwin G. Phelps; Mrs. Agnes Corwin; Mrs. Effie Worthylake; Mrs. Anna Nelke; Dr. Alfred J. Barbieri; Mrs. Sadie Gillen; Edward H. Potter.  
Decorations committee: Harry L. Zachmann, chairman; Denis A. Hayes; Etting B. Burchell, Sr.; Mrs. Mae Thomson; Mrs. Mae Gross; Miss Ruth Erdtmann.  
Parade committee: Harry F. Sullivan, chairman; Matthew T. Palmer; Clyde R. Hunt; Julius Friedman; Ralph B. Moore; Henry Garbe; Robert E. Harper; Mrs. Lydia Barker; Mrs. Julia Cheshire.  
Finance committee: John F. Rapp, chairman; Louis A. Liebs; B. C. Baumgarten; Mrs. Mary Rapp; Mrs. Mary Sarbach; Mrs. Margaret Erdtmann; Miss Margaret Loughlin; Robert L. Thornton; Walter T. Wagner.  
Publicity committee: J. Leonard Obrey, chairman; William F. Hyland; Mrs. Ethel Burglund; Mrs. M. A. Baumgarten.  
Program committee: Joseph Honsa, chairman; Mrs. Magdalen Broesler; Albert Green; Raymond G. Pollard; Anthony A. Garofalo; William Wolber; William E. Lohman; David Feiner.

[From The Chat of January 18, 1940]

From farm land to one of the most thriving communities in the country has been the progress of Woodhaven during the past 30 years. This was stressed by the speakers at the official dedication of the new post-office building in Woodhaven on Saturday afternoon. The speakers detailed the progress during this period. And during the progress the activities of Woodhaven were moved from south of Atlantic Avenue to the north side, it was stated.

It was also emphasized that within easy walking distance of the new post-office building located on the west side of Forest Parkway

north of Jamaica Avenue there is a fine public library, a beautiful high school, an attractive bank building, and a well-constructed elementary school building.

Owen Keen, chief clerk of the postal department, representing Postmaster General James A. Farley, said that business in the country is on an upward trend. He based this statement, he said, on the steady increase in the revenues of the postal department.

"When the revenues in the postal department increase it means that business is getting better and this is, indeed, a very good thing for the country," he said.

Callous to weather conditions, when a substantial community accomplishment is to be celebrated, more than 10,000 persons participated in the exercises. They stood on the damp ground, showing thorough indifference to the intermittent rain, so that they might view the parade and listen to what the speakers had to say.

The parade, in which was represented 45 organizations, got under way shortly after 2 o'clock. The marchers were taken along Jamaica Avenue to Forest Parkway from Ninety-eighth Street to the music of several bands. The paraders were cheered all the way. They were framed by buildings that were buried beneath flags and bunting for the occasion. It had been planned to hold the exercises outdoors, but this was deemed unwise, and so the committee, invited guests, and speakers moved into the new post-office building. Several hundred persons crowded into the building. The others had to remain in the street in front of the building. This they did and listened to the addresses that came through loud speakers. The police arrangement, under the direction of Police Capt. Joseph Henley, of Richmond Hill precinct, was perfect. John Pasta, chairman of the general committee, was master of ceremonies.

The program opened with the singing of The Star-Spangled Banner. This was followed by the flag raising and massing of colors by Woodhaven Post, American Legion; Whiting Post, Veterans of Foreign Wars, Woodhaven Post, Catholic War Veterans; and Richmond Hill Post, Jewish War Veterans. The pledge of allegiance was led by the Boy Scouts of America under the direction of Ralph B. Moore and O. William Wolber, neighborhood commissioners of district No. 8.

The invocation was pronounced by Rabbi Arthur H. Neulander, of Temple Beth Israel, of Richmond Hill; reading of Scripture by Rev. James F. Laughton, Woodhaven Baptist Church; remarks by Chairman Pasta; addresses by Owen Keen; Alfred J. Ball, publisher and civic leader; Representative Eugene J. Keogh; introduction of distinguished guests by Thomas F. Thornton, law assistant to the Surrogate of Queens; presentation of the keys of the building by Martin Sperling, contractor, to Postmaster Gilbert W. Rosenquist, of the Jamaica District; address by Postmaster Rosenquest; the offering of benediction by the Right Reverend Monsignor George A. Metzger, pastor of St. Thomas the Apostle Roman Catholic Church, and the singing of America.

Following the exercises a reception was held in the home of Edwin C. Morsch, chairman of the reception committee, opposite the post office building.

In his remarks Chairman Pasta said:

"Some of you here today recall the time when this site upon which is erected this magnificent post office building was farm land, cultivated by the pioneers of this community. Not very long ago we appropriately celebrated the one hundredth anniversary of Woodhaven's birth. But this is not the Woodhaven as it was then known—Woodhaven then lay south of the railroad tracks and there was located there some homes, a school, a church, an organization of volunteer firemen, some policemen, and a general store. I do not know whether there were any civic organizations then, but certainly there was a town meeting place, where in true American fashion, things important to the community were vigorously discussed.

"The passing of these years witnessed many changes. Public-spirited residents, too numerous to mention, enlarged upon the town-hall gatherings and fought for and obtained many needed improvements. The farms slowly disappeared; streets were opened, sewers laid, homes erected, inviting to this community people from East New York, New Lots, Old Canarsie, and later the Bushwick section, Williamsburgh and Greenpoint. Then came larger schools and more churches of varied denominations. On this very parkway a beautiful public library was erected; to the north, across the way, a fine bank building; just south, the home of our newspaper, and a short distance to the west, and behind us a new high school. The post office of 1874 was located in the then Woodhaven Center. The new post office building of 1940 is located in the new Woodhaven Center."

Postmaster Rosenquest, after congratulating the civic organizations in the community for their persistent campaign for the post-office building, called attention to the fact that the letter carriers and clerks who participated in the parade had finished their labors at noon but insisted on taking part in the exercises.

"And for this splendid spirit I want to publicly thank them," he said. "They are a fine bunch of men whose aim is to create good fellowship and friendship wherever they go."

Referring to the post-office building, he said that Woodhaven is deserving of such a structure.

"All that I ask of you, and I mean the residents and businessmen in Woodhaven, is to purchase your postal needs right here in Woodhaven," he continued. "Don't go to Manhattan. Don't come to Jamaica. Do your buying right here. Show that you fully appreciate this gift."

Alfred J. Ball, in speaking in behalf of the community, paid his respects to Robert E. Harper, veteran civic worker in the community, for the many improvements he obtained for the district. At the request of Mr. Ball, Mr. Harper stood up and took a bow.

## Recognition of Services of American Civilians in the Construction of the Panama Canal

### EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

Mr. McCORMACK. Mr. Speaker, in my judgment, one of the most meritorious bills on the House Calendar is H. R. 1674, introduced by the distinguished Member from Florida [Mr. PETERSON]. The measure has, for its purpose, the recognition by Congress of the invaluable services rendered by American civilians in the construction of the Panama Canal. It received the unanimously favorable report of the House Committee on Merchant Marine and Fisheries; and a companion bill (S. 1162) introduced in the Senate by Senator PEPPER, received the unanimously favorable report of the Senate Committee on Inter-oceanic Canals.

Some recital of the facts involved may be of interest. The construction of the Panama Canal—all things considered—constituted the greatest industrial achievement of history. To the world at large the operation of this great waterway is of incalculable importance and value, while as a national defense, economic and good-will asset of our own country, its worth is beyond all computation. Volumes have been written on the worths and significances involved, and for present purposes, the merest reference to the subject is sufficient.

Upon the completion of the Canal, early in 1914, a grateful people gave thought to the matter of expressing tangible appreciation and the according of due recognition to those who had striven and wrought so splendidly for their Nation, that is to say, to the fine body of Americans who, in a far-off, tropic, disease-infested land, had performed the seemingly impossible task of connecting the Atlantic and Pacific seas at the isthmus, thus, indeed, "dividing the land that the world might be united." Congress was duly impressed by this reaction of our people, and took partial steps to meet the situation. In 1915 it enacted a measure entitled "An act to provide for recognizing the services of certain officers of the Army, Navy, and Public Health Service for their services in connection with the construction of the Panama Canal, to extend to certain of such officers the thanks of Congress, and for other purposes." Under its provisions (a) the thanks of Congress were extended to those officers of the Army and Navy who had served as members of the Isthmian Canal Commission, and who were then living, four Army officers and one Naval officer, because of their services in connection with the construction of the Canal, and authorizing their advancement—which advancement promptly followed—in rank (major generals, two; brigadier generals, two; and rear admiral, one); (b) provided that the other officers of the Army and Navy who had been detailed for duty with the Isthmian Canal Commission on the Isthmus of Panama for more than 3 years should be advanced one grade in rank upon retirement; and (c) authorized the advancement—and the advancements promptly followed—one grade each of all the officers of the Public Health Service who had been detailed for duty with the Isthmian Canal Commission for more than 3 years.

In that measure, which became a law on March 4, 1915, no provision was made whatsoever for recognition, by extending the thanks of Congress or by according any material benefit, to any civilian official or employee of the Isthmian Canal Commission who had rendered on the Isthmus any services

in connection with the building of the Canal, regardless of the fact that American civilians had thus served, and for more than 3 years, during the construction period which ran from May 4, 1904, to March 31, 1914; and this, too, notwithstanding that such civilians, in every branch of the work, from the highest to the lowest, had rendered efficient service, and which was in all respects comparable to that rendered by those of the three governmental branches specifically singled out and honored by the provisions of the cited act. It is true that civilians largely predominated in the Canal work, but this does not affect in the least the principle involved.

Thus it was that Congress practiced what has always been regarded as a gross discrimination against these civilians—American citizens, if you please—employed in this great enterprise. However commendable may have been the services of those of the Army, Navy, and Public Health Service thus engaged, there has never been the slightest reason or justification for singling out the Army, Navy, and Public Health officers for special recognition and reward, and the complete ignoring of these civilians. Either none or all should have been the policy of Congress in dealing with the subject. Why make "fish of the one and fowl of the other"? As a matter of fact—and a feature that is a strong factor in the equation—during the first and most trying years of the construction period—from 1904 to 1907—the work was entirely in the hands of civilians. It was during that particular period that yellow fever prevailed and plague and malaria most fearful. The Army officers who became engaged in the construction work moved in during 1907, after the worst was over, so far as disease and insanitation were concerned. Colonel Gorgas, of the Army Medical Corps, in charge of sanitary work on the Isthmus, was practically the only Army officer there in the early days.

Can it be said that the American civilians—officials, engineers, and others, performed their work less efficiently than did those of the three special services singled out for distinctive recognition and reward by Congress a quarter of a century ago? The answer is "No," absolutely "No." The judgment of all those who, by contact and experience, were in position to have an opinion on the subject, negatives the idea that the work of these civilians was in anywise inferior, or less entitled to distinction and reward than the comparable work of those there engaged of the Army, Navy, and Public Health. Take, for instance, the testimony of General Goethals himself, who served from 1907 to 1914 as chairman of the Isthmian Canal Commission and Chief Engineer, and whose services in these capacities have been signally honored at the hands of Congress. What did he say? Concerning the passage of the act of 1915—wherein he was distinctively honored and advanced in rank—in a letter to the Secretary of War, written on the 22d of January 1916, he said:

It is deemed unnecessary to set forth the feeling of injustice that was aroused in the organization by the passage of this act [that of March 4, 1915, Army, Navy, and Public Health], because of its discrimination against the large class of employees not fortunate enough to belong to any of the foregoing branches of the public service, but who toward the accomplishment of the goal had worked just as faithfully as, in some instances more loyally than, those who were specifically selected for rewards. That there was just cause for this feeling cannot be questioned. This is the first instance where the thanks of Congress have been extended to the leaders of any enterprise without including all of those who were associated with it. The discrimination stands forth more glaringly when it is remembered that those detailed for duty on the Isthmus from the public services specified in the act, after the completion of their services here, are assigned to other posts of duty, and through retirement, are looked after by a paternal Government to the end of their days; while the civilian, after having been out of touch with affairs in the community from which he came during his absence of 3 or more years, is dependent upon his own energy and effort to secure employment.

In the organization that accomplished the result the work was so divided as to bring the service men in competition with the civilians, and the latter can truthfully claim that they accomplished results just as efficiently as, and in some instances more efficiently than, the men who were selected for reward, and yet even in a blanket provision they are denied the recognition of Congress.

It has been asserted that the service men had no choice but to obey orders which detailed them to duty with the Commission, while the civilians came of their own volition. This assertion, as it

relates to the service men, is not founded on fact. With one exception, all of the Army and Navy officers—and the same is true of the Public Health Service—who received recognition were detailed only after they had been consulted and had expressed a willingness to come. Furthermore, they all received compensation in advance of that specified by law for the positions they occupied in the Government service, this compensation in some instances exceeding three times the amount they would have received had they performed in the States or elsewhere the same duty that they were called upon to perform on the Isthmus. The increases granted by the act in the cases referred to are very substantial, amounting as high as 60 percent, which continues throughout the career of the officer affected. The privilege of retirement with advanced grade has been taken advantage of by several with great pecuniary gain. All of these facts are known to the civilians who labored as zealously and who received no reward.

Note what General Goethals said about the voluntary and willing service of those of the Army, Navy, and Public Health forces who participated in this construction work. Only those of the three units went to the Isthmus who wished to go. In all truth their work on the Canal enterprise was as voluntary as was that of the American civilians thus engaged. Also, note what he thus said about the pay of those of the indicated special services employed on the Isthmus, and the benefits which would be received by them under the act of 1915. The statement will bear repetition:

Furthermore, they all received compensation in advance of that specified by law for the positions they occupied in the Government service, this compensation in some instances exceeding three times the amount they would have received had they performed in the States or elsewhere the same duty that they were called upon to perform on the Isthmus. The increases granted by the act in the cases referred to are very substantial, amounting as high as 60 percent, which continues throughout the career of the officer affected. The privilege of retirement with advanced grade has been taken advantage of by several with great pecuniary gain. All of these facts are known to the civilians who labored as zealously and who received no reward.

What did former President Theodore Roosevelt say on the same subject—the gross discrimination practiced by Congress in 1915 in singling out the Army, Navy, and Public Health officials and employees for special honors and rewards, and in utterly ignoring the comparable claims of civilians? In commenting on the letter of General Goethals, just quoted, Mr. Roosevelt, among other things, said:

I most heartily endorse General Goethals' recommendation. As one who was instrumental in getting this work under way and who has followed its progress with deep interest and keen satisfaction, I am greatly concerned in seeing proper recognition accorded to the civilian employees. General Goethals has designated them as the real builders of the Canal. I sincerely trust that prompt action will be taken by Congress toward the early enactment of legislation to this end.

To the same effect are the statements and recommendations of Mr. John F. Stevens—who is yet living, after a long career as one of the Nation's most outstanding engineers and executives. He was in charge of the Canal work from 1905 to 1907 as chief engineer and part of the time as chairman of the Isthmian Canal Commission. In a letter urging enactment of this legislation, written to Senator BENNETT CHAMP CLARK, chairman of the Senate Committee on Inter-oceanic Canals, dated April 2, 1938, Mr. Stevens, among other things, said:

I have the honor to address you in regard to Senate bill 3621, which was referred to your committee on March 7, 1938, after two readings.

This bill, if enacted into law, would confer well-earned recognition upon the first civil employees of the Panama Canal Commission, who, by their loyalty and intelligence, especially at the inception of the Canal in 1906, made the successful work possible when tropical diseases were a menace to Americans and some of them went on to early graves in carrying out the tasks assigned them.

After the completion of the Canal, the officers of the Army, Navy, Marines, Hospital, and Public Health Service, who had—under orders, of course—served 3 years on Canal work, by a law passed by Congress were given the privilege of retiring at any time after the passage of the act at one grade higher than the one they had previously enjoyed. Such retirement granted them three-quarters pay of the retirement grade, this to continue during the remainder of their lives. The act also expressed the thanks of Congress for their services on the Isthmus.

As the writer was chief engineer of the Isthmian Canal Commission during the 2 years included in 1905-7, while the

plans for the Canal were being formulated (and adopted by Congress), the organization for construction made, the working force both white and colored brought to the Isthmus, the construction plant, the necessary arrangements for housing and feeding the employees made, and the real successful construction begun, not only in general but almost to the last detail. All of these arrangements were continued in their original shape until the completion of the Canal.

The writer justly claims, and such claim can easily be verified, that, owing to his intimate connection and supervision in effecting all these necessary measures, he was and is in a better position than any other man to know that the great and most important part of the success of the construction of the Panama Canal was due to the wonderful work of these early employees. It would be only simple justice if they were granted similar recognition to that which was granted by Congress to the Army, Navy, and other branches of United States service.

The writer will add that, if Senate bill 3621 becomes a law, he will personally in no way be financially benefited as his term of service was less than the prescribed 3 years.

Mr. Stevens performed a great and indispensable service in connection with building the Canal. Yet, for the sole reason that he is a civilian, he has never received even the thanks of Congress, though, just after the Canal's completion such thanks were accorded to the Army and Navy members of the Commission, and more tangible rewards were bestowed on them and on the others of the Army, Navy, and Public Health Service, as already pointed out. What justification was there for the action of Congress there and then, and what justification can be offered for the continued like action, in failing and refusing to extend its thanks, or any special benefit, to a solitary civilian, high or low, who was engaged in the construction of this great work?

Why the discrimination against civilians? Did they belong to a different order of American citizens? Has Congress so regarded them? Congress, made up of civilians, is always delighted to heap honors on those of the Army, Navy, and other life-tenure public agencies, who worthily serve the Government, but seems loath, if not altogether averse, to the bestowal of like honor and reward upon civilians who perform like service. Why do civilians in Congress accord such discriminatory treatment to civilians out of Congress? Is not all this class distinction with a vengeance? It is, to say the least, a strange psychology. Possibly, some answer is to be found in the fact that the special services of the Government are always organized and articulate; whereas this can hardly be true of such civilians who have passed out of the public service. They are scattered and unorganized; and, in consequence, too often it is the case that due recognition and reward, amply earned by the standards of service and precedent, are not accorded them. The more reason, therefore, why this Congress, in this particular situation, should act promptly and favorably.

The pending measure (H. R. 1674) proposes, in some degree, to remove the discrimination practiced against these loyal, deserving civilians more than a quarter of a century ago; that is to say, to remove that discrimination so far as those yet surviving are concerned. The majority of these civilians have passed to their final account; and they died with the bitter fact in their minds that they were the victims of a gross injustice. Those who yet live, cannot hope to live much longer. The mortality rate among them increases month by month, and year by year. This measure, if enacted, will extend the thanks of Congress to all the civilians who were engaged in the construction, operation, sanitation, and government of the Panama Canal and the Canal Zone during the construction period of the Panama Canal, from May 4, 1904, to March 31, 1914. These thanks will thus be accorded to all these civilians, living or dead, but much good will they do the latter! For those yet surviving, the bill provides for benefits to be paid to such of them as served in such construction services on the Isthmus for 3 years or more. The 3-year period was named because in the act of 1915, the special-service men below the rank of member on the Isthmian Canal Commission, who had that length of employment on the Canal enterprise on the Isthmus, were

made beneficiaries under the measure's provisions. The benefits provided for in the pending legislation take the form of payments, ranging from 40 to 60 percent of the basic pay of the proposed beneficiaries, based on the length of their respective construction period employments.

Full hearings were had on the House and Senate bills, and the justice of their provisions fully established. In this connection it was brought out that many of these—now old civilians—were in great need; that the average age of the survivors is between 60 and 70 years; that about 4,000 would have been beneficiaries had such legislation been enacted upon the completion of the Canal (1914); that less than 1,500 would now be beneficiaries if enactment is made without further delay. It was also brought out that fully 90 percent of these civilians yet surviving received salaries and compensation of less than \$2,000 per year during the construction period; that less than 8 percent received salaries and compensation of more than \$2,000 a year; and that less than 2 percent received salaries or compensation of more than \$3,000 a year. For the most part, those who received compensation of more than \$2,000 a year were of mature age when they rendered their Isthmian service, and there are but few of them yet living, and they of advanced years. Thus, if the proposed benefits are accorded, they cannot long continue, and within a comparatively short time they will inevitably cease.

If it be argued that because so many years have passed since the completion of the Canal, nothing should now be done to remove the indicated discrimination, with some substantial recognition of these survivors, a sufficient answer is that a belated act of justice is better than no act at all. Moreover, it ill becomes a great republic to plead limitation on any obligation of duty or gratitude. True, such legislation should have been enacted in 1915—at the same time that for the benefit of the special services was enacted; but it was not then nor since enacted. Let us, therefore, who are now in this Congress rectify, as far as we can, the wrong of a quarter of a century ago. While there was a bill introduced in the House and Senate in 1916 having for its purpose the according to these civilians certain benefits of a pecuniary character—where there had been 3 years or more of isthmian construction service—nothing came of it. It was recognized at that time that such legislation should be enacted; but the fact that these proposed beneficiaries were scattered all over the United States, and were unorganized, and inarticulate, together with the waging of the World War, operated, no doubt, to prevent favorable congressional action; and thereupon the idea slept until recently. Be the causes of nonaction what they may, Congress now has the opportunity to correct, in some measure, at least, and as to the surviving minority affected, the gross favoritism practiced years ago, and to accord, in a moderate way, much-needed benefits. These proposed beneficiaries constituted a generation ago in the fevered Tropics a part of the greatest industrial army ever assembled, and they performed for their country and for humanity—for all the world and for all posterity—a work of unprecedented character. The opportunity which is now ours to enact this legislation should be gladly availed of.

The fact that there were so many more civilians than of the special services already mentioned—Army, Navy, and Public Health—engaged in the construction activities of the Canal does not affect in the least the vital principle involved. That principle is exactly the same; what was fair for one class is fair for the other. As a matter of fact, if discrimination was to be practiced, it would have been more just for it to have been practiced in favor of the civilians. The special services had life tenure of place, as it was; they were not thrown out of employment by reason of the completion of the Canal, as were all the civilians, except those covered into the permanent organization of the Canal, for its operation, and at increased compensation over that paid in the construction period. But these civilians who found themselves out of employment when

the construction period terminated had to return to the United States. They were out of touch with conditions in the States; those in railroad work on the Isthmus lost all their seniority rights back home, and all had to start life over again upon their return, with all the hardships and disadvantages the situation inevitably presented. Had the proposed act of 1916 for their benefit been passed, their condition would have been made somewhat easier. That measure would have provided that each such civilian who had served on the Isthmus during the construction period should receive—where the service had been 3 years or more—the equivalent of 2 months' salary for each year of such service. Being civilians, they could not be advanced in rank or grade and permitted to retire, as had been provided for special services covered by the act of 1915. The privileges of the act of 1915 were of a distinct pecuniary benefit, and its beneficiaries not only received the advance-in-rank benefits but most of them promptly retired at the advanced ranks conferred, and were able to capitalize all this in entering upon remunerative employments and connections in private life. Thus it was that the proposed legislation for these civilians in 1916 carried the provisions just named.

Now, a word as to the cost involved, if the pending legislation is enacted. While the matter of cost cannot affect the vital justice at stake, yet the total outlay should prove a reasonable one. It should not now run, at the outset, more than a million dollars a year (and some, in very good position to estimate it, say that it should not exceed \$750,000 a year). The initial figure, whether one million or less, will diminish in a constantly increasing rate, because of the ever-increasing mortality of the beneficiaries; and, within a few years, the outlay will altogether cease.

What therefore is the situation presented? The Army, Navy, and Public Health officials and employees connected with the construction work of the Canal were liberally recognized and specially rewarded by the act of 1915; a considerable number of civilians—perhaps something like a thousand—were covered into the permanent organization of the Canal, after its completion, and at substantially advanced pay, and Congress some years ago enacted a liberal retirement act for their benefit and in addition provided that each of them who had served 3 years or more in the construction period should receive \$3 a month for every month of construction-period service; and as to certain other civilians who later served in the Government's Alaskan service and who had 3 years of construction service on the Canal, Congress enacted a measure giving them \$3 a month for that construction service. All those covered into the permanent organization of the Canal would have to be deducted from the estimated 4,000 civilians who, as already indicated, would have been eligible for the benefits of the pending measure had it been enacted at the completion of the Canal; and this is true, also, of those of the Alaskan service, just stated. This leaves of the entire construction forces of the Canal only those civilians left after the deductions just noted have been made—and, perhaps, some who returned to the United States and have since served in civil-service employments, with retirement benefits accruing—who have not received any specific benefits because of their service of 3 years or more in the work of building the Canal.

Much more could be said by way of proving the justice of the pending legislation; but this should be enough. Let us do our duty—though it be at such long last—and act so as, measurably, at least, to remove the old, old discrimination against these surviving civilians who served their Nation so honorably and so well a generation ago. This bill, based on equity and justice, and removing a discrimination that has existed for many years, should be enacted into law this session.

## Good Tariff Fences Make Good Neighbors and Promote Peace

### EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 1, 1940

NONPARTISAN RADIO FORUM OF THE AMERICAN GOOD GOVERNMENT SOCIETY

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the addresses delivered over the blue network of the National Broadcasting Co., starting at 10 p. m. Wednesday evening, January 31, 1940, on the Nonpartisan Radio Forum of the American Good Government Society, by two colleagues, the president of that society, and myself.

#### GOOD TARIFF FENCES MAKE GOOD NEIGHBORS

The ANNOUNCER. The National Broadcasting Co. presents a discussion of the reciprocal-trade agreements under the auspices of the American Good Government Society, of Washington, D. C., featuring Senator Alva B. Adams, Democrat, of Colorado; Congressman Karl Mundt, Republican, of South Dakota; Congressman Homer D. Angell, Republican, of Oregon; and Richard A. Staderman, nonpartisan, of New York, president of the society, who is presiding at this discussion. Mr. Staderman.

Mr. STADERMAN. Thank you, Bryson Rash. Our appreciation to N. B. C., to the local stations, and to N. B. C.'s Kenneth Berkeley for this coast-to-coast hook-up.

It has been said that the price of liberty is eternal vigilance. Today we have an ever-growing army of little would-be gods in the Federal Government who tell you and your neighbor, "Do this or do that, or else we will crack down." One of the worst crack-downs has been on the farmers, workers, and businessmen, who thought we had decent tariffs to protect us from inferior imported products of foreign sweatshops and peon labor.

Suddenly these citizens have awakened to find that a handful of bureaucrats whom the people never even elected have had a star-chamber, secret meeting, and traded away our tariff birthright for a mess of imported canned beef mixed with entangling alliances and international power politics.

The worst of it is that if you have your farm or your business or your job ruined by a tariff reduction, you are practically denied your constitutional right to justice. In the case of *Hampton v. United States* (276 U. S. 394), the Supreme Court rendered a very unconvincing opinion based upon what Congress had inaccurately assumed to be fact. In this decision the Court upheld the limited amount of tariff juggling which Congress had delegated to the Tariff Commission. Long before there was a Reciprocal Trade Agreement Act the late constitutional authority, James M. Beck, with remarkable foresight cited this Court's opinion as "a very fateful one in influencing further unconstitutional delegation of power by Congress," which "may yet prove the 'wooden horse' whereby the citadel of the Constitution will be taken."

Prior to the Trade Agreements Act, a party injured by a change in a duty by the Tariff Commission was allowed under section 516 (b) of the Hawley-Smoot Tariff Act to carry his complaint through the Customs Court and the Customs Appeals Court and even obtain review by certiorari from the Supreme Court. The Trade Agreements Act denies the right to make such appeals from a duty changed in any trade agreement.

Under the rule established in the case of *Massachusetts v. Mellon* (262 U. S. 447), a person adversely affected by a tariff reduction would have to prove, first, that the statute was unconstitutional, and, second, that its application had caused him actual loss. The proving of loss as a result of a tariff reduction has been rendered well-nigh impossible under the Supreme Court's decision in *Louisiana v. McAdoo* (234 U. S. 627), where it was held that production of a given commodity does not necessarily give a party cause for legal action to prevent continuance of the reduction in tariff protection.

In its denial of the rights of the individual to appeal from the decisions of administrative authorities the Reciprocal Trade Agreements Act is open to all the general criticisms leveled at Federal agencies by the American Bar Association as reasons for the need of enacting the Logan-Walter administrative law bill, which the bar

sponsored. The administrative law bill does not include the State Department in its excellent corrective provisions, hence the trade-agreements situation needs specific correction by the Congress, which should never in the first place have exceeded its constitutional authority by delegating the tariff-fixing power to any Federal agency. Insult is added to injury to further deny aggrieved citizens the right to obtain redress through taking the matter into the courts.

Coupled with these indictments of the trade agreements from the fundamental constitutional standpoint, we find numerous other reasons why they should not be continued in their present form. A study of the past 150 years shows that Britain under free trade had several times as many years of warfare as did our own United States under what were at least partly protective tariffs most of the time. From the purely economic standpoint we find the national income of all the people in the United States rising steadily year after year for the 10-year period following the Dingley higher tariff of 1897 and for the 7-year period following the Fordney-McCumber higher tariff of 1922—facts which cannot be disputed by Secretary Hull and other advocates of the agreements.

The agreements are administrative absolutism at its worst, endangering the peace of the United States as well as the livelihood of millions of farmers, businessmen, and workers. In the name of simple fairness and honesty the trade-agreements program must not be renewed in its present form.

As our first guest speaker, we have the privilege of presenting a man who is known in his own State and in the entire United States as an outstanding authority on the economic, financial, and governmental problems of our Nation. We of the American Good Government Society take great pleasure in presenting Senator ALVA B. ADAMS, Democrat, of Colorado. Senator ADAMS.

Senator ADAMS. Thank you, Mr. Staderman.

#### RECIPROCAL-TRADE AGREEMENTS

The founders of the Constitution in accord with the lessons learned from English history, reinforced by the American Revolution against an English King, who attempted to deny to the colonists the rights which English citizens had won, placed the power of taxation in the Congress. The establishment of tariffs in an exercise of the taxing power. In Congress and in Congress alone is vested under the Constitution the power to establish tariffs.

All the powers which the executive department exercises in the making of so-called reciprocal-trade agreements come to it by delegation from Congress. Every change in a tariff rate is an amendment of a law. The 22 trade agreements which have been entered into, if valid, have amended acts of Congress many hundreds of times.

It is an accepted principle of law that Congress can delegate power to administer a law in accord with standards or rules set up by it but not delegate power to enact legislation.

The former flexible tariff act authorized the President to make changes in tariff rates to equalize the difference between the cost of production at home and abroad. While often a difficult rule to apply, yet it was an understandable and applicable rule or standard. The law was declared by Congress, its administration only was left to the Executive.

The reciprocal trade agreement law gives no practicable rule or standard by which changes in any tariff rate can be determined. In effect, this law declares that the President may enter into foreign-trade agreements changing existing duties whenever he decides that such changes will expand foreign markets or be of domestic advantage. The decision as to the making and the details of trade agreements are left to his uncontrolled discretion.

The only limit on the President in this act is that he may not increase or decrease any duty by more than 50 percent. Under this act 22 agreements have been entered into changing the tariff rates on over 1,000 items.

The act provides that if in any trade agreement a change is made in the tariff on any item the same change in rate shall apply to all foreign countries.

Thus a reciprocal-trade agreement with one country where tariff-rate concessions by us are compensated by tariff concessions from such other nation produces tariff concessions to other countries which are not reciprocal or in any way compensated. Such policy seems of doubtful fairness, both to producers in the United States who are affected by the reductions in tariff, and to the country which has made concessions in exchange for the reductions in rate upon its products.

So far as I am advised, every change in tariff rates upon the more than 1,000 commodities affected has been a reduction. Every reduction involves a lessening of our customs income and may bring competition to American products and American labor from products of lands with lower living standards.

It is, of course, the hope that the lowering of foreign tariffs will afford markets for increased American production. This is probably true but it is little consolation to an industry and its employees that is crippled or destroyed by the foreign competition admitted by the trade agreement that some other industry in some other section of the country is profiting by the trade agreements.

The industries and, indeed, the economic life and prosperity of many sections of the United States may be promoted or destroyed by favorable or unfavorable tariff legislation.

It has been the constant effort and desire of our citizens to maintain and, if possible, to raise American standards of living. As a result of the better wages paid our workmen, the shorter hours of labor, and better working conditions it is not possible for industry

in the United States to produce goods as cheaply as in countries with lower wages, longer working hours, and inferior living and working conditions. For the purpose of protecting American industry from destructive competition from importation of products of cheap labor, tariff laws have been enacted by the Congress. Whatever may be the defects in our tariff legislation it has been enacted in a constitutional way. The representatives from every section has not only been heard but have had a vote. Tariff laws enacted by Congress give first consideration to domestic industry and commerce. Congress may underestimate the value of foreign trade, but it is far wiser to overvalue domestic than to overvalue foreign trade. The advocates of the reciprocal-trade laws have not only overestimated the value and importance of foreign trade but have also greatly overestimated the benefits received by the United States from the trade agreements. Many gains in the economic life of our country due to the general improvement in conditions have been ascribed to the effect of the reciprocal-trade agreements.

Of course, when the United States enters into a trade agreement, concessions must be given as well as received. There are and can be no agreements under which we receive all the benefits.

The articles upon which the foreign nations seek and secure reductions are frequently also produced in our country. In many instances the trade agreements have reduced duties on foreign products coming in direct competition with American products.

Let me illustrate from the experience of my own State, Colorado:

One of our more important industries is cattle raising. The reciprocal agreement with Canada lowers the duty on cattle. We are told that the number which can be imported is limited to 225,000 head of one weight and 100,000 head of the other upon which a reduction is made. We are told that we have not been hurt, that the number coming in under the lowered tariff is but a small percentage of the American consumption. Unless the law of supply and demand has been repealed by the negotiators of the treaties, every animal added to the supply without a corresponding addition to the demand inevitably tends to lower the price which the producer would otherwise receive. Naturally, the Canadian shipper will send in his cattle when prices are favorable and leave the market to the American producer when prices are low.

Beet sugar is one of the chief agricultural crops of many western States. By a trade agreement with Cuba the tariff was lowered from \$1.50 per hundredweight to 90 cents. Even though there are quota limitations the natural result is to lower sugar prices in the United States. Moreover, the agreement requires the United States to fix quotas on its sugar production in order to maintain quotas on Cuban importations.

Colorado is a great producer of potatoes. The Canadian agreement lowers the duty on potatoes.

Colorado produces many sheep and much wool. The British trade agreement reduces the tariff on certain woolen fabrics. These fabrics will now replace American fabrics made of American wool to the detriment of the American producer of sheep and wool. Furthermore, unemployment in the woolen mills will ensue to the extent of the replacement.

The producing of cattle and sheep provide a market for a large amount of feed crops which will be lessened by the importation of Canadian cattle to the detriment of American farmers.

There have naturally been some benefits derived from 22 trade agreements, but so far as Colorado and the West are concerned these benefits are small in comparison with the detriment.

Only recently the West was threatened with reductions in tariffs on some of its other chief agricultural and mineral products.

That the President, in whom the authority is vested, and Secretary Hull, of the highest integrity and courage, by whom the authority is in fact exercised, are conscientious in endeavoring to promote the welfare of the United States in making these agreements is, of course, beyond question.

My criticism is not of those who administer the law but of the law itself which takes from the elected representatives of the voters their constitutional duty and powers and makes one man an absolute dictator of the economic welfare of American agriculture and of almost every important industry.

Today the power may be used with judgment and produce on the whole good results; tomorrow it may be so applied as to bring disaster. The welfare of American industry should not depend on the decision or the life of one man. Who knows into whose hands the Executive power may go in future years? Who knows what economic or political theories will dominate the Executive Office tomorrow? Regardless of changes in the Executive, the Congress today does and tomorrow will represent all sections of the country and all groups and interests. No individual no matter how many aides or assistants he may employ can have the grasp of national interests and problems possessed by Congress composed as it is of representative men from every section of the land in constant touch with every group and interest. It probably will be less efficient than a wise and benevolent dictator, but in its cumbersome way it will safeguard the rights and welfare of all parts of the country. The history of the past and the events of today confirm the wisdom of vesting the power of levying taxes and spending the people's money in a representative assembly.

There is, therefore, involved in the reciprocal-trade law an issue of greater importance than the mere changing of tariffs. It involves our faith in some of the great fundamentals of our Government. The Constitution placed the exclusive power to levy taxes and determine tax policies in the Congress. The Constitution pro-

vided that revenue bills shall originate in the House of Representatives. The Constitution requires all treaties to be ratified by the Senate.

Reciprocal-trade agreements are an exercise of the taxing powers. They are revenue bills. They are, moreover, definite binding agreements with foreign nations affecting for a fixed time the commercial relations of the citizens of the respective countries. They amend existing law and become the supreme law of the land. They are treaties.

The reciprocal trade agreement law, therefore, offends against three fundamental provisions of our Federal Constitution.

The blame for this law rests not upon the President nor upon Secretary Hull, who are but endeavoring to carry out the law enacted by the Congress. Whatever blame there is rests upon Congress. It is not a case of usurpation but of abdication.

However, criticism may justly be made of those in the executive department who insist that this unconstitutional grant shall be renewed and declare that if the agreements are to be subject to Senate ratification, disaster will follow and the foreign-trade structure of the United States will be ruined.

I believe in the policy of reciprocal-trade negotiations between nations. I recognize that Congress is not the agency to conduct such negotiations but, as under the Constitution the authority of the Executive to conduct negotiations is derived from the Congress, the Executive should both as a matter of duty and of choice refer its completed work back to the Congress for approval or rejection.

The Senate upon the submission to it of an agreement would not have open to it an opportunity to amend individual items of the agreements. Its duty, as in the case of other treaties, would be to approve or reject the agreement as a whole.

Opposition to referring back for ratification to the Senate their work is either a reflection on the Senate or the assumption of a very great superiority on the part of the negotiators. In making these agreements the Executive according to its own theory acts solely under congressional authority and in accord with rules laid down by the Congress. Why should an agent be so reluctant to report to his principal what he has done under his authority? What would we think of an attorney who was unwilling to report back to his client what he had done with his business? And what would a client think of a lawyer who was unwilling to account to him or to submit his work for the client's approval? If they fear to submit their agreements to the Senate they should not make them. If they are for the good of the country, the Senate will ratify them; if they are not, they should not be ratified.

I now return the microphone to Mr. Staderman.

Mr. STADERMAN. Thank you, Senator ADAMS, for your enlightening and stimulating talk. We heartily agree that Congress should have the last word on all tariff matters.

As the next distinguished guest of the American Good Government Society we have Congressman KARL MUNDT, Republican, of South Dakota, the man who made the United States Department of Agriculture stop importing South American beef.

Accidentally discovering that the Department's own basement store was selling canned corned beef imported from Argentina, Congressman MUNDT got a reporter and was photographed in the act of buying a can.

Congressman MUNDT, what did you do with that can?

#### GOOD FENCES MAKE GOOD NEIGHBORS

Congressman MUNDT. It was this way, President Staderman. I immediately took the can and the sales receipt for it over to the chamber of the House of Representatives and held it up for all my colleagues to see as exhibit A of how bureaucrats encourage imports of things which drive our own farmers and businessmen into bankruptcy and force laboring men onto relief. While this example was perhaps a little more startling than the average because it involved the Department of Agriculture store, it is only typical of the manner in which the whole reciprocal trade agreement program of the New Deal has discriminated against American farmers, ranchers, laborers, and businessmen by giving foreigners the benefits of our tariff reductions and permitting them to drive American products from the market because of cheap sweatshop products from foreign farms and factories.

However, what I want to talk about tonight, Mr. Staderman, is the way in which the Government's huge propaganda machine behind these trade agreements is now trying to mislead so many of our citizens, especially the mothers of America, into thinking that these low-tariff agreements promote peace.

I agree heartily with the statement of Senator ADAMS that the increased imports resulting from the Hull-Roosevelt treaties are seriously crippling domestic producers. That is as true of South Dakota as it is of Colorado. These low tariffs are a direct discrimination against American farmers and laborers and serve only to perpetuate the depression and increase maladjustment of opportunity in this country. I believe even the New Deal enthusiasts for these executive trade treaties are realizing how badly their case crumbles on the economic front. They are now trying to divert attention from our low prices for farm products, our widespread poverty and unemployment, our closed factories, idle acres, frozen capital, and other heritages of this flirtation with free trade by attempting to deceive citizens into arriving at muddled-thinking conclusions that these trade agreements in some mysterious way promote world peace. Tonight, therefore, I want to meet this argument head-on.

New Deal propagandists are now busy trying to get women's clubs, peace societies, church groups, and peace lovers everywhere to en-

dorse the reciprocal-trade agreements as a weapon for peace. Radio friends, before you are misled by such Trojan horse strategy, may I seriously suggest that you ask some direct questions of those who frantically urge your support of the New Deal low-tariff program by attempting to tie reciprocal-trade agreements to the tail of the kite of peace.

For example, it is fair to ask them, "How can it help promote peace in America to deny the Congress, which represents the people, whose sons must do the fighting, from having the right to review and ratify these trade agreements, which can so easily involve us in disputes leading to war?" No one can deny that giving the President and his appointees full power to make treaties, which can be manipulated to favor the product of nation B, and discriminate against the products of nation C, is giving the President the power to join the United States in "economic warfare" between two groups of nations. It is almost delegating the power to declare war. Nor does it promote peace to fill the hearts of American farmers and workers with hatred for the people of foreign countries whose sweatshop products of farm and factory flood our domestic markets as a result of these Executive low-tariff treaties, thus forcing more poverty on our farms and more unemployment in our cities. The first step in maintaining international peace is to maintain internal prosperity; this we can never do by displacing American products on American markets with foreign imports rolling in to force down our own standard of living. America weakens its force for world peace when our people live in poverty and develop hatreds for the foreign producers who have invaded our home markets.

#### GOOD FENCES MAKE GOOD NEIGHBORS

Good fences have made good neighbors of Americans for 150 years, during which time we have had fewer wars than any other similar country. Good fences have kept out coolie and peon products, and Americans have developed their country with no hatred in their souls for any people. But now that the Hull reciprocal trade pacts are gradually driving us onto a free-trade basis by the piecemeal scrapping of our protective tariffs, we find ourselves being generous with some nations, selfish with others, and over all forms of prejudicial trade policies and unneutral trade agreements, the people and their Representatives in Congress have not one word to say. Can it make for peace, I repeat, to delegate the power to create warlike disputes and hatreds to the executive branch of Government? Did one-man control keep Russia or Germany at peace? Did it save Ethiopia from Italy? Has it prevented China from being attacked by Japan?

#### TRADE TREATIES DO NOT PROMOTE PEACE

In fact, the whole record of history belies the assertion that executive-trade treaties make for peace. Especially does it deny the theory that low tariffs or free trade make for peace. For 14 years, from 1920 to 1934, America had high tariff walls, and America and all of the world lived at peace. We refrained from undercutting foreigners in their markets, and we protected our home markets from foreign exploitation. Came the reciprocal-trade pacts in 1934—since that date we have had the Italian-Ethiopian war, the Italian-Albanian war, the Japanese-Chinese war, the German-British-French war, the Russian-Finnish war. The apologists for the reciprocal-trade treaties can point to no wars caused by a system of traditional American protective tariffs. I do not charge these treaties with being solely responsible for the wave of wars which followed them, but it certainly does show that the trade treaties have not promoted peace. It should be further remembered that in their origin all of the foregoing wars were based on economic needs. These needs were, at least in part, stimulated by the New Deal trade treaties, which drove other nations to become more aggressive in foreign economics, because we were granting concessions to foreign countries and trying to steal foreign markets which were formerly supplied by these nations. It takes a crafty political orator indeed to show how peace can be promoted by stimulating an aggressive trade war through an attempt to drive foreign products out of foreign markets by sacrificing our own farmers and laborers through the acceptance of increased imports in order to force sales abroad of the products of a few pampered American monopolies.

You know and I know, in the calm judgment of our honest convictions, that it is as unfair and as unjust to American farmers and laborers to tear down our tariff walls to help step up exports for a few manufacturers of farm machinery, sewing machines, office equipment, and other isolated favored industries as it would be to tear down our immigration restrictions and flood this country with additional unemployables in order to step up business for a few ship lines specializing in bringing over immigrants. Importing beef into America to force-feed a few extra sales of harvesting machines to Argentina wrecks a great American farming enterprise, stimulates more farm competition from abroad, and in the final analysis destroys even the favored Americans it is meant to help by depriving them of a prosperous farm market in which to sell their products. As it operates with imported beef, so it also operates with imported dairy products, eggs, grains, shoes, lace, coal, oil, and other products of American farms and factories.

Such a policy gains us the ill will of the foreign powers whose products we displace abroad and of the domestic producers whose interests are sacrificed through increased competitive imports at home.

In analyzing the relationship of trade treaties and peace, English history will be illuminating. There we have an English-speaking nation, whose people are similar to ours; and whose industries, when the entire Empire is considered, resemble our own in size

and variety, both on the farm and in the factory. Up until 1930 England was a prize example of a country having trade relations such as those sought by the reciprocal trade agreement sponsors. England's devotion to low tariffs was such as to give her almost free trade prior to 1930. Surely, if low tariffs promote peace, England's history prior to 1930 should reveal the fact. Let us look at the record. On page 189 of the Record for October 9, 1939, is a printed list of England's wars before 1930. It is an emphatic answer to those who argue that low tariffs assure peace. Between 1780 and 1930 England was engaged in 54 wars. During that 150 years, while America was engaged in foreign war less than 20 years, England was at war for more than 100 years. Included in those wars were wars with France, with Sweden, with Russia, with the United States, with Turkey, with China, with Germany, with Denmark, and many others. Historians report that most of these wars were about disputes involving foreign trade; all of them were fought while England's trade treaties and tariff policies excelled the fondest dreams of today's low-tariff proponents of American reciprocal trade treaties. Ladies and gentlemen, I repeat: Good fences make good neighbors. In private life or public affairs, poor fences and the policy of stepping on our neighbor's toes or having him step on ours is the formula which leads toward war and away from peace. Power should be restored to Congress to review and ratify all foreign-trade treaties.

Mr. STADERMAN. We heartily agree, Congressman MUNDT, that good tariff fences make good neighbors and promote peace.

The next distinguished guest of the American Good Government Society is Congressman HOMER D. ANGELL, Republican, of Oregon, who had many years of service in the Oregon Legislature and practiced law before the United States Supreme Court before coming to Congress. Congressman ANGELL, what is your objection to the trade agreements?

#### SHOULD THE TRADE AGREEMENTS ACT BE EXTENDED?

Congressman ANGELL. My objection, Mr. Staderman, to the reciprocal trade agreements program is the way it is operated by the State Department, resulting in very serious injury to many of our people, particularly in the Northwest and my own State of Oregon. In brief, the whole theory of the reciprocal-trade law is to facilitate trade by stimulating and providing markets for American products of which we have a surplus, and at the same time opening American markets for importation of those products which we do not produce and which we need. The underlying theory is the same as that laid down by President McKinley in 1897, when he said:

"The end in view is always to be the opening up of new markets for the products of our country by granting concessions to the products of other lands that we need and cannot produce ourselves, and which do not involve any loss of labor to our own people but tend rather to increase their employment."

I want to stress that the purpose of the reciprocal-trade program is not to open our markets to products which we ourselves produce or can supply. It was not designed to bring about free trade, but to provide foreign markets for products which we produce in excess of our own demands and furnish American markets for such imports as we ourselves do not produce. It was never contemplated, for instance, that the lumber markets of America should be thrown open to imports of forest products from Canada and other countries, depriving our own lumber producers of a market for domestic lumber, of which we have a surplus. Furthermore, it was not intended that the bars should be let down for the importation of cattle and beef products from Canada and Argentina to displace our western cattle. In 1934 we imported 59,000 head of cattle. In 1938, under trade agreements, we imported 424,000. In 1934 we imported 313,000 pounds of fresh beef and in 1937, 4,600,000 pounds.

In my own State of Oregon we have the largest body of standing timber of any State in the Nation. Over 50 percent of our pay rolls come from the forest industry. The reciprocal-trade agreement with Canada has resulted in great injury to this industry in our State. In 1935 the total forest products and paper imported from Canada was \$108,724,793, whereas in 1938 it had increased to \$168,990,162, or an increase of 55 percent. We formerly supplied 75 percent of the North Pacific coast lumber used by the British nation. The Canadian agreement of 1935 lowered the American tariff wall one-half, but left the British Empire tariffs intact. American duties on Canadian lumber were cut 50 percent—all the law allowed—restricted to 250,000,000 feet annually. Under the most-favored-nation clause, this reduced lumber duty was automatically extended to every other country in the world shipping lumber to the United States, including Soviet Russia. Lumber imports to the United States increased at once. Douglas fir and west-coast hemlock from British Columbia were practically doubled. In the first 11 months of 1938 Canada shipped 155,000,000 feet of Douglas fir and west-coast lumber into the United States, while west-coast shipments to the entire British Empire, Canada, included, totaled only 59,000,000 board-feet—a ratio of 3 to 1. In other words, American lumber exporters have been cut off from the British market, but the home market has been opened to Canadian shipments. In 1938, in the Northwest, 16 percent of the sawmills worked full time, 32 percent part time, and 52 percent were idle. We paid 76.7 cents per hour to our workers for a 40-hour week and British Columbia paid 57 cents for a 48-hour week.

We are all deeply concerned for the welfare of our country. We want to play our part as one of the family of nations. We do not feel, however, that we are called upon to surrender the American market to foreign importations of the very products which we produce and of which we have a surplus which we are now unable to sell. Reciprocity means receiving compensating benefits for those

we give up. We have only 7 percent of the population of the world, but we have the best markets in the world, and we cannot in justice to our own people, open our markets to the other 93 percent, without some protection for our own people.

The farmers of my own State of Oregon are in distress. They are not now receiving the cost of production for their products. The Congress appropriated \$700,000,000 for the relief of the farm industry last year. Many loggers and sawmill workers are forced out of work in the Northwest. We want agriculture and the great forest industry of the Northwest, and our workmen, protected from importations of products from cheap labor which are underselling and glutting the American market. We have 10,000,000 unemployed, and many more millions on relief. We have huge surpluses of agricultural products and lumber for sale. Let us preserve our own American market. We urge that the reciprocal-trade agreements require congressional approval as under the Constitution tariff making is a legislative power, vested in the Congress, and we have no right to delegate it. The interests of every community in America will be protected by such a provision.

Few countries have gone as far as has the United States in protecting its wage earners. We have a floor under wages and a ceiling over hours, and have raised standards on a broad scale for the guaranteeing to American workmen healthful surroundings and social security. As a result, these additional costs are reflected in the cost of American products. We cannot hope to maintain our agriculture and industries on a profitable basis, which are heavily taxed for these purposes, if we throw our products in free competition with peon, coolie, and other cheap labor in foreign countries.

Those of us in the Congress who represent the districts which are suffering from these importations are earnestly endeavoring to provide suitable safeguards in the further extension of the reciprocal-trade program so that such practices will be stopped and our foreign trade expanded. Under the present conduct of the program through the State Department the Congress is denied any voice in the matter. The duly elected representatives of the several States most vitally affected by these unwarranted importations are without any power or authority in the adoption of the program. We join with Secretary Hull in an earnest desire to engender international good will by removing, so far as possible, foreign-trade barriers. We do not, however, feel that in justice to American citizens we should adopt a free-trade program with respect to any major products of our own country that will stifle American production, throw American laborers out of work, and trade off American markets with no compensating returns.

Mr. STADERMAN. Thank you, Congressman ANGELL, and our best wishes to all friends of good government.

### Work Projects Administration Program in Pennsylvania

#### EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, February 2, 1940

LETTER FROM COL. F. C. HARRINGTON

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed to me by Col. F. C. Harrington, Commissioner of the Work Projects Administration, with regard to the Work Projects Administration program in Pennsylvania.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FEDERAL WORKS AGENCY,  
WORK PROJECTS ADMINISTRATION,  
Washington, D. C., February 1, 1940.

The Honorable JOSEPH F. GUFFEY,  
United States Senate.

MY DEAR SENATOR GUFFEY: The following is in response to your request for information concerning the Work Projects Administration program in Pennsylvania. I would like to avail myself of this opportunity to go into the matter in considerable detail. This will require some explanation of the legislation under which the W. P. A. is operating, as well as a review of past fluctuations in W. P. A. employment in the State of Pennsylvania.

The quotas for W. P. A. employment in all States are set by the Commissioner with no legislative restrictions upon his authority in this respect. When the current appropriation act for the W. P. A. was passed by the House of Representatives it contained in section 1 (c) a formula to govern the apportionment of such employment. This section was stricken from the bill as it was reported to the Senate by the Senate Committee on Appropriations and was never

reinserted. This indicates quite clearly that the Congress desired the apportionment to be made by the Commissioner in his discretion.

The apportionment of W. P. A. employment to the various States is one of the gravest responsibilities that the Commissioner has to discharge. I assure you that I am fully aware of the important duty which is imposed upon me in this respect and that I am performing it as conscientiously as I possibly can. I assumed charge of the W. P. A. on December 24, 1938. All decisions which have been made with regard to the allocation of W. P. A. employment since that time have been made by me with complete independence, and I accept full responsibility for them.

The mechanics of the process by which this apportionment is made are as follows. Each State administrator of the W. P. A. is authorized each month to employ not to exceed a certain number of people. The allocation is in the form of a specific number of jobs rather than a sum of money, although obviously the amount expended is approximately in proportion to the number employed, the only variation being that due to differences in wage scales. The primary consideration in making the distribution is the number of able-bodied people in the State who are in need. We use every resource of our field organization to obtain this information in the most accurate possible form. There are, unfortunately, certain deficiencies in this basic data but we are continually striving to improve the completeness of our statistics on this point.

Two other factors enter into the assignment of quotas. The first is the amount of funds available, as these must, under the terms of our appropriation act, be so apportioned and distributed as to cover the entire fiscal year. The second factor is the availability of locally sponsored projects which are suitable for operation by the W. P. A. and are located where the unemployed people are.

Passing now to the Pennsylvania situation, the quota authorized for that State for the month of January was 160,000, against which there was an actual employment on January 24, 1940 (the date of our latest count), of 144,672. For the month of February the State administrator has been authorized to employ not to exceed 165,000 persons. This increase of 5,000 in the Pennsylvania quota was a part of a total increase of 53,000 which was made nationally.

The variation in employment in Pennsylvania financed from W. P. A. funds during the calendar years 1938 and 1939 has been as follows:

Month <sup>1</sup>	1938	1939
January.....	183,962	248,470
February.....	193,350	245,359
March.....	223,052	241,248
April.....	227,635	218,777
May.....	244,836	210,469
June.....	264,379	180,187
July.....	277,388	141,910
August.....	274,110	130,514
September.....	277,783	131,925
October.....	291,447	145,177
November.....	286,546	146,416
December.....	261,891	147,972

<sup>1</sup> Data are for the last week of the month.

On a national basis the lowest W. P. A. employment was 1,448,411, which was reached on September 29, 1937. Subsequently, in an attempt to meet the increase in unemployment due to the recession which became apparent in the late summer of 1937, the W. P. A. rolls were increased to a maximum of 3,363,841 on November 2, 1938. On that date they began to decline and had reached a figure of 3,093,855 at the time that I assumed charge of the Administration at the end of December 1938. The reduction continued to a low point of 1,661,970 on September 6, 1939. At that time an increase was begun, as is usual to meet seasonal conditions, and the present national employment stands at 2,230,597.

The essence of Governor James' charges is that the reason for the reduction in W. P. A. employment which has been made in Pennsylvania since the autumn of 1938 has been a desire to penalize the State for having elected a Republican administration. I deny this with all the emphasis at my command and state categorically that no political consideration has entered into the fixing of any W. P. A. quota since I assumed charge of this Administration. If Governor James' charges were true, they would prove me to be completely unfitted for the position which I hold, but he has never at any time produced a scrap of authentic evidence in support of them.

During the fiscal year extending from July 1, 1938, to June 30, 1939, the amount available to the W. P. A. was approximately \$2,250,000,000, while for the 12 months from July 1, 1939, to June 30, 1940, the appropriation is approximately \$1,500,000,000, or one-third less. Obviously W. P. A. employment has to be decreased in order to meet the reduction in the appropriation. In distributing the reduced employment, every effort has been made by me and my staff to apportion it on the basis of need.

The reduction in the appropriation itself, of course, required that Pennsylvania's W. P. A. quota should be drastically reduced. Furthermore, in the industrial upswing which has occurred in the past 6 months the State of Pennsylvania has occupied a favorable position, which justifies a proportionately greater reduction in W. P. A. employment than has been made in other States where industrial improvement has had less effect.

Since the inception of the W. P. A. program it has been difficult to secure adequate sponsors' contributions on W. P. A. projects in

the State of Pennsylvania. The current appropriation act requires that on projects approved subsequent to January 1, 1940, the State average of sponsors' contributions shall be at least 25 percent of the total cost. I, of course, have no authority to depart from this requirement and it must be enforced by the State administrator. At the present time the proportion of sponsors' contributions in Pennsylvania is the lowest of any State in the Union except one.

Furthermore, projects to be suitable for operation by this Administration must be located in areas where the unemployed workers reside or within reasonable distance thereof. Obviously workers cannot be transported hundreds of miles in order to employ them on suitable projects.

The deficiency in W. P. A. employment in Pennsylvania is concentrated largely in five counties—Philadelphia, Allegheny, Luzerne, Lackawanna, and Schuylkill. This is because of the fact that projects for the employment of the needy in these counties have not been forthcoming. Elsewhere in the State the W. P. A. is employing very nearly all of the able-bodied persons who have been certified as in need.

The most striking instance of the situation which I have just described to you is in Philadelphia. From our knowledge of the need which exists in Philadelphia in proportion to that in other parts of the State, the W. P. A. would be justified in employing 39,000 persons in that city. This is in contrast to the present actual employment of 20,468. Of the actual employment of 20,468, only 4,545 are on projects sponsored by the city of Philadelphia. Four thousand three hundred and seventy-four persons are on projects sponsored by the Federal Government. Employment for the remaining 11,549 is provided as follows: Fairmount Park Commission, 1,600; board of education, 1,346; State highway department, 97; and nonconstruction projects, sponsored by the State department of public assistance, including sewing rooms, 8,506.

This is a situation which this Administration is entirely powerless to correct. If the deficiency in projects in Philadelphia were remedied, the employment in the State could be brought up to the authorized figure of 165,000, at which time discussion of further quota increases might be germane. However, an increase in quota at this time would be a meaningless gesture when nearly 20,000 vacancies remain unfilled. The State administrator has been doing everything in his power to remedy this situation and to secure projects which will enable him to employ the authorized quota. Some improvement in this respect is being made, but the situation is still highly unsatisfactory from the standpoint of this Administration.

While population cannot be taken as a yardstick for the apportionment of W. P. A. employment, an analysis of this factor insofar as Pennsylvania is concerned does not indicate any discrimination against the State. The population of Pennsylvania, according to the 1930 census, is 7.8 percent of that of the United States, and during the 6 months from July to December 1939 the W. P. A. employment in Pennsylvania was 7.1 percent of the total W. P. A. employment in the Nation. The unusual situation which pertains in Philadelphia is largely responsible for the fact that the proportion of W. P. A. employment is somewhat below the proportion of population. This is strikingly illustrated by the fact that if Philadelphia is eliminated the population of the remainder of Pennsylvania represents 6.36 percent of the population of the United States, and the W. P. A. employment provided in the last 6 months of 1939 has been 6.34 percent of the total W. P. A. employment.

In closing this rather lengthy and detailed letter I wish to state emphatically again that no political considerations of any nature whatever have entered into the authorizations for W. P. A. employment in the State of Pennsylvania and to assure you that none will in the future.

With kindest personal regards, believe me,  
Cordially yours,

F. C. HARRINGTON,  
Commissioner.

## Virginia Editorial Association

### EXTENSION OF REMARKS

OF

## HON. HARRY FLOOD BYRD

OF VIRGINIA

### IN THE SENATE OF THE UNITED STATES

Friday, February 2, 1940

ADDRESS BY HON. BURTON K. WHEELER, OF MONTANA

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Senator from Montana [Mr. WHEELER] on January 27, 1940, before the Virginia Editorial Association at Richmond, Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I suggested to my good friend Senator BYRD that since I had received and accepted an invitation to speak to the United Mine

Workers of America at their golden jubilee convention that you might want to cancel my invitation to address you this evening. Yesterday I spoke to the miners. I talked to John Lewis—the same John L. Lewis who, according to a prominent Republican Senator, was once offered a place in President Coolidge's Cabinet as Secretary of Labor. Some time ago a Catholic paper said something kindly about me and I immediately received letters saying I ought to repudiate the paper. Thereafter I spoke in the city of New York at a peace meeting and a Jewish rabbi introduced me, whereupon letters were sent to the Democratic leaders of my State saying I was selling the country "down the river." When I spoke before the National Association of Manufacturers a labor paper in my State said that I had sold out to the Tories and the reactionaries. But I am proud to speak to any group of American citizens who are interested in the welfare of our people and the preservation of American institutions. I am reminded of a story that is told upon my old friend, Senator Jim Watson.

Jim was walking along the streets in Indianapolis with two or three Republican leaders when he met a Negro. He left his friends for 5 minutes while he engaged in conversation with the Negro. When he had finished one of his friends said to him, "Jim, why do you want to waste your time with that old Negro? He has no influence and he is crazy." Jim replied, "I know he is crazy and I know he has no political influence, but he is the only man in the United States that has ever told me that he thought that I should be President of the United States, and I'd walk five blocks to shake hands with that old Negro."

The founder of the Democratic Party, Thomas Jefferson, a Virginian, was the greatest expounder of racial and religious tolerance; but those are not the only kinds of intolerance we have in this country. I find in my travels about the United States today that there is a tremendous lot of economic and political intolerance as well as racial and religious. When I was in Germany in 1923 I found the same intolerance widespread there. Intolerance of any kind tends to break down and destroy a democratic form of government, and as American citizens we should be extremely careful lest our passions and our prejudices rather than our reason govern our decisions.

When I say to you that I feel not only honored but pleased to be invited to address this meeting do not imagine that I have any illusions regarding the difficulties that confront me. It is trying enough for us Members of Congress to undergo the searching examination of our thoughts and purposes by a single alert reporter. But to face a large aggregation of newspapermen skillfully practiced in the analysis of current problems and employed in the skeptical appraisal of public men ought to make one feel much as if he were being trundled into an operating room as a helpless subject for the exercise of surgical virtuosity.

That I have been able to bring myself to face this ordeal without flinching should be attributed to my confident reliance on the graciousness of southern hospitality whose fame your fine old State has had such a large part in creating. In attempting to discuss before you some of the issues of the day I count not alone on the relation of host to guest, but also anticipate the treatment of moderation and charitableness which as you are so humbly aware is characteristic of the journalistic profession the world over.

Before going further I want to declare my respect and admiration for your Senators GLASS and BYRD who so ably represent this State in the Congress and who are such a credit to you and the Nation. We have not always agreed on public questions but no differences of opinion have ever lessened the high esteem in which I hold them, or diminished my appreciation of the high value of their public service. I am sure that my warm regard for them is shared by all their colleagues in the Senate.

I do not intend to try to enumerate all the distinguished sons of the Old Dominion who have made great contributions of thought and action to the upbuilding and glory of this country. Their names and achievements are too well known to you and the Nation to require any elaboration from me. But as a member of the Democratic Party I must pause to pay tribute to Thomas Jefferson. He was the author of the Declaration of Independence—a scholar, a statesman, and the unrelenting foe of everything embodied in nazi-ism, fascism, and bolshevism. Jefferson was a patriot. He was the champion of tolerance and freedom. The precepts he enunciated over a hundred and fifty years ago constitute the very basis of the Democratic Party.

Other parties have come and gone. Even their names have disappeared from use if not from memory. One party or another has arisen with this issue or that, carried on for a while, with or without success, and then gone into the discard. But the Democratic Party has lived on; at the advanced age of nearly a century and a half; it is still as active, progressive, and forward-looking as it ever was. It is in full possession of its faculties.

The reason for this longevity is that the Democratic Party does not owe its existence to the adoption of some contemporary and transitory issue, but that it was based on fundamental and eternal principles. It stood for equal rights and opportunity for all men; its appeal was to the mass rather than to the group, to the universal instinct for fair play instead of to the selfish desire for special privilege and advantage. That is not to say that inequality and special privilege did not sometimes win out, but the effectiveness of the Democratic appeal persisted, nevertheless, and triumphed often enough to keep the ship of state from floundering and headed in the right direction. The people have sometimes gone on a spree; they have sometimes fallen for the alluring promises of false

prophets; but after every brief debauch they always return to sound principle to cure their headaches, cleanse their systems, and restore their nerves. There is sound sense and ample justification for their action. In all the long history of the national party there has never been a Democratic administration that was corrupt—not one that was ever smirched by a major scandal. It is demonstrably true that Democratic administrations have been clean and honest administrations, while many other administrations have not been. It is something of which members of the party may well be proud.

This administration has a record of accomplishment. It is not a question of promises or proposals, of suggestions or tendencies, but a list of actual solid accomplishments and fixed policies. An idea of what will be done can be had from looking at what has been done. If the honest critics of this Democratic administration, not the captious or malicious critics, could be transported into the future 25 or 30 years, and, looking back, I believe they would confess that within its term more has been achieved in the upbuilding and improvement of the country materially and in the advancement of the social and economic welfare of the people as a whole than in any three or four like periods in the Nation's history.

If you will just stop and think calmly about the matter, you will find there is hardly one condition touching the life of the citizen of this country that has not been bettered as the result of some activity or measure of this administration. His bank deposit has been made safe; he has been protected from the operations of stock swindlers; he has unemployment and old-age insurance; he can buy a home on the easiest of terms without any longer being the victim of mortgage sharks; he can secure relief if misfortune has made him destitute; he can transform himself from tenant farmer to farm owner with the assistance of the Government; and if he is a hapless migratory worker the Government offers, as fully as at present possible, shelter in decent surroundings. The farmers have been aided with a higher income. The workman's right to collective bargaining has been assured. The consumer, both urban and rural, can in many instances acquire cheaper light and power.

In addition to these things that affect the individual directly, there are the splendid public works which have been constructed and will last for generations to carry out their useful purpose. Waterworks, bridges, hospitals, libraries, educational buildings, and highways—all products of the thought and enterprise of this administration—are scattered through every State and almost every county of the country—adding to its wealth and conferring benefits upon the public for years and years to come.

Someone remarked to me tonight, "Senator, we know the administration and you Democrats have acted—you have done much good, and you have made some mistakes—but when are you going to balance the Budget?" The answer is simple. We can balance the Budget when the people of New York City, Chicago, Philadelphia, Butte, and Richmond can meet their local needs. In one breath your civic groups wire and urge us to provide funds for a new auditorium, a swimming pool, a library, or something else, and in the next breath they demand a balanced Budget. When local needs are met by local governments the Budget will be balanced. But a democracy that fails to furnish the essentials of human dignity to its people is not worthy of the name; and if private industry fails to furnish jobs to the unemployed, the Government must.

No government can spend more than its income over a considerable length of time without coming face to face with bankruptcy. And it should never be forgotten that financial bankruptcy is the first and most direct step to political bankruptcy—to dictatorship. A dictator is but the receiver of a bankrupt nation. Let us, of course, realize the periods of national emergency, such as we have been experiencing, but the possibility of a balanced budget beyond the power of either a liberal or a conservative administration. We all want lower taxes; we would all like to pay less for government. Every thinking person realizes that every effort should be made to balance our National Budget. The present Congress of the United States is aiming in that direction.

Within the last month or two I have addressed great conventions of organized industry, organized labor, and organized farmers. I speak the same language to industry, to farmers, and to labor that I speak to you. I want to repeat what I have said to them.

This Nation of ours is confronted with a grave crisis. We have solved the problem of production, but the necessary correlative of mass production is mass consumption.

People everywhere are rightfully asking, Why do granaries bulge when people are hungry? Why are bales of cotton piled higher and higher when people lack clothing? Why do workers walk the streets when we need more adequate housing facilities? What has created this paradox of want amid plenty? What is it that leads men to close down mines and factories when people are cold and hungry? What is it that leads man to destroy wealth to create wealth? These economic riddles came with mass production, and they will go with mass consumption. The problem of consumption lies basically with the great underprivileged segments of American society—the unemployed, the underpaid, and the underprivileged farm group.

Contrary to the belief of many people, income levels of large sections of even the employed are desperately low. For instance, the wages of almost 40 percent of the workers were less than \$500 during 1937. The wages of almost two-thirds of the workers during that same year were under \$1,000. A quarter of our population is engaged in agriculture and the average cash income per farm during 1939 was \$625—and this includes the Government benefit payments.

Unemployment and the farm problem must be solved before this Nation can prosper. The nearly 10,000,000 who lack real jobs—and agriculture with its millions of low-income farmers—must be given an opportunity to consume not only the necessities but also the luxuries of life.

I have repeatedly said that it is not necessary for business to high-pressure John Jones into buying a new automobile; he would like to have a 1940 model. You don't have to high-pressure him into buying new clothes or more food or even a new home; he wants them all. His wife wants the modern conveniences.

John Jones and his wife and 40,000,000 others lack the means to buy goods with which our markets bulge. Industry has created the demand, but neither Government nor business has provided the necessary purchasing power.

This country is neither exhausted economically nor inefficient industrially. On the contrary, we are rich in men, money, and machines. We have a potential market. But until we have also helped to provide the means whereby this potential market becomes an actual market, the job is only half done. Our energies must be devoted to finding ways to give the farmers and the workers the purchasing power that will keep our factories running, not at 50 percent or 58 percent but at 100 percent all of the time.

Industry, as well as labor and farmers, are vitally concerned with this basic task that confronts us today. No one solution is available at the present time, nor is any one group or organization in a position to recommend a specific program to be readily accepted by all others. The Government, therefore, must assume the leadership. And to this end the national leaders of industry, agriculture, and labor should be called together to meet and confer and recommend a program by which we may achieve industrial democracy and economic and social security.

I have not mentioned international problems—Europe and Asia presently know the horrors of war. We are at peace, and, God willing, I hope we will ever be. As a candidate for reelection to the Senate in 1934, I promised the people of Montana that I would never vote to send an American boy to fight on foreign soil. In 1940 I am again a candidate for reelection to the Senate, and I give to you and renew to the people of Montana that same pledge.

As Americans—Democrat or Republican, liberal or conservative—our main and first and final duty is at home, not in Europe and not in Asia. We need not fear armed invasion by any means from any nation 3,000 miles away. We can and should, therefore, devote ourselves to a solution of domestic problems, not European difficulties. The danger to the United States and to democracy comes from within, not from without. We have nothing to fear from a mad dictator in Europe, but we do have much to fear from continued unemployment and an unsolved agriculture problem. Those are the primary problems that face us and their solution must be found within the framework of traditional American principles. In a spirit of constructive cooperation we can do this. American labor, agriculture, and capital working with Government, can solve all our problems. We do not hate any race or nation. We must keep peace with the world and at the same time extend the borders of economic and social justice at home. We are the richest, the freest country on this earth, and the last haven, the last frontier of tolerance and reason. By making the United States a better place in which to live, by maintaining our sanity and balance, we best serve democracy, civilization, and the world.

### Pembroke Republican Club

### EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, February 2, 1940

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the Pembroke Republican Club, Harrisburg, Pa., on February 1, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The economic basis of our Republic must be maintained, or we are destined to witness the greatest social tragedy the world has ever known. The mounting national debt and the continued policy of borrowing without respect for our ability to pay is bringing on a crisis. Probably you have all heard the lines:

Oh, Little Debt, don't you cry;  
You'll be a crisis by and by.

I tell you this is no laughing matter.

I have advocated for years that public confidence is as necessary to economic prosperity as our material resources, and that public

confidence can be sustained only by the active development of our capital structure. The American people are being led into a trap. We might be likened to mice nibbling at the cheese bait of the mouse trap. The cheese is our capital wealth and the trap is national bankruptcy. Just as mice are induced to nibble and nibble at the cheese until the trap snaps to break their necks, so the American people are being lured on to eat into our capital structure, to borrow and borrow and borrow again, and all the time beholding no increase of earning power and no increase of economic strength with which to meet our obligations. With no money with which to buy, we have been encouraged to borrow until we are sinking in the devastating quicksand of debt.

If we tie our Nation to the lag of world prices, we shall unquestionably remain just about where we are for a long period of time for the simple reason that the weight of world difficulty is so ponderous as to keep us constantly depressed. World prices will rise, but slowly. On the other hand, if we adopt a strict national developmental point of view and constitute ourselves as economically self-sufficient as possible, we shall not have to wait for world forces to recover, but shall be able to move toward prosperity much more rapidly.

Wealth consists not of any form of money, credit, or reform propaganda but rather of human and material resources, with which we are abundantly blessed in America. True wealth consists in high standards of living, together with the resources necessary to the maintenance and development of these standards. Our wealth, our capital structure, remains unimpaired today; our material and human resources are just as powerful as ever. However, inflation, the artificial alteration of price and wage levels, does not strengthen the capital structure or permanently stimulate exchange. Inflation is like a shot of a high-powered drug; it temporarily quickens the heartbeat of industry but must be constantly repeated in order to permanently speed up business. If oft repeated, the spiral of artificial prices soars beyond control and the capital structure is weakened, for confidence is lost. Any act of inflation, such as the devaluation of the dollar or the issue of greenbacks not backed by a metallic reserve, is a blow which staggers public confidence, for it always decreases the value of the securities of those who have them, the people who have had the thrift and the ingenuity to acquire them.

Credit expansion whether based on an inflated base or on a normal base has severe limitations for loans can be extended profitably only when borrowers possess earning power with which to repay them. Credit expansion is absolutely out of place when industry is stopped. The only use of credit expansion is a parallel movement with business expansion.

New forms of government and new forms of industrial discipline, new bureaus, and new codes do but little to strengthen the capital structure. These new forms are frankly experimental. They are powerless in themselves to make the economic machine work more efficiently. The only way to put power into new forms of government and industry is to place them in the hands of those who have the capacity to lead. These are people of brain power and experience, and it is very, very difficult to persuade them to scrap the old forms of society to which they are accustomed and to accept substitutes which are frankly experimental.

Therefore, if we are to emerge from the depression we shall have to find a way to increase our capital structure. If we seek simply to maintain it, we shall find it will decay before our eyes. Things do not stand still. They either go forward or backward. Our capital structure must be increased, and the only way to do that is to put it to work to meet economic demands.

Our problem is that of putting our capital structure to work. We need to search out the greatest markets in the world and use them; they are ours. The greatest purchasing power in the world is the United States. The greatest producing power in the world is the United States. Harness this purchasing power to the producing power and you have prosperity if you maintain quality production and a constant increase of wages.

These years of depression have laid low the pride of millions of our citizens. They have been compelled to subject themselves to conditions of life entirely strange in our American economy and for the first time many of them have been brought to a clear realization of the tragedy of insecurity which so long has prevailed throughout the world. The spirit of these depression years has been one of increasing insecurity. In the attempt to attain social security through governmental action economic security for our citizens as a whole has suffered. Our people know that war would bring increased uncertainty, and they have had enough of it. This is not the spirit that welcomes a fight on foreign soil.

If war ever had any glamour at any time, surely that strange romance has vanished in recent years. The world has been appalled by the revolting cruelties of war that have been thoroughly exposed by our recently developed efficiency of modern communication. War has ever been ugly, hideous, and ghastly. But its tragedies were known chiefly of old by those who went to battle. Now everyone who reads the papers, listens to the radio, attends the movies, has intimate glimpses into the reeking horror of it all. The American public has had a daily diet of this devil's brew during these fateful years since 1931. The bombing of innocent civilians, the starvation of helpless women and children, the wars that have involved all Europe and Asia have stabbed open the heart of the American people. The futility of war has been thoroughly exposed.

America has the will to peace and this will should be kept effective by a never-ending concentration on our own unsolved domestic problems. The more we think about foreign affairs in terms of war the more likely we are to become involved in foreign wars. We

have enough unsolved problems in our own country at the present time without going abroad to seek out the unsolved problems of foreign powers. This does not mean that we should refuse our sympathy to the oppressed minorities of the world. It does mean that we shall resolutely place first the peace, welfare, and safety of the American people.

The strongest safeguard of peace is not to be found in prohibitive acts of neutrality. The strongest safeguard of peace is eternal vigilance in building up the mind and will to peace among the people. A peace-minded people will not easily be betrayed into war. The sovereign power of government is still with the people. This will be reflected from day to day in an ever-increasing expression of public opinion. If the stream of public opinion is kept strong for peace, America will keep the peace.

It is inescapably true that the peace of the world is now upset by nations whose powers of government are dictatorial and removed from the thought and will of the people as a whole. It has ever been true that war is made by political cliques that ride roughshod over the peaceful desires of the people in order to attain increased domination for themselves. This makes ever more clear how fortunate we are in the United States where the President and the Congress are granted concurrent responsibility under the Constitution in the formulation of effective foreign policy. Executive control of foreign policy such as is exercised by highly centralized governments has an advantage of speed and secrecy but the American people do not want to be hurried into war in any sudden or secret way. So long as the United States continues to be governed under our Constitution, Congress will directly participate in the formulation of foreign policy, reflecting directly the will of the people. And the American people do not want war.

We have demonstrated on the North American continent that human beings of different race, class, and creed can live side by side peaceably. We have proven that defense consists of something more than guns. It takes more than armaments to make society secure. It takes men and women, boys and girls, with integrity and character and the will to peace. It is pathetic to see millions of people driving down the road to war, seeking to kill and destroy, without knowing why, trying to gather up the answers to their broken lives in the later records of historians who recount the tragic tale. We have shown that no barricades are necessary between Canada and United States. The good will established along this border can and should be extended in other parts of the world. We should put our trust in peace—not in war.

### Tribute to the Late Senator Borah

#### EXTENSION OF REMARKS

OF

#### HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, February 2, 1940

POEM BY KENNETH STUART MCKENZIE

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have printed in the *RECORD* a poem written by Kenneth Stuart McKenzie, of Idaho Falls, Idaho, on the occasion of the death of Senator BORAH.

There being no objection, the poem was ordered to be printed in the *RECORD*, as follows:

Stand silently, ye multitude,  
With bowed, uncovered head,  
Let no irreverence mar your hallowed mood,  
Before your mighty dead.

Stand silently about his bier,  
His soul's before his God,  
His mortal corpse, with glistening tear,  
You'll lay beneath the sod.

May no trifling speculation  
Disrupt the reverence of your mien  
Or disturb the relaxation  
Of his endless sleep, serene.

The Master's call's been answered  
By one of great renown.  
The "Lion of the Senate"  
Has laid life's burden down.

No more shall stanch supporters  
Hear him on the Senate floor;  
No more shall news reporters  
Record the Lion's roar.

No more reverberations  
From the galleries applause  
Shall resound through Senate corridors  
For the justice of his cause.

But the still-applauding populace  
Listens in with bated breath—  
He was eloquent in life;  
He's still eloquent in death.

He oft defied the tyrant's scorn,  
He was faithful to his trust,  
But soon his cold and pulseless form  
Will mingle with the dust.

Who'll dare now to fill his place?  
Who'll stand now in his stead?  
No mortal man can try, with grace;  
The immortal BORAH's dead.

Down the last, long, lonely river,  
His soul has gone to rest;  
But his spirit's here forever,  
'Tis the spirit of the West.

KENNETH STUART MCKENZIE,  
Idaho Falls, Idaho.

### The Negro in American Politics

#### EXTENSION OF REMARKS

OF

#### HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, February 2, 1940

RADIO ADDRESS BY EARL W. MANN

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have inserted in the Appendix of the *RECORD* an address by a wide-awake, thinking, and observing Negro leader of Colorado, Lt. Earl W. Mann, on the subject of the Negro in American politics.

This splendid address was delivered over radio station KVOB during Negro achievement week, and enlisted widespread comment. It analyzes, in a matter-of-fact way, the political significance of the migration into the North of the American Negro. It is startling to note that Lieutenant Mann looks upon the slums and abandoned areas of northern American cities as both a refuge and an opportunity for the foot-loose, and points out that city air still makes men free, and that these so-called slums are the most democratic of all our territorial units.

There is a challenge to his race in his quote that the Negro's struggle to get ahead is an inspiration and a discipline. This very significant and thought-provoking address is well worth the time of every American interested in the complexities of his country's current political development.

There being no objection, the address was ordered to be printed in the *RECORD*, as follows:

Before discussing the Negro in politics of a northern community, it is necessary to revive the history of Negro participation in American politics. It is also necessary to consider in what direction this group is going. The trend of American political development has been toward a wider and wider participation of all elements of the population in the affairs of government, sex, religious, and racial qualifications for voting and officeholding have been gradually liberalized. These changes being made in accordance with the ideology of democracy, which calls for political equality, in form of universal suffrage and freedom of choice. However, when these dogmas have been applied to these people, struggling from an inferior status, friction and conflict have resulted. In recent years there has been a great migration of the Negroes from the plantations and small towns of the South to the manufacturing cities and metropolitan centers of the North. This migration has brought a great change in the condition and in the outlook of the Negro people of America. In the cities rural Negroes have become involved in a competition—biological and economic—more intense and pervasive than they had ever known. On the other hand, the Negro has developed an intellectual life and produced a literature for which, otherwise and elsewhere, there would have been neither the occasion nor the opportunity. The character of this new Negro politics seems largely determined by the fact that, like other immigrants, Negroes moving northward settle first where they encounter least opposition, either in the way of high rents or social prejudice, namely, in the so-called slum areas. These areas where people live, ordinarily from necessity rather than choice, are in many respects the most democratic of all the territorial units in which this urban

complex finally resolved itself. Here where neighbors are mostly strangers, there is likely to be some sort of equality and a general disposition to live and let live, not characteristic of more highly organized communities. It is in these areas and the adjacent territories, where these people are forced to reside, that a voting preponderance has been achieved that has made them a political power to be reckoned with. It is significant also that the migration of the Negro to the northern cities took place at a time whites were leaving their homes in the center of the cities for the more spacious suburbs. Commensurate with the expansion of these suburbs, the abandoned areas also expand, now being peopled largely by immigrants and Negroes.

The result has been that by a singular turn of fortune the southern Negro, lately from the sticks—the man furthest down—now finds himself living in the center of a great metropolitan city, where his vote is not only counted but where, in various ways and for various reasons, it counts. Whatever criticism that may be offered for the birth of this new Nation upon the embers of an old one, the fact remains that those responsible were not able to see the woods for the trees. It is quite probable that no one visualized this new way and new deal, wherein the Negro would enjoy his civil rights. But, happily, he has at least been able to enforce, in this new social and political order, a consideration that he did not receive in the old. When, in January 1901, George H. White, the last Negro Member of Congress from the Southern States, delivered his valedictory speech, the incident, although it attracted little attention at the time, marked the end of an epoch. Since that time the public that gets its politics from the press had become accustomed to the notion that the Negro was out of politics, if not for good and all, at least for an indefinite period. The public was, therefore, surprised and a little disconcerted when, in 1928, Republicans of the First Congressional District of Illinois, elected a Negro to Congress. Still more surprising, 6 years later a Negro was elected from the same district on the Democratic ticket, to succeed a Republican. This shattered all traditions. Today we have Negroes holding legislative positions in several States, as well as members of this group being identified upon school boards, administrators of our courts, one young woman, a Yale Law School graduate, being recently appointed to a judgeship in New York City at a salary of \$10,000 a year. Also other appointive positions too numerous to mention. What makes this more interesting and significant is that these positions have been developed by the votes of the Negro migrants from the South, voters who at home had been effectively dispossessed of their franchise. It is still true of the Negro in America as it was of the serfs of Europe that city air makes men free, and this is true in more ways than are ordinarily conceived. The great cities are now what the frontier and wilderness once was—the refuge of the foot-loose, the disinherited, the exploited, and all those possessed of that undefined malady we call social unrest. The struggle of the Negro to get ahead has been described by one of my good friends of the dominant group, as an inspiration and a discipline. It has given the Negro a cause and a career, the influence of which upon his intellectual life can hardly be overestimated, for intelligence and intellectual life are incidents of action that give individuals and races the courage and inspiration that is necessary to rise from a lower to that higher cultural level of intellectual life, which is the standard of the world. It is true that there have been other races similarly circumstanced, as both Irish and Jews were left to their own resourcefulness upon arrival upon American shores. But in these comparisons we must bear in mind that the Negro had farther to go than either Irish or Jew. He started farther down—a slave. He has adapted himself, however, to our western civilization, with its complex traditions and polyglot groups, as has no other ethnic group, and is deserving the equality of opportunity he seeks.

### America's Relations With Japan

#### EXTENSION OF REMARKS

OF

HON. A. B. CHANDLER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, February 2, 1940

INTERVIEW WITH HON. THEODORE FRANCIS GREEN, OF RHODE ISLAND

Mr. CHANDLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interview participated in by the distinguished Senator from Rhode Island [Mr. GREEN], in which he answered questions put by Mainichi, a newspaper published at Osaka, Japan. This interview was a most unusual one. It was transmitted by telephone from Washington to San Francisco, by radio to Honolulu, and thence to Japan, where it was broadcast to the country. The Senator from Rhode Island, in the interview,

answers three very important questions concerning the relations of our country with Japan.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

ANSWERS OF HON. THEODORE FRANCIS GREEN, OF RHODE ISLAND, IN A RADIOPHONE INTERVIEW TO QUESTIONS PUT BY MAINICHI, A NEWSPAPER OF OSAKA, JAPAN, FROM WASHINGTON, WEDNESDAY EVENING, JANUARY 24, 1940

1. What are the reasons on the part of the United States for delaying the conclusion of a new treaty with Japan?

The reasons for delay in concluding a new treaty with Japan are the same reasons which led to the termination of the old treaty. You have asked me to be frank in my answers. Being frank, I believe that these reasons are twofold. In the first place, the people of the United States are indignant at the way in which their rights in China have been disregarded and denied by Japan. Many of these rights are based on treaties entered into by China and the United States in good faith on both sides, and the United States cannot condone their denial or interruption. In the second place, our people realize the importance to all civilized nations of law and order in the world and the abandonment of war as an instrument of national policy. We believe that our own interest and also of interest of the world at large is threatened by the use of force unsustained by right. They therefore condemn the invasion of great parts of China both as inhumane and a threat to world peace.

2. What is the prospect of an embargo on Japan? Is the sentiment of Congress favorable to the adoption of embargo bills?

All bills and resolutions relating to this matter have been referred to the Senate Committee on Foreign Relations. As a member of that committee, I feel that I should not express any opinion pending discussion in the committee and report by the committee to the Senate.

3. In view of the European war, don't you think it important for the United States and Japan to be on amicable terms and maintain a spirit of mutual cooperation?

Without regard to the European war I do think it important for our two countries to be on amicable terms and maintain this spirit. Our countries were for many years close friends. As a United States Senator from the State of Rhode Island, I appreciate this fact particularly because it was a son of Rhode Island, Commodore Perry, who helped Japan to open its doors to the world and create a modern Japan. Since then my countrymen have for many years looked with admiration at the extraordinary progress Japan has made. They have watched this not only with admiration but with friendly interest. However, we must remember that friendship cannot be one-sided. It must be mutual. It is difficult to maintain friendship when one of the friends ceases to respect the rights and opinions of the other. I, therefore, sincerely hope that the present tense situation may prove temporary and that the old friendship between our two Nations may be restored.

### Indian Fishing Ground

#### EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, February 2, 1940

ARTICLE BY RICHARD L. NEUBERGER

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have printed in the RECORD an article appearing in a recent issue of Collier's magazine, written by Richard L. Neuberger, and entitled "Unhappy Fishing Ground."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Collier's for October 21, 1939]

UNHAPPY FISHING GROUND

(By Richard L. Neuberger)

WE'RE STILL CROWDING OUT THE INDIAN—THIS TIME IT'S HIS FISHING RIGHTS THAT ARE IN DANGER—MAYBE HE WILL HAVE TO PAY A TOLL EVERY TIME HE GOES FISHING FOR SALMON

At the last big drop of the Columbia River on its swift course to the Pacific, Abe Showaway and four or five thousand other Indians are making a final defense of the heritage which was theirs. All else that belonged to the red man is gone. Even his lands have been taken from him. Celilo Falls is his last stand. There he is a warrior still—fishing exactly as Indians were fishing when they held dominion over North America—except that the white man has told him he must have a fishing license.

The "X" marks with which William Chinook, Elash Kish Kic, Mission John, and other chiefs ceded to the United States an area as large as England were not put to the treaty of Wasco in 1855 until a clause had been included assuring the Indians perpetual fishing rights at Celilo Falls. Almost within sight of the white plumes of the tumbling river the treaty was drawn up and signed and sent by military courier to far-off Washington, D. C.

The treaty of Wasco, ratified by Congress and proclaimed by President James Buchanan, made no mention of poundage fees, fishing licenses, game wardens, State policemen, open and closed seasons, and huge dams across the Columbia. The right of the Indians to fish forever for the giant Chinook salmon was not limited or qualified. Now restrictions have been imposed and the warriors are waging a resolute campaign of opposition.

"If white man can tell us go get fishing license," argues wise old Tommy Thompson, chief of the Celilo Indians, "maybe by and by he can tell us go away from falls all time and no fish any more."

The controversy involves not only the Federal Government, with which the Indian tribes made their treaty 84 years ago, but also the States of Oregon and Washington, which are separated by the river at Celilo Falls. Washington forms the north shore of the Columbia, Oregon the south. These States have been exclusively responsible for such restraints as fishing licenses and game inspectors. The dams blocking the river, with their threat to the future of the salmon runs, are solely the product of the Federal Government.

The red men believe that this encroachment imperils their very livelihood. Royal Chinook salmon from the Columbia River may be a rare treat in restaurant or dining car, but at Celilo Falls it is actual subsistence for hundreds of Indian families. Salmon to these original Americans is the equivalent of rice to the Japanese. This explains the perseverance and resourcefulness with which the tribes are protesting denial of their treaty rights.

When ordered by game wardens to fish on the Columbia according to State regulations, the Sokulk Indians in Washington began a campaign of passive resistance. They put away their dip nets and spears and let the salmon thrash upstream unmolested. Hunger invaded the wigwams and cabins of the Sokulks, who always had depended on salmon as their main food supply. In the river there was sustenance, but Chief John Buck shook his head each time braves took down their fishing equipment. "My people," he told them, "this is the way we must uphold our rights."

The Gandhi strategy proved successful. With famine menacing the teepees and shelters of the Sokulks, white settlers in the region became aroused. They sent a long petition to the State capital. It stirred the politicians, and the Washington Legislature has just passed a law pledging the Sokulk Tribe unrestricted salmon fishing on the Columbia River.

Public opinion in the Northwest overwhelmingly favors the Indians. This was demonstrated recently when warriors were arrested for fishing without licenses at Celilo Falls. While the braves sat in jail in the Washington town of Goldendale, their chiefs congregated in front of the building and solemnly made known their feelings.

#### BOSS OF INDIANS' LOBBY

It was clear everyone agreed with gray-haired Chief Speeding Arrow, of the Spearfish Indians, who said, with stony expression, "We all no like this." Friendly lawyers advised the prisoners to demand jury trials. They did. The charges were dismissed, the authorities apparently deciding it was wiser to free the Indians immediately than wait for 12 citizens to do so.

To protect the rights assured them by the American Government nearly a century ago, the Indians fishing on the Columbia even have ventured into politics. John Whiz, of the Yakima Tribe, is chairman of the Celilo Falls fish committee. This means he is the boss of the Indians' legislative lobby. In fact, he is the whole lobby.

"Indians have hard enough time now without paying fishing fees," John Whiz told senators and representatives as he stood in the marble rotunda of the capitol building beneath the mural of Lewis and Clark at Celilo Falls. The legislators and Gov. Charles A. Sprague concluded he was right, and this all-important sentence was inserted in the Oregon laws specifying fees for fishing:

"Provided, however, That the fees prescribed in this chapter shall not be required of Indians with treaty rights."

The red men regard John Whiz's lobbying feat as a great victory, but they know the campaign is still far from won. A district judge in Yakima has just ruled that the State of Washington can collect license tolls from the Indians, because the funds are used for conservation of the salmon runs. Chiefs and warriors with grim faces listened in the courtroom as the verdict was given.

The Indians will not give up until every appeal has been exhausted, and even after that they may keep on trying. The Department of Justice is allied with the tribes in this phase of the struggle. The National Government insists that Indians with rights under the 1855 treaty cannot be compelled to buy State licenses in order to catch salmon at their traditional fishing grounds.

"This is an important problem," contends Carl Donough, one of the Federal district attorneys in the Northwest. "Our country has a pact with these people. To violate that pact in any way would be as morally wrong as to break a treaty with our most powerful neighbor abroad. Our treaty with the Indians on the Columbia River is as entitled to respect as a treaty with the British Empire."

Yet, colorful though it is, the spectacle at Celilo Falls is no synthetic ceremony staged for visiting royalty or curious Pullman passengers. It is a real and serious business to the Indians of many tribes. The salmon catch is not only their principal food but also the solitary source of income for most of them. At the peak of the autumn run, when the fish jam in a thick mass below the falls, the Indians with their dip nets and spears have taken out 100 tons of salmon in a day. During such a period a dextrous brave can haul in enough fish to feed his family for many moons.

Not so long ago the Indians were pulling 9,000 tons of salmon annually from this swirling stretch of the Columbia. At a cautious calculation of 4 cents a pound, the value of such a catch would be \$720,000. In recent years the haul has been less. As civilization has hemmed in the river's lower reaches and dams have blockaded its course in the highlands, the salmon runs have dwindled. The Yakima Indian Agency estimates that the red men now catch approximately 5,000 tons of fish at Celilo each year. This is still no haul to be grunted at disdainfully. It consists of the sleek, flaky-fleshed Chinooks which are matched few other places on earth, and its commercial value would be \$400,000. If the catch only stays at this level—and the Indians are left in peace to catch it—the tribes will be content and Celilo Falls will continue to be their happy fishing grounds.

#### SALMON THEIR MAIN DIET

The Indians cure and smoke all the salmon they possibly can use themselves. The rest they sell to canneries along the river. At the crest of the September run, a fisherman like Abe Showaway or Joe Skahan can make as much as \$125 a week in this fashion. It is all the money many of these Indians earn during the year. It must pay for blankets, overalls, salt, sugar, diapers for the newborn papoose, a white doctor for the papoose's mother, and gasoline for the ramshackle, second-hand automobile that takes the family to Celilo for the spring and autumn salmon fishing.

Most of what the Indians catch they eat. Salmon is the bulk of many of their meals. While the men fish at the falls the squaws chop up and cure the catch. The portion of the catch sold to the canneries is shipped across the globe.

Red men whose salmon-catching prowess is almost legendary along the Columbia—Tom Frank Yallup, Joe Esterbrook, Willie John, Charley Fectochun, Oscar Billy, Abe Showaway himself, and many others—occupy dozens of rocks and crags at the falls. Sometimes they fish from wobbly platforms. A lot of the braves are fastened to the shore with ropes around their waists. Seldom a season passes that an Indian, thrown off balance by a salmon thrashing in his net, does not totter into the rushing river where no man can swim. Ladders leaning against the cliffs get the warriors from one crag to another. They also ride a little improvised cable car to the rocks in the center of the cataract. This is a hazardous passage. The cables and posts are makeshift, the work of the Indians themselves.

No brave has a monopoly on any particular point at Celilo. The place is the property of all the tribes. The fishermen cooperate rather than compete. Every Indian has an equal time to catch salmon.

Because the Indians want no white men interfering with their ancient fishing site, the braves at the falls take charge of their own discipline. Fishermen who get drunk are banished from Celilo. Night fishing is not allowed, for fear some warrior will stumble into the rapids in the dark. Rowdy or quarrelsome fishermen are also told to get out by the tribal council.

Except for their overalls and factory-made shirts and caps, the Indians at Celilo Falls have not changed greatly since Lewis and Clark paddled down the Columbia in 1805. They use the same sort of equipment the red men had then. The cable car is the only addition. When the river is especially thick with salmon some of the warriors bring out spears their fathers used.

Otherwise the standard device is the dip net. Once in a while the nets fill so rapidly that it takes two Indians to lift them out of the water. From experience the red men know exactly which swirls and eddies to probe. As a pilot charts a channel, they have spotted the white caps and chutes where the salmon accumulate. In these spots the Indians hold the dip nets, which are oval-shaped, with pole handles. The nets are constructed in the same way as they were long ago, with the frames being bent from sapling wood or pliable animal bones. No metal holds the nets together; instead, cord and thongs are used.

From the passes of the Cascade Mountains and from the plains of the inland empire many tribes trek to Celilo each year to catch the chinooks. There they are governed by Chief Tommy Thompson, ruler of the Celilo Indians. Other chiefs, sovereigns in their own realms, sit respectfully at his council fire during the fishing season. At the war dances and salmon feasts Tommy occupies the place of honor.

So many Indians now come to Celilo Falls that there are not enough cabins and shacks to shelter them. The long house has been commandeered in the emergency, and scores of tribesmen sleep on the floor, blanket to blanket, like marching soldiers bedded down for the night. Many of these Indians and their families speak only tribal tongues.

What about the dams and the salmon runs?

Last year approximately 413,000 salmon were counted flipping their way up the big concrete fish ladders at Bonneville. This is a lot of fish, especially considering that one female Chinook salmon may deposit 3,500 eggs in the spawning beds in the high-

lands. But the parent fish invariably die after the eggs are laid; and Prof. Lawrence E. Griffin, of Reed College, who has made an extensive study of the salmon runs, believes the quantity of fish ascending the \$7,022,000 steps at Bonneville is "insufficient to maintain their numbers in the river."

And 290 miles above Bonneville Dam now looms the vast fortress of Grand Coulee, already the largest structure ever built by man, although less than two-thirds completed. No salmon can pass that towering wall. So the fish will be collected in tanks and placed on trucks for transportation to the upper river beyond the dam. There the salmon will be released into the Columbia again. A fleet of these trucks has been specially constructed for the Government. They will contain ice compartments to keep the water cold, and oxygen pumps to keep it fresh. Fifty miles an hour the trucks will travel to return the fish to their natural environment as speedily as possible. Some of the salmon will be taken all the way to the tributary rivers in which the fish customarily spawn.

#### OTHER PERILS BESIDES DAMS

Nor are dams the only menace to the fish on which Abe Showaway and his fellow braves rely for subsistence and livelihood. Civilization—cities, towns, factories, mills, docks, sewers—constitute an equal peril. In 1925, 8 years before Bonneville Dam was started, the salmon runs began to taper off sharply. The weight of the total Chinook catch declined 18 percent from 1925 to 1926. Hugh C. Mitchell, director of Oregon State fish hatcheries, is afraid the great Chinooks, finest of all salmon, are gradually disappearing from the Columbia River. He blames dams, stream pollution, and civilization in general.

The faces of Tommy Thompson and his red-skinned followers are hard and set when they realize that fewer fish come upstream each year. Yet the Indians will be happy and content if only the present runs get no smaller, and if the white man honors the treaty the Government made in 1855.

"The multitudes of salmon are almost inconceivable," wrote Lt. William Clark in his journal as the little Indian girl, Wolwaypoo, watched him long ago. That day is gone now. Wolwaypoo's grandson, Abe Showaway, points to the thundering falls and says:

"All we want is white man leave us fish enough eat, and no arrest us when we catch—like white man promises our people when treaty made."

### Women's National Republican Club of New York

#### EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 30, 1940

ADDRESS BY HON. J. WILLIAM DITTER, OF PENNSYLVANIA

Mr. DITTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Women's National Republican Club of New York, on Saturday, January 20, 1940, and broadcast by the National Broadcasting Co.:

Mrs. Hays, and members and friends of the Women's National Republican Club, it has been said "the hand that rocks the cradle is the hand that rules the world." Well, some of you may never touch a cradle, but if the enthusiasm that I see here today starts rolling, I am convinced that your rocking will put the New Deal to sleep soundly in November. It may take a lot of rocking, for the baby has been well fed, has gotten beyond the bottle stage, and knows how to squeal and squirm, but I believe you intend to do the job, and do it you will.

I recall my last visit here. It was around the time that the Court was to be packed and the executive branch of the Government disorganized. Since then there have been purges, tweedledums, tweedledums, and the 1938 elections. My, what a difference a few short years can make.

I find that I am in much the same frame of mind, though not in the same spirits, as the Irishman at a wake who was drowning his sorrows, not wisely but too well, when he said, "As sad as we are at Mike's death, I must confess I'm glad the Lord spared me to help celebrate the event." I am certainly glad that the Lord has spared me to help celebrate this occasion, helping to mark, as I believe it does, the beginning of the end of the New Deal; and I want to express to you my appreciation of the honor which is mine in being your guest today.

You are to be congratulated today for one thing—there are no empty chairs such as those which aroused heavenly hopes at the Jackson Day dinner. I am delighted that you felt it unnecessary to invite three high priests of the New Deal to bolster up the tone

of this luncheon. I admit that it would have been difficult for me to shed crocodile tears over empty chairs, and I know they would not have inspired me with any sense of saintliness.

But while the praise of the Women's National Republican Club is still on my lips I would like to give credit to the leadership of this club, representing as it does the Republican women of America, for its enthusiasm, its activity, and its devotion, all of which have been a continuing challenge—a real incentive to the men—and which in a large measure have helped to make the New Deal today as nervous as a dish of Jello. I marvel especially at the fidelity of those who must vote in this Tammany stronghold, who must withstand from day to day the direct shock of the New Deal, and who, because of mass production at the polls, are required to supplement their active political work with prayers for their unregenerate neighbors. I believe your prayers will be answered.

That hope is the stronger as I realize the complete change of front which has taken place in Washington during the last 6 months. Like a drowning man grasping for a rope, they have snatched at every pretext to send out an S O S for the adjournment of politics. Some attribute it to the war abroad, although others are more practical in their thinking. At all events, it is becoming increasingly evident day by day that the administration knows that the Republicans must be reckoned with as the day for the final accounting of the New Deal approaches. There certainly has been a complete change of front.

But the Republican Party wants more than that. It wants more than a change of window dressing. It wants a change in thought—yes; and a change in actions, too. It's time to stop daydreaming. It's time to stop pussyfooting. It's time to call an ace an ace and a spade a spade. It's time to stop and decide where we are going and what we'll find at the end of the road. It's high time that a decision be made as to what our future is to be.

We can't wobble around, first here and then there and expect to get anywhere. We can't be parlor pinks today and true blues tomorrow. We can't flirt with collectivism and cherish competitive endeavor. America cannot have free enterprise with ringmasters cracking the whips of regimentation. I repeat, it is not a change of front that is needed. What the country calls for is an about face, so that we will be looking not for a "rendezvous with destiny" but out in the open in search of rallying posts of new and larger opportunities as freemen. No one can gain a yard or hope to make a touchdown unless he knows where the goal line is. And that goes for the quarterback as well as any other player. Our first job is to get back to bedrock—to fundamental principles—to the landmarks of the Republic.

In his message on the state of the Union, the President urged the need of a reassertion of our faith in moral values. He could have given no better advice. I know, and I believe you know, that our faith in these values has been shaken severely in the last 7 years with a heads I win, tails you lose game going on at full swing in Washington. As a matter of fact moral values have been marked down so low that in many cases they have not been saleable even in a bargain basement. Moral values are more than a blatant billboard or a fancy label. They are a way of life. In the days of the old-fashioned copybook they included such principles as honor bright, as good as one's word, on the square, utmost good faith, clean hands. And moral values, to be worth anything, must be woven from exactly the same fibers today.

Manifestly our faith in moral values has been tried as we have heard promises of breathing spells made to businessmen today, and have watched the executioner go to work to strangle the life out of those selfsame businessmen tomorrow. It's hard to have faith without any practice, for "faith without works is dead." How has our faith in moral values been affected by the Federal Administration of relief? It is painfully plain that the faith of a Moses would be tested as the record reveals an agency which has squandered millions of dollars with outrageous extravagance, which has shackled the needy with the chains of political serfdom and which, nevertheless, has been condoned, excused, and unrebuked. It takes more than a whitewash brush to restore life to a shattered faith.

You are familiar with the shocking revelations that come to us day by day from the House committee investigating the National Labor Relations Board. They would try the faith of a saint. For a long time the lid was clamped down tight on that Board's conduct. It was harder to pry open than the vault of the Federal Reserve. The bill to authorize that committee was fought tooth and nail. You and I—yes, everyone—had heard of the suspicions of conspiracy. Repeated charges were made that the most elementary rules of evidence were flagrantly violated and the most fundamental principles of law and equity defiantly ignored. The record of the hearings is disheartening as well as disquieting, with case after case showing the abortive methods which an administrative agency may use when clothed with judicial power. That record speaks for itself. You know the details just as well as I do. That record calls for action. The country wants neither an apology nor an excuse. It wants the stigma of disgrace which has been fastened on our regularly constituted judicial processes by this sinister intruder removed. It wants every taint of suspicion cleared up. It wants the relation between the employer and the employee protected against the cunning designs and the crafty purposes of racketeering spoliators. It wants an umpire who knows the rules, who keeps his eye on the plate, who calls balls and strikes without fear or favor, and who has not placed a bet on the final score.

As a member of the Appropriations Committee of the House I have been interested particularly in the fiscal policies of the Federal Government since 1933. I can't help but wonder how these operations have influenced our faith in moral values. I recall the assurances given year after year that the Budget would be balanced, but always next year. I recall the lavish hand with which expenditures have been made. I recall the promises going back as far as the campaign of 1932 that our Federal housekeeping would be put in order. I have seen the extraordinary methods and the complicated bookkeeping which has been tried in the hope of making it appear that outgo was somewhere in line with income. At last we have come to the point where an "A" budget and a "B" budget are in operation. To watch the ease with which bureau chiefs switch items from one budget to another is enough to make an engineer on a shifting freight green with envy. As a matter of common sense there is no real or practical difference between the two budgets. Whether the items are in "A" or "B," or, for that matter in "X" or "Z," they are one and the same thing—dollars and cents coming out of the taxpayers' pockets—and no amount of alphabetical juggling will change them.

The more I think of our fiscal operations and our faith in moral values, the more am I impressed with the Biblical definition of faith as the substance of things hoped for, the evidence of things not seen. We certainly have been called upon to live by faith during the last 7 years in the management of our fiscal affairs.

In 1932 the President promised to put our financial house in order. Deficits were to stop. Debts were to be reduced. Taxes were to be lowered. There were no ifs or buts attached to the promises. They were positive. They were plain. They were clear. But that job has not even been started.

It is now suggested that what the New Deal has failed to do along this line should be undertaken by others—that others should indicate methods by which order can be brought out of chaos. It's pretty much like locking the stable door after the horse is stolen.

Our present financial plight is a direct result of a policy that is near and dear to the heart of every new dealer—a policy that has been approved and followed with but slight interruptions for the last 7 years—the policy that prosperity depends upon pouring out the money in the Public Treasury and when that is all gone to borrow more and start pouring again.

The President is reported to have said some time ago that "we can afford what we need." He was right. The trouble is we have been trying to afford a lot of things that we do not need. The Federal Government has been spending money right and left for a lot of trinkets and soothing sirup that we neither needed nor could afford. As a matter of common sense—yes; and common honesty, too—there is only one way to put our financial house in order, and that's to start doing it. As long as the automatic check writer in the Treasury Department is permitted to run wild, as long as it continues to be the most overworked machine in Washington, deficits will continue to be piled upon deficits, and the Budget might just as well be put on exhibition in the Smithsonian Institution.

When the present administration took over the reins of Government, the Federal pay roll carried less than 600,000 names of the civil administrative function. By September of 1939 that figure had jumped to more than 900,000. This means that over 300,000 new job holders have been added to your pay roll in less than 7 years. As you know most of these new berths are filled by people who are busy in either making or enforcing rules and regulations which tie down your hands and the hands of millions of other Americans. The more rules and regulations we have the harder it becomes to get any real work done. That's true in your home and it is likewise true in the Nation, for every new rule and regulation is in some measure or other a restraint upon initiative, upon production, upon enterprise, and upon the smooth flow of plenty.

Those 300,000 new pay rollers are a very definite part of our problem. All of us remember the vast expansion of the Federal machinery during the World War days. No one ever imagined that we would ever see such a mushroom growth again. But the fact of the matter is that our peace-time growth of bureaucracy under the New Deal has overreached by far the war-time expansion of the Wilson years. At the World War peak the executive civil rolls carried 917,000 names as against 940,000 last September. Only a wizard could imagine what the Federal pay roll would be were a genuine national emergency forced upon us.

In the present confusion, in trying to square national conduct with the precepts of its leadership, in trying to find the substance rather than the form, the words of the President ring in our ears when he said, "But remember well that attitude and method—in other words, the way we do things, not just the way we say things—is nearly always the measure of our sincerity."

We look out on a troubled world today. Moral values have ebbed to a low level. They have been lost in the swirl of dictatorships. Deception and cunning have forced the surrender of honesty and frankness, and the cruel passions of hate have torn the world loose from its moorings. Ours is a serious responsibility as men yearn for enrichment and healing. In the measure by which the soul of America is rekindled with a love of truth will this enrichment and healing come.

With the prophet of old we cry "To your tents, oh Israel."

## The Anti-Americans

### EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

Mr. THORKELSON. Mr. Speaker, it is hardly conceivable that the public will be so foolish as to believe the atrocity stories now published in the daily papers, magazines, and glibly shot over the air by superdetectives who advise the F. B. I. how to catch patriotic American citizens, in order to protect the Communists. The purpose of this propaganda is to start tears rolling for the plight of our own hidden rulers, so that we will rally to their rescue and our doom.

I am little interested in Europe, but greatly interested in keeping the United States out of the present strife in Europe, for as I have said before, we are facing a much more serious situation at home. Let me now quote from articles which appeared in the Jewish Chronicle, London, December 20, 1935, February 7, and May 8, 1936, by Mr. S. Landman:

#### THE ORIGIN OF THE BALFOUR DECLARATION

TO THE EDITOR OF THE JEWISH CHRONICLE:

SIR: The Jewish Chronicle is rendering a valuable service by opening its columns for discussion on this very important subject, and it is certainly advisable that the utmost possible light should be thrown on the origin of the declaration before all of those responsible for it have passed away.

During the critical days of the war, in 1916, when the defection of Russia was imminent and Jewish opinion generally was anti-Russian and had hopes that Germany if victorious would in certain circumstances give them Palestine, several attempts were made by the Allies to bring America into the war on their side. These attempts were unsuccessful. Mr. Malcolm, who at that time was in close touch with the late Sir Mark Sykes (of the war cabinet secretariat) and M. Georges Picot (of the French Embassy in London) and M. Gout, of the Quai d'Orsay (eastern section), took the initiative in convincing these representatives of the British and French Governments that the best and perhaps the only way to induce the American President to come into the war was to secure the cooperation of Zionist Jewry by promising them Palestine. By so doing the Allies would enlist and mobilize the hitherto unsuspected powerful force of Zionist Jewry in America and elsewhere in favor of the Allies on a quid pro quo basis.

At that time President Wilson attached the greatest possible importance to the advice of Mr. Justice Brandeis. \* \* \* Sir Mark Sykes obtained permission from the war Cabinet to authorize Mr. Malcolm to approach the Zionists on that basis. Neither Sir Mark Sykes nor Mr. Malcolm knew who were the Zionist leaders, and it was Mr. L. J. Greenberg to whom Mr. Malcolm applied for information to whom he should address himself. Mr. Greenberg arranged for Mr. Malcolm to meet Dr. Weizmann and Mr. Sokolow whom Malcolm put into communication with Sir Mark Sykes and later with MM. Picot and Gout. Mr. Wickham Steed, in his book *Through Thirty Years*, mentions Sir Mark Sykes and Mr. Malcolm as the two individuals mainly responsible for the Balfour Declaration. The Zionists carried out their part and helped to bring America in, and the Balfour Declaration of November 2, 1917, was but the public confirmation of the verbal agreement of 1916. This verbal agreement was made with the previous knowledge, acquiescence, and approval not only of the British, American, French, and other allied governments but also of the Arab leaders. It was not merely a voluntary gesture on the part of the Allies, but, as I have previously mentioned on the authority of H. M. V. Temperley (*History of the Peace Conference in Paris*, vol. 6 (1920), p. 173), it was a contract between the British Government and the Jewish people.

In reading the first paragraph of this letter, it is evident that Mr. Landman feared that he and his brother Zionists would not receive full credit for their effort in involving the United States in the World War, and it is to give them this credit I am quoting from his letter. I am even agreeable in granting the same group credit in attempting to involve us in the present war. I am also anxious that the American people will take notice and give them credit for this intrigue and double dealing, hoping that such knowledge will keep us out of the present European war.

It is most interesting to note that the Zionistic Jewry had consigned the United States to war early in 1916, when we, the people, in simple faith elected President Wilson for the second term on the slogan "He kept us out of war." It is extremely interesting to note according to this letter that "Jewish opinion generally was anti-Russian" at that time, when Russia had a Christian government, and that the same groups became pro-Russian after a communistic government had been established by Lenin and Trotsky. That in itself is significant and should identify the source of communism and the Communists.

In order that there will be no misunderstandings as to the identity of the international warmongers, I quote again from Mr. Landman's letter:

As already explained elsewhere by me in detail, Dr. Weizmann and Mr. Sokolow knew that Mr. James Malcolm came to them as the emissary of the British War Cabinet, which authorized him to say in their name that England would "give Palestine to the Jews" in return for Zionist assistance, through Justice Brandeis, in inducing the United States to come to the help of the Allies.

As a result of the Balfour Declaration, controversy arose with the Arabs because of promises which had been made to them by Colonel Lawrence. They rightfully resented the about-face of England in the Balfour Treaty, which gave Palestine to the Jews, and it is over this grant war broke out in Arabia. I further quote:

I have read the letters on the above subject from Mr. Gullaroff and Mr. Hyamson in your recent issues, and they call for a reply. As they are couched in similar terms, I will deal with them together.

Your correspondents are entitled to their own views about President Wilson, but it does not follow that the advice given him by Zionists was reprehensible or not according to the view taken of the feelings and interests of the vast majority of the American people who were straining at the leash to join the Allies in the war. As a matter of fact, no one else has ever thought or said so.

Mr. Hyamson may disagree with the History of the Peace Conference in Paris, by Professor Temperley, which says that the Balfour declaration was "a definite contract between Great Britain and Jewry," but I think if he reads the Journal of the Royal Central Asian Society for January 1936 he will be rudely surprised and reluctantly obliged to admit that he is in fact supporting the opinions of Fakhri Bey Nashashibi, who is probably the most inveterate and uncompromising of the anti-Jewish Palestine Arab leaders. He alleges that I have "attributed actions" to Sir Herbert Samuel which he had previously disclaimed. But where, how, and when he does not say. I certainly fail to see that I have done such a thing.

Please note that in the third paragraph the Palestine Arabs, who you may recall as Semites, are called anti-Jewish by Mr. Landman himself, who is a Zionist. This, according to Mr. Landman's own interpretation, makes the Palestine Jews anti-Semites, for they are now fighting the Arabs.

In the following paragraph which I shall now quote it is my desire to call your attention to the fact that the writer of the letter involves the United States in the Arabian controversy:

As regards knowledge by Arab representatives of the pour-parles, Mr. Hyamson is in error. Both Sir Mark Sykes and Mr. Malcolm informed the Arab representatives in London and Paris that without the assistance of the United States the prospects of any Arab state arising after the war were most problematical, and they must, therefore, agree that Palestine should go to the Jews as their reward for their assistance in bringing in the United States.

The Arab representatives understood and agreed, and later Emir Feisal confirmed the agreement in his letter to Professor Frankfurter. The Palestinian Arabs were at the time fighting against the Allies and could not (even if it were necessary) be consulted.

I hope the American people will now give full credit for our entrance in the World War to those who are bragging about the power they had to involve us in that conflict. We were indeed gullible, for we swallowed all this prepared propaganda "bait, hook, line, and sinker." I also hope that we will not become unduly excited over the present emergency and propaganda, which is manufactured by the same group, to fool the American people again. If there is to be another war, let us give the Zionists and the international financiers guns so that they may finish their anti-Semitic and antiracial war in Arabia.

Have you folks noticed that little or no criticism is leveled against Russia in her present inexcusable war against Fin-

land, and have you noticed that the President has failed to declare Russia an aggressor nation? Do you not think it is strange? He declared Germany the aggressor against England and France, in spite of the fact that Germany as yet has not declared war on either of them. Oh, neutrality, what crimes are committed under they name.

I often wonder what sort of neutrality we observe. Here is Russia with 170,000,000 population engaged in war with Finland, a nation with a population of 3,000,000 people. Russia may buy all war materials she wants, in spite of the fact that she is an aggressor nation with nearly a 100 percent Jewish communistic government. No one can deny that Russia is the cradle of communism and the source of communism in the United States. The Russian Government, with her mass liquidation of life, torture in Siberia, and submarine graveyards, is not the most benevolent government, but is, instead, if one is to believe such descriptive literature, as Democracy and World Dominion, by Schoonmaker, a most inhuman and un-Christian nation. After reading this book by Schoonmaker, including many others, I am thoroughly convinced that we should not only get rid of communism but the Communists as well. In order to support the statement I have already made, I shall quote a few excerpts which, I believe, should be interesting to all Americans.

In a report on bolshevism in Russia, written by Sir M. Findlay to Mr. Balfour on September 17, 1918, he makes this statement:

I consider the immediate suppression of bolshevism the greatest issue now before the world, not even excepting the war which is still raging, and unless, as above stated, bolshevism is nipped in the bud immediately, it is bound to spread in one form or another over Europe and the whole world, as it is organized and worked by Jews who have no nationality and whose one object is to destroy for their own ends the existing order of things. \* \* \* So numerous were the communications and so important was the subject \* \* \* that the State Department compiled and published a digest of these reports, and, in addition, the United States Senate appointed a special committee called the Overman committee, which went thoroughly into the whole matter. \* \* \* The following extracts show the general trend of the testimony of these witnesses: "The leaders of the movement, I should say, are about two-thirds Russian Jews" (William C. Huntington, commercial attaché of the United States Embassy at Petrograd from June 1916 to September 1918, p. 69).

"In Russia it is well known that three-fourths of the Bolshevik leaders are Jewish" (Mr. Welsh, for 2 years a junior officer of the National City Bank in Russia, p. 269).

Later, in the Yale Review, in an article entitled "The World Menace," Mr. Henry C. Emery, LL. D., former chairman of the United States Tariff Board, supported this testimony. "No one who ever made a visit to Smolny Institute, when that was the headquarters of the Bolshevik government in Petrograd, could fail to understand how easy it is to get the impression that the Jews have at last seized powers." Newspaper correspondents on the ground cataloged their numbers and gave them to the world. "Ninety percent Jews," said the correspondent of the London Daily Mail. The correspondent of the Morning Post was more exact. Out of 545 commissars in the country, 447 were Jews. Of the leaders of this alien bureaucracy a few stand out like flags. There was Trotzky, from New York, leading the armies of Russia, and Zinoviev heading the great international that was to release the toilers of all nations. Zinoviev was also commissar of Petrograd, while Kamenev, brother-in-law of Trotzky, was commissar of Moscow. To Madame Kamenev had been entrusted the culture of Russia, and to Radek, director of publicity, the task of selling this new Russia to the world. Steinberg was commissar of justice, and Uritsky, commissar in charge of counterrevolution and speculation. Over the Ukraine, the richest province of Russia, was Rakovsky, while Joffe, high plenipotentiary, negotiated treaties for this new Russia with the nations of Europe and the Far East. From the foreign office was soon to pass the Russian Chicherin, to be succeeded by the Jew Litvinoff (Finklestein), and behind Finklestein, Weinstein. And so it went.

Equally surprising and equally significant is what happened in the field of religion. "Religion is the opiate of the people," Marx had written. To destroy religion, therefore, was essential if the great emancipation was to be achieved. Fifteen years after the Bolshevik Revolution was launched to carry out the Marxist program, the editor of the American Hebrew could write: "According to such information as the writer could secure while in Russia a few weeks ago, not one Jewish synagogue has been torn down, as have hundreds, perhaps thousands of the Greek Catholic churches. \* \* \* In Moscow and other large cities one can see Christian churches in the process of destruction. \* \* \* The Government needs the location for a large building. (American Hebrew, Nov. 18, 1932, p. 12.) Apostate Jews, leading a revolution that was to destroy religion as the 'opiate of the people' had somehow spared the synagogues of Russia."

It should now be clear who the Communists are, and where they may be found, for they are self-identified. This self-identification should not only be useful to the Dies committee, but particularly to the Department of Justice and the F. B. I. Credit must, however, be given to the congressional committee on subversive activities for having at least exposed one communistic organization, the League for Peace and Democracy.

The recent fiasco in New York City, where 17 young men were arrested for the possession of obsolete rifles, which they used for target practice, is a childish attempt to shield the Communists, who operate openly with the utmost freedom in their attempted destruction of our Government. Who is Mr. Birmingham and what is his connection with Mr. Prince and Mr. Shelton? Why not investigate the communistic intelligence service with headquarters in New York? Just what excuse for existence has the various boycott leagues and private propaganda analysis bureau? No one is allowed to operate such private investigation bureaus except the Communists. Why was Mr. Birmingham employed by the F. B. I. to build up and prepare a case against the so-called Christian Front? Is not it possible that this investigation was directed by certain defamation groups in New York City, in somewhat the same manner as was employed in the recent attempt to smear the Dies committee? It is to the everlasting credit of the Dies committee and Mr. Mayne for having exposed this defamation racket, for others have suffered from attacks by the same defamation groups. Their racket is not that of intelligent criticism and fairness; it is instead pure mud slinging, which is now rebounding on those who have been pitching for these international defamers.

The Dies committee has made a good start and should continue to investigate the higher Communists. Many of them, their fellow travelers, and their nit-witted gentile fronts should now be investigated, and their names may be found embossed on the margins of many letterheads such as Non-Sectarian Anti-Nazi League, 20 West Forty-seventh Street; Council Against Intolerance in America, Lincoln Building; Humanity Guild, 11 West Forty-second Street, all in New York City, and the last with approximately 120 names, professors predominating. We then have United Christian Council for Democracy, and when you find these organizations with "democracy," scratch it a little bit and you will find it full of Communists. That is what the Dies committee did to the League for Peace and Democracy and whose membership in Washington was found to be well represented and fully employed in various Federal departments. We then have the Peace House, One Hundred and Tenth Street and Fifth Avenue, New York City, which the United States detective No. 1 may investigate and report over the air to his friend in the F. B. I. To me it is strange that the greater number of these peace organizations may be found in New York City, in a State and city always restless, but with two distinguished gentlemen at the heads of both governments. Investigation may also be made of Rev. Charles C. Webber and his new philosophy, and particularly the membership of the board of control. Then there is the Federal Council of Churches, 297 Fourth Avenue, New York City, which should not be forgotten. The greatest attention should be bestowed on the financial resources of these anti-American organizations and their "sugar daddies" exposed publicly. It is only reasonable to assume that it takes a lot of money to run and hire the framing of these organizations, and we should make it our business in Congress to find out in what manner this money is obtained.

Government records, intelligence reports, and hundreds of publications reveal that the Communist and his fellow travelers are the anti-Americans who are threatening our Government and institutions of learning. The question may therefore be asked: What is the Department of Justice and the F. B. I. waiting for? These departments know that the Communists are and have been here for over 40 years, and that the United Mine Workers complained about them 20 years ago. Is it possible that the Department of Justice is

shielding these anti-Americans, who are now engaged in the sabotage of the Government, and if so, is it because the Justice as well as other Departments are infiltrated with communism to such an extent that exposure of such activities by the employees is tantamount to dismissal?

The recent attempt in smearing the Christian Front and the Dies committee is a peculiar warfare, which is not American, but is, instead, Asiatic in origin. It is promoted by the Communists and disseminated in pro-communistic newspapers, which are owned or controlled by the Communists or communistic sympathizers. It was this kind of ridicule that was heaped on General Moseley, Messrs. Deatherage, Pelley, True, and others because of having exposed and identified the Communists. These gentlemen are 100 percent patriotic American citizens, who are persecuted because they hate communism and subscribe to the fundamental principles of this Republic.

It is well to bear in mind that the people reserve the right under the Constitution to carry arms, and naturally such arms will be kept in their homes. The Bill of Rights also provides for free speech, to which there is, of course, no objection, so long as such speech does not advocate changes or destruction in the Government. When the speaker advocates destruction of the Government, he has then exceeded the liberty of free speech and is, instead, engaged in spreading sedition. The Constitution does not provide either the right or liberty for anyone, under the guise of free speech, to advocate changes that will prove destructive to our Government. Free speech is one thing—seditious speech is another. The Constitution provides means for taking care of both.

All of this can be avoided if every citizen subscribes to the principles of this Republic, and the fact that those who so subscribe denounce attacks upon our Government is a natural defense reaction which may be expected when the Government itself departs from the principles of this document.

It is, indeed, unfortunate that a person cannot address himself to the fundamental principles of this Republic, as set forth in the Constitution of the United States, without being smeared and ridiculed by international communistic saboteurs. I am quite willing to admit that these international Communists, whose "god is gold and whose savior is a bribe," control our money through their banks and bank associations. I am also willing to grant that they have used this deposit money to buy press, radio, cinema, hotels, real estate, and nearly all paying industries in the United States. It should, however, be understood that this accumulation of wealth and property has been acquired by them, not with their personal money, but with the Nation's monetary wealth, which is on deposit and naturally gravitates into the larger banks.

In order to clear up the confusion under which we labor today, let us divide the various groups that are now operating within the United States into two parts. The first group is composed of patriotic Americans, who believe in the fundamental principles of this Republic, as originally set forth in the Constitution of the United States. This group, being Americans, is, of course, intolerant toward socialism, bolshevism, communism, and all forms of radicalism, covered by the cloak of liberalism. This group is becoming larger and larger by leaps and bounds, as the people realize the inroads which communism has made in the United States.

The second group is composed of a conglomerate mass of people who believe the Constitution is a flexible document and therefore adaptable to their particular views. In this group we find the Socialist, the Bolshevik, the Communist, the radical, and the syndicalist, and those Fabians that do not believe in any government. The strange part is that these subversive groups are well financed, and Congress should make it its business to find out from whence the money comes. It is this group that shouts about the right of free speech while it is insidiously engaged in restricting those who believe in and advocate strict adherence to the Constitution of the United States.

**Bonneville Power for Southwest Washington—The Pacific Northwest—New Frontier for Men, Machines, and Money**

**EXTENSION OF REMARKS**

OF

**HON. MARTIN F. SMITH**

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

*Friday, February 2, 1940*

ARTICLE IN UNITED STATES NEWS, WASHINGTON, D. C.,  
FEBRUARY 2, 1940

Mr. SMITH of Washington. Mr. Speaker, the great Bonneville hydroelectric power project on the Columbia River in my district is beginning to prove an important and vital factor in the development and progress of southwest Washington, and I shall always be proud of my sponsorship of this legislation. Four local public-utility districts are now selling public power on a county-wide basis, my home county of Grays Harbor, Pacific, Mason, and Skamania Counties. The Cowlitz County district, also in my congressional area, is operating a rural electric-power project financed by the Federal Rural Electrification Administration. Pacific County has just completed purchase of private power facilities. Skamania County acquired the West Coast Power Co.'s properties January 4 and Grays Harbor Public Utility District purchased the Grays Harbor Power & Light Co. January 15, and all four districts are now selling power at retail. Grays Harbor and Pacific districts are using present generating plants and will be hooked up with the new Bonneville transmission lines next summer. Skamania County is already distributing power from Bonneville Dam, the first utility district to do so.

When the Pacific County district took over the local distribution system, the Bonneville administration purchased the Willapa Electric Co.'s 66,000-volt transmission line in the northern part of the county; also the Raymond substation. It was Bonneville's first purchase of a private utility property for incorporation into the Bonneville Pacific Northwest power system.

Steady progress is being made in the construction of Bonneville transmission lines in Cowlitz, Lewis, and Pacific Counties, and this work is furnishing employment to hundreds of citizens. In northern Cowlitz County over 500 men are working on the right-of-way for the line which will extend from Vancouver to Puget Sound. In Lewis County crews totaling 458 men are working on the north-south line and Raymond-to-Chehalis line. Actual construction has been commenced on the line at the Raymond terminus, and about 5 miles of double poles are being placed eastward from the Raymond substation, headquarters being maintained at Pe Ell. About 125 W. P. A. workers are clearing the 32-acre site near Napavine or the Chehalis substation planned by the Bonneville administration. Tentative plans call for a substation at Mossyrock to supply eastern Lewis County with electricity from Bonneville.

The location of the large plant of the Aluminum Corporation of America at Vancouver is just the beginning of the great industrial development certain to result in southwest Washington from the Bonneville project. Other big eastern concerns are making inquiry regarding sites and ascertaining possible savings in operating costs due to cheaper hydroelectric power and closer proximity to raw materials, according to information received from official sources.

President Roosevelt approved January 24 an allocation for \$919,859 for clearing the right-of-way for Bonneville project transmission lines. These lines will run from Vancouver to Aberdeen, in my congressional district, and from Vancouver

to Eugene, Oreg., and from Bonneville to Yakima and Grand Coulee.

Mr. Speaker, under leave to extend my remarks, I insert an article which appeared in the United States News, Washington, D. C., February 2, 1940, which describes the prospects for development of a great rich empire in the region to be served by the Bonneville and Grand Coulee Dams in the State of Washington:

[From the United States News of February 2, 1940]

President Roosevelt is holding firmly to an idea that dominated much of his thinking in early New Deal days.

The President thinks that New York City would be better off if its population was six million instead of seven. Mr. Roosevelt thought the other day that he could pick an argument with Mayor Fiorello LaGuardia of New York when he reexpressed this sentiment.

The mayor jumped to the argument, but on the ground that New York would be better off with five million in its population than with six or seven million.

Here is the germ of the idea that has persisted deep in the President's thinking. At one time he had in mind moving large numbers of people from drought regions in the Middle West. At another time he had in mind large numbers of subsistence homesteads that could absorb idle workers from the cities. The President thinks that the country would be better off if large cities were smaller and if the Nation's industry was decentralized.

That thought is taking positive shape again with new plans for moving large numbers of people. This time the President is announcing an intention to make a real Garden of Eden for 500,000 people in the Pacific Northwest, where the Government is spending large amounts of money to complete the Bonneville and Grand Coulee Dams. And Harold Ickes, Secretary of the Interior, is announcing plans to spend more millions to develop other areas that can start to absorb people moving from the drought areas of the Farm Belt and the blighted areas of the Industrial Belt.

Nearest completion is the development in the Northwest.

Here the Bonneville Dam is producing electric power, available for distribution under a plan that does not involve displacement of the private utilities. Farther upstream on the Columbia River is Grand Coulee, nearing completion. When completed, this dam will supply water to irrigate 1,200,000 acres of rich, but dry, land.

It is this area that the President sees as a new frontier to provide for 80,000 farm families who will help supply what he expects is to become an important new industrial area utilizing low-cost power. Industry in this region—if plans carry—will be decentralized, centering about small communities, rather than centralized, to correspond to the industrial cities of the East.

Interior Department officials say that the metallic and non-metallic resources of the Northwest are sufficient to support iron and steel, ceramics, plastics, electrometallurgical and electrochemical industries, in addition to paper, furniture, food processing, and lumber.

Already the Aluminum Co. of America is planning a plant to cost several million dollars at Vancouver, Wash., to be powered by 32,500 kilowatts from Bonneville. A steel company is contemplating construction of a new plant at Portland. President Roosevelt is interested in development of a steel industry on the Pacific coast that would utilize what he is told is a practical "wood coke." This industry would turn out the very highest grade steel for naval armament purposes.

But the President is not to realize his dream of getting a million persons out of New York to the great open spaces. Neither is he to realize any time soon his dream of moving large numbers of farmers out of the drought regions and the overpopulated farming regions of the country.

Reason is that even in the large Northwest area farm operations with Grand Coulee water cannot begin for at least 4 years. Irrigation projects must await completion of the dam itself, now about three-quarters finished. Resettlement will not be completed, probably, for 30 years.

**HOMESTEAD REQUIREMENTS**

No one is advised to migrate northwestward yet. When the first 50,000 or 100,000 acres are irrigated, the Government will select families for the land. Basis of selection probably will parallel present homesteading procedure. Requirements will include 2 years' farming experience, irrigation experience preferred, good health, moral character, and \$2,000 in capital or credit—possibly from the Farm Security Administration.

Holdings will be limited to 80 acres per family. Land values are to be fixed by the Government at dry-land value, probably about \$10 an acre. Large holdings now in the hands of banks, railroads, and city families must be sold before the Government will supply water for irrigation.

Rainfall in this area is about 8 inches a year, as compared with 30 inches in the Midwest. Climate is dry. Winters are short; summers long. Normal temperatures range from 32° in winter to 82° in summer.

Such are the ingredients from which a new northwest empire is being built. Up to now industrial development has been held back for lack of coal. Now this deficiency is made up by almost limitless supply of electric power.

The vision of the Northwest is the vision of a new kind of empire.

## America's Biggest Ditch

## EXTENSION OF REMARKS

OF

HON. D. WORTH CLARK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, February 2, 1940

ARTICLE BY RICHARD L. NEUBERGER

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "America's Biggest Ditch," published in a recent issue of the Coast magazine and written by Richard L. Neuberger, of Portland, Oreg.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Coast for December 1939]

AMERICA'S BIGGEST DITCH—HELLS CANYON HOLDS THE TORTUOUS SNAKE RIVER BETWEEN IDAHO AND OREGON

(By Richard L. Neuberger)

Washington Irving never got beyond the Rocky Mountains in his westward travels. The Snake River he knew only by the narrations brought back by Lewis and Clark, the Astor expedition of 1811, Captain Bonneville, and others who struggled into the Pacific Northwest when the United States was still a new country. From these sources Irving obtained a vivid impression:

"Indeed, from all that we can gather from the journals before us, we are inclined to think that the Snake River must be one of the most remarkable for varied and striking scenery of all the rivers of this continent. It penetrates vast sierras or mountainous chains, broken into romantic and often frightful precipices, and crowned with eternal snows. Tremendous walls of basaltic rock rise perpendicularly from the water edge, frowning in bleak and gloomy grandeur. Wildness and sublimity appear to be prevailing characteristics."

This is a description of Hells Canyon, the deepest chasm of North America and one of the last great wilderness fastnesses of continental United States. Hells Canyon is the final frontier of the far West. Men who have explored the world say there is no more rugged region on the planet. It was the principal barrier to the adventurers who settled the Pacific seaboard, and it has not yet been fully conquered. To this day, a century and a third after the first pioneers, Lewis and Clark, saw the Snake River, Hells Canyon remains a challenge to the people who would have a look at the American West as it was before the frontier was pushed back.

The immense abyss carved by the Snake lies along the border between Oregon and Idaho. It is 189 miles long and 10 miles wide at the broadest point. In the deepest stretch it averages 5,510 feet in depth for 40 miles. At one place it is 7,900 feet deep; this is at He Devil Peak, on the Idaho side. The Wallowa Mountains of Oregon form the western ramparts of the gorge, and opposite them is the Seven Devils Range of Idaho. Promontories 6,000 feet above the river are not unusual. The Snake is a tenuous thread from the last rim.

All over the West men and women are just beginning to realize that Hells Canyon is one of America's premier spectacles. Few natural wonders have been more obscure. Many encyclopedias and atlases barely mention it; tourist offices have not known whether it is in Idaho or Zanzibar; the thorough Britannica gives it only passing reference; the World Almanac does not list it at all. Such an authentic source of information as the World Book calls the Grand Canyon of the Colorado the deepest chasm in the Nation, with the Grand Canyon of the Yellowstone second. The Yellowstone's beautiful canyon reaches a maximum depth of 1,500 feet. Hells Canyon is five times as deep in some places. Actually the third deepest of the country's chasms, after Hells Canyon and the Grand Canyon of the Colorado, is the canyon of the Salmon River, which is the main tributary of the Snake. Its greatest depth is 6,000 feet. Then come the Bighorn River Canyon in Montana and the Gunnison River Canyon in Colorado.

Not until 1935 were the great dimensions of Hells Canyon officially confirmed. That year a report of the United States Geological Survey declared: "Below the Oregon mining town of Homestead the Snake River has cut through the mountain ranges that blocked its way to the Columbia River and flows in the deepest, narrowest canyon in the United States. When this canyon becomes better known it will doubtless rank as one of the great canyons of the continent."

There are three ways to glimpse America's deepest chasm: On foot, by automobile, or from a boat. All of them are adventures. Haldane (Buzz) Holmstrom is the most famous river runner in the world. He is the only person who ever voyaged through the Grand Canyon of the Colorado alone. Recently he added Hells Canyon to his exploits. "The Snake River Canyon," said he, "is four times as tough as the trip down the Colorado to Boulder Dam.

I was mighty lucky." And Amos Burg, of the National Geographic Magazine, internationally known as an explorer, exclaimed as he reached the lower end of the abyss, "Rapids are so frequent we seemed to be descending the canyon on watery stairs. Above us mountain rose upon mountain, shooting their splintered pinnacles dizzily into the heavens, flanked by more mountains and more pinnacles, climbing to loftier and loftier altitudes."

The average traveler cannot duplicate the feats of Buzz Holmstrom and Amos Burg. But he can go on the most sensational boat ride in the United States of America. This is the 99-mile voyage from the Idaho shipping center of Lewiston south and upstream to Johnsons Bar, far into the core of Hells Canyon. The trip is made once a week by a calm, laconic boatman named Kyle McGrady, who takes mail and supplies to the prospectors, ranchers, and sheep herders dwelling in America's loneliest hinterland. Occasionally McGrady has space for a passenger or so. In a few weeks he will have room for more; he now is building a larger boat.

At Lewiston there also is a pair of veteran Snake River argonauts—Press Brewink and "Cap" MacFarlane. When the water is not too low, they can coax their flat-bottomed Idaho upstream to Johnsons Bar. The Idaho comes back down the river in approximately one-fifth the time it required to make the ascent.

The boat trip from Lewiston to Johnsons Bar does not include the worst stretches of the river, but it covers rapids and white water which make the heart beat faster. Above Johnsons Bar the Snake is a hurtling demon. At Cauldron Linn, upstream from Hells Canyon, the water virtually boils. There the Astor expedition came to disaster, losing boats and boatmen in a tragic pile up. "La maudite rivière enragée," the early French-Canadian voyagers called the Snake—"the accursed, mad river." At Johnsons Bar this term is understandable.

The paramount drawback to the journey by boat is that only from Johnsons Bar and one or two other points may the final rim be seen. Otherwise merely the first cliff is within view of the traveler. This fact impressed itself on frontiersmen who tried to make Hells Canyon a route to the Pacific. The Astor party, attempting to climb out of the abyss, scurried past the first rim and "found they were not half way to the summit, and that mountain upon mountain lay piled beyond them in wintry desolation." Bonneville and his followers experienced the same disappointment and discovered that "although already at a great elevation they were only as yet upon the shoulder of the mountains."

To appreciate the true proportions of Hells Canyon it must be seen from above. This requires a route somewhat different from the boat trip. The bulk of it can be covered by train. The Southern Pacific's Klamath Limited leaves San Francisco at 9 o'clock at night and exactly 24 hours later is in Portland. At 9:30 this second night the Union Pacific's Portland Rose starts for the East. In the shivery, gray dawn the next morning the wayfarer tumbles out on the station platform at La Grande. At 6:15 in the morning a mixed freight and passenger train pulls out of La Grande for Enterprise.

This is a typical hinterland local. The coaches are heated with wood stoves and have carbon-arc lamps. The conductor wears overalls and knows most of the passengers by their first names. The train stops along the wayside to pick up loggers, ranchers, and backwoodsmen. As the chugging engine conquers the steep grades of the Wallowa Valley, villages become less frequent and farmhouses more remote. Forests begin to encroach on the railroad embankment. In the background, over in Idaho, tower the distant tips of the Seven Devils.

At Enterprise, automobile is the method of conveyance. Thirty-six miles away, over good dirt roads, is the post office of Imnaha, the jumping-off place for Hells Canyon. Imnaha seems at the end of the world; it is at the head of the canyon of the Imnaha River, which is almost half a mile deep.

Up out of Imnaha, around the shoulder of the Canyon of the Imnaha, curves a narrow road. It is wide enough for one car, with turn-outs spaced at irregular intervals. There is no railing, but there is often a 2,000-foot drop on the outside. Over the cowl of an automobile, the passenger sees space in which hawks and eagles soar against a backdrop of far-off mountains. This stretch is a mere 3 miles, but after it is over hands are usually clammy and abdomens seem to be revolving like a ferris wheel. "I'm used to it now," observes Grady Miller, who for 29 years has been a Forest Ranger in the Snake River region. "The only time I get nervous is when I think a lot about it afterward."

Once past the Imnaha, the road covers 17 miles of forests thick with lodgepole pines and comes out at Hat Point. Imnaha Canyon appeared impressive and deep, but it is a gully compared to the panorama from Hat Point. Far below, the Snake flows through Hells Canyon. Ponderosa pines and Douglas firs seem dwarfed to the size of the hackberry bushes. The crags are rough and the ridges broken, and the whole earth here gives evidence of the buckling and gnawing which took place during prehistoric epochs. The chasm is so vast that its depths fade away in a thin blue haze. Forest Service photographers, reaching this spot after having taken pictures in almost every State, said no view could compare with it in immensity and grandeur.

The road to Hat Point is open only about 5 months of each year, generally from June through October. Snow and ice barricade the passes the rest of the time. The difference in elevation between rim and river is so great that although the cliffs above Hells Canyon are invariably mantled and blocked every winter, the bottom of the chasm is powdered only with an occasional snowfall. Trails

from Hat Point lead to Barton Heights and Freezout Saddle and other promontories, where even more spectacular glimpses of the canyon are possible. These trails can be traversed on foot or by horseback.

There is a third direction from which Hells Canyon can be approached. This is at the upper end, near the Oregon hamlet of Homestead. The Oregon Short Line of the Union Pacific crosses the Snake 50 miles above Homestead, and a fair automobile road covers the rest of the distance. No other route is so good in winter, because from Homestead the chasm can be reached via the bottom. A road comes down from Idaho not far from the abandoned Red Ledge mine. It is called the Kleinschmidt Grade and surpasses even the Imnaha for thrills. The road has started to slough away in some places and slopes toward the outside. Once slipping there, a car would soar into the canyon like a stricken bombing plane.

Fewer people visit this unparalleled spot each year than go to one performance at one movie theater in San Francisco or watch the girls undress in a single evening at a burlesque house in Portland. But eventually Hells Canyon will probably be one of the great outdoor centers of the Pacific coast. From the population centers of California it is not so far to the vast chasm. Lewiston, where the boat trips begin, is 922 miles from San Francisco by highway; Homestead is 856 miles, and Enterprise is 929 miles. It is only a day's drive from Seattle or Portland to Lewiston.

Cliffs 1,500 feet to the first level are not rare in this awesome declivity in the American wilderness. Thousand-foot bluffs are ordinary. Some precipices tower 3,500 feet up from the river. Sheep Rock along the Oregon wall is higher than the whole Catskill Mountain Range on the other side of the continent. The needled trees on the crag's summit are 4,278 feet above the Snake. Three Empire State Buildings plus one Golden Gate Bridge, piled on top of each other in the river bed, would only slightly surmount the crest of that rock—and above Sheep Rock the canyon slopes upward another 1,007 feet to Lookout Mountain.

Various plans are now under way to make the chasm of the Snake River a recreational and scenic center for the States of the far West. In the summer a Department of the Interior survey examined the region, preparatory to recommending to Congress that it be set aside as a national park or national monument. The survey was requested by Senator CHARLES L. McNARY, of Oregon, the Republican minority leader. The American Wilderness Society would like to keep the region a vast primeval area, untrammelled by tonneau tourists or professional sightseers. Secretary Ickes hopes to have certain sections of the West preserved in their natural state, a scheme into which Hells Canyon might fit appropriately. Ranchers and stockmen will protest any attempt to take the management of the area away from the Forest Service.

Some public officials in Idaho want a road constructed through the bottom of the canyon. A preliminary survey by the State has disclosed that the project would cost approximately \$12,000,000. Other people are supporting the road venture, but think it should be along the rim of the chasm, in the heart of the Seven Devils.

Whatever is done with the expansive wilderness of Hells Canyon, it will not be possible to rob this last frontier of its color and flavor and folklore. It is as rich in tales and personalities as it is in scenic majesty. Back in the Wallows is Charley (Silver Tip) Seeber, venerable woodsman, who is 100 percent for a national park. Along the river rides Mack Chetwood, cowpuncher from Halfway, carbine at his saddle, cowhide mackinaw on his back; he thinks cattle should be allowed to graze on the upper slopes above the Snake. In the heart of the Seven Devils is a school where children come in from far-flung ranches, leading pack horses with loads of provisions and blankets. Downstream is the place an old hunter unearthed Meriwether Lewis's branding iron. Every cabin and tent and shack contains a score of tales and stories which have yet to be forgotten in the rush of civilization.

Long, weary wilderness miles from the sound and bustle of modern society, the water gurgles and splashes as it seeps down out of the highlands—the noise, once a whisper and later a roar, of Sheep Creek flowing to the Imnaha, of the Imnaha flowing to the Snake, of the Snake flowing to the Columbia and, far off, of the Columbia flowing on to the sea.

### The Civil Aeronautics Act of 1938 and Airport Development

#### EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

ADDRESS BY COL. EDGAR S. GORRELL, PRESIDENT, AIR TRANSPORT ASSOCIATION OF AMERICA

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following able address

given in Chicago this week before the American Road Builders' Association:

"This system . . . of making gifts to States and sections of the Union for roads and canals—will degrade the States by inducing them to look for bounties, to the Federal Government; will degrade and demoralize the people, by making them dependent on the Government . . . . As soon as the people of ancient Rome were taught to look to the public granaries for support, the decay of public virtue was instantaneous."

Thus, over a century ago, did a South Carolinian protest to the House of Representatives against congressional spending. And with this quotation an eminent student of our constitutional system opens his history of the spending power of Congress a hundred years later.<sup>1</sup>

This sober warning against the iniquities of Federal spending has been repeated in varying terms upon many occasions, even in years fresh in our memories. Within the sweep of the condemnation comes Federal spending for airports quite as well as for roads or canals or farm relief. And we, as responsible citizens, cannot sanction increased Federal participation in a program of airport development if these dire consequences, so eloquently asserted, will indeed follow from such a course. And the Civil Aeronautics Act, in providing for such Federal participation, should promptly be amended if such degradation and demoralization will result.

Of course, the truth of the matter is that no such doom is upon us. On the contrary, Federal participation holds incalculable promise for the future strength and security of our Nation. But we must understand and accept the full implications of Federal action in this realm if we are to avoid waste and foolhardy expenditure of money and energy.

Both in the old Air Commerce Act and in the Civil Aeronautics Act airports are treated as air navigation facilities.<sup>2</sup> They are, in other words, means whereby air navigation is made possible, of exactly the same nature as other facilities such as beacon lights and radio beams. Taken all together these facilities are to flight exactly what navigable waterways are to water transport.

The validity of Federal expenditures for such objects was established by a deeply significant political and constitutional struggle which began a hundred and twenty-five years ago and raged feverishly until a Civil War embraced all the clashes of our early history in one bloody climax. I refer, of course, to the struggle over "internal improvements," a term which merits capitalization. The struggle had many battlegrounds, from the Cumberland Pike to the first land grant to the Union Pacific, and there finally triumphed the principle that the Government of the Nation should take the lead in the development of the Nation's resources. The principle may be termed distinctly socialistic; but it is a fundamental of our American order, it is applied annually without question in the expenditure of hundreds of millions of dollars, and it has made possible the development of engineering wonders which go far to explain the proud position of our country in the family of nations.

Thus when the air became a means of commerce and travel there was an American tradition firmly grounded that the establishment of facilities necessary to air navigation should not be left to private interest. The universal acceptance of governmental responsibility for the facilities necessary to navigating the high seas, extended as well by our long struggle over the question of internal improvements to a comparable responsibility for inland waterways, made it clear from the beginning that air navigation facilities must be a matter of direct concern to the Federal Government.

That this should be true is not a matter merely of tradition, however. Consider the alternative.

In the early 1920's, when, because of the constructive policies of foreign governments, civil aviation was advancing rapidly abroad but, because of the negative attitude of our own Government, was floundering badly here, there were many wise men who gave serious study to the future of aeronautics and who considered every possibility. It was obvious that one of the most immediate needs was that of proper air-navigation facilities. At the very beginning of the air-mail service some had blandly assumed that nothing more than a compass was necessary for flight. This gross misapprehension was soon corrected by events sometimes amusing<sup>3</sup> but too often tragic. And very shortly students of this new science and leaders of public thought became impressed with the magnitude of the navigation facilities which would be required.

One possibility, of course, was that the provision of these facilities should be left to private capital. Another possibility was that there should be initial governmental aids to private interests, but that, once an industry had been launched, private capital should assume the full burden.

I speak advisedly of these alternatives as possibilities. For either was possible.

The fact that right up to 1937 private capital had spent more on the construction of air-navigation facilities than had the Federal Government<sup>4</sup> is sufficient indication that private enterprise might

<sup>1</sup> Warren, Congress as Santa Claus (1932). The quotation is from a speech by Congressman Warren R. Davis on April 4, 1832, 22d Cong., 1st sess.

<sup>2</sup> Air Commerce Act, sec. 5 (b) (1); Civil Aeronautics Act, sec. 1 (7).

<sup>3</sup> Warner, the Early History of Air Transportation (1938), at pages 7-8.

<sup>4</sup> Hearings on Senate amendments, State, Justice, Commerce, and Labor appropriation bill for 1938, before subcommittee of House Committee on Appropriations, 75th Cong., 1st sess., at p. 16.

well have been proceeded independently, or might have carried on after an initial period of assistance. In the case of the railroads, after enormous grants-in-aid early in the industry's history,<sup>5</sup> the provision of rights-of-way and related facilities was left to private enterprise. The same thing might have been done in the case of civil aviation.

But had any such policy been adopted the consequences would have been disastrous. Not only would there have been a much slower and more restricted development of scheduled air transportation, due to the demands which would have been placed upon private capital and to its necessary tendency to invest only where it could be most secure and profitable, but there would have been erected a barrier against the development of the nonscheduled commercial operator and the private flier which would have crippled us irreparably. For the result would have been the acquisition of monopolistic rights by large aggregations of capital in a few choice air routes. Not only the nonscheduled commercial operator and the private flier (were any to appear) but also the national defense forces would have been at the mercy of private monopoly. And except for a few choice routes where private capital could have effectively protected its monopoly, there would have been no development whatever of air-navigation facilities.

These consequences were foreseen by sober minds in the early twenties, and they came swiftly to the conclusion that the American tradition of direct governmental action to provide the ways for commerce and travel must be extended to the air. The entire argument is aptly summarized in striking passages from two reports which largely influenced the adoption and the terms of the Air Commerce Act of 1926. One was a report on civil aviation by a joint committee of the Department of Commerce and the American Engineering Council. The other was a report of a board, headed by Mr. Dwight Morrow, appointed by the President to study the development of aircraft as a means of national defense.

In the one it was said:

"Air routes can be developed in one of two ways—either they can be built up and maintained at great expense by private organizations, which may result in monopolistic control of the desirable routes, or they may be established as public facilities free to all who conform to proper regulations governing their use. The latter method is wise and sound and will be effective in bringing about the rapid development of civil aviation and avoiding the mistakes which have accompanied the development of some of the other means of transportation."<sup>6</sup>

And in the other report it was said:

"The principal conditions standing in the way of progress and acting in restraint of the more rapid investment of private capital in the field of air transport are:

"(1) The excessive burden placed upon private capital if it is to be required to pioneer in the development of flying equipment best suited to air transport and at the same time supply all the collateral requirements, including airways and air-navigation facilities, especially as such facilities are by their very nature open to the use of all, and no proprietary rights can be retained by the parties undertaking the original investment and the expense of maintenance. The parallel with maritime transport in this particular is exact."<sup>7</sup>

There, in brief, is the entire point. If the establishment of air-navigation facilities had been left to private capital, those facilities would have been provided in only a few favored regions because of their cost and because of the necessity that they be so situated that the private owners could exclude others from using them save at the owners' terms—necessarily a difficult accomplishment—and the power of large aggregations of capital in this new science would have been enhanced beyond all conscience, to the sore detriment both of our civil and our military life.

No wonder, then, that in the Air Commerce Act of 1926 an American tradition developed on the ground was applied by Congress to the air, and in section 5 (b) of the act the Secretary of Commerce was authorized to establish, operate, and maintain air-navigation facilities. That decision, reflecting stirring and even bloody pages in the history of our country, was probably the most important single decision ever made by our Government in its treatment of civil aeronautics. It is the very foundation of our aeronautical future.

The act of 1926 did, however, exclude airports from the competence of the Secretary of Commerce. His powers extended to all other air-navigation facilities, including emergency landing fields, but airports—a most important facility—were entirely excluded from his jurisdiction. Indeed Congress went so far as to provide that even those airports which in 1926 the Postmaster General already

controlled could not be transferred to the Secretary of Commerce but only to the various municipalities.<sup>8</sup>

This important exception from the powers granted to the Secretary of Commerce may at first blush seem illogical, if not quite inexplicable.

It arose in the following manner.

The bill as adopted by the Senate gave to the Secretary of Commerce the power to establish and operate only certain named navigation facilities, in substance lights and certain radio facilities.<sup>9</sup> In the House amendments to the bill the powers of the Secretary of Commerce were broadened to include all air-navigation facilities, including airports, and provision was also made for transferring the Post Office Department's airports to the Secretary of Commerce.

In explaining this extension of the Secretary's power, the House committee's report recognized that normally in water commerce terminal facilities had been provided either by the municipalities or by private interests, and it was stated that, while the Secretary was, under the proposal, given broader power, it was assumed that, pursuant to another provision of the House bill, the Secretary would have due regard to his duty to encourage the establishment of air-navigation facilities, "and, in particular, airports," by municipal and private enterprise in order that the place historically occupied by such enterprise in water transportation might likewise be occupied in air transportation.<sup>10</sup>

Thus, the maritime analogy was strongly urged, even by the House, and the compromise reached by the conference committee carried out precisely what was conceived to have been the historic view respecting waterways and seaways, by providing for Federal establishment, operation, and maintenance of air-navigation facilities, except airports. The matter was explained by Senator Bingham, one of the conferees and the Senator in charge of the bill:

"The conferees after a long discussion agreed that it was an unwise thing for the Federal Government to enter upon the ownership of airports, and that provision was stricken out \* \* \*. The object of the bill as now presented is to encourage municipalities to own their own airports and to permit the Secretary of Commerce to arrange for proper navigable airways \* \* \*. It was not our intention that any airports should be operated by the Federal Government. The committee thought that would leave the door wide open to thousands of cities desiring to have airports provided by the Federal Government. The Federal Government has never provided seaports, but only facilities in between seaports."<sup>11</sup>

While the Senator spoke of the dangers of ownership by the Federal Government, the real objection, obviously, was that too great a demand would be made upon Federal funds—and this objection would apply not only to Federal ownership, but also to Federal expenditures with municipal ownership.

So the alleged maritime analogy was carried out precisely, and airports, corresponding to seaports, were to be left to municipalities and private capital.

While a great step had been taken in granting to the Secretary of Commerce these powers respecting air-navigation facilities, the exclusion of airports left open some of the very problems which had led to the Air Commerce Act. I have referred to the grave dangers inherent in any policy which leaves to private capital the establishment of air-navigation facilities. Obviously much the same danger is inherent in a policy which leaves to private capital the establishment of an air-navigation facility so important as airports. The cost of airports would be a deterrent to all but large aggregations of capital. Furthermore, of all air-navigation facilities the one which would be most suited to the exercise of an effective monopoly is the airport. This had been recognized by the joint committee of the Department of Commerce and the American Engineering Council, to whose report I have already referred.<sup>12</sup> Therefore if there was any thought that the restriction in the Air Commerce Act would encourage private capital to provide airports, Congress was treading on dangerously thin ice.<sup>13</sup> Were the field to have been preempted by or left to private capital the consequences to the development of civil aeronautics would have been far more ominous than have been the consequences to water commerce of such activity as there has been on the part of private capital in seaport construction.

In any case, while there ensued some notable instances of private investment in airport development, and while several proposals for large-scale private financing have been advanced from time to time, it was naturally the municipalities which came to the fore. Their contribution has been of incalculable value. Not only has it assured them of air service, but it has provided the very nucleus for the development of private and miscellaneous flying using publicly owned airports open to all aviation.

<sup>5</sup> Sec. 5 (a).

<sup>9</sup> This provision and its later legislative history are succinctly reviewed in H. Rept. No. 1162, 69th Cong., 1st sess., the statement of the Managers on the part of the House on the Conference Report. See Legislative History, op. cit., supra, No. 7, at p. 51.

<sup>10</sup> Legislative History, op. cit., supra, No. 7, at p. 37.

<sup>11</sup> 67th CONGRESSIONAL RECORD 9354-9355.

<sup>12</sup> Op. cit. supra, No. 5, at pp. 13, 96.

<sup>13</sup> The House committee had stated that private enterprise as well as municipal enterprise should be encouraged to undertake airport development. Supra, No. 10. Senator Bingham, in the passage from his remarks quoted above, spoke only of encouraging municipal ownership of airports. Later in his remarks, when Senator Norris twitted him for socialistic tendencies, he stated that he should have said that both private and municipal ownership should be encouraged (67th CONGRESSIONAL RECORD 9356).

<sup>6</sup> Civil Aviation, a report by the Joint Committee on Civil Aviation of the U. S. Department of Commerce and the American Engineering Council (1926), states, at p. 96, "Aid was given to the pioneer railroads because capital would not and could not enter upon costly and speculative ventures without assurance of support. The development of the West would have been long delayed if such aid had not been extended."

<sup>7</sup> Civil Aviation, op. cit., supra, No. 5, at p. 13.

<sup>8</sup> Report of board appointed to make a study of best means of developing and applying aircraft in national defense (S. Doc. No. 18, 69th Cong., 1st sess., at p. 9). This passage was paraphrased in S. Rept. No. 2, 69th Cong., 1st sess., by the Senate Commerce Committee in favorably reporting the bill which was to become the Air Commerce Act. (See Legislative History of the Air Commerce Act of 1926, 1928 ed., G. P. O., at p. 27.)

Nonetheless, the municipalities' experience has been in many cases a struggle against unequal odds. Long before 1938 it was apparent that the problem was too big and too complicated for them to handle alone. The analogy between airports and seaports left out of consideration some vital characteristics of civil aeronautics.

Even prior to the adoption of the Air Commerce Act, there were disturbing signs. According to the admission of the Post Office Department, some of its agents had induced certain municipal and civic groups to finance airport construction with an overzealous representation that the Federal Government would reimburse them.<sup>14</sup> Undoubtedly there have been numbers of cases where misapprehensions of one sort or another were instrumental in securing municipal action and disappointed expectations as to the adequacy of airports, their Government rating, and the use to which they would or could be put have been too frequent.

To a large degree this has been due to misdirected enthusiasm and to carelessness. Unfortunately there has been a dearth of activity by informed and responsible organizations which could furnish to municipalities the advice and leadership which they should have had.

However, the basic difficulty is that neither from the standpoint of the financial burden involved in airport development nor from the standpoint of the planning and placing of airports can the problem be regarded as a matter for the municipalities alone. The airport is a link in a vast chain of technical apparatus that must continually be altered to keep pace with scientific and commercial developments which are proceeding with lightning speed. In the time taken to build one airport of respectable size, a thousand changes may have occurred in aeronautics which could make that airport either obsolete or misplaced. Unlike water transportation, aeronautics has not developed slowly, along obvious lines, and in channels which can be marked ahead of time with reasonable certainty. For airport development to proceed willy-nilly from one municipality to another is folly. Long ago it became clear that there must be Federal participation to a degree which the framers of the Air Commerce Act did not appreciate. The principal need was for adequate Federal planning, coordination, and advice. And there was also need for a certain amount of Federal funds.

Before the Air Commerce Act had been changed there appeared, quite fortuitously, a form of Federal participation which no one would have thought of a few years ago. Due to the remarkable foresight of a handful of individuals, the Works Progress Administration included in its stupendous program of work relief projects a generous allowance for airport construction. When the history of civil aeronautics during its formative era is finally written there will be a chapter on the activities of W. P. A. which will be unstinted in praise. At a time which has proved critical in the development of civil aeronautics, at a time, moreover, when those who had been meeting the needs for airport development had taxed their resources and ingenuity to the breaking point—even though many of them probably did not realize it—the W. P. A. launched its program. It was one of those seemingly unplanned coincidences which characterize democracies. But it was the result of deliberate and shrewd foresight, for which those responsible, from the President on down the line, are entitled to the highest measure of gratitude and credit. Easy hindsight today shows that this action was a most important step in the development of civil aeronautics in the period from the adoption of the Air Commerce Act of 1926 to the adoption of the Civil Aeronautics Act of 1938.

But the W. P. A. program did not and cannot offer a permanent basis for Federal participation. That came with the Civil Aeronautics Act. In the provisions of that law we have at last all the necessary legislation for proceeding with a permanent program.

Strangely enough the importance to airport development of the provisions of the Civil Aeronautics Act has been grasped only slowly by many who are vitally interested in the problem. Even during the last session of Congress a bill was introduced authorizing certain appropriations for airport development. No such authorizations and enabling legislation are necessary. Advocacy of such legislation wastes energy that should be devoted to securing such appropriations as may be necessary, confuses the real issue, and runs the risk of unfavorable political consequences that might follow if a new enabling bill were defeated or were adopted with restrictive terms not appearing in the present law.

Let us, then, understand exactly what the Civil Aeronautics Act provides, and act accordingly.

Section 302 (a) of that act, in the broadest possible phraseology, authorizes the Administrator of the Civil Aeronautics Authority to acquire (a power never conferred upon the Secretary of Commerce under the Air Commerce Act), establish, operate, and maintain along civil airways all necessary air-navigation facilities. And the term, air-navigation facilities, is defined to include airports, or facilities on airports.<sup>15</sup> He can also acquire, establish, operate, and maintain, in whole or in part, any air-navigation facility on a landing area, municipal or otherwise. The only limitation upon his power is that he cannot acquire, by purchase or condemnation, an airport. And that means only that he cannot buy up completed airports. But he can, himself, establish an airport and he can maintain an airport. And he can establish and maintain any navigation facilities on airports.

It is difficult to conceive how a broader power could have been conferred. In this law there is all the power necessary for Federal participation in sound airport development. All that remains to be done is that the law be properly administered and that the Congress provide the funds necessary for that administration in its regular appropriation acts.

Here then, at last, there is the legal basis for sound airport development. The gap in the old Air Commerce Act is closed. Every agency of Government—municipal, State, and Federal—can cooperate fully, each according to its proper capacities. The time is ripe for the formulation and the execution of plans for doing the job properly. To accomplish this there must be cold, dispassionate appraisal of practical possibilities and rigid adherence to sound planning for the future. The day is long past when blind enthusiasm and haste can prevail. What is most needed is steady and persistently cooperative work on a coherent, practical program.

I have spoken in these later paragraphs of plans and programs. I have indicated that Federal participation implies more than the doling of money. Let us be clear as to just what is implied.

No agency of government ought to spend the people's money unless it is convinced not only of the need for the expenditure but also that the expenditure will be made under conditions which will assure that the need will be met.

In some cases it may be true that the Federal Government can be more effectively assured of wise expenditure by turning funds over to local or State governments virtually without strings attached, to be applied by those governments as needs appear to them to dictate.

But I can see no basis for regarding such a passive attitude on the part of the Federal Government as necessarily proper in all cases. And certainly in the case of airport development it would be a serious error. In fact, you will observe that under the Civil Aeronautics Act no provision appears whereby the Administrator can merely dole funds to municipalities or States. He must himself do the establishing or the maintaining of the facility in question. Under the temporary W. P. A. program—which is still in effect—a greater degree of formal local autonomy in the use of Federal funds is possible; but as that program has been administered, the Federal Government has by no means been passive. And, to assure that the expenditure of Federal funds, even pursuant to the W. P. A. program or some similar medium which might be established in the future, will at all times be in accordance with standards and needs considered from the broad national point of view and in accordance with a coherent national program, Congress included in section 303 of the Civil Aeronautics Act a requirement that no Federal funds can be expended, other than for military purposes, upon any landing area, or any air-navigation facility on any landing area, without the recommendation of the Administrator of the Civil Aeronautics Authority and his certification that the expenditure is necessary.

Thus, however Federal funds may be expended, they can be applied only under conditions which fit the Federal Administrator's standards and program. And it may be earnestly hoped that the Congress will provide the necessary funds for the Administrator himself to proceed with the necessary construction quite independently of the exigencies of temporary work-relief projects, so that he may be able to apply most effectively a true Federal program looking to the Nation's needs for many years to come.

In the formulation of the Administrator's program all of us should be prepared to give him the advice and help that he will need. Again, careful, cold thought is requisite.

An example will indicate the nature of the problem.

Next only to the central question of actually providing for airport construction, nothing is so important as assurance that the areas surrounding airports will not become so obstructed with buildings or other structures that the airports will be too hazardous for proper use. To secure that assurance must be one of the first concerns of the Administrator if he is to avoid wasteful expenditure. This means that in some—and perhaps many—instances the Administrator will have to examine local provisions for airport zoning, and he may well find it necessary to require either that zoning legislation be adopted or that existing legislation be improved or that other steps be taken to assure against future destructive obstructions.

On a question of that kind voluntary organizations of informed citizens can, if they will, be of great aid, not only through the studies and recommendations they can make to the Administrator but also through the work of education which they can perform so effectively before local governing bodies and State legislatures.

In the administration of the great public-works program, the Public Works Administration found it necessary to draft and secure enactment of a whole series of measures by States and municipalities designed to secure adequate protection for its public works. Such enactment was often imposed as a condition to the grant of funds. Necessarily the P. W. A. had to work hurriedly and oftentimes toes were trod upon and feelings offended.

It may be—indeed, an appreciation of the importance of problems such as that of airport zoning indicates that it is quite likely—that the Administrator of the Civil Aeronautics Authority will have to proceed in somewhat the same way. In doing so, if he has the alert help of patriotic organizations everywhere, he should be able to avoid much of the difficulty which other agencies of the Federal Government have encountered in some of their emergency programs. Whatever can be done to promote timely action by the Administrator and to smooth the way for informed cooperative effort between the various agencies of government will prove a boon to the Nation.

<sup>14</sup> See, e. g., H. Rept. No. 472, 68th Cong., 1st sess., at pp. 2, 3; see also hearings before a subcommittee of the House Committee on the Post Office and Post Roads, 69th Cong., 1st sess., on H. R. 4326 and H. R. 4642, at pp. 4 et seq.

<sup>15</sup> Sec. 1 (7) and (8).

So I repeat, the time is ripe for action. The problem is national in scope, and it is not an easy one. Not only must there be the immediate appropriations of funds necessary to effective administration of the airport provisions of the Civil Aeronautics Act and to the airport construction now wanting—of even more importance is the careful study that should be devoted to the kind of program that should be followed and to the standards that should be applied, and the work of preparation among the various States and municipalities to meet that program and those standards. America, in looking up from the navigable waterways to the airways, has taken a step of the most profound importance to the national defense and to our happiness and prosperity. May our new enthusiasm be guided with the same intelligence that has led us to so many constructive accomplishments on the waterways. And may we be inspired by the same foresight which motivated the advocates of internal improvements, the sponsors of the Air Commerce Act, the leaders of W. P. A., and finally the authors of the Civil Aeronautics Act.

### Farm Legislation

#### EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

Mr. DIRKSEN. Mr. Speaker, this morning while turning the pages of the CONGRESSIONAL RECORD I observed an extension of remarks by the gentleman from Arkansas [Mr. TERRY], which included a letter addressed to me by Mr. Edward A. O'Neal, president of the American Farm Bureau Federation. In this letter Mr. O'Neal made inquiry about my view on farm legislation generally and parity in particular.

Perhaps the best answer that I can make will be further in the remarks which I made on the pending bill on the 30th of January:

I am willing to support any feasible and reasonable farm program and support any and all reasonable expenditures in behalf of agriculture if only there is some prospect that a solution will be found. In the light of the experiences of the last few years with generous appropriations to carry out a program for curtailing supply and expanding demand, is there anyone so bold as to insist that we have found the solution or, if not, approximated a solution? It is results that we are after, and I believe I express the sentiment of the majority of farmers that they seek results rather than experimentation.

It was rather interesting to observe in the February 1, 1940, edition of the Chicago Tribune an article which quoted one of the outstanding and most vigorous farm leaders in the United States. I refer to Mr. Earl C. Smith, president of the Illinois Agricultural Association and vice president of the American Farm Bureau Federation, who, in addressing the Twenty-fifth Annual Convention of the Illinois Agricultural Association, stated as follows:

Everything yet done by Congress for the solution of the farm problem has been done to appease the farmers rather than to solve the agricultural problem.

Mr. Smith rather well expresses my own sentiments. I, too, with all sincerity am seeking a solution of the farm problem.

### The Venezuelan Trade Agreement

#### EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

STATEMENT BY HON. LYLE H. BOREN, OF OKLAHOMA, BEFORE THE WAYS AND MEANS COMMITTEE

Mr. BOREN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the Committee on Ways and Means:

Mr. Chairman and gentlemen of the committee, I appear here to request this committee to make whatever amendment is necessary to existing law to prevent the inclusion of oil excise taxes as tariffs in trade agreements. In my judgment, the State Department has made a mistake by their inclusion of the oil excise taxes in the Venezuela trade agreement. I cannot believe that the State Department would deliberately ignore the clear intent of Congress, nor do I believe that they would knowingly grant privilege to a few great oil-importing companies at the expense of the United States Treasury and of the domestic petroleum industry.

I am not here to criticize those who are responsible for this error. I am quite aware that those in high positions must rely for information on subordinates, upon whom it is difficult to fix responsibility. The question is not who might be to blame for this, but rather, "What is the best manner of undoing the wrong?"

There is no great blame in making a mistake, but it is a great wrong to make a mistake and refuse to rectify it. I feel that the Democratic Party should evidence to the Nation that it hastens to correct any mistake that it might make. I personally never want to be in a position of attempting to defend or conceal error.

Mr. Chairman, my duty to my constituents also directs me here. Large numbers of my constituents are stripper-well operators. I believe I have more stripper wells in my district than are found in any other district in this country. Their production is of great importance to the entire Nation. Their costs are high and they cannot compete with cheap foreign oil. If the operators are forced to abandon these wells because they cannot be economically produced in a market controlled by the importers, then this country will lose the oil which underlies them. The national conservation program is largely based upon the protection of the wells of settled production many of which are commonly called stripper wells. The State conservation legislation for the prevention of waste limits the production of flowing wells to a comparatively small percentage of their potential production in order to effectively protect the stripper wells from abandonment. These wells can only produce when they have a market. They cannot have a market unless they can receive at least their costs of production. If a market is denied them over a considerable period the wells are closed down, water usually enters and the oil underlying these wells is lost so far as present known methods of recovery are concerned, since it would not pay to redrill them except as an emergency measure. Every known oil well will eventually become a stripper well unless it goes dry. Therefore the national conservation program put into effect by regulatory bodies in the oil States is protecting the future of the flush wells at the same time it protects the present stripper wells. To invite unlimited imports of cheap foreign oil by taking from Congress the power to deal with these imports and with the excise taxes as necessity may dictate, threatens the life of every stripper well in the country and with them the greater part of our known petroleum reserves.

My constituents, like the rest of the domestic petroleum industry, felt quite assured that Congress would not permit any trade agreement to take away its power to take any necessary legislative steps to meet changing situations in the petroleum industry due to importations. Because of that they made no representations when the Trade Agreements Act was originally enacted or when it was renewed in 1937. They were, therefore, shocked when this Venezuelan trade agreement was promulgated and they learned that their market was at the mercy of the importers and that in the future, for the life of this agreement at least, they could not turn to Congress for that sympathetic understanding and quick relief which they have previously experienced.

Because of the confidence I have in the integrity of purpose of the administration, I have no hesitancy in urging that this committee place itself upon record as favoring the definite exclusion of the existing excise taxes from any trade-agreement negotiations. I believe that if we thus make clear our policy and the intent of Congress the State Department will, in turn, take such steps as are best adapted to eliminate the petroleum excise taxes from the Venezuelan trade agreement and restore these to the supervision and control of Congress.

The trade-agreement program in its conception is sound. The Venezuelan trade agreement is not in harmony with that program. It is an abuse of a policy which the Democratic Party has established. If the example set in the negotiation of that treaty should be followed, it will mean the abandonment of principles as well as programs which our party has sponsored.

It is necessary, therefore, that we should very definitely and positively place ourselves on record in favor of correcting the mistake which has been made and make clear our desire that it shall not recur. We must, furthermore, do all in our power to actually correct the error and reestablish the situation as it existed before the excise taxes were included in the Venezuelan negotiations.

The Democratic Party is committed to the program of reciprocal concessions in order to promote trade. As a member of the party I am in hearty sympathy with this program. I have spoken in its favor. I have voted for it. As a Member of Congress I owe a duty to my constituents as well as to my party. The duty I owe each of these compels me to call attention to an abuse of this program of our party which I feel, if not corrected, will not only destroy our program but will destroy the party and our country.

In this Venezuelan trade agreement we have turned over to a few great importing companies one of the most jealously guarded prerogatives of Congress—the power to conduct foreign relations. This was never contemplated when we planned and worked for the Trade Agreement Act. If we are to keep our foreign relations in proper hands, we must be honest in our effort to correct the mis-

take which has been made in this trade agreement. That correction should come from those of us who are members of the party and believers in reciprocity. If this criticism were being offered by a member of the opposing party, it might be treated as a political maneuver and, therefore, not receive the consideration it deserves.

Mr. Chairman, I view this question as a matter of principle with broad and far-reaching scope. After mature and deliberate consideration I have decided, as an individual, that I will have to oppose the further continuation of the trade-treaty program unless this fundamental problem is solved and the State Department shows full faith in living up to the intent of Congress as expressed in the original report of this committee on this subject. I cannot see our oil compact system destroyed by this means. I hope this committee will make it possible for me to continue my support of this program by correcting this situation.

### Diplomacy and Russia

#### EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

UNITED PRESS DISPATCH

Mr. BOLLES. Mr. Speaker, the first resolution offered in this House at this session was one requesting that appropriations for supporting the Embassy and diplomatic agencies in Russia be no longer made. The effect of this resolution would be to close our Embassy in Moscow and all other agencies of the Department of State having to do with the Soviet Socialist Union.

I based that resolution on the constant violations of the terms of the agreement between Litvinov, the Commissar, and President Roosevelt, in 1935, and these violations still continue with more emphasis even than at the beginning. I find other nations are taking somewhat the same attitude.

I ask unanimous consent to print in these remarks, copy of a United Press dispatch from Moscow dated February 1:

Moscow, February 1.—French Ambassador Paul Emile Naggiar will leave for Paris Saturday on "indefinite leave," it was learned tonight.

The British Ambassador to Moscow, Sir William Seeds, recently returned to London for a "holiday" which is expected to be of prolonged duration.

Demands were raised in the French press and Parliament last week for recall of Naggiar and a breaking off of diplomatic relations with Russia. The government, indicating that it refused to take such a step pending a similar decision by Great Britain, refused to heed the demands, but explained that relations with Moscow were under constant scrutiny.

### Julien N. Friant

#### EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

EULOGY BY ALPHONSE C. LA FORGE

Mr. GATHINGS. Mr. Speaker, under leave granted to extend my remarks, I desire to include a eulogy to Hon. Julien N. Friant, former Special Assistant to the Secretary of Agriculture, by Alphonse C. La Forge, entitled "He Was My Friend":

#### HE WAS MY FRIEND MY HEADS

For many and many a time, in grief,  
My weary fingers wandered round  
Thy circled chain, and always found  
In some Hall Mary sweet relief.

—Father Ryan.

Julien N. Friant, an established and beloved boyhood friend, has with a patient little sigh closed his eyes and drifted out to shores beyond our view. The hands that bled at Calvary carried that gallant soul through starland to his trusting place with the Divine, where God will bestow His reward as he kneels before His throne.

There is nothing more precious than an old friend—nothing more difficult to replace when we are in the youth of our old age and our thatches have thinned and been grayed by the years.

A mantle of gloom has been cast over his family and his friends as bruised and broken hearts mingle their tears and mourn their loss, and our happiness is eclipsed by sorrow as we stand in the shadow of sadness.

To his wife, Bertha, the memory of his tender love and happy relationship will shine forever in the horizons of her heart—nor lose a single ray. Until death do us part—a sacred pledge fulfilled.

His children, Katherine and John, are like two faintly glowing sanctuary lamps shedding their rays in the home whence a loving, an understanding father has departed. 'Tis fame enough to bear his name. To them he left a legacy of loving acts done tenderly, unselfish gestures performed graciously, dreary tasks done cheerfully, the privilege and pleasure of having enjoyed his love, companionship, and guidance, lo, these many years; it gladdens them, their mother, and his sisters; and it is solace for their grief.

To his friends and associates the building in which his office was located will for a time become a big shell, a mausoleum to remind them that therein once worked a noble and gentle soul, a faithful and priceless friend. Our pot of gold is buried deep in the heart of friends like him. His friendship was a golden gift to share.

Better than riches are a peaceful home, fireside friends, sane living, and lofty thoughts—all these, and Heaven, too, for Julien.

Ever in the strife of his own thoughts he obeyed the nobler instinct.

His bright and cheery home held a welcome, opening wide its door of greeting to the many, not the few, and we who were privileged to call him friend and enjoy his hospitality will cherish his memory always.

He taught me that kindness is the best key to unlock the door to happiness.

I voice the thoughts of all those who loved him when I dedicate with tears the burning lamp of memory for him out somewhere over the rainbow.

Though he sleeps peacefully back there amidst the birds and the flowers, where songs and silences unite, I sense him at my side.

I breathe this blessing, I pray this prayer:

Out where he rests may the sun shine kindly, stars gleam brightly, breezes blow softly, rain fall gently, someone keep it orderly, and angels guard the lovely scene. And please, dear God, help me live so that I may be with him again.

Good-bye, Julien.

ALPHONSE C. LA FORGE.

### Let's Get Back to States' Rights

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

Mr. ALEXANDER. Mr. Speaker, before and since my election to Congress, I have presented the thesis that we should get back to the original theory of States' rights, which are fast being taken away and destroyed by the process of centralization of power and government in Washington.

Home rule is the only fit government for free men and women, and operation of every single activity and detail of government should be carried on in the respective States and the political subdivisions thereof to the fullest possible extent, leaving to the Federal Government only such limited powers and duties as were originally established by the Constitution and intended by its framers.

In practically every case the various States could operate their activities more efficiently and more economically than when operated and overseen by Washington authorities. In fact, most States collect and pay over more money to the Federal Government than they get back in largesse from the handers-outers here. A good illustration of this fact is called to attention in the last paragraph of the following letter, which came to me today regarding the Cartwright bill (H. R. 7695) providing for a 2-year authorization for Federal aid to State highways, and calling attention to the discrepancy between Federal gas-tax and excise-tax

collections and the Federal aid Minnesota has received for highway building:

ASSOCIATED GENERAL CONTRACTORS OF MINNESOTA,  
Minneapolis, Minn., January 31, 1940.

HON. JOHN G. ALEXANDER,  
House Office Building, Washington, D. C.

DEAR SIR: There has been introduced into the House H. R. 7695 and S. 3020, by Congressman CARTWRIGHT and Senator HAYDEN, respectively, providing for a 2-year authorization for Federal aid in connection with State-highway construction.

It is our understanding that hearings will commence, or already have commenced, on one or both of these bills, and we direct your attention to them, because, if passed, it will be a major factor in Minnesota in providing employment for between ten and fifteen thousand workmen, and around 300 employers, with a capital investment of between ten and twenty-five million dollars.

The effect of the legislation on Minnesota construction will be discussed with you in a future letter in more detail, but, in view of the fact that at no time has Minnesota received in Federal-aid highway funds from the Federal Government as much as has been paid in through the Federal gas tax and excise taxes, we believe that these bills should have your favorable consideration.

Very truly yours,

ASSOCIATED GENERAL CONTRACTORS OF MINNESOTA,  
By R. J. HENDERSHOTT, Manager.

Now, after studying the above communication, what is the conclusion which strikes one? Is it not that it would be better to collect our own gasoline and excise taxes and spend them ourselves, than to let them pass through the Federal sieve and then have only part of them come back from the Federal wringer to the States? If my mathematics is as correct as usual, then I am forced to conclude that there should be a reawakening among our people and among our legislators.

### Larger Percentage of Noncollege Students Should Receive Pilot Training

#### EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

#### LETTER TO CHAIRMAN OF THE CIVIL AERONAUTIC AUTHORITY

Mr. RANDOLPH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written by me to the Chairman of the Civil Aeronautics Authority:

FEBRUARY 1, 1940.

HON. ROBERT H. HINCKLEY,  
Chairman, Civil Aeronautics Authority, Washington, D. C.

MY DEAR CHAIRMAN HINCKLEY: I want to take this opportunity to highly commend the manner in which the civilian pilot-training program is being handled throughout the country. I have had an opportunity to personally observe this student training at several colleges and have only the highest praise for the thorough and complete preparation these young men and women are receiving in the science of aviation. I know that Grove Webster, Chief of the Division of Private Flying, and his staff, are doing splendid work and are to be congratulated.

I would like to suggest at this time that the quota of noncollege students benefiting from this program be increased from 5 to 20 percent for the coming year. I know personally several splendid young men and women who are most anxious to participate in this training and who, I feel, would make excellent pilots, but who are not eligible under the college requirements. I feel that this would be the means of actually providing a career for many young people who are unable financially or for other reasons to attend college, but who, at the same time, are definitely air-minded and anxious to participate.

Let me again commend you on the success of this undertaking and want to assure you of my cooperation at all times.

With kind personal regards, I am,

Sincerely,

JENNINGS RANDOLPH.

### Des Moines (Iowa) Register-Tribune Backs P. W. A.

#### EXTENSION OF REMARKS

OF

HON. WILLIAM S. JACOBSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

EDITORIAL APPEARING IN THE JANUARY 22, 1940, ISSUE OF  
DES MOINES (IOWA) REGISTER-TRIBUNE

Mr. JACOBSEN. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following article from the Des Moines (Iowa) Register-Tribune of January 22, 1940, pertaining to the Public Works program:

[From the Des Moines (Iowa) Register-Tribune of January 22, 1940]

P. W. A. LOOKS BACK ON NOTABLE SERVICE

Because projects authorized under the last Public Works Administration allotments are now rapidly approaching completion, and because there appears little likelihood of further large appropriations, this region's P. W. A. office at Omaha is to be closed on February 1 and consolidated with the Chicago office.

Of the 225 P. W. A. projects in Iowa for which allotments were made in the current program, all but 32 have now been finished. Unless the program is to be further extended, this elimination of regional direction is a logical retrenchment.

Much slower to get under way than some of the other Federal emergency agencies, because it dealt principally with major improvements that couldn't be launched overnight, it has proved to be one of the most efficient and most productive of them all. It provided employment directly at the site of substantial construction projects, as did other programs, but because the improvements under its supervision called for vast quantities of materials and the use of construction equipment, it also extended the employment benefits back through the long lines of supply and transportation to mines, mills, forests, factories and shops, and into the plants of the heavy industries.

At the same time, P. W. A. added enormously to our national wealth in the construction of schools, highways and crossings, streets, courthouses, hospitals, and other public buildings which will serve generations to whom this depression will be history.

When conditions are more favorable, we shall do well as a Nation to plan into the future for other possible emergencies. P. W. A. has given us a pretty good model for such planning.

### Department of Agriculture Appropriations

#### EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

RESOLUTION OF THE LEGISLATURE OF THE STATE OF SOUTH CAROLINA

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following concurrent resolution of the Legislature of the State of South Carolina:

Concurrent resolution memorializing the Congress of the United States not to make the farmer the goat of economy

Whereas it appears in the morning press that a certain group in the Congress of the United States are demanding a 51-percent cut in next year's Agriculture Department supply; and

Whereas if this group succeeds, the farm fund will be cut from \$1,301,340,315, the amount provided in 1939, to \$630,374,256; and

Whereas it is a matter of common knowledge that the things produced today by the farmers of America are not bringing a parity price as compared with other articles of necessity and common use and especially with those which he has to buy: Now therefore be it

Resolved by the house of representatives (the senate concurring), That the Congress of the United States is respectfully requested and urged not to make the farmer the goat of economy and

to make ample and adequate appropriations for the Department of Agriculture; be it further

Resolved, That copies of this resolution be mailed to the United States Senators and Congressmen from this State and to the clerk of each branch of the Congress.

### United States Imports—Selected—Of Special Interest to California

#### EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

Mr. HINSHAW. Mr. Speaker, there were approximately 2,500 classes of products upon which import duties were levied under the Hawley-Smoot Tariff Act of 1930. Of this number, tariffs have been reduced on 1,004 of such classes of products through the consummation of trade agreements with 22 foreign countries under the Reciprocal Trade Agreements Act of 1934. I have examined the voluminous statistics concerning our foreign trade and have selected from them a list of imports of products that are of particular interest to the people of California.

In the following table which I have prepared I have endeavored to present these statistics as compiled from several sources. In considering them it must be remembered that several factors enter into imports in addition to the customary fancy demand for certain imported articles. One of the strongest factors is the price of the article in the United States as compared with the foreign price. When our prices are comparatively high, imports should increase; and when

our prices are comparatively low, they should decrease. The rate of the American tariff enters into the picture at all stages, because when foreign shippers eye the American market they figure their own price plus freight plus duty in deciding whether or not they will ship to the United States. They also figure the exchange rate of their own currency in terms of United States currency, of course. Currency controls have been exercised in many countries and, although direct information is not made available, it is assumed that our Government also exercises such control through the operation of our stabilization fund. This is an interesting factor that enters largely into foreign-trade operations and is most difficult for the layman to fully comprehend.

Another set of influences bear upon imports and exports, and they include unsettled conditions, war and wartime needs, dumping operations, gold purchases by the United States since (1934) trade balances, and combat zones, requisitioning of vessels, and so forth. Still another set of influences include weather and crop failures, domestic acreage allotments and subsidies, Government purchases of surplus commodities, and so forth.

While the quantities of the articles enumerated in this table are not all large in proportion to the total annual domestic production of such articles, yet the fact that they are imported in any quantity at all is of importance to American producers. Every such importation has an effect, in some degree, upon the American home market and the American grower, and insofar as these products compete with like products of our own their importation and sale takes productive jobs from American labor.

I recognize that we cannot export unless we are willing to also import in order that foreigners may be able to pay us for the things we sell them, but I fail to see how we are ultimately benefited by importing products that compete directly with our own and of which we have ample capacity to produce economically.

TABLE I.—69 selected United States imports—Dutiable items upon which tariff has been reduced in reciprocal-trade agreements

Item	Unit	Tariff reduced from—	Reduction date effective	10 months, January to October, inclusive, 1933		10 months, January to October, inclusive, 1939		United States duty or tariff reduced by agreements with—

Total value of 69 imports listed above—10 months.....					315,613,431		441,955,083	
Total of all imported dutiable items—10 months.....					637,296,000		717,718,000	
Total of all imports for consumption—10 months.....					1,612,597,000		1,827,973,000	

NOTE.—Where the tariff rates are referred to as "percent" percent ad valorem is meant. It means that the import duty is figured as a percentage of the value established as fair in the foreign country of origin.

NOTE.—Where "(Cuba)" appears, it is meant that the tariff reduction applies only to imports from Cuba.

Items entering the United States duty free constitute 61 percent of our total imports.

There are over 200 paragraphs in the Tariff Act of 1930 providing for the entry of certain classes of merchandise into the United States duty free. These items are largely those that are not, for the most part, highly competitive with our home agriculture and industry, and which we need and can use. Some of these, such as fertilizers, are entered free of duty in order to directly benefit agriculture.

In negotiating certain trade agreements the United States has agreed not to place tariffs on most of these now duty-free items, and we have bound ourselves against conditional tariffs with certain exceptions. These items are listed as "Duty-free-status bound." When we took that course we laid ourselves open to possible dumping operations. Very soon after signing agreements most of the countries proceeded to reduce their currency exchange rates with our currency, thus enabling them to sell more readily on our markets and make it more difficult for us to sell on their markets. For example, Canadian exchange is now on a better than 10-percent dis-

count basis. A dollar's worth of Canadian goods can now be sold in the United States for 90 cents plus duty. On the other hand, it costs the Canadians \$1.10 to pay for one dollar's worth of merchandise in the United States. By the reduction in the exchange rate by 10 percent the Canadians have thereby canceled the effect of our import duties to the extent that 10 percent is a proportion of our tariff. Exchange rates with some other countries show greater discounts, and to the extent of such reductions the United States tariff rates are nullified.

When wars and consequent trade interruptions have passed, when millions of men return to productive work again, there will be a terrific struggle for markets. Unless steps are taken to protect ourselves we may well become the dumping ground for large quantities of foreign merchandise.

The following table contains a list of many items that are now "Duty-free status bound" under our trade agreements with foreign nations. This list is selected at random, but with a view to popular interest. Where the status as duty free is not bound, I have so noted.

# APPENDIX TO THE CONGRESSIONAL RECORD

519

TABLE II.—42 selected United States imports, duty-free, status bound

Item	Unit	10 months—January to October 1938, inclusive		10 months—January to October 1939, inclusive		Status bound, by agreement with—
		Quantity	Value	Quantity	Value	
Breeding animals:						
Horses	Number	335	\$207,593	391	\$286,790	United Kingdom, Belgium.
Cattle	Number	7,815	731,541	8,232	755,128	Canada.
Dogs	Number	499	83,503	552	81,549	United Kingdom.
Bananas	Bunches	50,727,409	24,622,697	49,239,526	24,827,094	Haiti, Honduras, Costa Rica, etc.
Coffee	1,000 pounds	1,629,415	112,137,221	1,608,815	112,399,538	Guatemala, Nicaragua, El Salvador, etc.
Tea	Pounds	65,365,640	15,084,757	75,838,403	16,580,300	United Kingdom.
Spices (unground)	Pounds	40,719,531	2,912,443	59,193,556	3,374,490	Haiti, United Kingdom, Netherlands, etc.
Taploca	Pounds	183,321,906	3,310,905	295,088,409	4,018,887	
Wood (unmanufactured):						
Logs	M board feet	72,006	740,829	187,348	3,903,834	Canada.
Softwood	M board feet			161,000	1,807,109	Do.
Hardwood	M board feet			1,269	32,075	Do.
Raw silk	Pounds	43,663,286	69,668,414	41,643,554	93,029,699	
Yarn (Angora rabbit)	Pounds	79,158	395,462	65,856	409,826	United Kingdom.
Rag pulp	Pounds	56,264,621	1,018,978	104,137,609	1,062,957	Do.
Chrome ore	Tons	486,690	4,628,425	323,722	2,946,108	Do.
Fertilizers	Tons	1,292,481	30,161,314	1,145,012	27,537,330	Netherlands, Belgium.
Skins: Deer and elk	Pieces	602,416		678,274		Nicaragua, Costa Rica, El Salvador, etc.
	Pounds	1,736,088	453,633	1,938,037	581,091	Costa Rica, El Salvador, Ecuador, etc.
Rubber:						
Crude	Pounds	738,495,000	102,183,459	810,873,000	127,141,741	United Kingdom.
Balata	Pounds	963,984	150,152	1,196,786	188,914	Brazil, Colombia.
Gutta percha and other guttas	Pounds	459,409	107,518	2,780,256	418,697	Netherlands, United Kingdom.
Sisal (not dressed or manufactured)	Tons	94,381	8,477,186	92,826	6,626,071	Haiti, Netherlands, United Kingdom.
Cattle-body and horse-body hair	Pounds	2,086,293	194,088	2,703,113	234,344	Canada.
Gypsum or plaster rock	Tons	586,620	619,561	868,966	884,206	Do.
Shingles of wood	Squares (100 square feet)	1,835,021	4,996,251	2,560,708	7,210,813	Do.
Platinum	Ounces troy	2,454	52,445	5,943	137,500	Columbia, United Kingdom.
Newsprint paper	1,000 pounds	3,671,116	81,710,587	4,246,669	94,228,948	Canada, Finland.
Wood pulp	Tons	1,350,047	57,816,383	1,518,702	57,488,529	Do.
Tin	Pounds	93,402,774	37,274,984	111,574,325	50,968,085	United Kingdom.
Asphaltum and bitumen	Tons	16,167	298,866	55,152	461,169	Do.
Turtles and crabs	Pounds	464,720	25,313	699,020	40,023	Nicaragua, Costa Rica, United Kingdom.
Furs:						
Cony and rabbit	Number	58,422,561	5,947,366	83,618,816	6,340,952	United Kingdom.
Hare	Number	3,887,038	646,247	8,098,305	1,267,133	Do.
Lamb, kid, sheep, and goat	Number	4,501,932	16,057,638	4,772,132	14,195,294	Do.
Other furs	Number	10,500,247	14,920,234	13,498,131	18,526,386	Do.
Coal:						
Anthracite	Tons	252,913	1,799,292	247,912	1,750,917	Do.
Bituminous coal and shale	Tons	131,401	583,984	215,459	1,065,141	Do.
Coke	Tons	79,346	797,290	93,542	970,199	Do.
Charcoal	Pounds	6,053,237	34,331	4,884,951	32,405	Do.
Slack and culm and lignite	Tons	37,586	145,672	45,879	202,010	Do.
Coal tar product: Dead or creosote oil	Gallons	44,567,944	5,074,185	43,242,415	4,860,783	Canada.
Precious stones:						
Diamonds	Carats	79,414	5,931,245	83,107	4,907,739	United Kingdom.
For glaziers, engravers, and miners, not set	Carats	1,080,048	3,328,934	3,234,934	8,226,048	Do.
Gold, at \$35 per ounce	Ounces		1,561,132,924		2,955,484,973	Do.
Total of the 42 duty-free items listed above, except gold	10 months		615,330,926		701,917,822	
Total including gold	10 months		2,176,463,850		3,657,402,795	
Total imports "duty-free" for consumption	10 months		975,301,000		1,111,204,000	
Total all imports for consumption	10 months		1,612,597,000		1,828,973,000	

The following table is to be found on page 384 of the Annual Report of the Secretary of the Treasury on the state of the finances for the fiscal year ending June 30, 1939:

TABLE 13.—Values of dutiable and taxable imports for consumption and estimated duties and taxes collected, by tariff schedules, fiscal years 1938 and 1939

Tariff schedule	Value		Duties and import taxes <sup>1</sup>		Percentage increase or decrease (—)	
	1938	1939	1938	1939	Value	Duties
1. Chemicals, oils, and paints	\$55,475,355	\$57,368,627	\$19,111,740	\$21,199,485	3.4	10.9
2. Earths, earthenware, and glassware	\$1,425,090	25,532,715	\$14,849,480	11,144,248	-18.8	-25.0
3. Metals and manufactures	87,519,655	78,422,702	28,353,815	23,257,203	-10.4	-18.0
4. Wood and manufactures	16,340,747	15,131,862	2,736,283	2,216,492	-7.4	-19.0
5. Sugar, molasses, and manufactures	\$2,668,849	76,910,369	\$38,343,028	37,690,323	-17.0	-1.7
6. Tobacco and manufactures	32,281,061	37,686,597	22,859,323	25,709,004	16.7	16.5
7. Agricultural products and provisions	\$200,232,682	164,246,322	\$67,078,647	56,008,920	-18.0	-12.5
8. Spirits, wines, and other beverages	\$68,968,794	58,093,406	\$41,087,301	33,249,541	-15.8	-19.1
9. Cotton manufactures	32,045,789	25,774,976	\$12,723,960	9,573,951	-19.6	-24.8
10. Flax, hemp, jute, and manufactures	60,282,274	52,046,383	14,730,639	11,546,278	-13.7	-21.6
11. Wool and manufactures	37,005,874	37,847,815	24,439,511	25,692,091	2.3	5.1
12. Silk manufactures	7,356,871	5,766,214	\$3,987,915	3,068,704	-21.6	-23.1
13. Manufactures of rayon or other synthetic textiles	4,897,922	8,654,998	2,248,238	2,793,879	76.7	24.3
14. Pulp, paper, and books	13,776,661	12,031,449	2,975,167	2,403,765	-12.7	-19.2
15. Sundries	130,951,663	129,717,872	\$40,701,691	36,057,511	-9.9	-11.4
Free list commodities taxable under the Revenue Act of 1932 and subsequent acts, dutiable under section 466, Tariff Act of 1930, etc.	\$37,312,059	34,924,671	\$11,044,722	10,483,580	-6.4	-5.1
Total	\$908,541,346	820,156,968	\$347,271,460	312,094,976	-9.7	-10.1

<sup>1</sup> Taxes collected on dutiable commodities under the revenue acts and the Sugar Act of 1937 are included in appropriate schedules.

<sup>2</sup> Revised.

TABLE 14.—Estimated customs duties, values of imports for consumption, and ratio of duties to value of dutiable imports and to value of all imports, for the calendar years 1929 to 1938 and by months from January 1938 through June 1939<sup>1</sup>  
[Dollars in thousands]

Year and month	Estimated duties (including taxes on imports)	Value of imports for consumption		Ratio of dutiable to total	Ratio of duties to value of—	
		Total	Dutiable <sup>2</sup>		Dutiable imports	Total imports
Calendar year				Percent	Percent	Percent
1929	\$584,772	\$4,338,572	\$1,458,444	33.62	40.10	13.48
1930	461,885	3,114,077	1,032,954	33.17	44.71	14.83
1931	370,771	2,088,455	696,762	33.36	53.21	17.75
1932	259,600	1,325,093	439,557	33.17	59.06	19.59
1933	283,681	1,433,013	529,466	36.95	53.58	19.80
1934	301,168	1,636,003	644,842	39.42	46.70	18.41
1935	357,608	2,038,905	832,418	40.83	42.06	17.54
1936	408,061	2,423,977	1,038,219	42.83	39.30	16.83
1937	470,505	3,009,852	1,243,534	41.31	37.84	15.63
1938	301,380	1,949,617	765,963	39.28	39.35	15.46
Month: 1938—						
January	24,923	\$163,312	64,852	39.71	38.43	15.26
February	22,961	\$155,927	59,448	38.13	38.62	14.73
March	27,214	\$173,185	69,816	40.31	38.98	15.71
April	22,526	\$155,118	58,744	37.74	38.35	14.52
May	20,766	\$147,123	54,188	36.83	38.38	14.14
June	21,632	\$147,779	53,807	36.41	40.20	14.64
July	24,150	\$147,767	59,745	40.43	40.42	16.34
August	\$29,288	\$171,023	\$71,082	41.56	41.20	17.13
September	27,663	172,909	70,960	41.04	38.98	15.00
October	28,973	178,447	73,780	41.35	39.27	16.24
November	27,010	171,668	67,583	39.37	39.97	15.73
December	24,244	165,359	61,958	37.47	39.13	14.66
1939—						
January	23,708	169,353	66,031	38.99	35.90	14.00
February	22,000	152,577	60,375	39.57	36.44	14.42
March	28,539	191,269	76,132	39.80	37.49	14.92
April	27,653	185,916	78,642	42.30	35.16	14.87
May	24,679	194,185	68,570	35.31	35.99	12.71
June	24,189	178,374	65,299	36.61	37.04	13.56

<sup>1</sup> The amount of customs duties is calculated on the basis of reports of the Bureau of Foreign and Domestic Commerce, Department of Commerce, showing the quantity and value of merchandise imported. Figures for 1934 and previous years were compiled by the Bureau of Foreign and Domestic Commerce; figures for 1935 and subsequent years were compiled by the Treasury Department. For figures back to 1867, see annual reports for 1930, p. 523; 1932, p. 382; and corresponding tables in subsequent reports.

<sup>2</sup> Imports into the Virgin Islands from foreign countries not included in "dutiable" imports for 1935 and subsequent years.

<sup>3</sup> Revised.

A number of conclusions may be drawn from these figures, but it is evident that because of lowered tariffs a higher proportion of dutiable goods are entering the United States, and that the income from duties on dutiable goods has not only failed to increase proportionally but has fallen off, as is to be expected. These dutiable goods that are increasing in volume are, with certain exceptions, goods which are largely in competition directly or indirectly with American home products.

### New Post Office at Madison, Conn.

### EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

ADDRESS BY FRANCIS J. BUCKLEY, DEPUTY FOURTH ASSISTANT POSTMASTER GENERAL, AND ESSAY BY MISS GLORIA CIABURRO

Mr. SHANLEY. Mr. Speaker, I have asked and obtained unanimous consent to extend and revise my remarks and include two speeches made on the occasion of the dedication of the new post office in Madison, Conn. One is by the Deputy Fourth Assistant Postmaster General, Francis J. Buckley, and the other is the prize-winning essay by Miss Gloria Ciaburro, which are as follows:

#### ADDRESS OF HON. FRANCIS J. BUCKLEY

It is an honor and privilege to appear before you on this occasion and join with you in the dedication of this new home for your post office and other Federal activities in this community.

Hon. James A. Farley, our Postmaster General, and Hon. Smith W. Purdum, Fourth Assistant Postmaster General and member of the Interdepartmental Committee on Public Buildings for the Post Office Department, both send you their kindest greetings and best wishes for the success of this occasion.

This fine building will provide for the postal needs of your community. It will replace the present post-office quarters, which have been leased from Mr. J. Harrison Monroe for many years, and will provide for you patrons, the postmaster, clerks, and carriers a more modern, airy, and satisfactory place in which to transact your business with the Federal Government. It will always be a reminder of this Government and what it stands for—liberty, equality, and freedom.

The site upon which this building stands was selected after careful consideration had been given to all of the sites offered, and was purchased from Mr. L. E. Bonoff for \$15,000. The building was constructed at a cost of \$52,740 and is modern in every way and is ample to provide for your needs for some time to come. The building was obtained largely through efforts of your Congressman, JAMES A. SHANLEY, who is here with you today.

The town of Madison was originally a part of the town of Guilford. The earliest record of any settler in this section of the old Guilford colony is that of John Meigs in 1654. This record also shows that the land now included in the town of Madison was acquired from the Indian sachems Weekwash and Uncas, and consisted of approximately 26,000 acres, the purchase price having been four coats, two kettles, four fathoms of wampum, four hatchets, and three hoes. From this brief historical statement it appears that the settlers adopted peaceful methods to secure their land rather than the seizure of the land from the Indians by force.

Madison was separated from the town of Guilford in 1826 and named for James Madison, the fourth President of the United States.

Postal records show that the Madison post office was established July 1, 1826, and was given its mail supply by the stage route plying between New Haven, Conn., and Providence, R. I. The earliest postal records show that Mr. Alva O. Wilcox was the contractor for that portion of the route between New Haven and Saybrook. The service was three times weekly, and the stage was described as a one-horse wagon.

The first postmaster appointed at Madison was Mr. Curtiss Wilcox, who served from July 1, 1826, to September 13, 1829. In all, there have been 19 postmasters or acting postmasters, including your present efficient postmaster, Clinton A. Theis. I have here a list of the gentlemen who have served your community as postmasters, and I will hand it to Postmaster Theis so that he may have it as a record here in your office.

The earliest postal records were not as complete as those now maintained, hence we find that the first record of postal receipts at Madison were for the fiscal year ended March 31, 1827, a period of 9 months from the date of establishment, and amounted to \$67.76 net. For the next fiscal year, ended March 31, 1828, the receipts amounted to \$78.10, as compared with \$14,783 for 1938, which would indicate that your office is in a healthy condition insofar as the postal receipts are concerned.

The postmaster's salary was not always what it is today, as the earliest postal record shows that Mr. Curtiss Wilcox received a total salary of \$72.31 for the fiscal year ended March 31, 1829.

We now complain somewhat at times because we are required to pay 3 cents in postage to send a letter any distance outside of the delivery of the postal district in which we live. In those good old days the postage rate on single sheets of paper was 6 cents up to 30 miles; 30 miles to 80 miles, 10 cents; 80 miles to 150 miles, 12½ cents; 150 miles to 400 miles, 18¾ cents; and over 400 miles, 25 cents.

These rates were doubled for two sheets of paper; tripled for three sheets; and quadrupled for what was then called a packet, made up of four or more sheets and weighing not more than 1 ounce. In those days the person who had much news to convey certainly had to pay the postman. Consider the postage rates of those days, and what the settlers received in return, with the rates charged today, and we can find small cause for complaint.

During the period 1921 to 1933 I was the resident post-office inspector for this district and inspected the Madison post office a number of times. While making those inspections the number of issues of the different denominations of postage stamps always caused me to wonder why they were necessary. Finally I asked and was informed that there were several stamp clubs in your community. Recalling this incident, I thought you might be interested somewhat in the history of postage and the several ways in which it was collected.

In the earliest days of the American Colonies postal service and posts were unheard of. Occasionally letters were brought by sea captains from overseas and these were delivered to coffee houses and taverns, where the addressees would eventually call and secure them. This uncertain method continued until November 5, 1639, when the General Court of the Colony of Massachusetts passed an act authorizing Richard Fairbanks, of Boston, to receive these letters from the sea captains and receive letters from the colonists for delivery to the captains to be carried overseas. For this service Mr. Fairbanks was authorized to collect 1 penny for each letter and was held responsible for the safekeeping and delivery of the letters. Here we have our first instance of the collection of postage in this country.

The next step was the establishment of a postal service in Pennsylvania by William Penn in 1683, and under this system fixed

rates were charged for the transportation and delivery to post offices of the mail. Between these two events there were other attempts to establish some kind of postal service in the colonies, but without much success.

On February 17, 1691, letters patent were granted to Thomas Neale by the King and Queen of England giving him full power and authority to establish offices for the receiving and dispatching of letters and packets and to receive, send, and deliver the same under such rates and sums of money as the planters agreed to give. Neale never came to the colonies but appointed Andrew Hamilton to the position of Postmaster General for America. Under the guidance of Mr. Hamilton a weekly service between Portsmouth, N. H., and the Colony of Virginia was established on May 1, 1693. Records do not state what the postage rates were but did comment that the rates were high but not excessive for the service rendered.

From this beginning we trace the service through its various stages, the establishment of additional post offices, improvement in transportation methods, and gradually growth of the service.

During all of this period postage was collected by postmasters and the amount so collected was either written or stamped on the outer covering of the mail matter. Some postmasters had special stamps and devices for use on mail matter as evidence of the prepayment of postage and these have come to be known as "postmaster's stamps" or "provisional" issues. Some of these have a very high philatelic value and have been sold to collectors for as much as \$10,000 each.

The first issue of postage stamps was placed on sale at the New York, N. Y., post office July 1, 1847, and consisted of only two denominations, a 5-cent stamp bearing the likeness of Benjamin Franklin and a 10-cent stamp bearing the likeness of George Washington. The use of adhesive postage stamps for the prepayment of postage was not made obligatory until July 1, 1855, and during the intervening 8 years the postage on mail matter was collected by means of both stamps and money.

The Postmaster General has authority under the law to make such change in postage-stamp designs as may be found desirable, including the issuance of special stamps for historical events.

For convenience in classification, postage stamps are listed in three groups:

- First. Ordinary or regular series stamps.
- Second. Commemorative stamps.
- Third. Memorial stamps.

The first set of commemorative stamps, known as the Columbian series, was issued in connection with the world's fair in Chicago in 1893, and from this date practically every event of importance in which the Government has participated by act of Congress has been recognized by a special set of postage stamps, and there have also been many stamps issued to commemorate anniversaries of important historical or industrial events associated with the development of the Nation.

The study and collection of postage stamps has grown to huge proportions, and has passed into a classification which can be correctly termed "big business." The sales of special issues by the Philatelic Division of the Post Office Department has grown to almost \$2,000,000 annually. The sale of ordinary issues of stamps for regular use on mail matter has increased from 860,380 during the fiscal year 1848 to more than 15,000,000,000 during the last fiscal year.

The foregoing is but a very brief sketch of the interesting data concerning postage and postage stamps. One could talk for hours and not exhaust the known facts, historical information, and interest in this subject.

One thing is important about postage stamps and that fact is known to all of us. We affix a stamp to our letter, drop the letter in the post office or street-collection box, and we have the assurance that for the small fee of 3 cents that letter will be conveyed by the fastest available transportation facilities and reach the addressee in the shortest possible time. If by chance one of our letters should be delayed we make haste to let our postmaster know of the incident and we feel certain that the cause for the complaint will be corrected, and it is.

In conclusion, as the representative of the Post Office Department on this occasion, it is with pleasure that I inform you that this building is yours for the transaction of your business with the Federal Government but principally your postal business. It is my sincere wish that you may all have the pleasure of using its facilities for many years and that the letters and other mail matter received by you may bring you nothing but pleasure and good news.

Thank you.

#### THE POST OFFICE OF TODAY (By Gloria Ciaburro)

The backbone of modern communication is the mail service. This service is one of the biggest businesses in the world. It covers a larger area than all other businesses and uses a goodly amount of money. Today we are dedicating a new post office to carry on this business here in Madison. This is a business we have at our fingertips and take for granted. But few of us stop to realize how this great business was started. Let's turn back the pages of time to the seventeenth century.

At this time the United States had no postal system, but letters were posted by private messenger and only the very wealthy could afford it. In England a postal system had been developed, but it wasn't very efficient because it was far too expensive to be practical.

After a few years, though, letter writing became more popular and necessary. A postal system was organized in a vague sort of way which seems as quaint today as the powdered wigs of the same time.

In Virginia there was a law written requiring every planter to carry the mail as far as the next plantation and in this manner it finally reached its destination. A little later, 1672 to be exact, a monthly post was established from New York to Boston. It took only 1 week to send a letter on this route. In 1753, 81 years later, Ben Franklin was made postmaster general of New York City. Up until this time the postage rates were charged as to the number of sheets of paper used in a letter and it was charged to the recipient. But in 1775 Ben Franklin introduced the penny postal system and on July 26 of that year the first real postal establishment was opened. Immediately boxes were erected in most towns and the mail was gathered from these and distributed either by stagecoach or sailing packet. At this time the mail route of the whole country covered 453 miles.

In 1783 the first Government post office was built and the mail system, which was then started wrong, started going down and the financial support as well. This Postal Service drifted along until 1850 when the Government realized that a postal system was really needed to aid the people and not just to bring profit to those who ran the establishment. From this point an appropriation of \$500,000 was made annually to make up for any deficits. The postal system increased by leaps and bounds. Within 30 years registered mail, money orders, and special delivery were introduced along with an international postal union, organized at Berne, Switzerland. This postal system has been steadily increasing through the years not only in size but in efficiency as well until in 1938 the United States postal route covered 44,000 miles and sold 14,000,000,000 stamps.

Our United States postal system costs the Government \$100,000,000 a year, and yet here in Madison today we are dedicating a new post office which was built for our own use and to satisfy all our needs for many generations to come, with no financial obligation to us whatsoever. We will all endeavor, I am sure, to make the most of our good fortune and let this, our new post office, be a symbol of the greatest business enterprise of the United States of America.

#### Senator Borah

#### EXTENSION OF REMARKS

OF

#### HON. WILLIAM LEMKE

OF NORTH DAKOTA

#### IN THE HOUSE OF REPRESENTATIVES

Friday, February 2, 1940

Mr. LEMKE. Mr. Speaker, recently I returned from the funeral of Senator BORAH at Boise, Idaho. It was a most impressive occasion. The State capitol was filled to overflowing, with thousands outside. It seemed as if every citizen of Idaho was present to pay tribute and respect to their and one of the Nation's greatest sons. The rotunda was literally filled with flowers. There was a general feeling of grief and yet of subdued joy. A feeling of strength and pride—a determination that the things the Senator stood for would continue to be the guiding spirit of this Nation—democracy without foreign entanglements.

Every boy and girl and every man and woman present felt that the State of Idaho and this Nation were better places to live in because of Senator BORAH's long and brilliant career. They felt that he did not belong only to their State but to every State of the Union—to the Nation and to the world. They knew that he was intellectually honest with himself and with their State and Nation, a quality altogether too rare in our everyday political life.

Senator BORAH was greater than Presidents—greater than kings. He was an American citizen—an intellectual giant who was not afraid to say "No." He was the enemy of greed and selfishness, of fraud and deception. He was not cowed by kings, queens, or Presidents. He belonged to the class of Clay, Webster, and Calhoun. His name, the same as theirs, for years had been mentioned as a Presidential possibility. But the king makers would not have it that way. They prefer more docile men.

Senator BORAH is not dead. He is part of the infinite. His name now more than ever will be associated with human progress. He will continue to live in the Nation's memory through generations. He will be remembered by every man

and woman who works for an honest living. His grave will become a shrine for those who appreciate and know true greatness.

His battles in the United States Senate were for humanity—for the common people rather than for the pampered, select, and privileged few. We will miss him, but from his passing Congress and future Congresses will take renewed devotion and determination so that this Nation will again become the guiding light of all nations—a place where one who possesses energy possesses wealth, and where such a person will have an opportunity to live and let live.

### Why Beat Around the Bush? Let Finland Have Loans for Arms

#### EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 5, 1940

RADIO ADDRESS BY HON. EMANUEL CELLER, OF NEW YORK,  
ON FEBRUARY 4, 1940

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a radio address which I delivered Sunday, February 4, 1940, over radio station WMCA entitled "Why Beat Around the Bush? Let Finland Have Loans for Arms," as follows:

Finland must have ammunition and implements of war to fight her battle—and even our battle—against the Communists. She asks for planes, we offer her cookies. She asks for guns, we offer her cake. To vary the simile, shall we sit in the bleachers and watch her being slaughtered in the arena of bloody Stalinism?

My understanding is that when the settlement was made with Finland, the amount funded was \$9,000,000, which was set up on a 62-year amortization plan, with interest at 3 percent for the first 10 years and 3½ percent thereafter.

Prior to the funding agreements Finland paid interest in the amount of \$309,315.27, and subsequent thereto she paid interest of \$4,624,443.27, a total of \$4,933,758.54. She has also made principal payments of \$957,511.23, so that payments of principal and of interest, both prior and subsequent to the funding agreements, aggregate \$5,891,291.77.

The balance of Finland's indebtedness is \$8,042,466.77 principal and \$100,423.44 accrued interest.

If we eliminate interest, Finland has paid over \$8,000,000 on a debt of \$9,000,000—practically eight-ninths of her debt to us.

She fights Soviet Russia, which owes our Government approximately \$187,730,000 and which owes our citizens approximately \$225,000,000.

Think of this—Finland has paid and retired bonds held by our citizens during the past 8 years in the sum of about \$80,000,000. If she had followed the example of Russia and other nations and refused to pay she would have accumulated \$8,000,000 paid into our Treasury and \$80,000,000 paid to bondholders, or a total of \$88,000,000. If she had held those \$88,000,000, she would not need our loans. She could now purchase with such sum all the arms and planes she needs. She paid. Others reneged. She is entitled to special treatment.

Under the proposed arrangement, which has the White House approval, a loan of \$20,000,000 might be made by the Export-Import Bank, whose capital would be arranged for that purpose. The loan, however, would be made on the condition that the purchase in this country would not include airplanes, arms, and munitions. Under such an arrangement, what is to prevent Finland from taking the American food that she can buy with the money loaned to her and exchanging same with other nations for such military supplies?

But why put such temptation up to innocent Finland? Where is the consistency so far as our policy toward Finland is concerned? It has been the well-recognized and well-merited rule of the State Department to refuse to recognize any territorial changes brought about by force. For that reason, we refuse to recognize the capture of Manchukuo in China by Japan; we refused to recognize Bohemia and Moravia, which was stolen from Czechoslovakia by Germany. For the same reason we could not recognize any exploitation of Finland by Russia. Why should we not help Finland against the bandit Stalin? We make speeches concerning the sanctity of treaties and international law. We have a Kellogg Treaty, to which scores of nations have been signatories, whereby we exacted the solemn pledge that they would not resort to war

as an instrument of national policy. Russia has violated the letter and spirit of that treaty. She seeks to possess Finland by force. She has ditched international law. Shall we encourage her butchery by refusing aid to her victim? Shall we remain stupidly silent in the face of rapine and plunder?

Nay, more, we have sent to aggressor Japan, in her pillaging of China without let or hindrance, scrap iron, copper, lead, and all kinds of military supplies. If we can supply 85 percent of the military import needs of Japan, including planes, equipment, and American bombs to slaughter Chinese women and children, assuredly there should be a way to help the gallant Finns fight the cause of human liberty and prevent ruthless slaughter of innocents. The Finns badly need pursuit planes to fight off Russian bombers. We should help supply them.

We have loaned money to China to the extent of \$25,000,000. China is in no way one wit different from Finland, because we have refused to apply the Neutrality Act in the fracas between China and Japan.

In my humble estimation, we subscribe to international anarchy if we do not help poor and helpless Finland—and that help should mean "help." The only help worth while is arms, airplanes, bullets, guns. Cakes and cookies and sandwiches will not do much good to Finland now. I would thumb my nose at some of the psalm-singing hypocrites who agitate against sending her military supplies. The Finns today, in their heroic stand against Stalin's Communist hordes, rank with the Greeks at Marathon, Washington at Trenton, and the Texans at the Alamo.

The whole world acclaims plucky Finland, whose guns at the Mannerheim line and whose skiing patrol have punctured the bubble of Russia's supposed military power. The Finn's machine guns sweeping along the frozen surface of Lake Ladoga have virtually slaughtered Red army regiments. The debt of the entire world should go to the Finns for their destruction of the bogey man of the European chancelleries. They have literally "shown up" the leaderless mob which we call the "red" army. The world no longer need fear Russia's supposed military power.

How can we stand by and be neutral when on the one side we see this monstrous bloody contemptible Stalin, and on the other side we see a nation of free men outnumbered 100 to 1 fighting voluntarily not only for their firesides and for their very existence but for democracy. Shame on any American who presumes to be neutral under such circumstances.

Remember this: The Finns are defending the gateway to the whole Scandinavian world. If the Soviets break through the Mannerheim line, Lord help Denmark, Sweden, and Norway. If Russia can get within cannon distance of Sweden, Hitler will undoubtedly send his army through Denmark and finally into Sweden before Stalin can get control of the Swedish iron-ore mines, because that ore is indispensable to Germany. We will then have a repetition of the tragic happenings in Poland. As soon as one or the other of the vile partners of the vile and unholy alliance between Hitler and Stalin becomes victorious in any part of Scandinavia the other will step in as in the case of Poland. Such thieves have no honor among themselves. Denmark, Sweden, and Norway will then become conquered provinces.

Therefore the gateway to Scandinavia must be held at all costs. If that gateway is not held, the cause of the allies, to whom we cannot but assume a "benevolent neutrality," will be greatly weakened. In truth and in fact, democracy itself, which is now on trial, will have received a severe blow. We cannot help being actively interested.

The European agents of the Carnegie Endowment for International Peace declare in confidential reports recently received here that United States help for Finland is imperative if Scandinavia is to remain intact. Without such active help the Scandinavian countries will go down one by one before the aggression of Russia and possibly Germany. Without our help Finland cannot hold out more than 10 weeks or so.

The fifty million or sixty million used for unrestricted purchases would enable Finland better to "gird her loins." It would enable that plucky little country to resist probably another 4 or 6 months. Frankly, if there ever was a case where, as Walter Lippmann puts it, "a stitch in time might save nine," it is the case of Finland today. For today the whole controversy can still be averted by supplying the Finns with arms; if this is not done, an infinitely more complicated problem, involving both Germany, Russia, and all Scandinavia, will confront the American people.

The Finns have proven their military judgment and capacity. We can rely upon them. They asked us for \$60,000,000 in order to offer ample resistance for 4 months. They turned to us because the United States is the only country where the type of arms and munitions and planes that they need can be sold to them immediately. France and Great Britain and other countries need all modern equipment they can make or purchase. They can only let Finland have their obsolete stocks. We are turning out a superabundance of the kind of modern and up-to-date equipment which Finland vitally needs to stop the Russian advance. Both our American Army and Navy are willing to let the Finns have this equipment, particularly pursuit planes and Garand semiautomatic rifles. Why in thunder should we object? I shall do all in my power to get congressional approval. I have offered appropriate bills for that purpose. I shall not rest until they have been approved. One bill, H. R. 7932, reads as follows:

"Be it enacted, etc., That the Reconstruction Finance Corporation is authorized and empowered to loan to the Republic of Finland a sum of money not exceeding \$50,000,000 for the purpose of enabling

the Republic of Finland to finance the purchase in the United States of such articles and materials of war as it deems necessary, including the Army Garand semiautomatic rifle. The Secretary of War is authorized and directed to sell to the Republic of Finland such rifles and other materials of war at a price not exceeding cost. This loan shall be made through the Export-Import Bank on funds furnished by the Reconstruction Finance Corporation on such terms and conditions as may be prescribed by the Federal Loan Administrator.

"In order to provide funds to carry out the purposes of this act the amount of notes, debentures, bonds, or other such obligations which the Reconstruction Finance Corporation is authorized and empowered under section 9 of the Reconstruction Finance Corporation Act, as amended, to have outstanding at any one time is hereby increased by \$50,000,000.

"This act shall be in full force and effect immediately upon the enactment thereof."

It was refreshing indeed, a few months ago, to have read of the actions of the assembly of the League of Nations to oust Russia from the League and expel her as an aggressor. That was an effective way to strike at the brazen, appalling brute. I would encircle Stalin with a moral blockade. I would ostracize him as being afflicted with a dread disease which his excesses have brought upon him. The foulness of his crime is all the more discernible since he refused to accept the good offices of President Roosevelt to negotiate a settlement, whereas Finland willingly accepted. Guilt is written all over Stalin. It oozes out of his slimy mouth and bleary eyes.

Our refusal properly to aid Finland now is hardly understandable because there was every indication a few months ago that we would help Finland. We have led Finland on. We have deceived her. There was every indication of American sympathy and our desire actively to help. The Finns, I am sure, never would have applied for the loan for the purchase of arms had they received the slightest indication that they would be refused. That refusal would be tantamount to a great victory for Stalin. It would be a horrible blow to Finland.

As Dorothy Thompson recently said, the refusal would be equivalent to sending a handsome wreath to Finland's funeral, bearing the inscription "He was an upright man and paid his debts." The Daily Worker, the Communist mouthpiece of the Soviet Government, in many of its news items and editorials is highly jubilant over the attitude of some of our men and women in public life who refuse to finance the defense of Finland. It speaks of the refusal as a great victory.

Earl Browder, who stands convicted of a Federal crime, likewise applauds. He said recently that if the United States ever gets into war with the Soviet Union, he would start a civil war in the United States.

How in thunder can we give comfort to rascals like Browder and publications like the Daily Worker? There must be something wrong with anything that gives them a feeling of victory.

Finland's 73-year-old peasant President, Kyösti Kallio, who is full of *sisu*—which in English is courage—has recently stated to the New York Times correspondent, Harold Denny, as follows:

"We are deeply grateful for the help America has extended us with humanitarian materials, but such help must be altered if the Finnish population is not to be massacred. If our civilians—our old men and women and children—are to be killed in their houses, as is happening every day in our cities, towns, and villages, they will have no need for food and clothing." (Finnish estimates of last fortnight's air raids—worst of the war: Localities bombed, 42; hospitals bombed, 3; bombs dropped, 2,000; people killed, 18; wounded, 93.)

Why could not all prosperous American cities decide each to take care of one city in Finland, or each one of your 48 States adopt a Finnish town? E. g., New York could adopt Helsinki, Chicago could adopt Viborg, Washington could adopt Abo, etc.

We must help the plucky Finns against the "red" Goliath, against the "red" Moloch, against OGPU terrorism.

Write me if you are with me on this loan to Finland. Write your Congressman and Senator. Write the President.

## Industry and Agriculture at the Gates of a New Decade

### EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS BY HON. JAMES A. FARLEY AT WINSTON-SALEM, N. C., AND EDITORIAL COMMENT

MR. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an important and timely address delivered at Winston-Salem, N. C., by

the Honorable James A. Farley, and together with it certain interesting editorial comments on the same subject.

There being no objection, the address and editorial comments were ordered to be printed in the Record, as follows:

I am happy to be in Winston-Salem again for the privilege it affords to address this representative group of your chamber of commerce.

Whenever I plan to come to North Carolina I always have the feeling of friendship and good will. Your welcome tonight confirms my faith in your friendship.

Sometime ago, President Roosevelt, in conference with southeastern Governors, is reported to have said that North Carolina is the best balanced State in the Union. This is a most distinctive tribute from a most distinguished source.

When I received your invitation to speak on this occasion my mind went back to the statement of President Roosevelt.

I am satisfied from my study that your unique position of balance is due, in part, to your economic equilibrium, to the diversity of your crops, and the wide scope of your industrial activities. There are a number of States with larger industrial production than North Carolina. There are also States with greater agricultural production. But there is no State where industry and agriculture, operating together with local raw materials, give such unified scope of industrial activity and steadiness of employment.

Other factors indicate your balance. North Carolina has busy factories and extensive park playgrounds, good roads, and diversified small industries, depending upon economical transportation beyond their local markets, State-supported public schools offering the children in the outlying communities as good as is offered the children of the cities, State maintenance of the local roads of the poorer counties as well as the wealthy counties, State supervision and handling of all prisoners with practical work programs looking to rehabilitation of the hopeful. I could go on, but I think I have made the point.

I have been collecting material for some time to undertake a speech giving expression to my views from a national standpoint on the subject of industry and agriculture, and saying nothing at all about politics. If I get through this speech without a political tinge, some people will doubtless think that such performance is in itself highly political. Maybe so. In any event, I have traveled up and down this country from Texas to Maine and across and back, and back again many times. I have seen my fellow countrymen in every business, occupation, and profession. I have talked with them in over a thousand cities, towns, villages, and hamlets, and at the countryside. I have heard their story. They have told me of their joys and their disappointments. I hope I am not too bold in saying that I have become acquainted, in part at least, with their intimate needs and problems.

I know that back of every factory and every farm lie economic and social issues more deeply imbedded than the surface content or discontent that expresses itself in political action and reaction.

In this connection, I would like to make it perfectly clear without pretense or flag raising, that I am partisan in politics and honestly devoted to the success and welfare of my party. I also want to make it clear that if at any time I am confronted with the issue of the welfare of my party, on the one hand, or the welfare of my country on the other, that that issue has already been decided. I love my country better than I love the Democratic Party. It is my constant hope that I will never be confronted with such an issue; but if it should come in this hour of international chaos, I owe too much to America to sacrifice my first loyalty upon the altar of party expediency or party fealty. The effect of existing wars upon American politics is utterly unpredictable and the judgment of our people in patriotic devotion will subordinate partisanship to the public good.

I just wanted to make this observation to clarify my political attitude with reference to my paramount obligation as a citizen of this Republic.

I stated that I was going to talk to you on the subject of Industry and Agriculture. In doing this I shall lay down my conception of certain principles of fundamental importance. There are five factors, as I view it, essentially interwoven with American industry—the employer, the employee, the stockholder, the consumer, and the Government. If industry is to carry on, giving steady work, there must be genuine understanding and cordial cooperation between these forces affecting industrial production.

Let me speak of the employer first. He must be able to operate under wholesome conditions with an opportunity for a fair margin of profit and a conscious sense of obligation to the public welfare. He must do more than this. He must recognize the legal validity of the status, and the moral rights, of the worker and the reasonable wisdom of a just participation of labor in the fruits of its service.

What about the employee? The Congress, the country, and the conscience of America have come to understand that it was in justice and not in wrath that man was commanded to eat his bread in the sweat of his brow. Labor in America is no longer a commodity. It has been decreed that labor shall not be bartered, sold, trafficked, and marketplaced as an inhuman senseless product. Men, women, and children shall not be exploited to the powerful demands of materialism.

Let me say a word about the stockholder. This point has partially been covered in my statement on profits. The American investor cannot be expected to risk his capital and venture his

assets without reasonable regard for the profit motive. This applies with equal force when taxes become so burdensome as to stifle private initiative and abolish fair prospects of profit. If we should ever at any time in America rub out the profit motive, we lay the foundation of the totalitarian state.

What are the rights and interests of the consumer? He is likely to become the forgotten man. But since we are all consumers—all of the 130,000,000 of us—his interest in the aggregate is greater than that of any other.

It is to the best interests of the employer, the employee, and the stockholder to furnish to the consumer the goods that meet his needs and wants at a fair price, and whenever possible, at a price that will lead to the highest possible consumption.

May I now say a word on the question of government and industry. On this point, I have no sympathy with the theory that government and business are naturally arrayed in hostile camps. Government must look with clear vision and embrace within its broad scope the employer, employee, stockholder and, finally, the whole public. My conception of government in business is that government should act as an umpire, and we all know that the first duty of an umpire is fair play and no favorites, to call fouls when fouls are committed, and to follow the ball without prejudice or bias.

This general statement regarding industry and its allied relations is capable of expansion and more detailed outline, but it represents my view of the Bill of Rights, of fair and reasonable treatment, and I believe constitutes the basis of liberal, mutual, and successful operation of American industry.

May I now tell you something of what I have absorbed, learned, and believe concerning some aspects of American agriculture.

I would like to talk to you at the moment about agriculture, in relation to an equally important subject—national defense. Today the mind of the Nation is turning in unity to the question of national defense. With the exception of the United States, most of the powerful nations of the world are engaged in war and thinking in terms of ships and guns, and forts and aircraft. Yet, I cannot escape the feeling that when this war is finally won its victory will not be accomplished on land or sea or by guns or aircraft alone. The forces of victory may come from the quiet peace of the laboratory and from the brain of creative research. They may come from the farms of this Western Hemisphere.

When I think of our experiment stations, agricultural colleges, farm agents, and above all, our vast State and National departments of agriculture all working together, I see the front line of our national-defense program gather a new force against any economic upheaval at home or abroad, and, at the same time, make more formidable our most powerful battleship and more swift our most daring aircraft.

Here in North Carolina industry and agriculture both loom large and strike an excellent balance. In the Nation at large, however, we have so long treated symptoms coming from the dislocation of these great branches of our national life that I fear we have developed a tendency to lose sight of the fundamentals of their interrelation.

The great industrial development which sets this Nation apart from all others has been made possible only by its fortunate agriculture. I doubt that the inventive genius of our people would ever have prevailed in industry except for our agricultural background. Here is one distinctive feature of how we differ from other lands. No other great nation of the world is able to produce its food from the land with the efforts of less than one-half of its total population. Agriculture in this Nation produces our food from the land with the efforts of only 13 in 100. It is the vast manpower released for other things than food getting that has made possible the creation of wealth and luxuries that set our civilization apart.

Happenings of the past two decades, however, have thrown increased burden on our agriculture. And industry could not escape the shock of adjustment to these events. Let us look at what has happened.

In the first place agriculture lost the market of the production of 50 or 60 million acres of land. It lost this market to the oil wells through the coming of motorized transportation on roads and streets and the coming of tractors to do farm work. The product of these acres, which formerly furnished horse and mule feed, is now thrown on the human food market in the form of bread, meat, milk, and eggs.

Right on top of this transition from horsepower to motorpower came the 1930 tariff revision, resulting in retaliatory measures by other countries which barred many of our farm products from European shores.

Heretofore, as agriculture has increased its efficiency and production city industries have expanded sufficiently to absorb the manpower released from the farms. In the decade just preceding the high days of 1929, 17,000,000 young people between 15 and 30 years of age left the farms and found employment in the towns. But for the past 10 years rural population has been damming up in rural districts. And we should never forget that rural districts constitute the great breeding ground of America. Yet the farmer today has lost the market for his greatest of all crops—his baby crop.

We are now over the critical stage of the maladjustment and are ready to start forward again. And I believe that this historic sketch of the road along which we have come furnishes us with a real clue to the road we shall travel.

Science and research got us into our trouble through making more complex our civilization. Science and research, I believe, stand ready to get us out and keep us out of our trouble, and to build a new civilization the like of which has never been charted, even by imagination.

Have you ever reflected on the fact that the great industries of today are along lines never dreamed of 40 years ago? I do not think I am alone in believing that the great industries of tomorrow will be along lines not dreamed of today. The industries which set today apart from 40 years ago are based on inventions. These inventions, in turn, are based on pure science studies carried out over a long period in laboratories manned by men of genius.

My proposal is that this Nation should give unstinted support and encouragement to basic research in physics, metallurgy, and chemistry. It is on discoveries in these fields that ingenious men contrive inventions upon which new industries are built.

Today research must be bought and paid for just as any other commodity, and while we have today the personnel of brilliantly trained young men ready and eager for opportunities our Government has, to a large extent, been neglectful of this whole field. In this respect European dictatorships have far exceeded our efforts.

In agriculture our present situation calls for the expanding of basic research for the very reason that it is burdened with many surplus products—overproduction. For example, in addition to competition with other nations, the farmer today has strong competition from farmers of other regions of this Nation. Too often he has to meet this competition without adequate knowledge to support his efforts or without being informed of the limitations under which he operates. To illustrate: The new hybrid corn of the Middle West, yielding one-fifth more per acre on these already high-yielding lands, puts a strain on the North Carolina corn farmer. The discovery of how to adapt the growing of cotton to the semiarid lands of Texas put nearly as much strain on cotton growing in Eastern States as did the boll weevil.

In any research program the plant breeder must be a sentinel in the front line of agriculture. It is only during the past couple of decades that it has been possible for man radically to change and modify plant forms. What they are doing today for human betterment has no counterpart in all history. Just a few months ago, the world was thrilled by reports of the new potato developed here in North Carolina by a member of your eminent State College staff. This potato, bred for high resistance to diseases and to insects, has yielded over a 5-year period, under the conditions of its trials, approximately 100 bushels more per acre than its nearest competitor.

Soil conservation has been given a new life by the coming of the great group of Asiatic plants called lespedezas. Here in North Carolina, more than 1,000,000 acres are covered by these plants which were unknown here 20 years ago. Throughout the Nation there are 40,000,000 more acres in this crop. They check erosion, and build rich soil in land heretofore considered marginal and headed back to complete destruction. We are just beginning to realize the vast and limitless value of lespedeza to American farming, and we owe much to our brilliant agricultural journalists in spreading the gospel of this great legume.

Scientists working on the problem of saving the blow lands and the almost denuded public domain now see that the new magic of the plant breeders must be made their first ally. It is in basic work in science that we are most deficient.

It seems to me to be fundamental and noncontroversial that the solution of many of agriculture's problems will come through the encouragement of basic research and that scientists themselves should make their basic programs and should be permitted to follow relentlessly any mystery that intrigues their imagination.

Basic research adequately financed is the biggest long-time creative force for adjusting agriculture and industry to one another and for the advancement of both.

In the working out of our problems in these fields there is one conviction that is deep with me. We have had uncertainty and fear striving to monopolize our national thinking, but we must not have these two devils again. I have respect for the past, and I realize that it is through error and mistake that progress comes; but at heart I keep looking ahead, convinced that tomorrow, somehow, some way, will bring a better day. Above all, I have confidence in the capacity of this country to solve its problems righteously and that the steady upward movement of our industry and agriculture will carry us to greater heights than we have yet achieved.

[From the Winston-Salem Journal of Thursday, January 25, 1940]

#### THE EMERGENCE OF A STATESMAN

Citizens of Winston-Salem and a national radio audience were happy participants last night in a significant and history-making event, when the Honorable James A. Farley addressed the annual meeting of our chamber of commerce.

They sat in on the casting of a new role for one of America's great citizens. They saw the acknowledged maestro of political movements, perhaps American history's outstanding vote getter and election-return prognosticator, start down what may become his and his country's glory road as a statesman.

Here was Jim Farley, Postmaster General, dedicating not a shining new post-office building but himself to whatever broad service his country might call him. Here was not a word about postal surpluses or deficits nor about the sleek efficiency of the great communications system he directs. Here was Jim Farley, Democratic national chairman, chief to millions of party workers,

not asking for votes and political operatives on behalf of his party's nominees, and playing his characteristically unselfish role but, instead, avoiding all reference to partisan politics—an omission significant in itself.

And here was Jim Farley, Democratic disciplinarian and loyalist, practical organizational genius, the greatest believer in party solidarity, patriotically putting country above party if necessary, demonstrating his boundless worth to his country as a public-spirited, forceful, and yet humble citizen.

But most significant of all, here was James A. Farley, speaking out on the fundamental problems of our Nation. Here was a man whose intelligence and integrity go unchallenged by Democrats and Republicans alike, setting forth for the first time, perhaps, on the basis of his wide travels from coast to coast, from border to border, his own views on industry and agriculture, and the part that government should play. And here was a statesman, probably better equipped than any other living man to tell of the thoughts and desires and needs of all the people, in all walks of life, submitting a cogent and restrained, yet unequivocal, bill of particulars for the Nation's consumption, and, we hope, acceptance.

Here was a disquisition in statecraft, with no political harranguing.

What Mr. Farley did not say is important. But what he did say merits the careful and exhaustive attention of every voter in America. His remarks, concerned as they necessarily were with national affairs, were neither Old Deal nor New Deal. They were neither rightist nor leftist, and for that reason will not have the ecstatic endorsement of reformists on the one hand or of inactionists on the other. But this sound and progressive attitude, this expression of moderate democratic philosophy, will, we feel sure, appeal to the vast majority of forward-looking citizens who are proud of American institutions and are hopeful for the future.

Mr. Farley is, we believe, on solid ground in his attitude toward fundamental problems. With regard to industry, he feels that the employer must have an opportunity for a fair profit, and yet recognize a sense of responsibility to the public welfare and to the employee, who at the same time is not to be exploited. He believes that the stockholder should properly expect a return on his investment, and that the consumer should not be the forgotten man, but should have his needs and wants at a fair price.

Mr. Farley does not believe that government and business are naturally arrayed in hostile camps, but that the role of government in business is that of umpire.

Mr. Farley takes the position that the unparalleled industrial development of this country has been because of its fortunate agriculture, the comparatively small percentage of our population needed to produce food from the land. But developments of recent years, such as the loss of great areas of production for certain purposes, and tariff retaliations because of the 1930 revision have put increased burdens on agriculture. Mr. Farley thinks that science and research, which got us into trouble, can get us out of trouble. He believes that science and research will make possible the adjustment of agriculture and industry to one another, and advance both, and that we will see the end of the damming up of rural population in rural districts. And to these ends he advocates unstinted support of basic research. The problems of surpluses and overproduction will, he believes, be solved by the results.

Altogether Mr. Farley accepts the American way and looks to the future. He indicates the necessity of the retention of the profit motive, for industry and for agriculture, and a square deal for workers in both. He believes that the alternative of the retention of the profit motive is a totalitarian state, such as those crushing the people across the oceans. And with an optimism which we share, Mr. Farley conceives of a new civilization, on the threshold of which we have arrived, to be created by new industries and inventions surpassing even those of the past 40 years.

If James A. Farley is a candidate for high office in this land, we believe that he has stated an attitude toward fundamental problems which should, in that respect at least, qualify him for any position of solemn trust to which he might aspire. We do not know his plans. We do know, however, that he has appeared for, perhaps, the first time as his own spokesman on the state of the Nation.

There are other things we do know: That he is an inspiration and an example for every mother's son in his personal habits; that his honesty is as long as the tall shadow which he casts over the length and breadth of this land; that his word is as steadfast as the smiling sky above him; and that his growth in stature as a man and as a leader has been an American phenomenon.

No; we don't know what will happen at the Democratic National Convention, but we do know that Jim Farley and his views won't be ignored there, and that his strong voice will sing loud in the chorus which shapes our country's destinies.

And practical politician or not, we salute him as a statesman.

[From the Greensboro (N. C.) News of January 26, 1940]

#### MR. FARLEY AT WINSTON-SALEM

Postmaster General James A. Farley's speech before the Winston-Salem Chamber of Commerce Wednesday night assumed significance not only because of its context but, even more so, because of the advance publicity and emphasis placed upon it by Washington commentators who should have been in position to know its political background and purpose.

The Postmaster General, who cannot be dissociated in the public mind from his chairmanship of the Democratic National Commit-

tees, stressed "my" throughout his presentation of views and impressed upon his audience at the outset that his data and his impressions had been gathered over the entire Nation. It was obviously a Nation-wide bid which he was making on the two interrelated subjects, business and agriculture, which have been the chief bones of Washington contention.

Mr. Farley's prefatory assurance that country comes above party might be interpreted as anyone wished. It could mean a readiness to go along with the New Deal, to lead Mr. Roosevelt in a third term campaign even if a party split resulted. On the other side, however, it is just as possible that he would go with what he conceives to be the old-line forces of democracy, that the good of the country and national unity in time of international chaos would cause him to take a walk in a direction that F. D. R. had not intended in his projection of walk-taking suggestions. These courses, however, offer the two extremes, and there is endless territory between them for compromise and for political as well as public service.

It is in this middle ground that we conceive Mr. Farley to stand. He obviously believes he is expressing the wishes and the feelings of the American people in decrying hostility between business and Government, in upholding the profit motive, in stressing cooperation rather than strife and in asserting that Government's role in business is essentially that of an umpire, which presupposes fairness to all sides. In the Farley discussion of agriculture one finds no reference to restriction; rather there are a forward-lookingness, a preaching of increased production, with the consumer ever in mind, for the life more abundant and a dependence upon science and research to steer us through the situation into which they have brought us and out into brighter social and economic vistas. The Farley philosophy, liberal in its basic aspects as some of us at least have interpreted liberal, differs sharply in various respects from that which has prevailed and ruled in Washington these last few years.

To us it seems that Mr. Farley has said, in so many words, that this is his creed, his bill of rights for business and agriculture, that that bill of rights will serve as his guide in days ahead and that when it comes to selection of a Roosevelt successor he and his views, based on close contact with the American people, must and shall have consideration.

[From the Asheville (N. C.) Citizen of January 26, 1940]

#### MR. FARLEY BESTIRS HIMSELF

That was an uncommonly thoughtful and constructive speech which James A. Farley delivered in Winston-Salem Wednesday night. In some ways it was one of the most significant addresses which this parlous political situation has produced in recent weeks.

Mr. Farley is, among other things, chairman of the Democratic National Committee. He could not discharge his duties as field marshal of his party if he did not devote a vast deal of thought and emotion to partisan issues and activities. His primary task is to keep the Democratic forces organized and enthusiastic and to win elections. Even the Republicans must admit that he performs this task with unusual ability and success.

Naturally enough, the American people have come to expect strictly partisan speeches from Mr. Farley. When they listen to him, they are in no wise disappointed or disillusioned if he celebrates the glories of the Democratic Party in glowing phrases and discredits the Republican Party at every honorable opportunity.

Mr. Farley changed his role Wednesday night. From the text and tenor of his remarks, he might have been an independent statesman rather than a party chairman. His references to the Democratic Party were incidental and oblique. He discussed national issues with originality of thought and expression.

Some citizens, in office and out, feel that there is a natural and ineradicable antipathy between business and government. The citizen fears that this feeling is rather generally held by many of the young theorists who swarm all over the Federal buildings in Washington and who are so active and so vocal in their attempts to shape the policies of the Government. Mr. Farley does not share this view. If this means treason on his part, then his critics will have to make the most of it.

Mr. Farley spoke his mind forthrightly in Winston-Salem. He dismissed with genial scorn the highly mischievous view that "government and business are naturally arrayed in hostile camps." He asserted the contrary doctrine that there can be no sane and durable prosperity unless all the elements—government, industry, labor, and agriculture—work together.

He went even further. He added: "My conception of government in business is that government should act as an umpire, and we all know that the first duty of an umpire is fair play and no favorites, to call fouls when fouls are committed, and to follow the ball without prejudice or bias." This is, of course, sound democratic doctrine. It is but a restatement of the policy which Woodrow Wilson announced and practiced.

This doctrine will draw the fire of the extreme liberals who look upon all business as suspect and who feel that government should side instinctively against industry. But it is none the less sensible and sound on that account. Business in the aggregate is neither saint nor sinner. The average businessman is an honest, patriotic citizen who wishes to provide employment, to deal fairly with his employees, and to do his full duty by his community, State, and Nation. The antisocial, malevolent businessman is exceptional. Of course, industry must be regulated. Such legal

control is inescapable in our complex society. But such regulation should be directed against specific abuses and should be enforced with rigorous impartiality. The honest role of the Federal Government is the rule of the vigilant, incorruptible but just umpire.

Equally original and interesting was Mr. Farley's discussion of the agricultural problem. He made no references to the commonly discussed and practiced remedies for the medication of this problem. It is fair to assume from such omission that he has little faith in crop-production control and other artificial solutions of the question. He must realize that these schemes are at best temporary devices which can be justified on the score of an emergency but furnish no permanent cure of the farm ailments. Any lasting betterment of the situation must be based upon policies that treat the disease rather than the symptoms.

The United States can grow more farm products than it can consume or export under present world conditions. Of course, the Federal Government should not relax its efforts to open new foreign markets to our surplus agricultural commodities. But we must learn how to grow better crops more cheaply. Above all, we must develop new domestic uses—and therefore new domestic markets—for our farm products. Given the same research which has blessed American industry with such miraculous achievements, our agricultural problem will be solved partly if not completely. As Mr. Farley phrased it, "basic research adequately financed is the biggest long-time creative force for adjusting agriculture and industry to one another and for the advancement of both." Governmental research in agriculture has accomplished much, but it has hardly scratched the surface. If the Federal Government had spent on such research one-fourth of the sum that it has expended on subsidizing crop control, the whole farm picture might be changed today.

Taken all in all, Mr. Farley's address was a noteworthy effort. It was all the more notable because it was delivered by a man who is supposed to be thinking only in terms of his party and of elections yet to be fought and won.

[From the Charlotte (N. C.) Observer of January 27, 1940]

#### MR. FARLEY IN THE SOUTH

Significance attaches to the visit of James A. Farley, Postmaster General and chairman of the Democratic National Committee, to this general part of the South at this time.

Particular weight is to be ascribed to his remarks incident to his dedications of post offices at some points, but notably, we contend, to his address before the annual meeting of the chamber of commerce at Winston-Salem.

This latter occasion gave him an audience before which he could touch impressively upon his views as to business and industrial situations in the United States, but more strategically as to what he thinks ought to be the relationship between business and Government.

The importance which we believe to be associated with these engagements of Mr. Farley in the South at this time, and to his Winston-Salem speech in particular, lies in the unquestioned fact that he remains very much of a possibility as the Democratic nominee for the Presidency in 1940.

There is a sense in which he may mount up to be the strongest candidate entering the nominating convention.

It is the sense in which he maintains such a powerful hold upon the machinery of the party.

None is warranted in denying his unique power at this point. As chairman of the national committee, he is awarded this advantage by the mere mechanics of his office.

It is his duty in such an official position to handle the political organizations of each of the States and, through them, on down to the smallest political subdivision of the government of this country.

By reason, therefore, of this assignment, Mr. Farley comes into direct, intimate, and influential touch with the political machinery of the party, with the most powerful leaders in the States and, only somewhat more remotely, with the most important leaders of the party in the smaller communities.

Not only, therefore, does he hold in his hands this potential delegate-strength in the national convention, but there is something else about him which is even more strategic.

Mr. Farley is uniquely popular with these influences within the party.

The public likes him and the men who officially work with and for him are manifestly devoted to him personally, and quite apart from their political attachments.

He has a magnetism that radiates from his speech and his presence, but no more so from these sources than from the simple strength of the man's morality and personal uprightness and integrity.

Those who speak of him even dispassionately admit his power at this point. His almost puritanic habits are such as to commend him to those who appreciate high-toned personal behaviorism.

And not only so, but Mr. Farley's further assets include his knowledge of the American people and of their government.

We doubt if there is any other man in the Nation who so singularly possesses within his own knowledge a cross-section of what are the thoughts of the public on problems of government, and so long as we confess that the human factor is the biggest problem

of government, we must likewise admit that the individual who has a mastery of knowledge of simple human problems and what the people themselves think and believe to be their problems, such an individual is in position to exercise a peculiarly wise and gifted sense of the solutions for a nation's political issues.

Mr. Farley's position in relation to the problems of American government at this time was touched upon in his Winston-Salem speech.

Notably intriguing were his remarks relating to what he believes should be the attitude of business and government.

Striking out strongly in defense of the profit motive and of the system of free enterprise, which lies centric to the basis of representative government—which, indeed, is the mudsill of the democratic concept—Mr. Farley would allow government only to occupy the status of an umpire and not of dictator or usurper.

This is refreshing and heartening.

And whether Mr. Farley manages to annex the nomination for President or not, he will do his party an invaluable service and his country an even greater and more permanent favor, if he will continue to use his powerful influence, in the convention, and everywhere else, toward magnifying this immutable truth and insisting that the American Government return to the simple role to which he ascribes its basic and ideal purpose.

Other phases of Mr. Farley's address were more than merely illuminating. They were frank, clear-cut, emphatic, and eloquent of that fundamental Americanism, back to which, in all of its rugged but effective simplicities, there comes clear and unequivocal call in these heavy and disturbed days in our national life.

Mr. Farley may, therefore, be kept constantly in mind by the American people as one whose influence in shaping the policies of his party will continue to be effective and intelligent.

He may not win the nomination for the Presidency, but his services have been too great, his devotion to Democratic principles too deep, and his influence too pervasive to think of him as being ignored at the next convention.

[From the Worcester (Mass.) Gazette of January 25, 1940]

#### MR. FARLEY STATES HIS VIEWS

If the speech James A. Farley delivered last night at Winston-Salem, N. C., could have been made a year ago, it might have passed largely unnoticed. The Postmaster General has been making addresses all over the country. Whenever a new post office was ready for dedication, he was pretty sure to be on hand with a few well-chosen words.

He went a little further, last night than he has gone before in defining his views on the proper relation of government to business. Yet a year ago this might have been taken as merely another voice from the administration promising peace and harmony for business.

No one today assumes that he is speaking for the New Deal or for the President. Mr. Farley is presenting nobody's views but his own. He is telling the country what he thinks about all this business baiting.

A possible key to his purpose was his introductory statement that he was going to avoid any reference to politics, but that this very fact would probably strike his hearers as "highly political." And that is precisely the way it does strike them.

As between the New Deal reformers of yesteryear and the hide-bound conservatives of the Democratic Party, Mr. Farley takes up his position carefully in the middle of the road. He is not an avowed candidate. But he is definitely freeing himself from the contaminating influence of the present administration. And, if the Democrats should find themselves in need of a compromise candidate, there he is.

[From the Sheboygan (Wis.) Press of January 25, 1940]

#### A REAL AMERICAN

Postmaster General James A. Farley, guest speaker before the Winston-Salem Chamber of Commerce last evening, drew tremendous applause when he placed his country above party if that day ever came for choosing.

His address was nonpartisan and his keynote was the Government acting in the position of an umpire, deciding questions involving the rights of the people, and always in the interest of a fair deal, calling fouls when fouls were committed, to the end that no injustice would be done.

Mr. Farley said he was a partisan in politics, but added:

"I want to make it clear that if at any time I am confronted with the issue of the welfare of my party, on the one hand, or the welfare of my country, on the other, that that issue has already been decided. I love my country better than I love the Democratic Party."

"It is my constant hope that I will never be confronted with such an issue; but if it should come in this hour of international chaos, I owe too much to America to sacrifice my first loyalty upon the altar of party expediency or party fealty."

Those are the sentiments that have dominated our men in public life and which have contributed so much in building a stronger and enduring America. We are proud of "Jim" Farley because he represents the best in American citizenship, and God and country are his first concern. Nothing else matters. Upon a foundation like that we can go forth to further heights.

[From the New York Times of January 26, 1940]

WORDS LEFT UNSAID?

A good many things can be and are being read between the lines of Mr. Farley's pleasant talk before the chamber of commerce at Winston-Salem. Perhaps he intended to put them there. If so, he will no doubt bring them more plainly into view when he believes that the time is ripe to discuss them.

Meanwhile it is not necessary to read between the lines of the Winston-Salem talk in order to find in it much common sense and sound advice. In these categories fall Mr. Farley's repudiation of "the theory that government and business are naturally arranged in hostile camps"; his advice to government to risk no measures that threaten "to stifle private initiative and abolish fair prospects of profit"; his advice to business to recognize "the legal validity of the status and the moral rights of the worker, the reasonable wisdom of a just participation of labor in the fruits of its service."

One passage in the speech has drawn particular attention: "I want to make it clear that if at any time I am confronted with the issue of the welfare of my party, on the one hand, and the welfare of my country, on the other, that that issue has already been decided; I love my country better than I love the Democratic Party." The immediate implications of this statement may be somewhat cryptic, so far as 1940 is concerned. But no first-hand friend of Mr. Farley can doubt that in a real test for him between party and country his Democracy, fervid though it is, would come off second best.

### The National Health Bill

#### EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS BY HON. JAMES E. MURRAY, OF MONTANA

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able address delivered by the junior Senator from Montana [Mr. MURRAY] at a joint session of the American Statistical Association and the American Association for Labor Legislation, at Philadelphia, Pa., on December 29, 1939, in regard to the legislative position of the national health bill.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is altogether fitting that the members of your two associations should be reviewing and discussing legislation for health security. The American Statistical Association represents statesmanship, as well as scholarship and technical expertness, in all the fields of statistical knowledge. The American Association for Labor Legislation has for a long time furnished strong and effective leadership in the promotion of progressive legislation in the interest of labor groups. The two associations embrace knowledge and action, the twin bases for progress. You should have much to contribute which should be of permanent value to the health of the Nation.

At a time like the present, when a large part of the world is convulsed in the agonies and disruptions of war and international dissension, there is a tendency in some quarters to forget or to relegate to the background many of the vital problems which confront us on our own domestic scene. There is much loose talk today to the effect that our domestic program for the solution of social and economic problems is "on ice" for the duration of the war. This, in my judgment, is an irresponsible attitude.

No sensible person can ignore world conditions and their effects upon our own lives. Yet no responsible citizen should seriously propose to disregard our own problems or sanction or encourage any reduction in our own efforts to strengthen and extend the welfare of our own people. The greatest problem of our country—it is second to none—is to make our democracy strong, efficient, and effective. At this time, when the lamps of civilization are burning low in Europe and in other parts of the world, it is our special duty to undertake to make them burn brighter and clearer in the United States. Thus only can we preserve our American system of government.

Democracy is being challenged on all sides. Our answer to that challenge is a renewed determination to make our democracy an even stronger instrument for peace, for defense of liberty, and for the health and happiness of our people. To these ends we must look to the needs of our citizens and we must encourage constructive efforts to advance human welfare. The health of the Nation cannot be viewed apart from other important characteristics of national life. Just as health is a basic need for all other pursuits, so also it is a result of many other conditions.

Yet, to the extent that public health, medical science, and administrative skill provide special and direct methods of dealing with health needs, a program for national health need not wait on the solution of other major problems. We can reduce a worker's exposure to silica dust and thus protect him from contracting silicosis, even if we cannot yet assure him full employment, adequate compensation, and economic security. We can make possible the draining of malarial swamps, the conservation of great water resources, and the establishment of many sound practices in agricultural economics, even if we cannot yet solve all the problems of agricultural production, distribution, and prices. We can build and staff hospitals and health centers and make them available to communities lacking in such facilities, even if we cannot yet solve all the pressing domestic problems which contribute to unemployment, poverty, and human distress. Modern medical service means something totally different than the medical practice of past decades. No longer can an individual doctor give complete medical service to his patients. Modern practice is group practice. We can bring together doctors and patients and we can provide for more effective distribution of health services, even if we cannot yet solve all the vital economic problems of production and distribution which leave large portions of our population insufficiently provided with the necessities of life.

The national health bill (S. 1620) now before the United States Senate is a comprehensive proposal to establish a health program for the Nation. Indeed, it is probably no exaggeration to say that the program which this bill proposes to establish could contribute greatly to the health and welfare of the entire population. It is therefore one of the most important subjects under consideration by the Congress.

The national health bill (S. 1620) was introduced on February 28, 1939, by my able colleague, Senator ROBERT F. WAGNER, of New York, whose long association with liberal and progressive programs has made him a distinguished national figure. Behind this bill, its objectives, and its provisions, there is a long history of investigations and conferences. Many of you are acquainted with much of this background. I need only remind you of the most recent events.

The Committee on Economic Security, appointed by President Roosevelt in 1934, developed the outlines of a health program as part of a general plan for economic and social security. Some parts of that health program were adopted in 1935, and they were embodied in the Social Security Act as titles V and VI, providing Federal grants to States for maternal and child welfare and for public-health work. Other parts of that program—dealing with medical care, the construction of needed hospitals and other health facilities, and compensation of disabled workers—were reserved for further study.

The President's Interdepartmental Committee to Coordinate Health and Welfare Activities resumed the health studies, and in 1938 made public the national health program which had been developed by its technical subcommittee on medical care. As many of you know, this report was very favorably received at the National Health Conference in July 1938, where it was considered by a large and representative public gathering. Subsequently the program was explored in some detail with lay and professional groups and it was transmitted to the Congress by the President with his message of January 23, 1939, accompanied by a report of the Interdepartmental Committee.

Senator WAGNER's bill was introduced shortly thereafter. It was referred to the Committee on Education and Labor, which created a special subcommittee, of which I am chairman, to handle this bill. The subcommittee conducted public hearings between April and July 1939, in the course of which it accumulated an exhaustive record of evidence demonstrating the need for the national health program, and the opinions of many representatives from various groups, both lay and professional, concerning the bill.

I will not undertake to review at this time the record of existing conditions which have led many leaders of the country to propose a new health program for the Nation. These have been stated in sufficient detail in the reports of the technical committee and of the interdepartmental committee; they are embodied in the hearings and are summarized in the preliminary report which I made to the Senate on August 4, 1939, on behalf of the Committee on Education and Labor.

A large mass of evidence which has been presented before this committee shows convincingly that there is a great need and a great opportunity to improve health conditions in this country, to reduce the toll of pain and suffering, to lessen disease and premature death, and to greatly diminish the public and private burdens created by preventable sickness and disability. These opportunities exist notwithstanding the fact that health conditions have been steadily improving.

Our general death rate has been declining; the deaths from tuberculosis, diphtheria, and other diseases have been greatly reduced; infant mortality has been cut to nearly half of what it was about 25 years ago; and other great accomplishments have been achieved.

While all this, and more, redounds to the credit of public and private efforts which have been made to improve the Nation's health, urgent needs still exist and large opportunities are still ahead.

It is necessary to consider not only present achievements but what can be done—what it is possible to do with the resources at our command. It is well known that the prevalence of disease and the length of life are related to economic status. Because of this country's relatively high standard of living it is to be expected that our sickness and death rates should compare very favorably with those

of other countries. While death rates were lower last year than ever before, this is no reason for failing to strive for further improvement, since the same statement could have been made concerning the rates of 5, 10, or 30 years ago.

However good our accomplishments, compared with those of other countries or those of our own past, it is nevertheless true that the conditions of health in this country could be and should be very much better than they are. We are convinced, from the testimony presented before us, that if existing medical knowledge and skills were adequately marshaled and put to work the prevalence of disease and disability could be greatly lessened, tens of thousands of deaths annually could be prevented, the average expectation of life could be appreciably increased, and our people could be rendered healthier, happier, and more productive.

The opportunities for improvement in health conditions become evident when we look beneath the surface of national death and sickness rates, and consider the rates for particular localities or groups in our population. Then it becomes apparent that these average rates, which may be highly encouraging, obscure rates for particular communities, population groups, or diseases which are disgracefully high. We then find how much less we are doing than we are capable of doing; how much suffering, disability, and premature death persists which obviously could be prevented by known and applicable methods. If to accomplish these ends is a good, sound national investment, why should we delay?

The purpose and objective of S. 1620 is to aid the States in improving health conditions and services in the United States and in establishing systems of insurance against wage loss from temporary disability.

This bill does not propose a new departure or a new type of activity for the Federal Government. Participation in health services by the Federal Government is as old as the Nation itself. Federal cooperation with the States in safeguarding health and strengthening State and local health services has an unbroken history of 150 years. The bill before us proposes only to lay out a long-range and systematic program as a basis for carrying on old and traditional activities in a sound and efficient manner.

Disease germs and the economic effects of sickness do not respect State lines. The opportunities for the spread of disease are increased by modern methods of transportation and by the mobility of population. The citizens of one State cannot be safe from communicable disease so long as such disease prevails among the citizens of other States. We recognize all these principles in regard to our national livestock and agricultural industries. One State cannot stamp out tuberculosis among its people unless the disease is also stamped out in neighboring States. One State cannot meet all the costs of improved health services and cannot protect itself against the burdens of dependency caused by sickness, disability, or premature death unless other States also participate in a common effort against disease. But together, and with the aid of the Federal Government, an effective and concerted war can be waged against disease. Such an investment would pay dividends to the States and to the Nation.

The Federal Government is now providing aid to the States for a variety of purposes having to do with the general welfare and with health. Grants to the States are now being made for the provision of assistance to the needy aged, dependent children, and blind, for vocational rehabilitation, for the strengthening and developing of public health and maternal and child-health and welfare services, for the provision of health services to crippled children, and for the control of venereal diseases. There are as strong reasons for Federal assistance, financial and technical, to the States for health services as for any other objective of social endeavor.

A national health program is not merely an emergency program, any more than the health problems of today are emergency problems. On the contrary, a sound health program must deal with a problem of large magnitude. It is a problem which can be solved only by years of sustained effort. The accumulated neglects of many years must be overcome and careful plans must be laid to wage a ceaseless and unremitting war against disease.

We are spending about three and a quarter billion dollars or more each year for health services and medical care. Our workers probably lose over a billion dollars a year in wages that are unearned because of disability. Premature death of wage earners brings losses in our human capital which have been authoritatively estimated as amounting to over \$5,000,000,000 a year. Altogether, sickness and disability levies upon the national economy a toll, in costs and losses, of something like \$10,000,000,000 a year.

As a result of these costs and losses there is a staggering public burden for dependency and relief. One State alone expends \$22,000,000 per year for home relief of families made dependent by illness of the breadwinner.

The public hearings on S. 1620 held by our committee provided an opportunity for us to be furnished a large volume of information and to hear the opinions of groups and individuals interested in health services and in the public welfare. The committee cannot fail to be greatly impressed by the large number of highly responsible organizations and agencies whose representatives testified in support of the bill and urged action by the Federal Government.

These public hearings have shown that there is broad and substantial support in this country now for Federal legislation to strengthen, extend, and improve the health services of our people. Scarcely a witness raised objection against the objectives of the

bill, although representatives of some organizations presented serious criticisms. These criticisms, in the main, resulted from a misconception of the real provisions of the bill.

This national health bill simply proposes to implement the national health program by building upon the framework of health services already constructed under the Social Security Act. To that end it merely amends several titles of the act, to enlarge and broaden their scope, and adds three new titles. There would then result the outlines of a general program, with five principal elements:

- (1) Maternal, infant, and child health and welfare services;
- (2) General public health services;
- (3) Construction of needed hospitals and related facilities;
- (4) General medical care; and
- (5) Compensation for disability wage loss.

S. 1620 offers the basis for a balanced, long-range program.

In its general pattern, S. 1620 undertakes to develop the national health program primarily through the method of Federal grants-in-aid to the States. Thus it follows closely the basic pattern of the Social Security Act. This pattern tends to give great latitude to the States in the development of their own plans. The last 4 years' experience shows that such a pattern is flexible and adjustable to the different needs which exist in the States, though it has some weaknesses evident in the diversity and in the inadequacies of some State plans and in the inability of the poorer States to meet the uniform matching of funds required alike of the poor States and the rich States.

There is only one part of the Social Security Act which is wholly Federal; that is the system of old-age insurance. I pointed out in our preliminary report that this has a direct bearing upon the health bill in connection with the proposals for disability insurance. The health bill proposed Federal grants-in-aid to the States which develop systems of temporary disability insurance. The bill did not deal directly with insurance against permanent disability, because it was intended that insurance for those who are permanently disabled should be part of the Federal old-age insurance. An independent amendment to this effect was introduced in connection with other amendments to old-age insurance, but permanent disability insurance benefits were not adopted at the last session of Congress. Accordingly, I reported that when our subcommittee resumes the study of the health bill, it will have to consider whether permanent disability insurance should be taken under consideration at the same time when we study temporary disability insurance.

In the preliminary report to the Senate I pointed out that S. 1620 has received wide support from large and representative organizations. Its objectives are noncontroversial. However, the importance and complexity of the program requires that it shall be worked out with great care. The committee had not had adequate time to make an exhaustive study of all of the problems involved in this proposed legislation. It therefore promised to continue its study of the bill so that a definitive report could be submitted soon after the beginning of the next session of Congress.

In order to expedite further study of the bill, I submitted a carefully prepared summary of the bill itself and of 12 of the most important problems raised in the hearings, these being questions on which differences of opinion had developed or topics which required special further study. These special items included such subjects as: The formula on which Federal grants would be made to the States; the methods of adjusting the grants to the financial needs of the States; the income limits of the populations which may be aided under the bill; the need for special provisions to support or encourage medical education, research, and health education of the public; the coordination of administration at both the Federal and State levels; the protection of minority population groups against unfair discrimination in any health plans developed under this program; limitations on the freedom of each State to determine the scope of services or the eligibility of practitioners under State plans; cooperation between official and nonofficial health agencies; safeguards to assure the construction only of needed hospitals; and assurances that nongovernmental hospital and other facilities would be utilized effectively under State plans. I review this list in order to call to your attention the scope and the complexity of the problems which still remained before our committee after the public hearings were completed.

These special problems raise questions of different kinds. In some instances, we are confronted with highly technical subjects in which we must be guided by experts of one type or another. This is inevitable in a program which is designed to deal in a comprehensive way with different kinds of needs in highly diverse communities. In other instances, we are dealing with misunderstandings rather than with real problems. In most instances, these questions can be resolved by comparatively simple amendments to the bill.

In the preliminary report I gave special attention to the problem of industrial health and safety hazards. There can be no doubt that the activities of the Federal and State Governments need to be greatly expanded and strengthened so that the health of industrial workers may be better safeguarded and improved. If we needed any new reminder of the terrible plight of workers exposed to dangerous dusts, fumes, vapors, etc., and living under insanitary conditions, we should find it in the recent report on Living, Working, and Health Conditions in the Tri-State Mining Area (Missouri, Oklahoma, and Kansas). I am personally ac-

quainted with silicosis problems in my own State of Montana. Furthermore, there is serious need to strengthen the administration of workmen's compensation laws in the States. To these ends we have been giving careful consideration to the proposal made to our committee that an additional title be added to the bill. Under this title, while strengthening the industrial hygiene activities of health agencies, it is proposed that Federal grants-in-aid be made available to the States, through the Department of Labor, to assist the States in the control of working conditions and practices involving health and safety hazards in industrial establishments, and in the administration of workmen's compensation laws. There would, of course, need to be coordination at the Federal and State level among the health, labor, social insurance, and related agencies. Such coordination can, of course, be worked out. Developments along these lines could give a new and strong stimulus to industrial hygiene activities on a practical scale. This offers one of the important opportunities for the improvement of national health.

Thus, the specific amendment of the bill still lies ahead, but I believe that soon after Congress convenes our committee will undertake the job of preparing an amended bill in a hopeful and optimistic spirit.

In bringing you up to date on the legislative position of S. 1620, I must refer not only to the problems and issues which I summarized in August but also to some more recent developments.

We have, for example, reviewed the recommendations recently published by the American Youth Commission of the American Council of Education, calling attention to the special health needs of the youth of the Nation. It is gratifying to find that these recommendations are amply anticipated and met by the provisions of the bill.

Two of the great labor organizations of this country, namely, the American Federation of Labor and the Congress of Industrial Organizations, recently enacted resolutions at their annual conventions in which they emphasize their preference for national rather than State social-insurance systems to protect wage earners against the costs of medical care and against loss of earnings because of disability. There is obviously much to be said in support of their recommendations and these must be given very careful consideration. We recognize that the development of the insurance parts of the health program on a Federal basis presents some complex and knotty administrative questions which require further study by the technical experts as well as by Members of Congress.

Many welfare administrators in the States and localities, as well as other persons, have repeatedly called attention to the health and medical problems of needy people. In many places the deficiencies of medical care are quite acute for people who are already being assisted for their food, shelter, and clothing through funds provided under the Social Security Act or through the general relief programs of States and localities. A serious question has been raised whether the Federal Government should make special provision to help the States in providing medical care for these needy persons through the health bill or whether this problem should be met by amendment of the public-assistance titles of the Social Security Act.

Medical assistance for needy persons would meet an obvious objective. It cannot, however, be considered as a substitute for a program to meet the medical needs of many millions of self-supporting people. We have had ample testimony showing that wage earners, farmers, agricultural workers, and people who run their own small business do not wish to obtain the medical care they need on a charity or on a relief basis. Millions of these people who are self-supporting for all the other necessities of life find themselves unable to pay their way when they are faced with serious illness or expensive medical or hospital care. These people who do not have to take a "means test" for anything else do not want to take a "means test" for health services. Medical assistance is no sound answer to their problem. A sound plan would make medical care available to them on a basis which they can accept as self-respecting.

There are various groups of people who have expressed dissatisfaction with the general medical care program embodied in title XIII of the health bill. Even some of those who believe that medical care insurance should be developed on a State basis would prefer to see this title divided so that some parts would deal with medical assistance for needy people and other parts would provide specifically for medical care insurance programs, with appropriate standards and safeguards explicitly stated in the bill. If the medical care programs for self-supporting people should be developed on a national basis, it is possible that the Federal-State program of title XIII should be restricted to the needy.

Many of you know that the health bill received endorsement from many important organizations, representing citizens in all walks of life. These endorsements included not only labor, consumer, civic, welfare, public health, and other groups, but also many special professional groups. The American Medical Association and some other professional associations endorsed the general objectives of the bill, but expressed various reservations as to the specific proposals or the details.

Recently, the American Medical Association published an eight-point platform which has a direct bearing upon the problems before our committee considering the health bill. That association advocates: The establishment of a unified Federal agency coordinating and administering all medical and health functions of the Federal

Government, exclusive of those of the Army and the Navy; the allotment of Federal funds on proof of need; local responsibility, local determination of needs, and local control of administration in health and medical services for the sick, for the prevention of disease and for the care of the indigent and the medically indigent; full utilization of qualified existing facilities; the continued development of the private practice of medicine, subject to such changes as may be necessary to maintain the quality and increase the availability of medical services; and the expansion of public health and medical services consistent with the American system of democracy.

It is gratifying that the broad principles and objectives expressed in this platform are in general agreement with the principles on which the health bill was drafted. Nor is this surprising; when the bill was being prepared the American Medical Association had already stated in considerable detail—in the resolutions adopted by its house of delegates in September 1938—its views on the proposals previously developed by the technical committee on medical care.

The only point at which the bill is clearly not in accord with the eight-point platform of the Association is on their first point, the establishment of a unified Federal agency embracing all medical and health functions of the Government except those of the Army and the Navy. This is obviously a counsel of perfection, which must be tempered by practical and realistic considerations. To carry out this proposal numerous and complex activities would have to be dislocated wholesale from other agencies of government with which they are now functionally coordinated. This would be greatly to the disadvantage of their efficiency. Otherwise I can see no basic disagreement between the platform of the American Medical Association and the objectives or the provisions of the bill. There may be some minor differences of detail, but it should not be difficult to iron these out. I look forward to cooperative exploration of all such problems.

Whether all parts of the program can be worked out satisfactorily in the next few months, whether it should be enacted as a whole, or whether some of its parts should be given preference over others will receive careful consideration.

Last week the President himself suggested the advisability of a limited program, concentrating for the present on the construction of hospitals and health centers in communities where the need for such facilities is greatest. It is reported that this plan contemplates construction of hospitals by the Federal Government, wholly at its expense, where the need exists and where the locality is willing and able to maintain and operate the institution after it is built. I understand that the details of this plan have yet to be worked out and that it is being carefully studied by the interdepartmental committee. It is therefore premature to hazard opinions about its merits.

The health bill emphasized the need for constructing hospitals in certain areas. It also made provision for small temporary grants, disappearing after 3 years, to assist the communities in taking over financial responsibility for operation and maintenance. Grants-in-aid for hospital construction are proposed in the bill on a "variable grant" basis, the Federal grants ranging from 33½ percent for the wealthiest State to 66½ percent for the poorest State. It was intended that this formula should enable even the poorest area to participate substantially in the program. If this formula still gives too much to the wealthy States and too little to the poor States, there might be justification for spreading the range of variable grants still further. Under the public-health title of the present Social Security Act no matching of funds is required from the States. Our committee will carefully study any plan which may develop from the President's suggestion.

Thus, while there are both old and new questions still confronting us, we can happily report that much progress has been made in the development of health and disability legislation. It is now widely recognized that many fears which were expressed when the bill was first introduced are largely groundless. Some who at first thought that the bill proposes to bring about revolutionary or dangerous changes in medical care have found, as they have proceeded with the study of the bill, that these fears are largely unwarranted. Everyone is agreed on the objectives to make health services available to all our people; everyone wants these services maintained at and raised to the highest practical level; everyone wants sound relationships between doctor and patient; everyone wants to protect the integrity of health services; and everyone wants the worker protected against disability which brings loss of earnings and threatens security. I am confident that these objectives are attainable.

As we continue our work on the bill, we shall welcome further suggestions as to specific amendments which may safeguard the objectives of the bill and make its provisions surely practical. Medical science has reached a high state in this country. The bill should contain provisions which will encourage the further evolutionary development of medical science, teaching, and practice. It should contemplate proposals which will work toward the goal of making modern health services—preventive, diagnostic, and curative—available to all people in all walks of life. It should aid and encourage health safety in industry. Its provisions should be equally significant for the people living on farms and in villages as for those who live in the cities. It should not only maintain but encourage the partnership of effort between the Federal Government and the States and localities in the continuous improvement of health and the advancement of security.

## Jewish Congress at Detroit

## EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS OF HON. PRENTISS M. BROWN, OF MICHIGAN

Mr. BROWN. Mr. President, I ask unanimous consent that an address delivered by me to the Jewish Congress at Detroit on Sunday, February 4, 1940, may be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, ladies and gentlemen, from the dawn of recorded history down to the present day the peoples of the world have been engaged in bitter struggle. War is, of course, a most newsworthy fact. Historians as well as newspaper reporters lay great emphasis upon the spectacular, and war is spectacular. Perhaps the picture is somewhat overdrawn, but, nevertheless, the history of the human race is a history of internal and external violence. War, not peace, has prevailed in this world of ours.

In the days of my youth, when we contemplated the period of peace between the end of the Franco-Prussian War and the beginning of the twentieth century, we who were in school and college thought that perhaps the era of struggle was coming to an end. But, Mr. Chairman, the first half of the twentieth century is probably the bloodiest in history. The promise of the late years of the nineteenth century has not been borne out. America, in this century, has not been the scene of war. The one in which we participated was, thank God, away from our shores and beyond our realm, but we were finally drawn into the greatest struggle in history and played a part in its final years. It is our most heartfelt hope that we may avoid embroilment in the present struggle.

But the present wars are more widespread than the last World War. Then it was confined to the east, west, and south borders of the Central Powers; now it has spread to the north, before untouched. The great struggle in China involves more than a half billion people, over a quarter of the entire population of the world. It has not, like the last, affected as many nations, but many more people are closely involved, subject to war's horror and the civilian population who actually feel the hot and destructive breath of the war monster, is many times that in the last war.

I think that if you will search deeply, you will find that mankind in general will suffer almost any kind of enslavement other than enslavement of the mind. I think you will find also that from the days of the holy wars of the crusades, down to the present struggle in Europe, that intolerance, the desire to impose the thoughts and beliefs of a more powerful and numerous people upon the less powerful, the minority, is still the deep underlying cause of war. I said a moment ago that man would accept almost any yoke of service. He will willingly obey the laws which impose restrictions upon his right to do business, such, for example, as tariffs, trade limitation, and regulation; on his mode of living, such as the type of house he may build in a certain locality, the speed at which he will drive his automobile, and even the number of hours that he will work and the minimum rates of his pay. He will assent to the public demand that his children obtain a minimum of schooling in schools of his own choice. In short, he will accept the restraints that civilization requires. All of these restrictions on personal liberty we generally recognize as being necessary to our peaceful living together.

But, Mr. Chairman, the most important thing in our lives is our individual theory of morality, our ideas of the future, our religion, our worship, particularly the course that we should take in life to assure as nearly as we each think we can, what will happen to us after we leave it. The answer to the famous Jew, the Psalmist, who asked, "Lord, who shall abide in Thy tabernacle—who shall dwell in Thy holy hill?" is one that each for himself must make. In this realm, the God of us all has placed in each of us an unquenchable determination that he shall think his own thoughts, live his own life of worship, and attach himself to the religion of his choice. When men interfere with this phase of our natures, no matter what the cause, we humans rebel at restriction. There is also a desire on the part of mankind to impose, persuade others to their favored viewpoint, and that desire carried to extremity, is in my judgment, the chief cause of world unrest, of world war.

The converse of this is the denial of the right to worship, to the exercise of religion, of the right to believe according to the natural processes of thought of each individual. Search of the beginnings of the present holocaust in Europe and you will find it was first exhibited in the persecution of your brothers by the German ruler in the early days, a persecution that has continued unabated to the present hour. It was the spirit of intolerance, denial of freedom of thought and worship.

If wars were carried on today in the twentieth century as they were carried on in the nineteenth century and preceding centuries,

there would not be the suffering that we have today. Then armies fought as representatives of nations. Today, the entire populace is involved. The only civilian contacts with war in the old days were in those places through which the armies passed and in the few and usually remote localities where battles took place. Now the whole population of a nation is in fear of air raids. Where once men looked upward to the skies for peace, now it is filled with the hellions of destruction. Peaceful travelers are the targets of undersea assassins. Neutral ships and the property of citizens of neutral nations are destroyed without hesitation and without discrimination. In the eyes of the rulers of certain powers, every babe in the land is a combatant.

The Chinese philosopher Confucius is generally credited with the idea of the Golden Rule. Five thousand years of bloody history has not taught the peoples of the world the truth of the Golden Rule. At least we do not apply it. The excesses of the savage barbarian of the past came from an uncivilized, uneducated, untaught mind. He justified his savagery upon the ground of some strange belief, but the cold-blooded barbarian of today has been taught the tenets of religion. He knows of pity, tolerance, humanity, but he rejects them all. The savage of the past knew no better; the savage of today can plead no such immunity when he faces his Maker.

Mr. Chairman, many have painted for you the picture of the treatment of your race by the present misruler of Germany. I give you a brief summary, a factual summary of the suffering, the destruction, the butchery that has taken place: Since January of 1933 the Jewish population of the then Germany has been reduced from 500,000 to 180,000. About 250,000 have migrated and an unknown number of the remainder have succumbed. In 1933 the employed Jewish population of Germany was 51 percent of the total of all Jewish employables. Today only 16 percent are so employed. There are said to be 35,000 Jews in 3 concentration camps. During the month of November 1938, 463 synagogues were demolished. This was before the war, over a year ago.

In Austria, in March of 1938, there were 165,000 Jews. In September of 1939 there were 65,000. In 5 years over two-thirds of the Jews in Austria have either migrated or have been driven out. It is now announced that the Nazis intend to expel all Jews from Vienna at once. Economically speaking, there are no Jewish enterprises left in Austria. Out of 25,898, all have been liquidated or taken over.

Previous to the taking over of Czechoslovakia there were 356,000 Jews. I am reliably informed that this number has been reduced almost one-half; that the Jew is denied the right to engage in all professions and many occupations; that in Slovakia the Nazi representative, Premier Tiso, announces that Jewish property reverts to the Government upon the death of the owners.

It is impossible to keep up to date with Nazi persecution in Poland. At the outbreak of the war there were 2,000,000 Jews in the German-occupied area. It is estimated that about one-quarter million have died, 25,000 were executed, and 2,500 committed suicide. One estimate states that less than one and one-half million have survived out of the former population of 2,000,000. The *Essen National Zeitung*, a German publication, says that the Nazis have liquidated 87 percent of the workshops and 83 percent of the stores owned by Jews. Agricultural property has been confiscated. Funds remaining in the hands of individuals or Jewish institutions have been, in effect, confiscated. I could go on giving you details of petty persecution, of execution, of suicide, and the general terrorism, but I know that you have full knowledge of all of these things. I summarize without the gruesome but truthful details in a few lines from a weekly news magazine: "Since Adolf Hitler's inspection of bomb-shattered Warsaw last October, German-occupied Poland has been verboten to neutral correspondents. Only the meagerest details of how 19,000,000 people were faring at the hands of their new Nazi masters filtered through the news black-out to the outside world. The woeful experiences of escaped refugees, occasional off-the-record reportings of neutral consular agents, revelations of the Nazis themselves, have generally added up to the same thing: The Germans have methodically looted the land of grain, foodstuffs, cattle, butter, swine, horses. Jewish and Polish property has been confiscated indiscriminately. Vast concentration camps have been set up and at least 300,000 young Poles, many of them former soldiers in the Polish Army, have been conscripted for labor in the Reich. Jews have been forced to wear identifying clothing (generally yellow arm bands) and are largely confined to ghettos. Thousands of Jews, not only from former Polish provinces but also from Bohemia, Germany, Austria, have been dumped unceremoniously, with little food, clothing, or money, into a small, not yet defined enclave around Lublin, southeast of Warsaw. Famine, disease, and epidemic threaten the territory."

I cannot understand the type of mind that permits these things to be done, nay, that directs the hand that does it. I cannot understand the inhuman attitude toward the Jew. In every nation in which your people have been accorded a degree of tolerance, they have rapidly forged to the front, be it in government, in law, in finance, in charity, in religion. That may be the reason for it. I am most familiar with the achievements of members of the Jewish race in the law. I think the most brilliant advocate of my time was the great New Yorker, Samuel Untermyer, and I recall Chicago's great legal light, the famous Levi Meyer, and in our own Detroit, the Butzel family, one of whom sits on the highest court in our State, and many others. When the history of the Supreme Court of the United States is written none will eclipse Brandeis, whom I consider the greatest judge of the present day.

In science you have produced Einstein and many others. In politics many, headed at the present time by the solid, substantial Morgenthau, the Secretary of the Treasury; Governor Lehman; Governor Horner. In charity, Strauss and many others in the metropolitan center of New York. I well recall the great prominence that David A. Brown achieved, and his success in carrying on the drives for charity in the city of Detroit. In religion we admire the leadership in the Nation of Rabbi Stephen S. Wise and your own Leo M. Franklin in the city of Detroit. In finance the accomplishments of your race have been most remarkable, some heading the greatest of our financial institutions. I know of no line of endeavor where you have not proven yourselves to be fully adequate to your responsibility.

I cannot understand intolerance. I do not believe that I have an ounce in me. You know that the great Catholic Church has been the object of intolerance on the part of many. You know that attempts have been made to prevent her from educating her own children. My earliest political effort was my resistance to the so-called parochial-school amendment. My first national political convention was one in which I, a Methodist, voted constantly and continually for a great Catholic, Alfred E. Smith, of New York.

Mr. Chairman, we are now in a State which was carved out of a territory whose original basic organic law, the Ordinance of 1787, stated this great principle, that the Northwest Territory was founded for the purpose of "extending the fundamental principles of civil and religious liberty which form the basis whereon these republics, their laws, and constitutions are erected, to fix and establish those principles as the basis of all laws, constitutions, and governments which forever hereafter shall be formed in said territory."

The substance of that ideal is the fundamental law of Michigan today. And, Mr. Chairman, we live in a Nation whose Constitution provided in its first amendment, yea, in the first sentence of its first amendment, the following:

"Congress shall make no law respecting the establishment of religion or prohibiting the free exercise thereof."

There have been violations of these cardinal principles in this land of ours. There have been in the past, and there are now, many movements contrary to these superb tenets of democracy, to these assurances of religious freedom, but in the main the great majority of our people when the tests came, when the issue was raised, stood by your religious liberty and mine.

I know that spirit pervades the Congress of the United States today. I know that it pervades the administration in Washington. Criticism has come to it because too many representatives of minority groups are in this administration. I would rather lean backward in my tolerance than forward in intolerance.

I am not among those who believe that the moral force of what I consider to be the prevailing public opinion of my country should not be used. I do not believe that neutrality implies that a citizen or a Member of Congress may not condemn aggression, cruelty, and modern barbarism when he finds it. And, Mr. Chairman, I have not hesitated to express my views concerning the actions of the present ruler of Germany. During the neutrality debate on the floor of the United States Senate, and subsequently over the radio, I said:

"American public sentiment is against Germany in this war because the ruler of the German people has seized and throttled democratic government in Germany and has reorganized a powerful nation apparently for the purpose of dominating Europe. Our sentiment has risen against him because he has cruelly persecuted a Jewish minority; because he has endeavored to break down religion, attempted to throttle the great Christian Church in Germany, Catholic and Protestant alike; because he has mercilessly bombed Polish cities and slaughtered Polish citizens without just cause; because he has devoured the democratic countries to the south of Germany, such as Austria and Czechoslovakia against their will. I think no military master or ruler in history has gone as far as he has. He aspires not only to one-man rule, but he names his successor. Even the absolute monarch claimed no such power; he was bound by the laws of legitimate inheritance and succession. But Hitler names his successor and his successor's successor. But we condemn him most because he has plunged an unwilling world into war, unleashed the most contagious passion known to man, and menaced my sons and yours. This and much more is the reason for the dominant anti-Nazi sentiment of America today."

And, Mr. Chairman, we view the nefarious doctrines of the present Government of Russia in much the same way. The present wave of sentiment for the heroic Finn in his defense of his homeland is due in part to our aversion for the principle of communistic Russia. Much of my own legislative effort for the past month is to get Finland such aid as I can, within the bounds of our neutrality, in her battle for national life. Our great Nation must be and will be neutral in act, but we cannot all be neutral in thought.

There still swells within our breasts the love of human freedom, sympathy for the oppressed. We cannot view the spectacle of a brutal foe, outnumbering his intended victims 50 to 1, in an unprovoked attack on a peaceful nation without emotion. Those who love liberty need not be silent.

The views and the attitude of this mighty Nation of the western world are important to the peoples of Europe. No matter how much they may rail at us over our commercialism, they know that in the last war we asked nothing and received nothing; that we expended tremendous amounts of money, of resources, of men. They know all this stands upon our ledgers in red, as a great loss; that the

prevailing opinion is that our effort was in vain; but the people of Germany, the people of Russia, know that our great President, Woodrow Wilson, struggled for a just peace; that probably due to the suffering of the Belgians and the French, to the destruction caused by the Germany Army, vengeance rather than justice dictated the terms of the peace treaty, which was an unfortunate one for the world.

The thinking people of the Central Powers know that the public opinion of this Nation, not only because of its morality but because of its tremendous power, can be and is a potent force in the world. I favor the use of that American public opinion in condemnation of the course that the German ruler has taken in his treatment of the civilian populations which he has subjugated and cruelly mistreated, and, though that public opinion will not affect him nor the servile sycophants around him, it will ultimately affect the people of Germany. And that public opinion will be a tremendous factor in shaping for the world a course which all men of good will hope will see the end of this half century of war.

Let no man misunderstand me. Much as we condemn those for the moment—and I hope it is a brief one—who control the Governments of Germany and Russia; much as we sympathize with their innocent victims, there is nothing we can or should do, in my considered judgment, by military action. I look for their complete defeat. I look for the ultimate rise of their own people against these cruel masters of the moment. Our course as citizens is the expression of our abhorrence and such aid as we can in our charity give. I approve the eloquent words of a recent editorial in a Detroit newspaper:

"The German experience must have gone far to confirm the fact, accepted in this country for 200 years, that religion is safe only where there is democracy. Only democracy can assure that respect for the worth and dignity of the individual human being which is the basis of all freedom, including religious freedom."

The greatest service we in America can now perform is to maintain this Nation now and in the future as it has been maintained in the past an example to the world that a solid, substantial, and permanent government can exist with liberty of worship and individual freedom for all its people.

That is our mission. To follow that example is the one hope of this war-torn world.

## Hospital and Sanitation Needs

### EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK, AND EDITORIAL FROM THE NEW YORK TIMES

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the RECORD an address delivered by me last evening over the Mutual Broadcasting System, concerning problems associated with hospital and sanitation needs, together with an editorial from the New York Times of January 31, 1940, on the same subject.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

Tonight I wish to discuss with you some of the problems associated with our hospital and sanitation needs.

Last week I presented a bill in the Senate which proposes a rather large construction program aimed at the eventual fulfillment of these needs.

Any proposal of this type is bound to attract some criticism, especially in these days when we are seeking to reduce government costs.

However, neither at this time nor in the future can we afford to neglect the health of our people.

My bill provides a modest approach to the protection and improvement of the Nation's health. That is why I believe you will be interested in what I am trying to accomplish.

To grasp this subject we must remember that in the pioneering of this great country, communities sprang up almost overnight.

The trend was ever westward.

As towns and villages began to dot the map and to expand there was little or no long-range planning.

An adequate water supply, of course, was always an essential; but less attention was paid to sewage disposal, to hospitalization, and to kindred health and sanitation requirements.

It was natural, therefore, that as time went on, improper sewage disposal should result in polluted rivers and lakes which, in turn, brought on disease that at times reached the proportions of epidemics.

It was not until shortly after the Civil War that the country at large realized the lack of adequate and necessary facilities for safeguarding the public health.

This gave rise to the creation of sanitation boards, planning commissions, and other bodies by States and local governments, to combat these alarming conditions.

While great strides were made in the protection of the public health, by the turn of the century we were inundated with a vast army of new citizens.

America was growing by leaps and bounds.

Cities numbering into the millions developed and with them developed even graver sanitation needs.

We are still growing in population and the construction of adequate, modern hospitals, water-supply systems, and sewer facilities has not been able to keep pace with our growth.

Complicating this problem came the economic tailspin of 1929.

The depression crimped all lines of endeavor and the public health suffered proportionately.

A sharp curtailment of construction took place.

The depression took its toll in health as problems of substandard housing, malnutrition, and reduced standards of living asserted themselves.

Our existing hospitals took on added burdens. In many instances entire water systems or sewage-disposal systems of communities were condemned.

Expenditures for hospital construction by 1933 were at an incredibly low level.

The Public Works Administration, set up to offer financial assistance to local bodies in the national emergency, met a portion of the public need by providing funds for over 1,700 hospital projects, involving the construction of over 2,000 buildings with accommodations for 107,000 patients.

The Public Works Administration has been immeasurably helpful to suffering communities during the 6½ years of its existence but now it is being liquidated, therefore a new attack must be made on this problem.

There is a vast amount yet to be accomplished and it is to this task that my bill applies itself.

In 1938, President Roosevelt called attention to health requirements of the Nation. At that time his National Health Conference, after a Nation-wide health survey, reported that an estimated normal increase in hospital beds should be 25,000 a year.

Again, in January 1939, the President expressed to the Nation his concern over national health services and resources.

Then, just a week ago, he again emphasized the immediate and pressing need for the provision of hospitals, particularly in financially distressed areas.

Public-health officials and private medical experts have again and again cited the needs that exist for more adequate and more up-to-date health facilities.

And so we see that this is not a theoretical problem; it is an extremely real problem. We have no more precious stake in our Nation than the health of our people.

The President has carefully and dramatically explained the needs for hospital facilities in financially depressed sections of the country. No one has taken issue with his judgment on this subject. I thoroughly agree with the proposal he suggests.

But I am likewise concerned with the problem of health on a wider scale.

Allied to the ever-increasing demand for hospital facilities is the need for adequate water-supply systems. It is estimated that approximately 35 percent of suburban and rural communities in the Nation are in genuine need of additional or improved water-supply systems. We must not blind ourselves to this widespread need.

Sewage disposal plants and sewer lines constitute absolute necessities to every community. If funds at reasonable rates were available from any source, hundreds of cities and villages would go ahead with construction of new and improved projects of this type.

The elimination and reduction of stream pollution has likewise become a paramount need throughout the country.

Aside from the disease epidemics that result from such pollution, there are practical reasons why such conditions demand to be corrected or eliminated. The wholesale destruction of fish has resulted in many places, bringing pangs to the hearts of sportsmen and depletion to our fish supply.

Since I introduced my bill to provide loans for the construction of facilities to meet these needs, I have received a great many letters from all over the country inquiring into its details.

Before I conclude, therefore, I wish to briefly explain its provisions.

I would emphasize right here that this plan in no manner conflicts with the President's recommendations, nor with those of the Public Health Service; this is a supplementary proposal to those recommendations—one which, in my opinion, commends itself as meeting the existing requirements of hundreds of our communities.

I am proposing that the Federal Works Agency be authorized to make loans, 100 percent loans—no grants, for the construction, equipment, repair, alteration, extension, and improvement of hospitals, water and sewage systems, and remedial works for the reduction of pollution in our rivers and creeks.

In some few cases it might be advisable to amortize such loans over a very long period. Therefore, I have indicated a ceiling of 50 years for the maturity of these loans. I have stipulated that a 2 percent interest rate be charged and that \$300,000,000 be provided for the purpose. One-third of this sum is definitely earmarked for hospital construction.

Hospital loans will be made available to public bodies and to private nonprofit organizations. This means that privately owned, nonprofit institutions, operated by religious, fraternal, and educational organizations, heretofore denied Federal Public Works assistance, will benefit under the provisions of this measure.

Important to bear in mind is the fact that these loans will be repaid to the United States Treasury. They will involve no permanent financial burden on the Government. They will assist communities and nonprofit organizations in the construction of permanent, self-liquidating, essential projects.

While I have not discussed this proposed program as it would affect our economy and the unemployment problem, that, of course, is a natural outgrowth.

Such a program would provide many jobs in both the skilled and unskilled fields. It would serve to stimulate increased activity in the heavy, durable goods industries.

In view of the liquidation of the P. W. A., and the curtailment of relief funds, this program would serve as a partial cushion for the shock that is bound to result from abrupt reductions in public employment.

This plan dovetails into other suggestions that are being advanced to promote the public health.

There is a widespread demand for essential projects of this nature. We cannot afford to neglect the Nation's health—if we do, we are all bound to suffer in the future.

This is an appropriate time to apply ourselves to a practical, inexpensive solution of this problem.

A strong, healthy, vigorous race is our Nation's supreme defense.

[From the New York Times of January 31, 1940]

#### THE PRESIDENT'S HOSPITALS

There can be little doubt that Congress will approve the President's request for an appropriation of \$7,500,000 to \$10,000,000 for the construction of some 50 experimental hospitals in regions where populations are poorest and medical care is hardly known. Social workers, organized medicine, public health officers, medical reformers all hailed the plan when it was first outlined a few months ago. Yet in view of the mounting deficit, the Nation would support the President's medical enterprise more wholeheartedly if he had not made a special financial case of it. Though the maximum of \$10,000,000 requested is little more than one-tenth of 1 percent of a national Budget of nine billions, can we be sure that this is the end of medical experimentation until a Federal health bill is passed? Experiments have a way of revealing unforeseen, urgent, and expensive needs. The hospital plan would not have suffered if, instead of asking for a special appropriation, the President had simply included the item of ten millions in the Budget and indicated that the money should be found through offsetting economies where they could most easily be made.

Medically the President's plan has one weakness. It does not dwell heavily enough on the kind of medicine and surgery that is to be practiced in the experimental hospitals. Since the Federal Government is to erect the buildings and retain title to them and their equipment, it has a right not only to set up medical standards, as the President indicates, but to insist that the standards be observed. Insistence is especially important in counties where physicians are few and not highly competent, and where surgery is nonexistent. Yet the President believes that a board with merely advisory powers will meet the requirements. If medical standards are to be of the highest the board must have authority to enforce its medical rules. Advice may be ignored.

Congress can rectify this oversight by specifying the functions of the medical board and giving it the power that it should have if the local communities which are to conduct the hospitals with their own money are to render the kind of service expected of well-equipped institutions. Control is the very essence of every experiment. And unless control is exercised by the Surgeon General, and a medical board of which he should be the chairman, we run the risk of building 50 hospitals from which little of medical value can be learned. If this experiment is conducted in the right way, Congress will be greatly aided in framing a health bill which will not impose on the country a tax burden as outrageously heavy as that called for by the Wagner bill.

#### The Forest Service

#### EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

LETTER FROM HON. GIFFORD PINCHOT

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD and made a part of my remarks a letter written to me by Gifford Pinchot, twice Governor of

the Commonwealth of Pennsylvania and a recognized national leader in all efforts to conserve and beautify our national forests. In this letter he calls attention to the attempt of the Interior Department to get the Forest Service and the national forests away from the Department of Agriculture and outlines his objections to such a transfer.

Mr. Pinchot is an authority on this subject and speaks with the force of a lifetime of private and public experience. As Governor of the Commonwealth of Pennsylvania he put into effect his principles of forest conservation and beautification, with the result that Pennsylvania is the proud owner of one of the best maintained and most beautiful areas of forest land in the country.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

1615 RHODE ISLAND AVENUE NW.,  
Washington, D. C., February 3, 1940.

HON. JAMES J. DAVIS,

United States Senate, Washington, D. C.

DEAR JIM: I am taking the liberty of calling your attention to the renewed attempt of the Interior Department to get the Forest Service and the national forests away from the Department of Agriculture.

There is no good reason for the proposed transfer of the Forest Service or any part of it. Moreover, it would be a severe and unnecessary blow to the farmers of America. The Farm Bureau Federation, the National Grange, the Farmers' Union, the National Cooperative Council, the Federation of Milk Producers, and other farm organizations have made official protest against it.

So have the National Federation of Women's Clubs, the American Forestry Association, the Association of State Foresters, the Society of American Foresters, the National Livestock Association, the National Wool Growers' Association, the National Lumber Manufacturers' Association, the California and other western chambers of commerce, the Izaak Walton League, the Camp Fire Club of America, etc.

The users of the national forests and the people of the 11 States which include most of the national forests, and their representatives in Senate and House, are overwhelmingly in favor of letting the Forest Service be. There is also strong opposition in the Central and Eastern States.

This is no partisan question. I fought the transfer when Republican Secretaries of the Interior tried for it under Coolidge, Harding, and Hoover, just as now. Under any administration it would ruin the Service.

Nothing whatever is to be gained by tearing the Forest Service out of the Department where it belongs, grew up, and has done such admirable work. No one pretends that it could do better elsewhere than where it is now.

Every Chief Forester has been dead against it. Every Secretary of Agriculture for the last 40 years has emphasized the close relationship of forestry with agriculture. The national forests are important parts of the agricultural equipment of America. They are cooperating forms of land use built on the soil. To separate them would deeply injure both.

As the President himself said last December, "the forest problem is part of the broad problem of modern agriculture." Forest conservation is an indispensable part of agricultural conservation. Trees are an important farm crop. They help sustain farm enterprises, lessen erosion and floods, serve irrigation, and contribute to livestock pasturage.

The Forest Service is in close, constant, and necessary cooperation with more than half of the other organizations in the Department of Agriculture, such as the Soil Conservation Service, the Agricultural Adjustment Administration, the Farm Security Administration, Agricultural Economics, etc.

All but an insignificant minority of conservationists oppose taking the national forests or the Forest Service (in which the conservation policy originated) out of its present location. This move would amount to a most destructive attack on the national-conservation policy.

The Interior Department is not fitted to handle the national forests. Its chief function with respect to public lands under the laws of Congress is to pass them into private hands. Again, the Interior Department centralizes its work in Washington. The Agricultural Department decentralizes. The Forest Service decides local questions by local men on local grounds. Centralization would cripple it.

The national forests are handled for production from the soil. The national parks are not. That the parks are in the Interior Department is no reason whatever why the national forests should be there also.

Because Theodore Roosevelt recognized that the Interior Department's handling of the national forests was a public scandal, he secured their transfer to the Department of Agriculture, where their administration has become a model of clean, competent, publicly approved efficiency unsurpassed by any Government bureau.

The Interior Department has no claim whatever upon the national forests. Ambition for power is no good reason for upsetting a lay-out that works superbly where it is.

The transfer would seriously disable the Forest Service, cut off essential cooperation with other bureaus, injure the users of the

national forests, and hurt and affront the farm interests of America.

Only the strongest constructive reasons could justify the transfer. As a matter of fact, every reason of morale, cooperation, natural relations, tradition, and good work are against the transfer. Why rock the boat?

Sincerely yours,

GIFFORD PINCHOT.

### Associate Justice Murphy

### EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ARTICLE BY H. C. GARRISON IN THE DETROIT NEWS

Mr. BROWN. Mr. President, yesterday the Honorable Frank Murphy took the formal oath as an Associate Justice of the Supreme Court of the United States. He then achieved the highest position that has ever been achieved in this Government by a native of Michigan. A very fine tribute was paid to him by Mr. H. C. Garrison in the Detroit News. I ask unanimous consent that Mr. Garrison's article may be printed in the Appendix of the RECORD.

There being no objection the article was ordered to be printed in the RECORD, as follows:

[From the Detroit News of January 4, 1940]

MURPHY'S STORMY CAREER MAY FIND ITS FIRST CALM

(By H. C. Garrison)

For nearly 20 years, slim, red-headed, bushy-browed Frank Murphy has stood at the very core of the political maelstrom where the storms of criticism rip and roar, where ambitions fall before the hurricanes of opposition and reputations are shredded into ribbons.

His incumbency of virtually every public position he has held—and there have been a half dozen of them—has been the subject of violent controversy, for Frank Murphy was of a peculiar temperament that caused among his friends an admiration that was close upon idolatry and goaded his enemies into something akin to a frenzy of hatred. There were few persons who were able to preserve an aloof middle ground with Frank Murphy. You either liked him a lot or you hated his guts. That's a pretty pungent phrase, but it's descriptive.

As judge of the recorder's court of Detroit, Murphy was praised to the skies for his humanitarianism, his understanding of the problems of the unfortunate, and he was lambasted right merrily for what his critics were pleased to call "softness."

CITY'S GRAVEST CRISIS

As mayor of Detroit, he ran full tilt into the city's gravest economic crisis. Mayor Murphy decreed that no one should go hungry. The welfare funds were poured out like water.

It may be there was waste at first, before the system was fully organized. On the other hand, the problem was there and had to be met at once, not next week or next month or next year. Time, tide, and empty stomachs wait for no man. The budget went out of balance. It had to.

The criticism was terrific. The wolves howled upon the Murphy doorstep day and night. Yet there was a mighty host who said: "This is the man who fed us when we were hungry." You were running into trouble when you criticized Frank Murphy to those people.

Again, as Governor, Murphy had the sit-down-strike problem thrown into his lap. It was a ticklish problem, too. No one can deny that. The stern legalists said Governor Murphy should have blasted the strikers out of the plants, if need be. They didn't think it would go that far, it is true. They believed that a word from the Governor would have brought the strikers out. But there was no proof of that. An attempt to dislodge them might have meant the bloodiest day in Michigan's history.

ONLY ONE HURT

The strikes were mediated. The men finally came out peaceably. No one was hurt—that is, no one but the man who decreed there should be no bloodshed. He went down to defeat the next time out, and 90 percent of the cause of that defeat was opposition to his sit-down policy.

His policies as Governor General and High Commissioner of the Philippines met with sharp criticism and high praise. So did his work as Attorney General of the United States.

Yet, buffeted and blown about as he has been, Frank Murphy always has weathered the storm. He has gone on steadily, relentlessly almost, from job to better job.

And now, after nearly 20 years of the wars, Frank Murphy has emerged on the high, still plateau of the Supreme Court of the United States, where the political winds blow not, where criticism,

when it comes at all, is whispered behind a shielding hand in dark corners, where there is peace and security and the opportunity to ponder problems in quiet and at leisure.

Maybe Mr. Justice Murphy will enjoy the calm of the country's highest legal tribunal. Maybe he has been in the hurly-burly too long and will fret and paw at the unaccustomed quiet like an unhappy old war horse in a stall. You must remember that Frank Murphy is Irish, and red-headed to boot. And he is only 46, which is young to retire.

#### FAMILY OF REBELS

Murphy comes from a family of rebels. His father, the late John F. Murphy, was imprisoned in Canada when a boy for Fenian activities. There are stories of rebellious Murphys in Ireland, but his father would never permit young Frank to study his family tree.

"Only snobs bother about family trees," said Murphy the elder, "and, anyway, you probably wouldn't like what you found."

Frank Murphy was born in Harbor Beach, Mich., April 13, 1893. He came by his Democratic politics honestly, for his father before him was an ardent Jeffersonian and was active in Huron County politics.

Frank took part in the usual boyhood activities of a small town, but he was more serious and farther-seeing than most boys of his age. He decided before he ever left home that he never would smoke or drink. He felt that these habits would impair his efficiency, and he had already decided he was going a long way up. Therefore, he felt he needed all his powers.

On the campus of the University of Michigan young Murphy won a reputation as an orator, an art which he retained and polished until he is today one of America's finest platform speakers.

#### FIVE-DOLLAR-A-WEEK CLERK

Graduated from the law school of the university in 1914, he obtained a post as clerk in the law office of the late George F. Monaghan, in Detroit, where his services were valued at the unflattering stipend of \$5 a week. This he pieced out to \$13 by teaching three night classes a week in the Delray district.

After 3 years as a struggling young lawyer in Detroit, Murphy entered the officers' training camp at Fort Sheridan, Ill., and was commissioned a lieutenant. He saw no active service but went to France and later was part of the Army of Occupation in Germany. After the war he was detailed as an Army student to study law at Lincoln's Inn, London, and afterward at Trinity College, in Dublin. He was discharged with the rank of captain and returned to Detroit.

Here he was appointed an assistant United States district attorney in 1919, under that stern taskmaster, the late John E. Kinnane. He received official commendation from Attorney General A. Mitchell Palmer and from Gen. John J. Pershing in 1920 for his successful prosecution of a \$30,000,000 war-graft conspiracy.

In 1923 Murphy was elected judge of the recorder's court of Detroit after a stirring campaign against the so-called "big four" judges. In 1929 he was elected to a second term but resigned in 1930 to become a candidate for mayor. Mayor Charles Bowles had been recalled, and there was a large field, including Bowles himself, at the election to select a successor. Under the faulty law as it stood at that time, there was no primary. Murphy won easily.

Murphy admitted he had had no experience as an administrator, but promised he would pick excellent men for his cabinet. That promise was kept religiously. He made the late Joseph E. Mills commissioner of public works, and Mr. Mills turned out to be one of the best executives in the history of the city. He retained the able Clarence E. Wilcox as corporation counsel; he put James K. Watkins, an attorney of high reputation, in as police commissioner.

Perhaps his most fortunate selection, in view of his own career, was that of G. Hall Roosevelt as city controller. Hall Roosevelt is the brother of Mrs. Franklin D. Roosevelt. That was the beginning of his friendship with President Roosevelt and the basis of the friendly charge that Murphy has "gone onward and upward with Roosevelt."

#### MILLIONS FOR RELIEF

In the first year of his administration, Mayor Murphy spent \$20,000,000 for welfare relief. Neither the State nor the Federal Government was contributing at the time, to any substantial degree. There was plenty of criticism, but Murphy was easily re-elected mayor in 1931.

Mayor Murphy, in his second term, began the job of reducing the budget. He called in a "brain trust" of financiers, industrialists, and businessmen and cut the operating costs of the city government by \$27,000,000 in a period of about a year.

He had launched a debt-refunding program when he resigned as mayor in April 1933 to accept President Roosevelt's appointment to the \$18,000 a year post as Governor General of the Philippines. He took a number of his trusted Detroit friends to the Orient with him to fill key posts—Joe Mills, his best executive; Edward Kemp, his law partner; Norman Hill, his secretary.

In the first year of his administration in the Philippines Governor General Murphy cut governmental expenses \$10,000,000. Other achievements of his regime included the introduction of an 8-hour-day law, a franchise for women, a central budget control system, placing government-owned enterprises on a paying basis, a parole and indeterminate-sentence system, reorganization of the constabulary.

#### PLEASANT RELATIONS

When the Philippines became a commonwealth Governor General Murphy was retained at Manila as High Commissioner. He had no real authority. His only job was to keep relations between the Governments of the United States and the Philippine Commonwealth pleasant.

Of course, he was criticized for his work in the Philippines, too. There were some who said he played too close to ambitious Manuel Quezon, later President of the Philippine Commonwealth, but his successor, Paul V. McNutt, found he had to pay a great deal of attention to Quezon, too.

In 1936 Murphy resigned the High Commissionership and returned to Detroit to become a candidate for Governor. He was elected by a narrow margin. The first big sit-down strike was already in progress when Governor Murphy took office January 1, 1937. Murphy called out the National Guard to keep peace in Flint, but would not permit them to attempt to eject the strikers.

The General Motors strike was followed by the Chrysler strike and by a host of smaller ones. The critics said all subsequent strikes could have been avoided had the Governor acted "strongly" in the first one.

But there was no bloodshed and the strikes finally were settled peaceably.

#### CALLS ON EXPERTS

Governor Murphy had followed his Detroit custom in his appointments. Almost all of the key appointments were nonpolitical. He took men who were experts in their line but were almost unheard of politically, men like his budget director, Harold D. Smith, who had been executive secretary of the Michigan Municipal League for many years but who never had held a political office.

In the uproar over the sit-down strikes, the public lost sight of the really magnificent accomplishments of the Murphy administration in Lansing. He put through a civil-service law over the opposition of many of his own party leaders; a secret primary ballot; a basic science act; an occupational-disease law; a teachers' tenure law; a welfare consolidation law, later defeated in referendum through the influence of county politicians.

When the legislature appropriated \$18,000,000 more than the State's estimated income, Governor Murphy vetoed \$3,000,000 in appropriations and slashed \$12,000,000 from the budget. He cut another \$2,000,000 from the budget in the summer of 1938, when the relief problem became pressing again, by reducing salaries from 6 to 15 percent.

#### DEFEATED IN 1938

These accomplishments faded out, however, before public dissatisfaction with his handling of the sit-down strikes, and Murphy was defeated for reelection in 1938. Even former Gov. William A. Comstock, of his own party, publicly turned against him.

Before Governor Murphy was out of office, he was appointed Attorney General of the United States by President Roosevelt. He entered into his new duties shortly after January 1, 1939.

In Washington his conduct of his new post has been spectacular. He convicted Democratic Boss Pendergast, of Kansas City; routed the corrupt Democratic politicians of Louisiana; indicted Moses Annenberg, Philadelphia publisher, for income-tax evasion; prosecuted Federal Judge Martin Manton in New York for "selling justice." He shook up the personnel of the Department of Justice, replacing many of the old political hacks with young men who were not afraid of politicians or political power.

### American Coalition

### EXTENSION OF REMARKS

OF

HON. RUFUS C. HOLMAN

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS BY HON. RUFUS C. HOLMAN, OF OREGON

Mr. HOLMAN. Mr. President, a few days ago I delivered in this city, before the American Coalition, a brief address which reflects in a limited way my views on a subject which is of lively interest to many of our citizens. I ask unanimous consent to have the stenographer's transcript of my speech printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Colby, Mr. President, fellow countrymen, what I have to say to you must be said extemporaneously and without previous preparation. I did not know that I was to speak here today, but I am glad of the opportunity. Ever since I have come out of the West and into the East, I have longed for the opportunity to appear before an American audience. [Applause.] Time and again the lines have occurred to me:

"Breathes there the man, with soul so dead,

Who never to himself hath said,

"This is my own, my native land."

You will pardon me if I make some reference to my own background and present opportunities, because you do not know me, and neither does the kind gentleman who introduced me, nor he

who invited me here. Perhaps when I get through you will regret you ever met me.

On my mother's side I come from an old American family. She was a Huntington, and the Huntingtons founded Norwich, Conn., in 1635 and fought through the American Revolution. On my father's side, I am the son of an English immigrant boy. I mention that because I am going to have something to say on immigration.

Both of my parents, but prior to their marriage, crossed the plains to Oregon in the covered wagons of 1852, and I just want to give you a little background because it has to do with the present philosophy of opportunity, or the lack of it, in this country.

When Oregon pioneers with their covered wagons, facing and experiencing Indian attacks, came to the broad rivers, they didn't stand by the river bank and begin to wear out their thumbs for a lift. There were no bridges but they got across the rivers. The faint-hearted turned back. When the Oregon pioneers came to the mountains and they found no roads over them they didn't sit down and demand that Congress pass a law. They got over the mountains. And when they got in the gorge of that great Columbia River, that deep and inhospitable gorge, in the late fall and early winter and the snowstorms came on and every head of livestock starved they didn't go on relief. [Applause.] They went into that densely timbered country, my own grandfather and his family, with not a head of livestock, winter coming on, made a clearing in the forest, built a log cabin, and did not have even salt to put on baked potatoes. They had no salt nor pepper, tea nor coffee nor sugar. They parched wheat to make a hot cereal drink long before anybody ever heard of Battle Creek, Mich. They did not claim to be underprivileged. They would have resented—and vigorously as an insult—any such term as applied to them.

In crossing the plains they had thrown out of their wagons their bedsteads, their furniture, their dishes, everything that they had, except dried apples and beans and things of that kind, and a few crude farming implements because oxen could not drag the heavily loaded wagons where there were no roads or bridges.

The Oregon pioneers may have been destitute, but they were never poor. Do you get what I mean? [Applause.] They had character, self-reliance, and independence—they were genuine Americans—the kind of Americans that made our country and upon whom we must now depend for its preservation. By the observation of the orderly enforcement of law, by perseverance, truthfulness, self-reliance, and thrift, their clearings grew into fine farms and their log cabins into frame dwellings.

I come on here to Washington with no previous experience in legislative work, but I have had 20 years of administrative experience and have left behind me a record of doing more things with less money. [Applause.] It appalls me to see here the wasteful, useless extravagance resulting from what I think is incompetent administration. And in this period of ever-mounting Federal deficits, bear this in mind: No government in history ever survived bankruptcy, and if we lose our Government, we lose everything.

I like the language that I learned in my schoolboy days, reported to have been used by John Smith who founded Jamestown, Va., in 1607, and during that later time called the "starving time," when he said, "He who will not work shall not eat."

I like the words of Thomas Jefferson when he said, "If we are to be told from Washington when to sow and when to reap, we shall soon want bread."

I also like his expression, "That country is best governed which is governed least."

I like to read George Washington's Farewell Address as he stresses the wisdom of the avoidance of international alliances.

I come on here as a Senator from Oregon and find myself a member of five very important committees, some of which are very pertinent to the questions that this group, I understand, is considering. I am a member of the Appropriations Committee. I am a member of the subcommittee on naval affairs of the Appropriations Committee. I am a member of the Military Affairs Committee, the Public Lands Committee, and I am also a member of the Immigration Committee. It seems to me I have a wonderful opportunity to serve the American people, and I have nothing left in life to do but to serve them. [Applause.]

I have gone along and been a party to, and assume my share of responsibility for appropriating money and devising ways and means for America to become so strong in a military and naval sense that no nation or group of nations dare attack her, and then with all my heart and soul I want America to mind her own business. [Applause.]

Every elected official or representative of the people in our Nation, from the President to the local town constable, must take an oath of office. In every one of those oaths is the obligation and the promise to protect, defend, and support the American Constitution. When I have taken that oath (and I have taken it many times) I never have had any mental reservations.

For what I am going to say from now on I probably will get hisses from some as well as applause from others, but I have lived my political life as a lone wolf. While I have received the nomination at times of both parties, I have always received the opposition of the organized politicians, in both parties. I am able to stand alone.

When I took the oath to protect, defend, and support the Constitution, the obligation didn't set forth from what particular kind or methods of attacks. I took it to mean from every kind of an attack I was to protect, defend, and support the Constitution.

It is the avowed purpose of Communists to undermine and overthrow our Constitutional Government; so that when out in my State one of the county courts removed Communists from the relief rolls and was forced to put them back on the relief rolls by a representative of the executive branch of our Federal Government, I thought the Executive was violating his solemn oath to protect, defend, and support the American Constitution, because through one of his appointed representatives he was giving aid and comfort to its enemies. [Applause.]

We need leadership in this country whose acts and deeds square with its fair words. [Applause.]

My distinguished colleague from Massachusetts, Senator WALSH, has told you more eloquently, and probably more forcibly, of the hazards of our foreign relationships than I can; but I want to call to your mind the immediate hazards of our domestic and interior relationships. I believe if our Government is to be overthrown it is to be overthrown from enemies within our territory rather than by enemies from without. Our present foes are domestic foes, not foreign foes.

I have taken a great interest in the subject of immigration, in its regulation, and in the supervision of those aliens amongst us who need supervising. Up to now, my efforts have not resulted in anything constructive, and time is fleeting. I have requested repeatedly other Members of the Congress, men who have been here longer than I, to permit me to join with them that we may co-operate together and bring out an immigration bill and a bill governing the conduct of aliens in this country that would have the general and united support of all of us. All I have got so far along that line is merely oral approval signifying that I have a grand idea. I have within the last 2 or 3 days made another attempt for concerted action which I hope will bear fruit.

Now mind you, don't ever forget the fact that my own father was an immigrant and that I have no personal enmity to any such of good character, but when he took the oath of citizenship under our Government but he had no mental reservations. He didn't retain any tie to the land of his origin. He took that oath, as he did everything else in his life, sincerely and honestly, and lived according to it.

And he raised an American family. [Applause.]

We have had tremendous difficulties out in the West. Our leading industry—lumber—the bread-and-butter activity of our population, has been paralyzed, and out there we pay the highest wages that are paid in the world for labor. Yet an industry that had no quarrel with its men, or its men any quarrel with it, has been paralyzed and brought to its knees financially, and the workers have lost their chance to work and support themselves and their families. How and why? Because two conflicting groups of racketeers of honest labor—men who profit from exploiting labor, parasites on labor—were striving for the mastery to sell the labor of others. It has been a dreadful situation, and it has been directed out on our coast by aliens, and our Secretary of Labor has recently held some kind of a hearing and, as I interpret the decision, has put the stamp of approval on those troublemaking aliens as if they were desirable citizens. I am opposed to that idea and that decision with everything that is in me. [Applause.]

I have a bill reported out of committee and now on the Senate Calendar, authorizing an investigation into the conduct of the Immigration Bureau in the Department of Labor. I hope it may effect a thorough and far-reaching investigation. [Applause.] I wish I could get the approval, when I appear before senatorial committees and before the Senate, that I can get when I appear before American audiences, for the ideas that I am now expressing.

Out on the coast we also look to Asia in our foreign relations as well as to Europe. We know the Chinese. The house servants in my father's home were Chinese boys. We know the Chinese to be a fine, peaceable, honest, faithful, loyal people. Those of us who know the Chinese feel as sorry for them and have as deep a sympathy for their plight as anyone of any group can have for any of their group in Europe. China was a peaceful nation. It had done nothing offensive to anybody; minding their own business, getting along as best they could; and then in comes Japan without provocation and slaughters, maims, and destroys them. Think of the terrified, frightened little children, the women, the peaceful men of China. How dreadful their plight.

But having that sympathy, I would not open our doors and permit the distressed people of China to swarm over here and settle in our country as permanent residents, and become American citizens. Neither will I open our doors to take in all of the distressed people of Europe. [Applause.] No man can serve two masters. I owe allegiance to my people—the American people—and I have taken an obligation to support, defend, and protect the American Government. Regardless of how I may sympathize—and I do sympathize—with the distressed people of Europe, I must take care of my own, and they now need taking care of.

Therefore, in view of the trouble that aliens have made for us, in view of the fact that thousands and tens of thousands of Europeans are coming into this country annually regardless of quotas—they are coming here as visitors, losing themselves in our land even to the extent of changing their names—I want to stop all immigration, at least for an experimental period; at least until we approach a solution to our unemployment problems and our domestic administrative difficulties in financial matters and in law observance and maintenance of order and until we have established peace in industry. Then, perhaps if the experiment proves successful, the prohibition could be made permanent.

I want the government of this country to go back to its city halls, its courthouses, its statehouses, and its National Capitol. I object to the prevailing lawlessness, and being told from the headquarters of racketeers of honest labor, from the cells of Communists, and from other unauthorized places of Government what we, as American citizens, may and may not do. [Applause.]

I look back to the founders for guidance. Experience is a wise master. I still am a disciple of Benjamin Franklin and his ideas of industry, thrift, self-reliance, truthfulness, and loyalty; and of George Washington and his determination not to accept a third term. [Laughter and applause.]

To me the Constitution means liberty and freedom. My liberty ceases where yours begins. Oh, I shall name those who inspire me: Washington, Jefferson, John Marshall, Andrew Jackson, and that almost God like man Abraham Lincoln; and Grover Cleveland, when he did not permit interference with the delivery of the United States mail. What a contrast with what happened recently in Michigan.

When I look back to these patriots and statesmen, my reverence for the wisdom of those who founded this great Government of liberty and freedom and opportunity, and those who have carried it on and perpetuated it for us, I say, with Kipling—

"Lord God of Hosts, be with us yet,  
Lest we forget, lest we forget."

[Applause.]

### Connecticut Bankers Association

#### EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS BY WALTER PERRY

Mr. MALONEY. Mr. President, I ask unanimous consent that I may have inserted in the Appendix of the RECORD an address delivered by Mr. Walter Perry, bank commissioner for the State of Connecticut, to the Connecticut Bankers Association at its midwinter banquet, held in New Haven, Conn., on January 25, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Were I to choose a text this evening, it would be found in the sixth chapter of the Gospel according to Matthew, in the twenty-first verse: "For where your treasure is, there will your heart be also." Now, we are led to believe that when St. Matthew wrote these immortal words they were words of admonition not only to the men of his own time, but he was also looking far into the future, and in his mind's eye he saw the board of a mutual savings bank, a few members of which, although they proudly referred to the institution as "our bank," continued to keep their own money, if they had any, somewhere else. In order to correct this seemingly unethical situation I am strongly in favor of a deposit qualification for directors or trustees of savings banks. My reasons for speaking to you about it are these:

This is a very unique gathering, since it is made up of the representatives of National banks and State banks and trust companies, while many of these representatives of both groups are also directors or trustees of savings banks. Although savings banks do not belong to this association, there are probably more savings-bank directors or trustees here than ever gather at the meetings of the savings-banks association, such meetings usually being attended by officers and by but few directors.

Savings banks keep their checking accounts with the commercial banks, both State and National, and occasionally borrow from them. Trust departments of these banks deposit trust funds in savings banks. The stock of every commercial bank in the State is on the legal list for savings banks, so that to a considerable extent savings banks are also your stockholders. Your interests are so interwoven with those of the savings banks that I feel sure I can count on your influence to help add a slight percentage to the number of those who live up to the already high standard of management set by many banks.

Directors of most corporations are required to hold qualifying shares of stock. The law requires this of both State and National banks. It seems to be a sound rule, and one of long standing, that the owners of a business who are stockholders have a right to insist that a director shall have some stake in the enterprise which he serves, and also that the stockholders shall elect him. Boards of management are thus not only the chosen representatives of the owners, but also have a stake along with the other owners.

If we allow that the owners of a mutual savings bank are the people who have their money in it, since there are no stockholders, we must admit that the owners of this particular type of business

have neither of the two usual privileges, that of selection of management, and that of requiring of management a stake in the business. While at present the law gives the depositor neither privilege, if he is the owner in effect, I believe he has a moral right to at least one of these privileges, and future legislation may give him both.

Some claim that depositors are not the owners. There are no stockholders, but there must be ownership somewhere and while we may not agree as to just what type of ownership to call it, there certainly is ownership of some type, though perhaps akin to a vested interest in a trust fund. There is very definite support for the ownership theory in the *Watertown case* (81 Conn. 265), and there is reference to the trust theory in the *Windsor Locks case* (89 Conn. 451). I believe, however, that there is no support whatever to be found anywhere for the sometimes accepted theory that the depositors are nothing but the customers of a business owned by somebody else.

Depositors in mutual savings banks are beginning to be articulate, and during the last three general assemblies they introduced bills, some of which provided for the election of directors by depositors, and some for the appointment by some authority of at least some depositors as directors. Elections by depositors would be cumbersome and impractical. A simple and effective way to remove the cause for this demand, is to provide that those who now elect the directors, elect only depositors for directors, and there you are. Depositors are then directors and directors are depositors. Whether depositors are owners or trust beneficiaries, they are vitally interested in an invested fund of some \$800,000,000, and I believe they have the moral right to demand that the State which chartered these savings banks shall see to it that this fund is administered by the best management that law can provide. The management of the savings of a million depositors should be regarded as a public trust and never a private snap. A law which provides that every member of the managing board of a savings bank must qualify as a depositor of some specified minimum amount will not result in perfect management, but it will help, and it will remove a grievance.

At present a self-perpetuating body of corporators meets only once a year and elects directors who, like themselves, may or may not have a dollar invested in the enterprise. At the time of the last General Assembly, little more than half of the directors of savings banks had any deposit at all. A deposit qualification would be some pledge of good faith and result in better management for some savings banks. Of course, there are many directors who would serve the savings banks, or any other institution, just as faithfully and with as much interest, whether or not they had any financial stake in the business, but the stake I propose would insure the interest of any who might not be in that category.

A national banker, very prominent in your association, told me some time ago that he did not agree with my proposal. He was, however, recently elected to a board of a savings bank and immediately became a depositor. When I asked him why he did that he said, "I would not feel comfortable not to do so." Perhaps, having for so long a time been under the influence of the comptroller's office and Governor Young's office, he had developed a yearning for those activities that are voluntary rather than mandatory, but he certainly knew what was the right thing to do and he did it.

In spite of inroads on earnings, we have been able by a reduction in dividends to maintain surplus at approximately the same level as in better times so that the savings banks are now sound, as sound as before although earning less. In order to continue to keep them sound, we want the best possible management and a management that has the full confidence of the public. If your name alone as a director gives the public confidence in the institution you serve, the public will have an even greater confidence in the institution, and with reason, if it knows that your own money is invested with that of other depositors.

"For where your treasure is, there will your heart be also." And St. Matthew might have added—but he didn't, so I'll do it for him—

Let him that hath stewardship over the treasures of many people, subject his own treasure to the hazards of that stewardship.

### Westminster College, Fulton, Mo.

#### EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS BY HON. JOHN HAMILTON

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on liberalism, delivered by John Hamilton of Kansas, chairman

of the Republican National Committee, at Westminster College, Fulton, Mo., January 30, 1940.

There being no objection, the speech was ordered to be printed in the Record, as follows:

We hear a great deal about liberalism today. In current political discussion few words are more frequently used and few are less understood. It has become a popular catchword, a nebula of half-understood ideas, a smoke screen for designing propaganda of all sorts. In recent years this word "liberalism" has become almost a necessary badge for the holding of public office, although few who claim the label seem to know really what it means.

It seems to me eminently fitting then that in these halls of scholarship and learning we pause briefly to inquire into the nature of real liberalism. Such inquiry, I believe, will disclose that much which passes among us today as liberalism is merely disguised subversive radicalism and a cloak for the schemes of crafty politicians who would substitute bureaucracy for our constitutional form of government, and economic regimentation for our system of free American enterprise.

Present-day liberalism flows from two distinct traditions in the eighteenth century. They are not easy to distinguish because they often express themselves in the same words. The first lays emphasis on reason, on individual initiative, on freedom guaranteed by a bill of rights. It is from this philosophy that real liberalism stems.

The second liberal tradition that has come down to us had its origin in the emotionalism of Rousseau. It emphasizes enthusiasm, collective sovereignty, and, yes, even the uprising of the people. It is this philosophy which has been perverted into the false liberalism of today which, like charity, is used to cover a multitude of sins.

It was on the first of these traditions that the old English liberalism was based—the liberalism which we carried forward in this country for 150 years. In politics it found expression in the formal limiting of the powers of government by recognized respected constitutional checks and grants.

The purpose of a constitution is first of all to compel the sovereign power to act only within the law. Instead of depending on the Government to make them decent, reasonable Englishmen sought to make the Government decent and so to respect the dignity and peace of the individual, to assure men's rights by seeing to it that everyone had legal remedies against usurpation.

The great purpose was to prevent any organized group to rule by sheer brute force. Inevitable conflicts among men were to be settled as matters of principle and reasoned law. This is revealed, for instance, in the whole tone of Burke's speech on conciliation. The argument is based on discussion of the rights guaranteed men under the constitution. "We conquer," said Burke, "not by force but by our constitution." Here is no rule or ruin temper of mind. Discussion here is not intellectual bullying or raucous demand, but a tolerant attempt at a meeting of minds.

Thus, we may define real liberals as those who have learned to exercise self-restraint, to respect one another's independence, to grant one another opportunity for self-development and personal responsibility. In other words, we have real liberalism when people on the whole are intelligent enough to create a social order in which both the individual citizen and the Government mind their own business.

The characteristics of the pseudo liberals are a passion for blind reform, an impulse to crusading, and an attitude of intolerance. Without a cause and a creed their ego shrinks. Their wish to be important is rationalized as devotion to principle. Their lack of inner adjustment and their emotional instability they mistake for philosophic love of truth.

Raymond Moley, in his book, *After Seven Years*, relates an anecdote concerning President Roosevelt that aptly illustrates this type of mind.

The President told Moley that he wanted a "fighting speech" for his annual message in 1936.

"Whom are you going to fight? And for what?" the astonished Moley asked.

The President, Moley says, was vague about whom he wanted to fight or why. But he was very definitely of the opinion that fight he must.

Liberals with such a mental outlook seldom attain intellectual independence; their life is a series of conversions. The objects of their belief shift and change, but the act of believing remains the same. They accept their latest faith with the same infantile credulity and delusion of finality as their first.

Their technique to bring about what has been called the more abundant life is to operate on man from without, manipulate his environment, regulate the conditions of his life. Never mind about individual responsibility—such a term has no place in their vocabulary. Treat every man as an automaton. Emancipate the masses by social machinery.

So they talk glibly of liberalism. But the course they pursue clearly indicates that they are little familiar with Hume and Voltaire. Indeed, from their mouthings one would hardly suspect that Hobbes, Milton, Montaigne, Rabelais, Locke, Gibbon, Shelley, John Stuart Mill, or even our own Emerson and James, had ever lived and made their priceless contributions to the cause of real liberalism.

None has paid greater lip service to liberalism than Mr. Roosevelt and members of his administration. But if true liberalism be what I conceive it to be, let us apply the acid test to the New Deal and its works.

Is it liberalism to demand that our essential liberties be handed over to boards of bureaucrats over which the people have no control because they never submit themselves to the verdict of a popular election?

Is it liberalism to tax business enterprise to death and to shut off the free flow of investment funds into new enterprise?

Nowhere in the world have enterprising young men with only meager capital had such opportunities to start in business as in the United States.

Is it liberalism to take from them their surplus earnings in the form of an undistributed-profits tax and prevent them from plowing back these earnings into a growing enterprise?

Is it liberalism to thus prevent the growth of small business? Is it liberalism to leave the small-business man so little profit that when slack periods come he has no funds to tide him over and must close up shop?

Is it liberalism to use the prestige of the Federal Government to split organized labor wide open and embroil it in civil war?

The answers, I believe, are obvious. And I also believe that you will agree with me that true liberals, today as always, are those who are making a determined fight against the centralization of government powers in one man. True liberals would never vote for such relics of the reactionary periods in France and China as the New Deal schemes to restrict by compulsion industrial and agricultural production and fix prices. True liberals favor enforcement of the antitrust laws and not their suspension.

True liberals would never vote for irresponsible fiscal measures and for monetary tinkering which chiefly benefit a few speculators at the expense of the industrious farmer and worker. True liberals today are fighting against domination of the labor movement by government bureaucrats.

True liberals do not harbor in their party leaders who deny men their constitutional rights of free speech and assembly. True liberals cannot remain silently acquiescent when funds voted to relieve the distress of the unemployed are used for partisan political purposes.

For a short period after entering the White House Mr. Roosevelt indicated an understanding of true liberalism, for he said that "too often in recent history liberal governments have been wrecked on rocks of loose fiscal policy." What he then feared has happened, for today Mr. Roosevelt regards as a liberal anyone generous and liberal with other people's money.

So much for the liberalism of the New Deal. Now let us look at the attitude of the New Deal toward youth. The question has been raised in your series of discussions here as to whether student America should concern itself with politics. The answer is a short, sharp, decisive "yes." For the students of America are young, ambitious, and self-reliant. They do not want government hand-outs, but a real opportunity to help themselves.

And what hope does the New Deal hold out to them? Let me quote you what Aubrey Williams, head of the National Youth Administration, said in an address before the Council of Social Agencies of Buffalo, N. Y., in 1936. I quote:

"Thousands of young men and women leaving our schools each year are destined never to become self-supporting and independent in the sense that your and my generation were led to believe was our due. The supply of workers exceeds the demand. Man power is a drug on the market. The productive forces of this country are glutted with brain and brawn which they cannot use. And what can't be utilized is simply laid aside to molder and decay."

Are you willing to be "laid aside to molder and decay"? Are you willing to accept that philosophy of defeatism? Never; not if I know the spirit of the students and youth of the United States.

A significant report was made recently by the American Youth Commission, a body of leading educators and industrialists that inquired into the nature, extent, and causes of the problem of unemployed young men and women.

The report stated that the rate of unemployment is higher among youth between 20 and 24 than in any older age group, and that the rate of unemployment above the age of 55 is not nearly as high as under the age of 25. The report also stated and I quote directly:

"\* \* \* the number of farm boys who reach the age of 18 each year is more than twice as great as the number of farms that fall vacant. Opportunities \* \* \* are reduced by the growing concentration of business and the diminution in the number of small businesses. \* \* \* The restrictive rules of trade unions and professional associations have limited \* \* \* openings for beginners."

And the only answer the New Deal has—the only answer it has ever had in its futile and costly attempt to solve the unemployment problem—is the creation of more work projects.

Is it really, as the report states, a growing concentration of business that compels us to throw young producers on the scrap heap before they have even begun to produce? If that is so, should not some thought be given as to whether business should not be deconcentrated?

Is it truly the diminution of successful small businesses that is to blame? Then how about working to restore small businesses? Are our prospective farmers really outnumbering the farms? Could Government policies curtailing crops and tending toward even larger farms have anything to do with it? Are the restrictive rules of trade unions a factor? Then should not some attention be given to modification of those rules?

And while we're about it, shouldn't we get rid of every depressive rule and practice; every price-fixing, trade-barricading, production-thwarting, competition-stifling dodge that is hamstringing our

economy? Hasn't the time come to stop feeding free men the dangerous pap that the way for a Nation to get rich is to destroy its wealth, restrain its production, and restrict its jobs?

On April 13, 1936, Mr. Roosevelt made a speech in Baltimore, addressed to the youth of the Nation. What he said was little noted nor long remembered. In view of the New Deal record since that time, a rereading of that address today leaves the impression that its significance lies not in what Mr. Roosevelt said but in what he failed to say.

It was in this address that Mr. Roosevelt said that "some people tell you that even with a completely restored prosperity there will be a vast permanent army of unemployed. I do not accept that." How hollow that sounds in view of Mr. Roosevelt's more recent utterances on the subject.

And when in Baltimore Mr. Roosevelt discussed reemployment he failed to make mention of the obvious truth that if corporations were not allowed to keep surpluses it would mean the curtailment of employment and the reduction of wages as soon as the inevitable rainy day came.

He did not say but well he might have said that every young man and young woman coming out of college knows that there can be no jobs unless business is making some profit.

And he might also have well said that all young people know that if we do not encourage industry, if we pass legislation which hinders and stifles business, this will create more unemployment and, therefore, less opportunity for young people to get jobs.

Yes, Mr. Roosevelt might well have said these things to the youth of America, because our young men and young women understand conditions pretty well—many of them better than the New Deal administration.

They understand that unless the finances of the Nation are put in order, it is the youth of America and the generation to come who will have to pay both direct and indirect taxes to liquidate the already colossal and ever-growing Federal debt.

Fresh from school, high school or college, our young men and women know that a business house cannot add employees unless it can afford to pay them. They know that industry is as anxious to employ more workers as unemployed workers are anxious to get jobs.

Waiting impatiently on the threshold of life, youth realized that its opportunities can never rise until, with the overwhelming force of its millions of new votes it removes extravagant and experimenting officials from high office, lifts the weight of Government interference from business, and permits a return to normal conditions, in which youth will find its place.

To a large extent there rests today on the shoulders of the youth of America the responsibility of bringing America back from the ruinous Roosevelt experiments. In the hands of youth lie the ballots which can bring the change next November—a change which would mean restoration of youth's opportunity and the deliverance of the Nation from 8 years of political and economic bondage.

## Democratic National Committee

### EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. BARKLEY. Mr. President, I ask unanimous consent that there be printed in the RECORD the address delivered yesterday by Hon. James A. Farley, chairman of the Democratic National Committee, at the meeting of the committee at the Willard Hotel, in this city.

There being no objection the address was ordered to be printed in the RECORD, as follows:

Once more we are gathered to formulate plans for a continuation of democratic government. This means that our procedure and our processes must be such as to prevent any interruption of the program which has kept our country at peace amid a world the countries of which are either actually at war or are trembling at the menace of war; a program that has restored business to a peak that has not been paralleled since the last Republican administration led us into a depression that shook the foundations of the whole American system. We must all shudder to contemplate the depth to which our failure to win the 1932 election would have plunged the country.

The peril of those dark days was averted by the Roosevelt policies, and as a result of those policies the United States continues to be the greatest nation in the world—great in its wealth, great in its power, and more important than all, great in the circumstance that our people are the envied of all the earth. All we know

about food rations and interference with the natural rights of free people is what we read in the reports of conditions abroad.

The Democrats have accomplished all these things without the sacrifice of any of our cherished institutions. We continue to have freedom of speech, the freedom to worship as we please, freedom to develop individual enterprise, and freedom to enjoy the proceeds of our industry.

The mere fact that we have intensive political activity in this country is in itself the finest evidence that we are on the right track and going strong. Where else but on this continent is it possible today for an opposition party to flourish? Where else would any group or individual be permitted to assail the government, to question its motives, and to urge the people to strip it of power? In any other country this would mean revolution. Here it means filling the air with radio clamor, filling the newspapers with critical editorials, and filling the CONGRESSIONAL RECORD with speeches for or against the administration. These things are probably the healthiest manifestation of the sturdiness of American principles and our greatest safeguard against the evils that beset the other great commonwealths of the world.

True, we have by no means solved all the problems. True, the job our party undertook 8 years ago has not been completed. Much remains to be done, and it is our part to see to it that what remains to be done will be done in orderly, democratic fashion. So I address you today not merely as the chairman of this committee, but as an American citizen, proud of the progress we have made and eager and anxious that there shall be no let-up in our efforts to preserve all our American liberties and to enhance the happiness of our people.

Naturally, our political foes question Democratic competence to meet the problems that still exist. They point to the vastness of our Federal debt. They emphasize the perils of an unbalanced Budget. They declaim against continuing unemployment and the size of the relief rolls. That is their right, and is perhaps the only method available to them to forward their hope of regaining control of the Government. They dare not permit the comparison of things as they are, compared with things as they were, when a disgusted country turned them out of office for simple incompetence—for a complete bankruptcy not only of policy but even of ideas.

Of course we have a huge Federal debt; that is the price we paid for averting chaos. The situation is comparable with that of a family stricken with a dreadful disease that goes into debt in order to save the patient. We have had a big debt before, and have worked out of it with no great distress. The Roosevelt Administration did not invent the deficit. We had 2 or 3 years of deficits under Mr. Hoover. The difference between those deficits and ours is that the Hoover deficits accomplished nothing, while the Roosevelt deficits fed and housed millions of people and gave business the backing which has enabled it to substitute dividends for assessments; to substitute sound and secure banks for the toppling array which closed the doors of more than 6,000 national and State banks in the few years prior to the banking holiday, which was the first act of the Roosevelt Administration.

I confess that I have no great apprehension as to the result of the forthcoming election. Until or unless the Republicans are able to formulate a better program to take the place of our program, I do not think there is any danger of the voters of the United States consenting to any interruption of the course that has brought us so far on the road to recovery. It has long been a political maxim that in a political campaign you cannot beat anybody with nobody. It is equally true that you cannot beat any program with no program.

We have come through more than 7 years of an administration that has expended enormous sums with not a single scandal. It is quite possible—in fact, it would have been a miracle if in our wide distribution of relief some fellow had not received a basket of groceries for which he was able to pay. But I think you will agree with me that it was better to have a limited amount of this petty chiseling rather than to have deserving and destitute people go hungry because some relief administrator was hardboiled or too busy to bother with such petty things. We have had no Teapot Dome scandals, no hundred thousand dollar bribes in a black satchel, or anything of that sort to blemish our record as custodians of the country's welfare.

But while I express to you my sincere belief that our party is in a healthy condition and still has the warm affection and support of the majority of our people, I must urge on you that we cannot afford to take any chances. The opposition is bitter and resourceful. It has at its command bottomless money bags to carry on its campaign. The eminent gentlemen who possess the greatest wealth in this country are hungry for a return to the old conditions by which they dominated the Government for their own advantage and profit. They will have dollars where we have dimes, to pay the normal expenses of the coming campaign. And long practice has made them experts in how to put their dollars around.

Against a united Democracy our enemies are helpless. Between the two great parties are roughly 10,000,000 voters who will cast their ballots for the best candidates and the best program that is offered. It must be our job to so conduct our campaign that those independent voters will adhere to the allegiance they gave in 1932 and 1936. Nothing would so tend to make them waver as the spectacle of a shattered Democratic front. I look forward to a very active pre-convention campaign, for there are many candidates, each with his devoted adherents. The greater the enthusiasm that can be aroused for these varying candidacies, the greater the good to the Democratic Party, always provided that

the preconvention campaign does not become so bitter that the rivalries will hold over beyond the period when our coming convention gives us a ticket.

Officially the Democratic National Committee can, of course, take no part in the preliminary struggles. We all have, of course, our individual preferences. But the guiding principle must always be that the Democratic National Committee is for the candidates selected by the national convention, unqualifiedly, enthusiastically, militantly.

Our function is to see to it that our party workers have every encouragement. We did not win the other elections. Those were won by the party workers; by the men and women far down in the ranks who gave their time and all that was in them to the maintenance of Democratic principles and to carry the message to the whole country that our candidates were the men best fitted and most eager to serve the public interest. I have the deepest appreciation of the faithfulness with which you men and women have carried on. May I take this occasion also to thank the vice chairmen and women of this committee, including sturdy, stalwart John Nance Garner, Vice President of the United States. Let these words of gratitude go to the State chairmen, the State committeemen, the county chairmen and the county committeemen, district captains and ward leaders, and that other multitude of good Democrats who, without title, labored so tirelessly in the past. I know that I do not appeal to all of these in vain when I ask them to take up the burden again and to work as hard and to strive as tirelessly in the coming election as they did in the past elections.

Victory is again within our grasp. We can only lose if, through overconfidence, we neglect to do the things that we are able to do or to slight our individual tasks with the idea that somebody else is sure to shoulder the burden.

It seems to me that it is the best political strategy to regard no battle as won until the ballots have been counted.

In fact, as to the coming election, we should regard the size of our majority as only less important than having any majority. The fight for popular government, which has been the mainspring of every Democratic campaign, is not over on election day. It must be our aim to make the assurance and the sustaining of democracy so plain that the lesson to our adversaries will not be lost sight of in the future. In no other way can we make certain of a long continuance of our party in power. We can and should demonstrate that regardless of candidates our determination is to give this country the best government that can be furnished. We must never lose sight of the principle that good government is good politics. We must realize that our term in office can last only so long as our administration meets the popular will and wins the popular approval. We are all good Democrats, of course, but we are loyal Americans first.

Let me thank you again for your service to your party and your country. And now let's get to work.

### South Carolina Political Forum

#### EXTENSION OF REMARKS

OF

HON. JAMES F. BYRNES

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA

Mr. BYRNES. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting address delivered by the distinguished Senator from Florida [Mr. PEPPER] on February 1, 1940, before the South Carolina Political Forum at the University of South Carolina at Columbia, S. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Reaching from the tidewater of Virginia to the plains of Texas lies an area one-third of continental United States. This region forms a great crescent bounded on the east and south by the Atlantic Ocean and the Gulf of Mexico, which meet at the southern tip of the Florida Peninsula, and on the north by the Ohio River and the Potomac. Traversed by the great waterway of the Mississippi and its tributaries, crowned by the Blue Ridge, the Great Smokies, and the Ozark Mountains, basking in the salubrious climate of the temperate and subtropic zones, endowed with an abundance and variety of natural resources and presenting every promise of potential bounty, are 13 great States comprising the South.

Let us take a quick look at a business-like inventory of that South.

Population: Estimated (1937) over 36,000,000; white, 71 percent; native born, 97.8 percent.

Land: Total area, 552,000,000 acres, or between one-fourth and one-third of Nation's total. Soil types, three hundred odd; farms, 2,380,000, or nearly 40 percent of Nation's total.

Climate: Range, temperate to subtropical. Area with frostless growing season over 6 months; about 50 percent of Nation's total. Area with 40 inches or more annual precipitation, two-thirds of Nation's total.

Forests (southeast): Commercial forest area, 198,000,000 acres, or about 40 percent of Nation's total; saw timber area, 30 percent of Nation's total; virgin area, 15 percent of Nation's total; hardwood area, 78,000,000,000 board feet, or 43 percent of Nation's total; softwood area, 121,000,000,000 board feet, or 8 percent of Nation's total; southern yellow pine, 118,000,000,000 board feet, or 98 percent of Nation's total.

Minerals: Soft coal reserves 5 percent of world's total, 10 percent of Nation's total; soft coal supply, 20 percent of Nation's total; coal seams untapped, 98 percent; iron ore, 10 percent of Nation's 1930 supply; phosphates, 98 percent of Nation's production; petroleum (including New Mexico and Arizona), more than 65 percent of Nation's production; natural gas, more than 60 percent of Nation's production; others available, limestone, granite, sandstone, basalt, slate, marble, copper, bauxite, manganese, clay, lime, soapstone, and barite.

Power: Installed hydroelectric capacity, 27 percent of Nation's total; undeveloped hydroelectric capacity, 13 percent of Nation's total.

Wealth and income: Tangible wealth (Southeast), \$1,498 per capita. Bank resources: Highest Southeastern State, not over \$275 per capita; highest State in Nation, \$1,850 per capita. Savings deposits: 7 Southeastern States, under \$50 per capita; 6 Northeastern States, over \$500 per capita. Average income: The South, \$314; the Nation, \$604.

Cotton and tobacco: Total annual production range for cotton, 12,500,000 to 17,000,000 bales; proportion of 1932-33 world consumption grown in South, 58.2 percent. Tobacco production (Southeast), 1,600,000 pounds, or 85 percent of Nation's total.

Textiles, pig iron, and cigarettes (Southeast): Producing cotton spindles (1929), 58 percent of Nation's total; counties with over 100,000 spindles each, 56 of Nation's 79; pig-iron production, 7 percent of Nation's total; cigarettes, 84 percent of Nation's total.

Fish and game: Furs (1 State), 6,000,000 furs from 20,000 trappers. Value of 1929 commercial fisheries: Southeast, \$22,000,000; Nation, \$104,000,000.

Transportation: Railways (1931), Southeast: Main track, 52,433.48 miles. Main track to 1,000 population: Southeast, 2.05 miles; Nation, 2.03 miles. Main track per 100 square miles: Southeast, 10.27 miles; Nation, 8.22 miles. Locomotives, 11,205, or about one-fifth of Nation's total; freight cars, 431,264, or about one-fifth of Nation's total; passenger cars, 7,979, or about one-sixth of Nation's total.

Highways (1933), Southeast: State and local, approximately 666,666, or 22.1 percent of Nation's total; surfaced, 70,638, or 26.6 percent of Nation's total.

Other facilities: Mississippi and tributary river systems to other regions and to Gulf and Atlantic coasts; Atlantic and Gulf ports for seagoing vessels; major air lines serving each of the major cities.

(NOTE.—These data refer to the 13 Southern States of Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, Oklahoma, and Texas, except where noted "Southeast," omitting Oklahoma and Texas.)

It might be added that this South is bordered by thousands of miles of coast line affording innumerable and excellent harbors for seagoing transportation, while the whole region is traversed by a generous portion of the Nation's internal waterways.

Southern shores, rivers, streams, and lakes abound in shrimp, shad, oysters, clams, scallops, mullet, mackerel, sponge, trout, bass, bluefish, frogs, and turtle to the extent that the South supplies the Nation with more than a fifth of its total commercial fisheries' products. A high authority states that the best fishing in the world is found in the waters of the Gulf of Mexico off Florida.

The South has almost half of the country's agricultural workers. It has four-fifths of the Nation's female farm workers.

These are good things about the South in terms of physical assets. The richness of her culture, the nobility of her spirit, her ability to sacrifice and to suffer, the soaring reach of her idealism, the deep roots of her understanding, and her culture, are a worldwide tradition which shall in the future, as it has in the past, dignify and beautify the pages of history.

Unfortunately there are some bad things about the South. Eleven of the twelve States with an annual per capita crop farm income of less than \$200 are in the South. The average annual wage of southern industrial workers is but two-thirds of that of the industrial workers in other parts of the country. The 12 States in this country in which the average per capita wealth is less than \$2,000 are Southern States, and the figure for the thirteenth Southern State is only slightly over the amount. The South has been so unable to accumulate productive capital assets out of her sparse income that the average per capita income from dividends and interest is but a fourth of that for the rest of the country. Taxable property in the South yields to State and local governments but three-fifths as much revenue per person as that of the Nation, and southern income yields per person are less than half as much Federal income-tax revenue as that of the Nation as a whole.

More than half of the Nation's illiterates are in the South. In the South only one out of six school children is in high school, as compared with one out of four for the other parts of the Nation, and the combined endowment of all southern colleges and universities is less than that of two large northeastern schools.

The South has to bear the scourge of malaria, typhoid, hookworm, pellagra, venereal diseases, tuberculosis, and other sicknesses, which, if attacked with adequate means by medical science of today, could be eliminated or controlled. Malaria takes a toll of a third of southern laborers' industrial productivity. Pellagra, the disease of malnutrition, is readily preventable, and yet afflicts 1 southerner in 50. Perhaps half of the school children receive inadequate diets. Tuberculosis, rickets, and anemia generally harass those improperly and insufficiently fed.

Farms in the South are small; 1 in 5 is less than 20 acres. Two-thirds of the Nation's tenant farmers are in the South; and half of the southern farmers are tenants. A small farm operated by a tenant farmer means that every available acre must be tilled; that little or no incentive exists for conserving the land; and that cash crops receive an undue share of attention. Cotton, corn, and tobacco continually planted without cover crops, contour plowing, and other devices for conserving and restoring the essential qualities of the soil, have wreaked havoc with land originally so fecund. Of the South's 100,000,000 acres, or three-fifths of the Nation's badly eroded soil, over 20,000,000 acres are ruined beyond recovery. This is the uncounted harvest of intertilled cotton, tobacco, and corn.

There are no more deserving people in the world than southern farmers, yet only 1 farm in 20 has water piped to the house; only a third of the houses are protected from flies and mosquitoes; 1 farm in 5 does not have a privy. According to modern housing standards, half of the farmhouses have been described as inadequate for human habitation. Of the 10 States in which the value of farm equipment is less than \$200 per farm, 9 are Southern States.

The farmer has no monopoly on privation; the industrial worker shares his lot. Two out of five southern urban homes are substandard, with more than one-fourth of these lacking sanitary plumbing. Before the effective date of the Fair Labor Standards Act in 1938, more than two-thirds of the southern textile mill workers received less than 37½ cents an hour while two-thirds of the northern millworkers received more. In spite of the very high standard of wages which prevails in certain cotton textile mills, which are highly to be commended indeed, it is unfortunately true that, taking southern cotton textiles as a whole, reports to the Bureau of Labor Statistics for November 1939 indicate that there was still a difference in average hourly earnings of 7½ cents between the North and the South.

What I have said is unpalatable to us who are of and who love the South, but I have presented a sketch of our assets and liabilities. The facts and figures are not mine; they are gleanings from the thorough work of scholarly people who have been permitted more time than I to make a survey of southern problems. This is what has been variously called the Nation's economic problem No. 1 and the Nation's No. 1 opportunity, appellations which to me have seemed synonymous. This is the good and the bad which we must accept objectively in our efforts toward solving the problems before us.

Let us look at some of the causes of these dark shadows across the picture of the South. Until the War between the States, this region was in many respects the richest section of the Nation. The devastation of the war itself and the subsequent reconstruction cannot be estimated in terms of money. The accumulated capital represented by slaves alone has been estimated at \$3,000,000,000. This was wiped out together with other forms of capital. The whole "going concern" value of the South was dissipated. The waste of cities pillaged and homes and factories burned, her young men killed and maimed, and women and children ravaged by disease and starvation left the South prostrate and at the mercy of a bitter and hostile North. Under these tremendous handicaps her efforts to build herself anew inevitably forced the South to place herself in hock to the remainder of the Nation.

The passions and prejudices of the war are gone, but the economic burdens which were its aftermath in the South are deeply entrenched and linger on to plague her people.

Undoubtedly the fact that our economy had been built on slave labor and had to experience the shock of an adjustment to free labor, together with the hazards of weather, price, and markets growing out of the two-crop system, have contributed immensely to much of our unhappiness.

The southern farmer, forced to purchase his commodities in a protected market and sell his products in an unprotected world market, without adequate capital to finance his efforts or to enable him to choose to whom or where he shall sell, and paying for the money he uses at exorbitant interest, has continually faced a combination of economic forces which have kept his nose to the grindstone.

Again a freight-rate structure had grown up in the Nation which to a large degree isolated the South economically from the rest of the country. Such a system of rates put the South generally under a 30-percent disability in reaching the great market north of the Potomac and east of the Mississippi, and, naturally, limited the extent of the South's competition.

A low wage scale not only pulled down the South's standard of living but it so reduced the South's purchasing power that we have had no adequate market for what we produced.

Moreover, there has been a continuous draining of the South's resources and wealth into the pockets of the great financial centers of other sections of the country. Not only were our forests, mines, and minerals—in fact, essentially everything we had of Nature's endowment—being developed to the profit of absentee investors, but our savings as well, poured in a steady stream into insurance companies, investment houses, banks, and enterprises of all kinds and character centered principally in the North. The North was the owner of the machines and the patents constituting the essentials of our mechanization and industry, and to them went a steady tribute. Meanwhile the Federal Treasury poured out to citizens of the North billions of dollars in the form of pensions and business subsidies, while the South continued almost "a stranger in a strange land," her status still almost that of a province, as she was after the Civil War, except only that her subjugation was economic and political instead of military.

Standards of public education and public-health facilities for research and graduate education in the South, being lower than in other parts of the Nation, were an incalculable drag upon our ability to progress and our advancement. Because of a combination of all of these conditions it is not surprising that the South has lost every year thousands of its most alert and enterprising young men and women, whom it has trained and educated at painful expense, to devote their increased productivity to a further disparity between the South and the North.

What forces have been at work to improve our situation? For the first year after the Civil War the energies of the South were dedicated to a restoration of our civil order, the preservation of the essentials of our civilization which war had shattered and all but destroyed. With matchless faith and courage we entered upon the lonely and hard struggle against odds which would have destroyed the faith of a less virile and determined people. By the end of two decades the South had thrown off the shackles of military force and dominion and regained its political sovereignty. Again self-determining, Herculean were its efforts to build a new edifice from the fragments of the old and the vital materials of new hope and new opportunity.

But the new prosperity which came to the South in the wake of the great sales campaign of the South's resources so effectively launched and sustained by Henry W. Grady, and his colleagues, fattened only a few chosen spots in the South and almost as many out of the South. Nearly everywhere there was still abject poverty, the natural consequence of the shock of the war and the disrupted economic order of pre-Civil War days. So the State and the local governments had little money for education, less for public health, and hardly any at all for public aid either to agriculture or to native industries.

Moreover, a great part of the South's ills grew out of the attitude and the policy of the Federal Government, and, of course, the Federal Government for nearly two decades after the Civil War was the armed enemy of the South. Afterward those dominating this Government disclaimed the South's problems unless they afforded an opportunity for exploitation of the South's virgin resources. Hence, the local governments were not able to discharge their obligations, and the Federal Government was not interested.

Though there has been a steadily increasing tempo in the South's progress, the last 6 years have seen a more fundamental and sympathetic attack upon our real problems than has ever been made. A glance only at these 6 years will show what a friendly Federal Government has done for the South. During the past 6 years the nonrepayable Federal expenditures in Southern States amounted to \$5,400,000,000. Repayable loans totaled \$2,900,000,000. In addition \$300,000,000 of F. H. A. home mortgages have been insured. These figures are exclusive of the activity of the United States Housing Authority in erecting low-rental housing units to replace the substandard dwellings that so many of our southern people are forced to inhabit.

During this period the Reconstruction Finance Corporation has loaned \$700,000,000 to stabilize and increase credit of southern business. Some \$900,000,000 has been loaned farmers and livestock raisers in the South during the 6-year period by the Farm Credit Administration. These loans included a quarter million long-term amortized loans on farm properties, 1,000,000 crop-producing loans and one-half million loans to livestock growers. Also more than 75,000 loans were made for drought relief. Over \$90,000,000 has been loaned to over 400,000 needy families by the Farm Security Administration's Rural Rehabilitation Division and subsistence grants allowed by the agency amounted to \$65,000,000 for the period. The Rural Electrification Administration has loaned \$17,000,000 and provided 24,000 miles of electric lines to serve 90,000 families.

During this period the Public Works Administration made over \$300,000,000 available to Southern States for a variety of public projects including schools, waterworks systems, sewers, jails, university buildings, libraries, hospitals, disposal plants, auditoriums, recreation centers, fire houses, gymnasiums, bridges, and streets. Home owners who found their property about to be seized because of unfortunate personal financial troubles found relief through loans made by the Home Owners' Loan Corporation, which loaned \$480,000,000 to 200,000 distressed home owners. The Federal Housing Administration insured \$210,000,000 for the building of new homes or for refinancing existing homes for \$52,000 southern families, and insured \$80,000,000 loaned to 217,000 southern families for modernization and repair purposes. The Bureau of Public Roads has spent \$410,000,000 in building more than 21,000 miles of southern roads and in eliminating over 1,000 grade crossings.

The Agriculture Adjustment Administration has made 4,500,000 crop-adjustment contracts amounting to \$900,000,000 with southern farmers, to stabilize prices and allow them to change their crops from those that deplete the soil to those that improve or conserve soil resources. The important programs of soil-erosion control, forest-fire protection, and reforestation have been aided tremendously by the expenditure of \$32,000,000 in the southern region during the period by the Soil Conservation Service, which also operates several demonstration areas throughout the Southern States.

With an expenditure of \$570,000,000, the Civilian Conservation Corps has provided admirable training to 586,000 enrollees in the South who during the 6-year period made great improvements in forest areas, through extensive conservation and reforestation.

Relief expenditures have amounted to nearly a billion and a half dollars and in addition to giving jobs to hundreds of thousands of our needy and unemployed, have resulted in an impressive array of public improvements: roads, bridges, culverts, curbs, schools, athletic fields, playgrounds, parks, tennis courts, golf courses, water supply, sewage systems, and improvements made to thousands of such families. More intangible but worthy contributions to southern life have been made through projects for serving of hot lunches to needy school children, nurses to visit indigent homes, furnishing clothing made in the sewing rooms. Finally, there is the research and clerical work which has helped so many local governments in their work.

The National Youth Administration has aided 93,000 southern students in providing adequate work for them to do so that they can earn their education. Fifty thousand youths who are out of school but need assistance have been helped by the N. Y. A. work projects. Another great humanitarian venture is the social-security program, which through State and local authorities has provided aid in the South to 8,800 needy blind people, 410,000 aged persons, and 150,000 dependent children. The Federal expenditures for the program have amounted to \$72,000,000.

The Corps of Engineers of the War Department has done \$300,000,000 worth of river and harbor development and flood-control work in the South for this period. Even the angry floodwaters of the Mississippi have been successfully harnessed.

The contribution of the Tennessee Valley Authority in reclaiming a great valley of the South cannot be measured in terms of money. It has provided a pattern of such magnitude that the history of the Nation will be affected by it henceforward.

The employment work of the United States Employment Service, the securing of bank depositors' savings through the insurance by the Federal Deposit Insurance Corporation, the extensive research work of the Department of Agriculture, the distribution of surplus commodities—all have made a peculiar contribution to the South's rehabilitation.

Late in the session of 1938 the Congress passed the wage-hour law. Many claimed to see in it the death knell of the South. Others of us saw that the South had to raise her wage scale to get a greater purchasing power, which in turn would lead at once to a better market for southern industries and agriculture, and a higher standard of living for the southern worker. We saw also an economy of the South's native resources which had been squandered without conscience and without economic justification, except by the use of sweated or underpaid labor. There was also the thought that the accelerated emergence of a skilled labor supply of strong and intelligent people would attract industry requiring more skill and responsibility in the worker. In spite of the shock which always follows a fundamental change in economic conditions, and a number of defects in the law, which experience has revealed and are in process of adjustment, the satisfaction with the law has been far more general than was anticipated, and it is realized that the law was an inevitable attribute of the times.

The South has already gained from the Congress two major concessions as a result of the wage-hour law. The first is the provision in the transportation bill, which passed the Senate during last session, directing the Interstate Commerce Commission to take such steps and to enforce such rules and regulations as will abolish and prevent freight-rate discrimination against any section or region of the country. This provision is also in the House bill, and will undoubtedly become the law at the next session of the Congress.

Here is one of the major obstacles to the South's progress, which would otherwise have challenged our best efforts for years, swept away in a few months after the wage-hour law became effective.

After these differentials are removed, the products of southern industry will be able to enter the great markets of the country without having to surmount a freight-rate structure which was, in effect, a tariff wall shutting out the South's products.

The second glaring discrimination against the South has been a W. P. A. security wage scale which gave the worker in the North or West much greater compensation than the southern worker for the same labor. The southerners who resisted a W. P. A. wage higher than the impoverishing prevailing wage are as much responsible for this condition as uninterested outsiders. This differential we abolished in the Emergency Appropriation Act of 1939 with the proviso that workers must be paid the same wages the country over for the same work, with a permissible allowance only for actual difference in cost of living. We know that if the same standard of living is maintained, the difference in living cost in different sections of the country is hardly more than 5 percent. Thus, more millions of dollars will come to southern workers and southern merchants.

The passage of the wage-hour law has given the remainder of the country a new feeling about the South. Realizing that the South thus undertook new burdens, they have been willing to relieve it of many old discriminations and handicaps.

The Conference on Economic Conditions in the South, summoned by the President, held in Washington in 1938 was the first time a President of the United States has so conspicuously and so conscientiously set in motion the machinery of government designedly to help to a new life a particular section of the country. No other President has been so close to the South, has had the same knowledge of its problems and the same sympathy for our difficulties, as has President Roosevelt.

In Congress a real fight is under way to meet another great need of the South—adequate capital and credit for business and business expansion. The South's vast resources are notoriously owned and exploited by absentee ownership. The South did not have the money to develop these resources, and it has had to do what Henry W. Grady and southerners after the Civil War did—beg northern capital to "come over into Macedonia and help us." Help came, but it stayed and took over the place generally.

As a consequence, our transportation systems, our utilities, our mines and factories, are not ours. While our resources have been used up, and wealth from our Treasury has poured into the coffers of other sections, the South has gained little in either taxes or wages. With 28 percent of the population, our investment banking facilities were less than 20 percent of those of the Nation. Big investment bankers of the North were not interested in our unknown issues. Such issues were not proper subjects for houses which have a large overhead expense and have to sell quickly. Everywhere there has been an admitted demand for effective long-term credit to small- and average-sized business, impossible through the existing banking system, which by its very nature can accommodate only short-term commercial demands.

Accordingly, hearings have been held, or are under way before the Senate Banking and Currency Committee and the Temporary National Economic Committee on the Mead bill, providing Reconstruction Finance Corporation insurance for bank loans to small business, and the Pepper bill, contemplating a system of regional banks with an adequate capital subscribed by the Government initially, but open to subscription by the public. Such banks, governed by boards chosen jointly by the President and private investors, would be reservoirs of capital and credit not drying up in bad times, and having available equity capital and investment capital, as well as both short- and long-term credit. The plan includes also a system of insurance for the funds employed so that a large distribution of any loss may be had. From such facilities the alert and responsible businessmen of a section may develop the resources there, and their increment will go to enrich their communities and States, as well as themselves.

Laboratories and experimental research in agriculture and industry the Government has also established in the South. A vast new industry—the kraft-paper industry, has, to a large degree, grown out of a forest-conservation program of the Federal Government. Florida and Mississippi have recently joined Virginia in shipbuilding under the Maritime Commission contracts. Army and Navy air bases, alert eyes and arms of our Nation's defense, and furnishing a permanent pay roll, dot the South.

The greatest effort we have ever seen has been made by the Government to stabilize the income of farmers. Control programs, subject to the approval of the farmers themselves, have been set up, by which production and price have been relatively stabilized. Crop insurance against the hazards of weather and pests has been provided for the wheat crop; a recent Senate bill extended it to cotton. Soon it shall assure the producers of all major crops, and the gamble, which the farmer could never afford, will have been largely removed.

A vast program for Federal aid to public education, which will have the effect of equalizing the educational opportunity of the children of the South with the offspring of the North, is upon the Senate calendar with a favorable report from the Senate Education and Labor Committee.

Also upon the Senate calendar, with a favorable committee report, is a bill for Federal aid to the States in affording required training in the public schools for physically handicapped children, and for children in the tender, but important kindergarten stage.

Last year the Congress vastly increased the funds available for vocational education.

The Wagner bill, providing for Federal aid to the States in furnishing better health facilities, will give the South means for health work which now is so pathetically needed. Recently the Congress, with larger annual appropriations, launched a great attack on cancer and venereal diseases. New funds for research in the virus diseases are about to be voted to the Public Health Service.

Here, then, are only a few of the instances in which the Nation, through the effective instrumentality of its Government, is undertaking a program which reaches down to the very roots of our problems. Gone is the old enmity and the ancient indifference, and in their place in the White House, in Congress, in the bureaus there are men and women who are zealous to be helpful to the South, to make things better with us.

What is the South's future? Are we to remain an agricultural economy, or shall we forsake our ancient role and embrace the new industrialism? Or shall we, perchance, be the favored region where a proper balance between the two may be struck? Shall those who locate industry hereafter take into consideration the opportunities which a certain locality offers for living as well as for working? To

what extent shall an equable climate with a long growing season where the laborer cannot only have a home but a garden influence the establishment of a factory? Are we about to lose cotton as our great crop to other countries having lower labor standards or to substitutes? Or shall we meet lower costs by less cotton production or by machinery displacing manpower? If we do lose cotton, what shall take its place? How shall we accommodate the millions of unskilled labor now engaged in cotton production to an abrupt change if it should occur? Shall we go in for subsistence farming and the exodus be to the farm for food and shelter? If so, what shall be the cash crop? Shall we turn to home manufacturing again, or to decentralized industry, where small units shall be distributed over the countryside? Due to our proximity to Central and South American countries, shall we in the deep South be great assembly centers for American production, where raw material from those countries and the factory shall meet? What changes shall research and discovery make in the South in the next quarter of a century?

There are many who think the South, with the prospective loss of her cotton crop and the general plight of agriculture, has a somber future. Others wonder if, as has happened before, her misfortunes may not be her greatest opportunity. With her vast natural resources of increasing use with the progress of science, with her climate and living advantages, the strength and genius of her people, and the rewards of profit, health, and pleasure which await those who come to blend their destiny with ours, no place in the world has an assured future more inviting than the South. In many of our hearts hope is hardly ahead of faith that the South is destined to be the cradle of the best that civilization can produce. We believe that here sturdy men and women may learn to live not too hurriedly but intelligently and well, properly balancing their work; gain something of equilibrium in their economy and in their lives.

In the last analysis, what the South shall be, her people, and not her resources, or her climate, will determine. What shall be the attitude of the South's people to her problems toward other people, toward the Nation, and the Nation's government? There may be some who dream of some glorified isolation for the South. Only the blind can feel such detachment, or the unthinking desire it. Most of us will realize that we cannot, if we would, surmount our difficulties alone. We cannot free ourselves from age-old discriminations and injustices by our own remonstrance alone, or with only local instrumentalities. In short, we are of and a part of this great, throbbing Nation. We must go along with it. We must help it solve its problems and see that it aids with ours. If we pull back we shall be dragged along anyway. If we go along joyfully and bear our share, we shall enter into the councils of the common course and have our just rewards.

One thing must be clear. We were born to be leaders, not followers or pouters with our lips stuck out. We led this continent in a Declaration of Independence at Mecklenburg. We led in the War of Independence, and for decades we led the procession of the Nation's noblest men across the stage of our national life. We led the trek of virile men and brave women who made the West and remade America. Only when we lost our consciousness of identity with the Nation did we cease to lead and our vision fail. Again we led the Nation to a new sense of right in the eighties and nineties, and set in motion a train of ideas and a sense of social justice which have swept on down through William Jennings Bryan, Woodrow Wilson, and Franklin D. Roosevelt. The tradition of the South is positive, not negative. Its men have dreamed but they wrought their dreams into throbbing truth and vital fact.

There are yet myriad wrongs to be righted. From generation to generation honest and diligent men still bear the galling yoke of economic slavery. Callous wealth still indifferent and conceited yet sees the neglected babe sobbing beside the mother, dead ahead of her time, and preventable disease taking its barbaric toll. Nature's rich jewels are swept up by the powerful, and hoarded from the hungry sight of the confused and impotent masses. Millions needlessly suffer "the slings and arrows of outrageous fortune" molded by human and not divine hands.

There are great dreams to be dreamed, and mighty works to be done in our South, in our great country, in this troubled world. These great things cannot be done by those who sit beside the road. The South is ready to march as she always, in her heart, has been. Let her speak in this troubled today in the same stirring words of determination to go through with the program now under way, which one of her great Georgia sons uttered when she was leading another crusade.

Said he:

"Today there stands waiting in the South and West as grand an army as every brought pride to a warrior. It only needs leaders bold and true. Leaders who can't be bought, or duped, or bullied. Leaders who, knowing what the enemy is, will dash straight against it and take no rest and make no terms until the enemy is routed. Leaders who do not stand aside and shirk dangers and avoid responsibilities, but who will dash to the front; who by example will dispel doubt and remove hesitation and who by their courage will win the right to say, 'Let the bravest follow me.'"

"Given leaders like that, there can be no retreat. We know what we want; let us take nothing else. With this resolution strictly adhered to, we draw all our energies to a focus . . . any other policy breeds divisions, factions, malcontents. Our energies will be scattered. . . ."

"When I entered this reform movement I meant business.

"The people who elected me meant business. I mean it yet. So do they. We never meant to carry the movement a trifling distance and then stop. We meant to go clear through or die trying. We mean it yet."

## The American Defense Society

### EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ADDRESS BY LT. GEN. HUGH A. DRUM

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address by Lt. Gen. Hugh A. Drum, commanding the First Army and the Second Corps Area, on the occasion of the award of a distinguished-service medal by the American Defense Society at a banquet at the Hotel Commodore, December 15, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Twenty-four years ago the founders of your society pledged themselves to maintain a policy of "peace through preparedness." Through the long years which have intervened, our great Nation has watched the world turn away from the peaceful pursuits and become engaged in conflict. As these unhappy events have come to plague us, the United States has eagerly sought to solve not only our own problems but, through sympathetic cooperation with our neighbors, to seek solutions for our common problems. Despite these efforts, we find that war remains a paramount issue in many parts of the world. It is not my desire to speak of conditions in any part of the world other than our own. It would be idle to deny that we are unaffected by happenings on other shores. Consequently, it is important that we consider in detail our own household and how we may best avoid the miseries we see in other lands.

What is our own ability to maintain your policy and our Government's policy of "peace through preparedness"? Are we prepared to insure such peace as will guarantee to all our citizens life, liberty, and the pursuit of happiness? You will recall that in 1920 the Congress of the United States established a law outlining the framework of our national-defense policy.

Our national war experiences indicate a consistent aversion on the part of our people to a sound preparedness policy. The old militarism of mother countries and financial burdens caused them to shun a practical solution. Our people seem to have preferred to risk national ruin—to pay uncalled-for expense in lives and finances—than to have faced this national problem with a realistic approach. History shows that we have followed a vicious cycle—first, hasty defense, irrespective of costs or sacrifices; second, war success without thought of lives needlessly sacrificed and financial burdens; third, a rush back to the old state of defenselessness, exposing the next generation to a worse fate.

As a result of our World War preparedness, we had 20 years ago the strongest defense establishment our Nation had ever known—in fact, the strongest in the world. Some 4,000,000 men had been under training, our navy was unsurpassed, and we had secured or produced adequate arms and supplies for such a force. During the demobilization of these forces, and after prolonged study, Congress enunciated a defense program to meet our peacetime preparedness needs.

In its act of 1920 the Nation adopted for the first time a defense policy parallel to that enunciated by Washington and translated the objectives into an army of some 300,000 Regulars, 435,000 National Guard, with an indefinite number of Organized Reserve officers and enlisted men, and stocks of arms, munitions, and supplies for an army of not less than 1,000,000 men, as well as a system for mobilization of our industries.

What has become of this policy in the last 20 years? It has remained on the statute books with only minor changes, but have we kept it implemented, active, and healthy, or has it followed the course of many other of our good defense intentions? Three great influences appeared shortly after its adoption and practically made it noneffective:

First, The slogan "war to end war" and all the associated hopeful, theoretical, psychological, spiritual views come into play. We had made the "world safe for democracy," and the next step was for our Nation to lead the world in disarmament; we should lead the way and be an example. We scrapped the superiority of our fleet and reduced our army. It was a great experiment and too bad that our conception was not followed in the rest of the world. Our faith and intentions were honest but hardly practical in view of the world situation of today.

Second. "Economy," "reduce the war debt," became a laudable political appeal, accepted by our people in principle, but the main application was tied into the theory of "peace by disarmament" and being an example to the rest of the world—so that the main economies were applied to our naval and army forces. The policy of 1920 was forgotten, and our great defense power of that time was allowed to slide unobserved, so that by 1930 we stood seventeenth in armed military strength of the nations of the world.

Third. Old age and obsolescence and depletion of stocks came upon our trained manpower and arms, munitions, and equipment. In the 20 years since the World War the fine men trained therefor became too old and much of our organization antiquated. In these years our reserve supplies were used up or deteriorated as funds were not available to replace or renovate them. Then again, modern improvement in military weapons paralleled similar advances in civil life. Think of the mechanical advances in your lines in these 20 years—transportation, motors, aviation, communications, business machines, etc.—and add to these the developments in specialized military weapons—airplanes, tanks, antiaircraft artillery, communications, etc.

These considerations, as well as the lack of governmental support, not only depleted our vast assets of 1920 but reduced our standing defense forces in many ways to less than we had had before the World War, and, such as they were, they were far from being modern. This is a brief picture of the history of our defensive forces since the World War. As in the past, we are now rushing with all the weakness associated with such a hasty approach to overcome these existing deficiencies.

The crisis in Asia and the turmoil in Europe a few years ago, and the war today have fortunately had their repercussions on our people. The fallacy of neglecting Washington's advice has gradually gained ground. Our present administration sensed the situation some time ago and is striving to recuperate some of our losses and to revitalize and modernize the whole system. Our past neglect has now "come home to roost." Lack of funds in the past years must now be compensated for by extraordinary appropriations if we are to catch up. Bear in mind that modern arms—aviation, tanks, motors, anti-aircraft, and anti-tank weapons—cost far more in funds, and, more to the point, in trained manpower to operate and maintain them. An airplane in the air requires about 15 men to produce and maintain it, a field gun about 8, and a tank about 10 men. One mechanized brigade costs about \$100 per mile of travel, not counting the pay and maintenance of its personnel.

These new financial problems are complicated by the increased difficulties of organizing and training forces to use efficiently the modern weapons of defense. The day of the "minutemen" and the "making of a soldier in 10 days" has passed. The system of scattering our army in small posts in 48 States without adequate training facilities must be discarded. The great mass of an army must be skilled mechanics—the infantryman must combine individual initiative and field craftsmanship with skill in operating the new mechanical weapons. The junior officers as well as the higher leaders must learn the characteristics of all weapons and know how to team those in the air and on the ground to secure decisive results in a battle crisis. These ends are difficult to secure. Without such efficiency modern arms and weapons are valueless. Consequently, forces trained in the practical employment of modern weapons is a prerequisite and one that cannot be secured without long individual and group training and the facilities essential thereto.

The War Department has been well aware of all of these several deficiencies which I have briefly enumerated here. Its plans look to the future and are, of course, dependent upon receipt of appropriations from the Congress. However, we must bear in mind the time required to produce airplanes, arms, and other munitions. With the funds now available little of the modern equipment contemplated thereby can be made available in less than a year, and in many cases it will take 2 years. Then again, even though all the modern equipment required were available today, our army would still face a difficult task. There must be men available to put this equipment to use, and that problem requires long and painstaking care to see that individuals are well trained, well led, and well organized for the duties facing a modern army. This essential difficulty has, in a small way, been brought to the attention of the American public during the series of army maneuvers held this year. These maneuvers, particularly the recent maneuver in August in the vicinity of Plattsburg, N. Y., clearly indicates that in numbers of men, amount of equipment, and in organization and training, all components of our army require attention. To my mind, the outstanding characteristics of these maneuvers was the clear indication that the spirit and willingness of all the officers and men exists as high today as it ever has in our Nation. With that spirit and willingness, so clearly evident, it is essential that these men be provided with adequate equipment and opportunity to train for the tasks our Nation may require them to perform. I cannot emphasize too strongly that throughout every part of the Regular Army and the National Guard and the Organized Reserves this same spirit to face every task unflinchingly exists in all the officers and men. And I emphasize with equal force that it is the duty of every citizen and of our Government to see to it promptly that these men are provided with the essential tools they need to do their work and greater opportunity to learn how to use them efficiently.

We are all aware that in the field of political philosophy today, force remains an essential factor. We are equally aware that if we as citizens are to enjoy the rights and privileges of our society, then we must cheerfully accept the obligations that accompany them.

## The Blight of Bureaucracy

### EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ARTICLES BY COLE E. MORGAN

Mr. BYRD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD four very able articles written by Mr. Cole E. Morgan and published in the New York Journal-American under the caption "The Blight of Bureaucracy."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

#### ARTICLE I

WASHINGTON, January 2.—One of every seven persons employed or engaged in business in the United States draws a Government pay check every week, every month, or twice each month.

Of the \$63,993,000,000 total national income earned by the 45,500,000 gainfully employed workers and producers of the Nation in the calendar year 1938, \$7,926,000,000 was received in the form of salary or wages from some Government disbursing office by 6,902,000 men and women enrolled on some public pay roster.

This means that of each 100 workers or producers, 15, or practically one-seventh, were getting their pay from some agency of Government, Federal, State, county, municipal, township, or other subdivision.

Of each \$100 of income earned by all the people, these public pay rollers received \$12.35—12.35 percent—virtually one-eighth of the total.

Six income producers, engaged in privately operated commercial, industrial, agricultural, and professional activities, earned the income.

They provided the taxes therefrom to pay off one of those fortunate enough to have a public office or a public job.

The 38,598,000 private income earners received \$56,067,000,000, or an average of \$1,452 each, for the year. The 6,902,000 public pay rollers received \$7,926,000, or \$1,148 each, on an average.

But 2,996,000 of the 6,902,000 receiving public pay and constituting 43.5 percent of the group drew only \$2,100,000,000, an average of \$701 a year each.

The other 3,906,000, or 56.5 percent, got \$5,826,000,000, an average of \$1,492 each. This is more than double that of the low-pay group and \$40 a year more than the 38,598,000 private income earners averaged.

The \$701-a-year-average men and women were employed on depression-made emergency jobs at subsistence wages as an alternative to a direct-relief dole.

Yet they were working.

The \$1,492-a-year-average folk were in regular governmental employment, though hundreds of thousands of them were in positions created in the last 7 years under the cloak of emergency.

The foregoing facts and figures are derived from official Federal Government sources—after painstaking research, study, and analysis. If anything, they are ultra-conservative.

These facts and figures mean that every one of the close to 40,000,000 of income earners engaged in private endeavor in the United States last year contributed, in direct or indirect taxes, on the average of \$17 a month to support some governmental job-holder.

This was apart from what they also provided to carry on the multifarious operations of government from the rural civil district and township up to the mammoth national and international ramifications of Federal administration.

The Federal Government alone in 1938 spent . . . in round figures . . . \$8,000,000,000. . . . This was one-eighth of the entire \$64,000,000,000 total national income that year.

Half of this eight billions . . . or four billions . . . went out in the form of wage . . . and salary . . . checks . . . to Federal job holders.

Practically another four billions . . . went in wages . . . and salaries . . . to job holders of State governments . . . and their political subdivisions.

Thus the job holders' pay rolls . . . consumed one-eighth of the national income.

The Federal total . . . was \$4,031,949,000 . . . and that of the States . . . and their subdivisions . . . \$3,893,724,000 . . . Breaking down the figures in detail . . . 38,598,000 persons . . . engaged in private business and industry . . . earned \$56,067,000,000 . . . while 6,902,000 persons received . . . \$7,926,000,000 . . . in governmental pay checks.

The Federal statisticians . . . include this \$7,926,000,000 . . . of public pay-roll earnings . . . as part of the \$63,993,000,000 national income.

Necessarily it had to come out of tax revenues levied . . . on the returns . . . of private business.

It didn't just come out of the air . . . though it would appear . . . some governmental spenders have that idea.

Here is the governmental job holders' break-down:

Government	Employees	Pay roll	Wage average
Federal	1,187,814	\$1,931,949,000	\$1,626
States	475,988	616,056,000	1,294
Counties	309,601	419,948,000	1,356
Municipal	721,911	1,204,266,000	1,668
Public Education	1,210,946	1,653,454,000	1,365
Work Relief	2,995,702	2,100,000,000	701
Total	6,901,962	7,925,673,000	1,148

The work-relief category covers only wages . . . paid to workers . . . on Work Projects Administration-operated projects . . . and enrollees . . . and military details . . . in the Civilian Conservation Corps.

With 38,598,000 private business earners . . . providing the \$7,925,673,000 . . . of tax money to pay the wages . . . and salaries . . . of the 6,901,962 governmental jobholders—the average cost to each private earner . . . was \$205 for the year.

This, divided by 12, makes \$17 a month . . . as the individual contribution to the pay-roll army.

#### ARTICLE II

WASHINGTON, January 3.—Public education . . . is one of the major activities of government . . . in the United States today . . . and probably the most important and valuable . . . to the people as a whole.

For the year 1938 various governmental agencies . . . from the Federal Government . . . down to the local school district . . . expended \$1,653,454,000 in salaries . . . to 1,210,946 teachers . . . and others in the Nation's public school and college system.

These school and college employees . . . averaged \$1,365 salary each . . . for the year.

Kindergarten—primary—and grade school teachers—averaged around \$1,000 . . . high-school faculty members around \$1,500 . . . and college and university instructors around \$2,000.

These figures are the estimates . . . of the Office of Education . . . of the Department of the Interior.

Specific figures for the 1935-36 public school year . . . show: That 870,963 elementary and high-school teachers . . . received \$1,146,460,000 . . . an average of \$1,340;

That 19,118 administrative officers . . . received \$67,436,271 . . . an average of \$3,527.

That 29,570 supervisory and maintenance workers . . . received \$60,968,247 . . . an average of \$2,061.

Thus . . . 919,651 public school personnel . . . in that year . . . received \$1,274,864,918 . . . an average of \$1,387 . . . which is \$22 more . . . than the 1938 average.

Money spent for education . . . does not go to waste . . . as history well proves in the intellectual advance . . . and the decline of illiteracy . . . in the country in the last half-century.

If all tax moneys were spent as judiciously . . . as are those invested in education . . . the taxpayer would have little . . . of which to complain.

So, to be fair to the cause of education, funds expended in that field . . . cannot be treated in the same light . . . as those for other governmental operations.

Deducting the \$1,653,454,000 . . . paid to the 1,210,946 employees . . . on the public educational pay rolls—there remain 2,354,414 governmental employees . . . drawing \$3,803,119,000 in 1938 . . . an average of \$1,615 each.

Taking the educators out . . . jumps the average \$111 better a year . . . better than \$2 a week . . . for jobs that are essentially political.

Least political . . . of any branch of government . . . is the judiciary.

The Federal judicial system's personnel in 1938 . . . numbered 2,271 persons . . . These 2,271 persons, including 1,860 holding official status and 411 in minor capacities received \$6,815,000 . . . an average of \$3,001 each in 1938.

The legislative organization of the Federal Government . . . the Congress and its staff of assistants . . . that year embraced 5,145 persons.

The legislative pay roll . . . including \$5,351,000 . . . for salaries of 96 Senators and 435 Representatives at \$10,000 a year each . . . totaled \$13,185,000.

The average . . . was \$2,562.

Taking the Federal legislative and judicial personnel . . . out of the picture . . . there are left on the Federal pay roll 839,498 persons.

These constitute the officials and employees . . . of the executive branch . . . of the Government.

There also remain 1,507,500 . . . on the various State pay rolls . . . including cities . . . and counties . . . as well as State governments.

Deduct the \$6,815,000 judiciary pay roll . . . and the \$13,185,000 going to the congressional or legislative establishment . . . from the \$1,562,849,000 Federal expenditure . . . that remained . . . after the Army and Navy and work relief wages . . . had been chalked off.

That leaves \$1,542,849,000 . . . with which the executive personnel . . . was paid for the year 1938.

There also remained . . . \$2,240,270 of State pay-roll expenditures . . . after the educational outlays . . . were eliminated . . . a total of \$3,782,119 Federal and State funds.

The loose-jointed methods of presenting governmental statistics . . . frequently give an incomplete picture . . . of the whole . . . unless the flow of figures . . . is traced to its source.

This is how it is done:

The Civil Service Commission's monthly reports . . . showed a total . . . of \$1,542,848,640 . . . paid out in executive department salaries . . . and wages . . . in the 12 calendar months of 1938.

At an average of \$151 a month . . . of \$1,812 a year . . . this outlay . . . less the \$11,465,681 December postal service extra . . . or a net of \$1,531,382,950 . . . would have paid 845,193 full-time workers for the year.

The Bureau of Foreign and Domestic Commerce . . . fixed the total earnings of these workers received from the Government . . . at \$1,931,000,000—1,187,814 as the total number on the Federal pay roll in 1938.

That included, beside the executive department, the Army . . . Navy . . . and Marine Corps enlisted and officer personnel . . . the legislative branch of the Government . . . and the Federal judiciary.

The Bureau of Labor Statistics . . . gave the writer the figures 340,900 . . . as the Army, Navy, and Marine personnel . . . 5,145 for the legislative establishment . . . and 2,271 for the judiciary . . . These three items total 348,316 . . . and leave 839,498 . . . as theoretically the executive personnel.

The Civil Service Commission's semiannual report . . . added up . . . to a total of 10,164,685 man-months of executive department employment in 1938.

Dividing that by 12 . . . gives a monthly and yearly average of 847,057.

How are these three figures—847,057, 845,193, and 839,498—to be reconciled? The writer chose the lowest figure—839,498.

#### ARTICLE III

WASHINGTON, January 4.—The founding fathers, in drafting and adopting the American Constitution a century and a half ago created three coordinate branches of the Federal state—the executive, the legislative, and the judicial.

To all practical purposes there has developed a fourth branch, the national defense.

No part of the Government operates more independently than the Military Establishment—the uniformed Army, Navy, and Marine Corps.

With 340,900 men drawing \$369,100,000, the average is \$1,080 a year, or \$90 a month, for the combined officer and enlisted military personnel.

Of course, outside of this base pay they are fed, clothed, and housed at Government expense.

In the judiciary department, the 1938 pay roll was figured at \$6,815,000 by the department.

The department claimed only 1,860 judicial employees against the 2,271 figure of the Bureau of Labor Statistics. Taking the 2,271 as the complete figure, the \$6,815,000 pay roll struck an average of \$3,000 each.

Topping the salary list is Chief Justice Charles Evans Hughes, at \$20,500, and his eight Associate Supreme Court Justices at \$20,000 each.

Federal circuit court judges get \$12,500 and district judges \$10,000, except in Hawaii, where the pay is \$7,500.

Clerks range from \$8,000, for the Supreme Court, down to \$2,400 in Hawaii, with \$3,800 the lowest in the States.

District clerks average \$5,600.

District attorneys run from \$10,000, in New York City, down to \$4,600, with \$6,000 the average.

United States marshals range from \$6,500 down to \$3,000.

Other judicial personnel includes . . . United States commissioners . . . and referees in bankruptcy . . . district attorneys . . . clerks . . . marshals . . . bailiffs . . . stenographers . . . file clerks . . . record clerks . . . etc.

The legislative branch of the Government . . . with its 5,145 personnel . . . and \$13,185,000 wage and salary account . . . in 1938 averaged . . . \$2,563 per person.

The funds were divided as follows:

Salaries, 96 Senators, at \$10,000 each	\$960,000
Salaries, 435 Representatives, at \$10,000 each	4,350,000
Salaries, 3 territorial delegates, at \$10,000 each	30,000
Total, 534 Members' salaries	5,340,000

Senatorial patronage positions, 864, at \$1,800 average...	1,555,200
House patronage positions, 1,752, at \$1,600 average...	2,803,000
Permanent non-patronage parliamentary staffs, 60, at \$3,000.....	180,000
Congressional Library, 864 positions, at \$2,000 average...	1,728,000
Architect of Capitol, 800 positions, at \$1,600 average...	1,280,000
Miscellaneous employment, 71 positions, at \$1,000 average.....	98,600
Miscellaneous employment, 200 positions, at \$1,000 average.....	200,000

Total salaries for 5,145 positions..... 13,185,000

Bureaucracy flowers . . . to its fullest bloom . . . in the Executive establishment . . . of the Federal Government.

Seventy percent . . . of the entire regular Government personnel . . . hold bureaucratic positions . . . chosen for . . . and placed in . . . their jobs by bureaucrats, not one of whom . . . except the President himself . . . owes his office directly to the votes of the people.

The others . . . are creatures of the appointive power . . . vested in the Chief Executive . . . and, except in a few instances, delegated by him to bureaucratic subordinates.

The Executive departmental personnel . . . in the main . . . is composed of intelligent and conscientious persons . . . and persons of unquestioned character . . . But anyone who has been around Washington . . . knows of many instances of square pegs . . . trying to fill round holes . . . at the behest of some bureaucratic . . . or political . . . friend.

#### ARTICLE IV

WASHINGTON, January 5.—Recruiting the governmental job-holders and pay-roll proportions . . . is not confined alone to the Federal Government.

It is just as pronounced . . . in the States . . . the counties . . . and the cities.

The percentages of increases for the States . . . and their political subdivisions . . . do not run quite as high . . . as for the Federal Government . . . but they are high enough to cause the average taxpayers to stop . . . look . . . and wonder . . . what it's all about and why.

Statistics . . . compiled by the United States Civil Service Commission . . . and the National Income Section of the Bureau of Foreign and Domestic Commerce . . . disclose that between December 31, 1932 . . . and December 31, 1938 . . . administrative personnel of the Federal Government rose . . . from 568,345 . . . to 861,914.

This excludes all military . . . legislative . . . and judicial officials and employees and . . . it represents an increase of 293,569 . . . or 52 percent.

Personnel of the States . . . counties . . . municipalities . . . and minor subdivisions . . . excluding all public education . . . rose 218,577 . . . from 1,288,923 . . . to 1,507,500 . . . an increase of 17 percent.

State government personnel alone jumped from 334,476 . . . to 475,988 . . . a gain of 141,512 . . . or 42 percent.

County employees, including all minor governmental units outside the incorporated municipalities, climbed . . . from 270,521 . . . to 309,601 . . . a gain of 39,080 . . . or 14 percent.

Municipalities . . . went up from 683,926 . . . to 721,911 . . . a rise of 37,985 . . . or 6 percent.

For the calendar year 1932 . . . the Federal executive departmental pay roll was . . . \$1,038,000,000 . . . For the calendar year 1938 . . . it was . . . \$1,543,000,000 . . . an increase in 6 years . . . of \$505,000,000 . . . say a round half billion . . . or 49 percent.

The States . . . and their subdivisions in 1932 . . . had pay rolls totaling \$1,916,000,000 . . . and in 1938 . . . they ran up to \$2,240,000,000 . . . an increase of \$324,000,000 . . . nearly one-third of a billion . . . or 17 percent.

It will be noted that the increase in personnel and pay rolls for the States and their subdivisions . . . were identical . . . 17 percent . . . while Federal personnel jumped 52 percent . . . against a 49 percent gain in pay rolls.

The State governments . . . increased their pay rolls . . . \$187,592,000 . . . from \$428,464,000 . . . to \$616,056,000 . . . a step-up of 44 percent . . . against 42 percent . . . in personnel.

The counties and minor subdivisions . . . went up in pay rolls . . . from \$376,861,000 . . . to \$419,948,000 . . . or \$43,087,000 . . . an increase of 11 percent . . . That was 3 percent less than . . . the employment gain.

The municipalities . . . rose \$93,399,000 . . . from \$1,110,399,000 in 1932 . . . to \$1,204,266,000 . . . in 1938—a boost of 9 percent . . . against a 6 percent employment rise.

There was a tax increase . . . of \$4,616,000,000 . . . or 61 percent . . . in the 4 years from 1933 . . . to 1937 . . . It will be observed . . . that the Federal taxes jumped . . . from 24.8 percent of the total in 1933 . . . to 42.3 percent in 1937.

The State percentage . . . shifted only one-tenth of 1 percent . . . dropping from 23.2 to 23.1 . . . while on the other hand . . . the city and county taxes dropped . . . from 52 percent . . . to 34.6 percent.

That means . . . that the local communities . . . shifted a big share of their obligations and responsibilities . . . to the shoulders of a willing Uncle Sam.

In fact, they were heartily encouraged to do it . . . by the liberal way . . . in which the Federal Government . . . passed out loans and grants . . . for most every conceivable purpose.

LXXXVI—App—35

The Federal tax haul in those 4 years . . . jumped \$3,269,000,000 a year . . . that of the States, \$1,065,000,000 . . . and that of the cities and counties, only \$282,000,000.

Federal taxes were up 175 percent.

State taxes were up 60 percent.

City and county taxes were up only 7 percent.

On February 23, 1933 . . . 4 days before the inauguration of the Roosevelt administration, there were 563,487 names . . . on the Federal executive civil pay roll . . . On October 31, 1939, there were . . . 937,357 . . . an increase of 373,870!

If that monthly average of increase . . . keeps up another 12 months . . . up to October 31, 1940 . . . it will mean the creation . . . of 56,076 more jobs . . . to be passed out to the faithful . . . in time to be on the pay roll . . . when next election day comes around . . . on November 5, 1940!

When the New Deal came into office . . . on March 4, 1933 . . . it was faced with this pledge . . . written into the platform adopted by the Democratic National Convention . . . in 1932:

"We advocate an immediate and drastic reduction of Government expenditures by abolishing useless commissions and offices, consolidating departments and bureaus and eliminating extravagance to accomplish a saving of not less than 25 percent in the cost of Federal Government."

President Roosevelt ran and was elected in November 1932, on that platform.

The Federal Budget . . . in 1932 . . . was \$3,500,000,000 a year . . . In his message to Congress last January . . . submitting the Budget for the 1940 fiscal year . . . the President said:

"The expenditures contemplated for the fiscal year 1940 (exclusive of expenditures for debt retirement and those payable from postal revenue) total \$8,995,663,200."

When the President sent his message to Congress last April 25 . . . submitting a plan for reorganization . . . of the executive establishment . . . Congress quickly adopted the program . . . and put it into effect July 1.

On June 30 . . . according to the Civil Service Commission . . . the executive personnel . . . was 925,982 . . . and the monthly pay roll . . . \$140,217,974 . . . On October 31 . . . after 4 months of reorganization . . . that promised a saving . . . of \$15,000,000 . . . to \$20,000,000 . . . a year . . . the personnel was 937,357 . . . and the pay roll . . . \$142,065,340!

In the first 4 months of reorganization . . . the personnel was "reduced" by hiring an additional 11,375 workers . . . and the pay roll was "reduced" by an additional \$1,847,366 in pay checks.

Some people may figure . . . that's good arithmetic . . . but it's not the kind this writer was taught . . . many years ago . . . back in grade school. But such is government . . . in these new dealish days.

#### Civic Planning

#### EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

EDITORIAL FROM THE WASHINGTON EVENING STAR OF JANUARY 29, 1940

Mr. GIBSON. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Washington Evening Star of January 29, 1940, concerning the development of the National Park and Planning Commission in the city of Washington.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of January 29, 1940]

#### CIVIC PLANNING

More than a decade and half ago, when much of the post-war public building and parkway program for Washington was still in the dream stage, a group of forward-looking citizens organized the Committee of One Hundred on the Federal City. With the Nation's Capital already suffering from growing pains due to the tremendous expansion of governmental activities resulting from the World War, the committee, of which Frederic A. Delano was chairman, appointed subcommittees to study such problems of city development as zoning, architectural harmony, parks, highway improvement, school and playground sites, and water-front beautification. The committee offered its cooperation to Federal and municipal authorities in solving these ever-multiplying problems.

At that time there was no official park and planning agency such as exists today, but this situation was remedied the next year, 1924, with the passage of the Ball-Gibson Act, creating a National

Capital Park Commission and authorizing purchase of land for parks in the District of Columbia. Two years later Senator ARTHUR CAPPER, of Kansas and Senator ERNEST W. GIBSON, then a Member of the House, sponsored the noteworthy Capper-Gibson Act, which created the National Capital Park and Planning Commission. In 1930 another important act bearing on the methodical esthetic development of the whole metropolitan area was passed—the Capper-Cramton Act, providing for the George Washington Memorial Parkway along the Potomac River, from Mount Vernon to Great Falls.

These were memorable milestones along the path of Washington's amazing progress of the late twenties and of the thirties. During that epoch the sprawling, flimsy temporary war buildings in the Mall area were replaced by imposing, columned structures of stone and steel. The "Federal Triangle," which so long existed only on paper, became a magnificent reality. Great memorials, broad avenues, new parks came into existence. All are fine monuments to the foresight and determined endeavors of countless citizens and agencies, both public and private. Some of these civic planners will review the accomplishments of the past and discuss a program for the future at a dinner Wednesday night in the Willard Hotel in honor of the National Capital Park and Planning Commission. The hosts will be the Committee of One Hundred on the Federal City and the Board of Directors of the American Planning and Civic Association. Attending will be many of the persons who have played leading roles in the controlled development of Washington in recent years. They have the satisfaction of knowing that their plans were well laid and that their efforts have brought remarkable results. But they know, also, that Washington will continue to grow and that new problems constantly will arise. An immediate concern of the planners, for example, is the overdevelopment of Northwest Washington. The trend of expansion naturally is toward the east, where large parkway and building projects are planned. Such public-spirited citizens as those to gather here this week must continue their vigilance and their cooperative efforts if the Washington of tomorrow is to continue to enjoy the orderly growth befitting the Capital of the Nation.

### Gold Buying

#### EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

EDITORIAL FROM THE NEW YORK POST OF SEPTEMBER 19, 1938

Mr. TOWNSEND. Mr. President, my recent speeches on gold have inspired numbers of people to write me and to send me clippings of articles on the subject. Among these is an interesting editorial from the New York Post of September 19, 1938, which I ask consent to have printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Post of September 19, 1938]

#### GOLDEN BOY

"I would classify this [inflow of gold] as a very pleasant movement."—Secretary of the Treasury Morgenthau.

Gold continues to pour into the United States. The Nation's monetary gold stock rose last week by \$184,000,000, to a new record high of \$13,421,000,000.

If gold should continue to come into the country at the same rate, in 1 year and 3 months we'd have all the monetary gold in the world.

That, to Secretary Morgenthau, is a pleasant prospect.

Mr. Morgenthau's statement is a monument to the gold obsession which grips him and which appears to have hypnotized official Washington.

To us the spectacle is anything but pleasant.

It is not pleasant insofar as it represents panic and terror abroad. It is even less pleasant insofar as it represents stupidity here at home.

Every ounce of this gold will be paid for in the labor of American workmen in one of two ways:

Or in the form of bank balances, securities, or other credits which can be used as claims upon goods later on.

In either case, now or later, we hand over something valuable and usable in exchange for metal so useless that the most we do with it is to bury it in the ground.

That gold never will be any good to us unless at some future date we can dig it up again and use it to buy from other countries commodities which we can use and enjoy.

At present we have nearly 60 percent of all the world's monetary gold. Yet Mr. Morgenthau declares:

"The attitude of the Government is that if individual investors and governments and central banks want to send their money here in the form of gold, as a haven of refuge, why, we stand ready to buy it at \$35 per ounce."

This naïveté of the Secretary of the Treasury reveals how little he has analyzed the problem which faces him and how oblivious he is to the great danger which faces the Nation.

For what's going to happen after we get the bulk if not all of the world's gold?

The theory is that it will represent a ticket for the future on the goods of other nations; that, say in 1980, we will be able to send it to England or France and get goods in exchange, just as they now send it here and receive goods in exchange.

But if the other powers ship their gold here—

What's to prevent them from demonetizing gold? From telling us:

"Well, Uncle Sam, you've got the gold; may it do you a lot of good. We don't want it. It isn't money in our countries any more."

Fantastic? No more fantastic than the repudiation of the war debts. No large nation today uses gold as general currency; most use it as a symbol.

And other nations can demonetize gold, once they are rid of it, quite as easily as we prohibited citizens from possessing gold.

Then we will be left with a huge buried pile of metal—a pile worthless to us, worthless to the world. Again we will have been the prize sucker of civilization.

Yet, as the gold pile mounts, as the day draws nearer, Mr. Morgenthau smirks with satisfaction.

For sheer contemptuousness of reality, the pose of America's Golden Boy may go down in history alongside Casablanca's standing on the burning deck and Nero's fiddling while Rome burned.

### The Northwest Territory

#### REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. ROBERTSON. Mr. Speaker, we recently celebrated the one hundred and fiftieth anniversary of the formation of the Northwest Territory. Virginia, of course, claimed title to that vast area and ceded it to the Federal Government. In colonial days all of the Northwest Territory was a part of Augusta County, one of the counties of the present Seventh Congressional District. Rev. James Sprunt, of Lynchburg, Va., has written a very interesting article on the early settlers of Augusta County, describing their origin, their hardships, and their manner of living. It was those settlers in colonial days that first went into the great Northwest Territory. Their descendants in the States carved from the Northwest Territory as well as their descendants in the Shenandoah Valley of Virginia have a right to be proud of these nation builders.

The article by Reverend Sprunt follows:

THE SETTLEMENT OF THE GREAT VALLEY OR EARLY DAYS IN THE GREAT VALLEY

(By Rev. James Sprunt, Lynchburg, Va.)

Virginia was settled from two directions. As Dr. R. B. Bean succinctly points out in his book, the Peopling of Virginia, "The earliest settlers came almost entirely from the south and southwest of England and settled around the Chesapeake Bay and along the rivers which empty near its confluence with the ocean. They were chiefly cavaliers and were strong for church and king. The second great movement of people into Virginia started from the northwestern corner of the State into the Shenandoah Valley, also called the Valley of Virginia. These were mainly Scots with a considerable number of Germans, a few Dutch, and some Irish." And, we may add, they were a conscientious, God-fearing, hard-working, liberty-loving people.

Back of this second great movement into Virginia, which issued in the settlement of the great valley, there was another which must at least be mentioned. Beginning about the year 1714, and continuing for 60 years and more thereafter, there occurred a singular migration from Europe to America. It has been described as the most extensive movement ever made across the Atlantic before the modern days of steamships. Often as many as 12,000 persons came in a single year (which I believe was the record number of troops carried the other way by the steamship *Leviathan* on one trip in the days of American participation in the

World War). In 1 week in 1727, 6 ship loads landed at Philadelphia. And who were they? They were sturdy Scottish folk from Ulster, in the north of Ireland, and from Scotland. One of them, Thomas Craighead, was entered upon the records of the University of Glasgow as Scotto-Hibernus, a Scot from Ireland. Most of these immigrants were such, and we call them the Scotch-Irish. So many of them sailed westward across the great sea in those days that when the War of the Revolution broke out there were approximately 500,000 Scotch-Irish in the Colonies, forming one-sixth of the total population. And these same valiant folk played a heroic role in the winning of our independence. To answer the natural question as to why it was that Scots should come from Ireland to America would take too long just now, though it is an intriguing story. Suffice it to say that harried by persecution in Scotland, there had been numbers who had set up in the north of Ireland a godly, Presbyterian civilization. But there too they met with conflict and trials innumerable. Finally to escape the oppressive, tyrannical laws which bound them, a great host of these liberty-loving Scots of Ulster sought new homes in America, where their longing to be free contributed so vitally to the making of a new nation on this side of the water. Hanna, the historian, estimates that about 200,000 Protestants, most of them Presbyterians, one-third of the entire Protestant population of Ireland, left the Emerald Isle between the years 1725-68. These represented the young, the enterprising, the most energetic and desirable classes of its population. They took such a leading part in their new home in America toward the attainment of self-government and liberty that when the news of the extraordinary proceedings in the days of George the Third reached England, Horace Walpole exclaimed in the English Parliament, "Cousin America has run off with a Presbyterian parson."

You will no doubt think that we have wandered far from the great valley, but as a matter of fact we are heading straight for it. Some of these incoming Scotch-Irish folk landed in New England, and some in South Carolina, but the great majority sailed up the Delaware Bay into Philadelphia, and most of these soon made their way westward into the Pennsylvania settlements, realizing that the best opportunities for themselves and their families lay on the frontier. It was from there that the stream of pioneers began to pour down into the inviting valley of the Shenandoah, "the daughter of the stars." About 1732 the first trickle of settlement took place in the northern tip of the valley, but from that time on it grew in volume and extent, pushing on by 1740 into North Carolina and 10 years later into upper South Carolina and on into upland Georgia. During the days of savage Indian warfare prior to the Revolution and in that long struggle itself these Scotch-Irish and their fellow pioneers were settled largely on the frontier, a line of strong, sinewy men thrust in as a barrier between the older colonists on the east and the Indians on the west.

This actual settlement of the valley of Virginia was not the first time that its soil had been trodden by the feet of the white colonists of America. It is customarily thought that Gov. Alexander Spotswood, that brilliant exception to the rule of despicable royal Governors of Virginia, and his Knights of the Golden Horse-shoe were the first to look upon the entrancing vistas of the valley, from Swift Run Gap in the Blue Ridge in 1716. One may read the description of their achievement in prose and poetry on the monuments erected there beside the highway. But there were earlier explorations of this tramontane region, to say nothing of the isolated hunters and traders from the east who made their unrecorded travels across its happy hunting ground. In 1669 John Lederer, an enterprising German surgeon, said to have been a former Franciscan monk, explored the James River over the valley of Virginia, up which he proceeded to the headwaters of the Roanoke. Later he traveled from Williamsburg across the Blue Ridge at Rock Fish Gap (which we more generally know as Afton) to where Waynesboro now stands, and in 1670 he crossed the valley somewhere in the vicinity of the present towns of Front Royal and Strasburg. He left a fascinating diary of his peripatations, in which one finds the singular statement that from the top of the Blue Ridge he was able to see the Atlantic Ocean. Those of you who have climbed our highest mountains will understand how he could be so deceived by the eastward haze that resembles the great sea.

In the year 1671 Governor Berkeley directed Gen. Abraham Wood to send an exploring party under Capt. Henry Batte, Thomas Wood, Robert Fallen, and an Appomattox Indian, who traveled with 5 horses. They were sent, Berkeley says, "for ye finding out of ye ebbing and flowing of ye waters behind ye mountains in order to the discovery of ye South Sea." Their nearest approach to the south sea was the discovery of a river which the Indians called Kanawa, "River of the Woods," which flowed in that direction. In 1684 Maj. Abraham Wood of Petersburg made a trip of explorations through a gap in the Blue Ridge, even now called "Wood's Gap," in the endeavor to find a body of water that flowed into the Pacific Ocean. He discovered New River, which was known for a time as Wood's River, but never got time to follow it on to his cherished Pacific. How astonished he would have been to know of the vast area which even the waters of the New River traversed on their way to the Gulf at New Orleans.

Louis Michelle and others came up from Annapolis in 1707 and entered the valley at or near Harpers Ferry and proceeded up the north fork of the Shenandoah as far as what is now Woodstock or Edinburg. Michelle's map of his itinerary is now on file in the Public Record Office in London. There were many others

who penetrated at one time or another into the valley lands, and some worth-while surveys were made. The dates of these various expeditions are matters of controversy now, and no one can be quite sure of their accuracy.

Although there were, it is stated by some, a small handful of German settlers in the valley near the Massanutten Mountain prior to this time, the first real settlement took place in 1732, when the area around Winchester (westward and northwestward), and that farther along, near Staunton, was occupied. Joist Hite, a German, like a patriarch of old, with his family; his sons-in-law, George Bowman, Jacob Chrisman, and Paul Froman, with their families; Robert McKay, Robert Green, William Duff, Peter Stephens, and several others, amounting altogether to 16 families, came down from Pennsylvania, crossing the Potomac (called by the Indians, and for many years by the whites, the Cohongoruton, "River of Wild Geese") near Harpers Ferry (about 2 miles above). Hite settled on the Opecon, a few miles south of Winchester, and the other families settled in the same general neighborhood wherever they could find wood and water convenient. They took what lands they wanted, largely by "tomahawk rights" (marking their area off by slashed trees), not bothering about proprietors, but later had many disputes about titles. After them came many others in an increasing stream down the old Indian warpath that was worn and deep and followed by so many that it came to be called the Pennsylvania Road. Some settled on the Shenandoah, some stayed just south of the Potomac, others turned to the west of the Indian road to the Wappatomaka, the south branch of the Potomac, while others, Ross and his Quakers, abided on the Cacapon. Many of these settlers of the lower, or northern, part of the valley were German Palatinates, who had fled their native land because of King Louis, and the large number of Lutheran German Reformed, Mennonite, and Brethren Churches in the lower valley today testify both to the numbers and godliness of these German ancestors. In this same year of 1732 there came one John Lewis, a Scot from Donagah in Ulster, with his wife, Margaret Lynn, and their two daughters and stalwart sons, Thomas, Andrew, William, and Charles, who pushed on up the valley beyond the settlements on the Shenandoah and the Potomac to the two little mountains opposite Rock Fish Gap which he named Betsey Bell and Mary Gray, after two hills back in County Tyrone in Ireland.

"O Bessy Bell and Mary Gray.

They were two bonnie lasses—

They biggit a bower on yon burn-brae,

And theekit it ower wi' rashes." \* \* \*

There they built their stout log home, and became the founders of what later became Augusta County. In his wake there came Ulsterman after Ulsterman, the Robertsons, Campbells, Matthews, McClanahans, McClungs, McCauslands, McCues, Mosbys, McDowells, Mackays, etc. Some of them were attracted by the lands to the south, among whom were Ephraim McDowell and his sons, John and James, the Greenlees, and Paxtons, who were the first in the Rockbridge section.

It should be stated that most of the domain in the great valley was divided up into large grants of land procured by energetic and influential individuals who became thus responsible for the settlement of these broad acres. In the main there were four of these large tracts, aside from the vast area which was under the sway of Lord Fairfax, from the northern neck of Virginia westward across the lower portion of the valley. The Van Meters, and later Joist Hite, obtained the grant of the region around Winchester. William Beverly, in 1736, was granted by patent of King George II the 119,000 acres of Beverly Manor, which lay to the southward in what is now Augusta. Benjamin Burden (or Borden) was the owner of what was known as Burden's grant, to the south of Beverly Manor. The story is that this affable and wily individual ingratulated himself with Governor Gooch at Williamsburg by the present of a buffalo calf which he had captured in the valley, and by virtue of this was able to obtain the grant of this great area. In the absorbing diary kept by Margaret Lewis, the wife of John, sometimes called the Valley Manuscript, she states that this calf was captured by her sons, kept at their home some months, and then given to Burden, who took it to the Governor. Because, as she says, the Governor had never seen "so comical a monster in lower Virginia," he was in generous mood. The area south of Burden's grant became the property of Matthew Burke, and was known as Burke's tract, lying along the James. If you would read a perfectly fascinating account of the settlement of this particular region, I heartily commend the novel by Mary Johnston entitled "The Great Valley." All of these grantees were obliged to settle a stipulated number of families on their land in thousand- or hundred-acre sections, or to have a certain number of cabins erected by a certain time. In the event of failure their patents would be forfeit or would have to be extended. Strenuous efforts were therefore made to induce settlers to take up land by these large landowners. And sometimes ingenious tricks were resorted to to fulfill the legal conditions of ownership. Samuel Kercheval, the Froissart of the valley, in his classic history written in 1833, tells of how Jacob Stover, an enterprising German, obtained a grant for 5,000 acres on the south fork of the Shenandoah. "On his application to the executive for his grant," writes Kercheval, "he was refused unless he could give satisfactory assurance that he would have the land settled with the requisite number of families within a given time. Being unable to do this he forthwith passed

over to England, petitioned the King to direct his grant to issue, and in order to insure success had given human names to every horse, cow, hog, and dog he owned, and which he represented as heads of families ready to migrate and settle the land." It worked, and soon after obtaining the land he sold it off in small lots and went off with his money. The bona fide grantees, however, labored hard to bring in true and able settlers to their lands. As Foote tells us in his *Sketches of Virginia*, advertisements describing in glowing terms the beauty and fertility of the valley, offering a home, terms, were sent abroad in every direction and attracted the attention of the hard-working tenants in England, Ireland, and Germany, to whom the offer of a farm in fee simple was the offer of wealth. (We may rest assured the hardships and dangers of the frontier life were not mentioned at all.)

These advertisements, no doubt, played their part in maintaining the stream of immigrants that flowed across the sea in those years. The results were shortly evident. Within 10 years there were about 2,500 settlers in the region known as Beverly's Manor alone. As Waddell suggests in his *Annals of Augusta County*: "We may accompany in imagination these immigrants on their way from the settlements north of the Potomac, through the wilderness, to their future home. There was, of course (in the beginning), no road, and for the first comers no path to guide their steps, except the trail of the Indian and the buffalo. They came as a venture, climbing the hills, fording the creeks and rivers, and groping through the forest. At night they rested on the ground, with no roof over them but the broad expanse of heaven. After selecting a spot for the night's bivouac and tethering their horses, fire was kindled by means of flint and steel, and their frugal meal was prepared. They carried only a scanty supply of food, for as game abounded they mainly subsisted off the country." Before lying down to rest many of them did not omit to worship the God of their fathers and invoke His guidance and protection. The moon and stars looked down peacefully as they slumbered, while bears, wolves, and panthers prowled around. It was impossible to bring wagons (at the first) and all their effects had to be transported on horseback. The list of articles was meager enough. Clothing, some bedding, guns and ammunition, a few cooking utensils, seed, cord, axes, saws, \* \* \* and the Bible were indispensable, and were transported at whatever cost of time and labor. Houses and furniture had to be provided after the place of settlement was fixed upon. We may imagine the leaders of each band, on arriving at a well-wooded and well-watered spot, exclaiming, 'This is my rest and here will I dwell.' In the meantime there was no shelter from rain and storm."

"The world was all before them where to choose  
Their place of rest and Providence their guide."

For a graphic description of such a pioneer journey I refer you again to the story of Mary Johnston, which tells of a Scottish family, the Selkirks, making their way from Williamsburg to Burke's Tract, the establishment of their home, and the saga of their family.

The valley country has been under many political authorities in Virginia. The whole area beyond the mountains was added to the domains of Essex County by Governor Spotswood in 1716. Then in 1721 Spotsylvania County was formed from parts of Essex and other counties, and was the frontier county. Giles Brent, cousin of Lord Baltimore, who married an Indian princess, was its first settler. Orange was formed from Spotsylvania in 1734, just 100 years after the first eight original shires of Virginia were established. Orange County was the largest county the world has ever known. It went "with a fine indefiniteness" south toward the Carolinas, north to the Great Lakes, and westward to the blue waters of the Pacific. Out of Orange in 1738 were cut Frederick and Augusta, "the first," as Mary Johnston writes, "leaning upon Potomac, the second upon James, but careering sublimely, when it came to the west, over Alleghanies and outward."

Frederick was named for the Prince of Wales and Augusta for the princess, his wife. Neither of these two counties could compete with their mother county, Orange, in size, for their westward limits were merely upon the Mississippi. Nevertheless, by the Treaty of Paris in 1763, the territory of our present States of Missouri and Michigan were added to Augusta. Therefore, Augusta, be it known, was not a county to be sneezed at, for it then embraced the area now comprising the States of West Virginia, Kentucky, Ohio, Indiana, Illinois, Michigan, Missouri, and the southwestern parts of Pennsylvania and Virginia. It was to this region that General Washington referred when, in a dark period of the Revolution, he said, "If I am defeated I can retire to the wilds of West Augusta and hold out indefinitely." And the metropolis of this vast domain was a town, if such it could be called, consisting of a mill and two or three log houses, before the largest of which swung a sign stating that it was McClanahan's Ordinary. This was Beverly's Mill Place, better known to us as Staunton. The other counties of the Valley were not formed for a score of years and more.

Perhaps you have wondered ere this that I have not mentioned the Indians and their relationships with the white pioneers of the Valley. Let a page from the novel *The Great Valley* serve us here. The Reverend John Selkirk, one-time minister in Thistlebrae Kirk, in Old Scotia, is talking in Williamsburg, with Col. Matthew Burke, the holder of Burke's Tract, and the colonel is much interested in the possibility of the Scot and his family becoming settlers on his land.

"There is another thing, sir," said Selkirk, "that I would bring up now rather than later. I would know about the Indians."

"The Indians?" Col. Matthew Burke again straightened from the map and prepared to take up a frequent explanation. Everyone into whose head the Great Valley had entered must know about the Indians. Very soon in their conversation they asked, "What about the Indians?" So now this Scot minister and his family had come to it.

"Well, Indians are Indians, Mr. Selkirk! God made them and they have certain virtues. For the rest, when it comes to a fight and the ways of it before and after, they are much, I'm thinking, like the Caledonians and Picts and the sons of Erin before the time of the blessed saints Patrick and Colum! But in the first place you're to understand that the authorities do everything possible to make and keep peace with them, and that we've had peace for a score of years."

"What I'm meaning," said Selkirk, "is, if I and mine go to this new country, will we put them forth, or agree with others putting them forth, from lands they've held God knows how long, and that make their home on earth? In my life, Colonel Burke, I've seen a deal of putting forth of the helpless by the powerful. I would not cross over into that camp!"

"Ah?" said the Irishman, "And that's the way you're feeling about it? And of course it does you honor! Then I'm happy to tell you, Mr. Selkirk, that the great valley, from the first sight of it a score or more years ago until now, is not dwelt in by Indians. When they left it, and why they left it, God knows, for it is a fair land. It's likely it was once pretty populous with them as they count populousness, which is nothing like our populousness."

"Long ago they cleared a considerable portion of the floor of it and left it to the high grass and the buffalo and the elk. There must have been villages and maize fields. There are many beautiful rivers, and they love rivers. But they're hunters, and at last they eat up the forest around them and they move. Or there is a war and they are killed off. Or they move restlessly anyhow, like the waters of the sea. Whatever the reason, they're clean gone, and with them, or before them, the buffalo and the elk. Hunting parties, or just rovers for curiosity come back into it at times, and it is true that the war bands of the Catawbas and Delawares, who are perpetual enemies of one another, have a warpath through it which they use when they are in active controversy. But that's all. The true Indian country is now back of the Ohio, behind those Allegheni or Alleghany Mountains that make the western boundary of the valley. No, sir! Indians may make a sentimental claim to all of Virginia, or all the continent for that matter. But as they don't choose to live in the great valley, who's to gainsay others from doing so? \* \* \* Faith, and indeed, sir, your conscience may be at ease!" (pp. 20, 21).

Just how tragically wrong Colonel Burke was in his promise of naught but halcyon days for his settlers in the valley is discovered by the further reading of that splendid book. It is true that the relationships were all to the good between whites and Indians at the first. But 70 pages of Kercheval's fascinating history of the valley are taken up with the accounts of those Indian forays and massacres and fights which brought such sorrow and tragedy to the border folk in the years just prior to the Revolution, to say nothing of the continued strife with the red man during that bloody period. Now and again we see the markers on our highways telling where such and such fort stood, and where a massacre took place. The first clash with the red men was in 1742 when John McDowell and seven of his men fell up here where the North River joins the James at Glasgow. Following the disastrous rout of Braddock's force on July 9, 1755, the terrible news spread like wildfire through the valley, and consternation and fear followed in its wake. And well it might be so, for a wave of dolor and horror broke upon the border in those days, and many there were who fell victims to the tomahawk and the scalping knife. An interesting side light on the state of mind produced among the settlers by the tidings of Braddock's defeat is preserved in the memoirs of a young minister who was traveling through this country southward at the time. He was the Reverend Hugh McAden, a graduate of the fifth class of Princeton, then Nassau Hall, afterward to do a great work among the Presbyterians of Carolina, who, by the way, is a great, great, great grandfather of my wife. It was at the house of a Mr. Bowyer, near Staunton, that McAden noted in his diary on July 16, 1755: "Here I received the most melancholy news of the entire defeat of our Army by the French at Ohio, the General killed, numbers of inferior officers, and the whole artillery taken. This, together with the frequent accounts of fresh atrocities being daily committed upon the frontiers, struck terror to every heart. A cold shuddering possessed every breast, and paleness covered almost every face. In short, the whole inhabitants were put into universal confusion. Scarcely any man durst sleep in his own home, but all met in companies, with their wives and children and set about building little fortifications to defend themselves from such barbarian and inhuman enemies, whom they concluded would be let loose upon them at pleasure."

It was at this period that the many forts were constructed here and there for every convenient group of settlers. Into these tiny areas of protection they gathered in apprehension during the days of Indian raids, free to live in their own homes in comparative peace of mind only during the days of winter. In some cases, as at the Old Stone Church at Fort Defiance, the stone church buildings were centers of these fortifications. If you wish to read the details of the awful experience of those days when any moment might

bring the sound of an Indian war whoop, the destruction of one's home, the death of dear ones, and possible capture and torture, then you will find much absorbing material in old Kercheval's History. You will find it hard to put it down, I assure you. It was not until General Wayne's treaty in 1794 that the menace of the red men and the tomahawk was removed from the frontier folk of the valley.

It was my intention at the outset to describe in some detail the homes, the dress, the food of these early pioneers, and something of their manner of life and customs, in particular their wedding feasts and jollities. Now I must revise that outline, as my time is overpast. Nevertheless, with your indulgence I would give you a glimpse of these things, by quoting a paragraph or two from Bean's *The Peopling of Virginia*:

"The pioneers had no luxuries in those days. They possessed a scant supply of clothing and bedding, and had for kitchen utensils chiefly iron kettles, frying pans, pewter spoons, steel knives and forks, wooden bowls, trenchers, platters, and noggins. The head of the family had to be a farmer, hunter, and warrior. He was a 'jack-of-all-trades,' as he made the wooden vessels, bedsteads, cupboards, tables, stools, looms, and moccasins. His tools were a drawing knife, ax, tomahawk, and possibly an auger and handsaw. The men wore leather breeches, leggings, linsey woolsey suits, and moccasins. A bride, we are told, wore a poke bonnet, 'bedgown,' linsey petticoat, and moccasins.

"The houses were cabins of unhewed logs with but one room, except in the families of the well-to-do, who had hewed logs with huge fireplaces, a living and eating room, a small bedroom, and kitchen, and a loft above reached by a ladder, where the boys slept. The joints were held in place by wooden pegs, and pegs were also thrust into the walls to serve as wardrobes. Buck antlers held the ever-ready rifles, four wooden logs were used to hold a huge clapboard for a table, and there were three-legged stools for seats. At mealtimes the tables groaned with a display of all varieties of meats: Bear, venison, steaks, roasts, wild turkey, pheasants, and other small game. Wonderful Johnny cakes and corn pone, abundance of rich milk from cows that grazed on the pea vine and bluegrass, sparkling water that gushed from lively springs provided the families with nourishment that kept the grown people robust and vigorous and developed the children into stalwart men and women.

"Logrollings, house warmings, sugar stirrings, quiltings, 'apple butter billings,' corn shuckings, house raisings, and the Old Virginia reel were frolics in which the entire neighborhood took part. (When a new house was needed the logs were cut and hauled to the desired place, and there in 1 day the men of the community would complete the house, except for doors, floors, windows, the roof, and the chimney.)" (Pp. 40-42.)

And we may add to this brief description to say that in all and over all and through all the church of the living God stood indeed for them not only as the pillar and ground of the truth but the center of their community life and interest, their social hub, and their spiritual fountain. They had strong minds in those days that delighted in sermons of hours' duration, that often had some 50 points and more, and equally strong backs to enable them to sit on their puncheon pews and not only take it but like it.

These are some vistas of those early days in the great valley that will serve, I hope, to entice you to further exploration. And if as we ride along in our comfortable cars on the smooth surface of the valley pike we will have a new appreciation for those hardy souls who broke the way and bore the brunt and lived heroically that we might have our heritage of today I will be indeed content.

Thomas A. Edison

# REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. VREELAND. Mr. Speaker, the 11th of this month will be the anniversary of the birth of Thomas A. Edison, who died a resident of West Orange, N. J., in my district.

Mr. Speaker, during the first portion of my remarks on this subject I am going to ask all who are present to employ their imaginations, as the condition I am about to describe is, I am glad to say, an imaginary one.

Suppose, if you will, that it is nearly half past 3 in the morning on the 18th of October, 1931. Suddenly the entire world is robbed of its electric power. Whole cities are plunged into darkness. Transit lines are at a complete standstill. Radios, telephones, and the telegraph are unable to function. Communication has received a tremendous set-back.

The 18th of October dawns on a different world. Men in cities either walk to work, or go by horse and buggy, for

storage batteries have failed completely and countless thousands of automobiles, subways, and airplanes are electrical cripples. In the tall city buildings elevators are no longer running. Factories lack the power to operate. Electric appliances in the home are reduced to the status of ornaments. In the rural districts, men on modern, electrically equipped farms are forced to return to the harvesting methods of their grandfathers. By nightfall, panic has seized the world. Every division of industry has been victimized. The United States and all the world about us are paralyzed. People seeking solace in entertainment find the phonograph silent and motion pictures nothing but a memory. In hundreds of ways, the progress of civilization has been robbed of the accomplishments of half a century.

I suppose you are saying to yourselves that my words are fantastic and that such a series of calamities could never befall the world. You are right. My words are fantastic. Such a series of misfortunes is most improbable. Then why did I use such fantasy to preface my remarks? I will tell you.

I employed the story of a crippled, paralyzed world because that is exactly the way it would have been if, on that quiet October morning, 9 years ago, the things created and made possible by Thomas Edison had been taken from this world when he himself passed into the Great Beyond.

Not one person in this great room can fully appreciate what Thomas A. Edison did for America and for the entire world. He changed America and he changed the world as no other man has done before or since.

The story of Thomas Edison unfolds like a fairy tale and is amazing in its revelation of what one man can accomplish in the span of a single lifetime. Here today time will permit me to mention only a few of the outstanding events in the life of America's greatest genius, but, perhaps, after hearing these, we will all come to realize some of the greatness of Mr. Edison and the unpayable debt of gratitude which we as Americans owe to him.

Ninety-three years ago, on the 11th of February 1847, Thomas Edison was born in the little town of Milan, Ohio. Young Edison was a real boy and got into trouble with annoying frequency. He nearly lost his life when he fell in the town canal, and again when he tumbled into a great pit of wheat in a nearby grain elevator. He had the top of a finger accidentally chopped off by an ax, was butted through a fence by an angry ram, and was spanked in the public square, as an example to the other village boys, because a fire he had built in a barn had burned it down.

Despite all this, the young lad was a constant student. He watched everything and learned something from it. One of his earliest experiments was to sit on a nest of hen's eggs in the hope that he could hatch himself a batch of chickens.

At the age of 12, Edison had his own laboratory rigged up in the cellar of his home. While still 12 years of age, the boy began to sell newspapers on a local train, running between Port Huron and Detroit, Mich. Later, he set up a second-hand printing press and printed his own *Weekly Herald*, the first newspaper ever printed on a moving train. The fame of his little journal spread to England, where it received the enthusiastic approval of the *London Times*. Edison, only 15 years of age, was everything from newsboy to editor and publisher, and proud of his achievement.

Soon the youthful Edison became interested in the telegraph, which was then in its infancy. Before long he became an expert and, like all telegraph operators in those early days, drifted from one section of the country to another, serving as telegraph dispatcher on the railroads.

While following this occupation he perceived many difficulties in the crude telegraph equipment. His inventive mind began to function. Young Edison began to experiment with improvements for the telegraph systems, both sending and receiving. Even then, he was working under difficulties, when we consider it was not many years after his birth that Edison was left almost totally deaf, due to an accident

which occurred while he was editing his Weekly Herald on the Grand Trunk Railway.

But in spite of this physical handicap, he continued the work that was to bring him world renown, and secured the patent for his first invention, the electrical vote recorder, when he was only 21 years of age.

This, however, was only the beginning. After obtaining his first patent, Edison really went to work. The resulting inventions were amazing in their number and variety. All told, they reached the staggering sum of more than 1,150 products of Edison genius, all of them patented in the United States Patent Office and many patented in foreign countries as well.

When we consider that it took "The Wizard of Menlo Park" 10 whole years and that he experienced some 50,000 disappointments before he completed his most difficult invention, the nickel-iron-alkaline storage battery; and when we consider that the scope of his inventions encompassed everything from gigantic electric dynamos to our simple, everyday waxpaper, we begin to get a faint idea of the greatness of the man.

It would take hours to mention those 1,150 inventions, so I will merely mention a few of them in order that we may get a small idea of the debt we owe to this great American genius.

He ushered in the era of electricity, inventing the first practical electric light, the dynamos to supply power on a commercial basis, and the first electric lighting system. He gave the world the duplex and quadruplex telegraph; the first thermionic tube, forerunner of our modern radio tube; the telephone carbon transmitter which contributed much to the development of both Bell's telephone and the radio; the Ediphone business dictation machine now so indispensable in our great business concerns; the magnetic ore separator; giant cement kilns for the mass production of portland cement; the electric pen, which led to our modern mimeograph machines; the storage battery safety lamp for miner's caps; the Universal stock ticker; a fluoroscope now used in modern X-ray machines; and even the gummed paper we find in nearly all our up-to-date stores and shops. If, by any chance, you begin to grow tired of this parade of inventions, gentlemen, please remember that there are more than one thousand, one hundred more, which I am not taking the time to mention.

The favorite inventions of the Wizard, himself, were the phonograph and the motion-picture camera. We do not know why, but I would like to venture the opinion that Mr. Edison preferred these two because they added so much to the gaiety and entertainment of the world, for Edison was always the humanitarian, thinking not of what he could do for Edison, but rather of what Edison could do to make life easier and bring more comfort and happiness to his fellowman—and more prosperity and prestige to his country.

One invention alone, such as the electric light, would have given Thomas Edison a permanent place on the pages of history, but the tremendous Edison energy kept new ideas, new mental conquests tumbling forth from his inexhaustible imagination.

Most people think that the story of Thomas Edison begins and ends with his multitude of inventions, but that is where most people are wrong. The story merely starts there. Here, briefly, is what the inventions of Thomas Edison mean to the world in general and to the United States in particular.

They mean employment. A recent survey has shown that one out of every nine people gainfully employed in the United States in all the transportation, communication, and mechanical industries, owes his employment directly to the inventions of Thomas Edison.

The inventions of Edison mean higher standards of living. We can be sure, gentlemen, that the fantastic situation I described in the beginning of this talk would not be at all fantastic if the multitude of Thomas A. Edison inventions were suddenly subtracted from our everyday lives.

The inventions of Edison mean the development of industries. As far back as 1931, the industries arising directly

from the inventions and discoveries of Thomas Alva Edison represented a total of over \$25,000,000,000. That was 9 years ago. A conservative estimate of their worth today would be well over \$30,000,000,000. The genius of Edison has aided the development of every single industry we have. The inventions of this one man have made the United States the greatest industrial nation on the face of the earth.

Not only have Edison's inventions made us the greatest industrial nation on earth, but they have also given the United States leadership in the constant battle to uncover the secrets of nature and further the progress of mankind. When Edison erected his laboratories in New Jersey and surrounded himself with a group of master scientists, technicians, and students of physics and chemistry, he pioneered a system of organized research. This system, after steady development, is today responsible for the marvels of science and industry continually being born in our great scientific and industrial research laboratories.

The potentialities of the organized research methods and rich industrial heritage which Thomas Edison bequeathed to the world in general and to America in particular defy the powers of human calculation and conjecture. This is a strong statement to make, a very strong statement, but also a very true one.

The inventions of Edison mean democracy. Take Mr. Edison's very first invention, the electrical vote recorder. There, right at the start, was an instrument of democracy. "The Wizard of Menlo Park" loved and labored for his country and the principles of stanch democracy for which it stands. During the World War he devoted all his time and his genius to the United States Government, making a complete, first-hand study of conditions and needs, and then suggesting 42 defense and life-saving measures, rather than instruments of war and death.

His work in establishing methods and plants with which to overcome shortages in the necessary war chemicals is outstanding. For instance, Edison installed and put into operation in 45 days a benzol plant at Johnstown, Pa., and in 60 days another in Woodward, Ala. Previous to this time it had taken 9 months to install and operate benzol plants. In Canada two plants were put into operation within 60 days. This, too, was accomplished according to plans mapped out by America's greatest of all inventors.

Later he surveyed national economic conditions and drew up a complete report, including his suggestions for improvement, which he presented to the astonished officials at Washington.

Finally, the inventions of Edison mean an inspiration to youth. It is common and very logical knowledge that the future of any nation is in the youth of the land. With the advantages and inspirations supplied by Thomas A. Edison the youth of America has an example of inventive accomplishment that the youth of no other land in the world can boast. Young America can look upon the life of Thomas Alva Edison as a life of conquest and achievement—a life of conquest over the things worth conquering and of achieving the things worth the work of achievement, a life that embodies all the finest ideals of America today and the America we hope for tomorrow, a life that is the very essence of peace and progress, because it has made possible, and will continue to make possible, the peace and progress which we, as a nation, are enjoying today.

There are some among us who may say that Mr. Edison received ample reward for the products of his genius and that we would be lucky if we possessed the wealth which came to him from his inventions. It is true that Mr. Edison did receive large sums of money from his inventions, but not nearly as much as he could have made. As soon as an invention was perfected by the great inventor, he lost no time marketing it for whatever it would bring. This money was then turned over to finance his new inventive interests and the operation of his research laboratories. Why, on the Edison steel storage battery alone, the Electrical Wizard invested the enormous sum of \$3,000,000.

No, gentlemen, his motive was not to obtain a life of ease for Thomas Edison. If it were, he could have retired for

life on the royalties of just one invention. However, on the very day when fatal illness overtook him, he was at his Fort Myers, Fla., laboratories, busying himself with the problem of extracting rubber from the common, ordinary goldenrod. Therefore, gentlemen, we see that Thomas Edison derived his reward not from what money he made, but rather from the happiness he brought to his fellow man, and the peace and prosperity he did so much to secure for America.

Merely because his birthday neighbors were also great men, the life and deeds of Thomas Alva Edison should not be consigned to obscurity. Men like Edison are mighty scarce.

It is indeed difficult to think of any other man who has patented more than 1,150 inventions, and who has contributed to mankind the tremendous amount of good that has come to us, and will continue to come, from the genius of Thomas Edison.

To forget a man like Edison is not characteristic of the American people. He merits exceedingly high ranking among the great men of our young and glorious history. His name should be honored and his birthday celebrated by America and by Americans everywhere.

He is an outstanding example of achievement and initiative of the people of this country by the efforts of whom it has become the greatest nation on earth in the shortest period of any in history—a great American and a great country.

### Navigation on the Columbia River, 1897-1939

#### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

STATEMENT BY M. J. VENNEWITZ

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. M. J. Vennewitz:

#### NAVIGATION ON THE COLUMBIA RIVER, 1897-1939

(By M. J. Vennewitz)

Two years ago, in January 1938, the Bonneville lock was opened and a new era in river navigation above Bonneville began. Prior to the construction of the Bonneville Dam and the formation of the pool to The Dalles, the Cascades Canal provided the means for navigating the Cascade Rapids and continuing upstream. On the upper river the Dalles-Celilo Canal is still the connecting link between the deep-draft navigation possible below The Dalles and the shallow-draft navigation above. (At the present time, pending completion of a 27-foot channel below Bonneville and the raising of several bridges, all traffic on either stretch of the river is shallow draft.)

In the table accompanying this article an abbreviated summary has been made of river traffic since the construction of the Cascades Canal in 1897. With the exception of logs which are rafted down river from points usually between Stevenson and Hood River, the difference between commodities shown passing Bonneville locks and those passing the Dalles-Celilo Canal represents that shipped from or to The Dalles.

Traffic through the Cascades Canal from its opening in 1897 to about 1920 was mostly in miscellaneous merchandise, berries, and fruit. Practically no petroleum products or rafted logs were moved and shipments of wheat, if any, were small and unimportant.

From 1921 to 1925 traffic through the Cascades Canal underwent a transition. The commerce in merchandise, berries, and fruit which prevailed during the first 23 years of canal operation abruptly diminished and by 1925 had disappeared. Simultaneously with the diminishment of that traffic commerce in logs began, in general, increasing as the previous traffic declined. Shipments of petroleum products and wheat, if any, were still small and inconsequential.

The year 1931 marked the approximate date of another transition period for river traffic. Movement of logs reached its peak during that year, sharply declined the next year, and then stabilized around an annual tonnage of between 40,000 and 50,000.

About this time shipments of wheat through both the Cascades and the Dalles-Celilo Canals began. Small at first, they increased sharply for several years, reaching a high in 1934 of 33,608 tons through Cascades Canal and 21,017 tons through the Dalles-Celilo Canal. Wheat listed as through the Dalles-Celilo Canal actually was shipped from a point located on the canal. It was not until 1938 that any wheat was shipped from points on the upper river. (In that year about a third of the wheat through the Dalles-Celilo Canal came from points above. Figures are not yet complete for 1939, but with several new terminals constructed on the upper river during the year, the proportion of wheat coming from points above the canal promises to be much greater in 1939 and to continue to increase in future years.)

In 1937, when other traffic was choked by construction activities at Bonneville Dam, the petroleum products transportation industry was born. For 9 months, while other traffic was at a standstill, gasoline was pumped over the dam and continued upstream to The Dalles and Attalla.

At first, all petroleum products passing through the Dalles-Celilo Canal went to Attalla, 127 miles above The Dalles. Since the construction in the spring of 1939 of terminal facilities at Umatilla, 30 miles downstream, the traffic above The Dalles has been divided between the two. In 1938 and 1939 a little over 50 percent of the petroleum products passing Bonneville locks continued through the Dalles-Celilo Canal to Umatilla or Attalla, the remainder was discharged at The Dalles.

With the opening of the Bonneville lock in January 1938 river traffic surged forward. The newly born petroleum commerce accounted for about 50 percent of the traffic through both canals, with wheat representing roughly 25 percent at Bonneville. With one exception, no previous year has been as large (1931 was a little larger, but that traffic was almost entirely logs valued at about one-fourth that of wheat or gasoline). The Dalles-Celilo Canal passed nearly as much freight during the year as in the previous 22 years of canal operation. In reality, for the first time since its construction in 1915, this canal was effectively serving the vast hinterland beyond The Dalles. One important reason why the canal had failed to attract commerce in the past was the number of swift, shallow rapids above Celilo, making navigation possible only at high-water stages and hazardous at all times. This condition was remedied to a great extent in 1938 with the completion of a channel 150 feet wide and 7 feet deep at low water from Celilo to Umatilla, making shallow-draft navigation possible over the entire year.

In 1939 commerce through the canals soared. Petroleum products, amounting to over 50 percent of the traffic through both canals in 1938, increased over four times. Wheat almost doubled. Rafted logs, which represented 80 percent of the traffic through Cascades Canal in the period from 1925 to 1936 was less than 6 percent of the total commerce through Bonneville in 1939. Total commerce through Bonneville during the past year was three times as great as that in 1938, while at Dalles-Celilo nearly twice as much went through in 1939 as in the 22 years of canal operation from 1915 up to 1938.

Such is the record of river navigation before and after the construction of Bonneville Dam. The large increase in traffic since the dam was constructed is gratifying in the fullest measure and prophesies a future which indeed looks bright.

#### Abbreviated statement of tonnages through Bonneville and Dalles-Celilo Canal, 1897-1939

Period	Through Bonneville locks (Cascades locks prior to 1938)			Through Dalles-Celilo Canal		
	Petroleum products	Wheat	Rafted logs	Petroleum products	Wheat	Total tonnage through locks
1897-1900.....	(1)	(1)	(2)			
1901-10.....	(1)	(1)	(2)			
1911-20.....	(1)	(1)	(2)	(2)	(3)	4,020

1939 total....	215,809	49,420	17,838	300,867	119,350	18,921	139,535	

NOTE.—Total petroleum products shown above are about 93 percent gasoline and 7 percent fuel and Diesel oil.

### The Shadow of McKinley

#### EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

EDITORIAL FROM THE BOSTON HERALD OF FEBRUARY 4, 1940

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of February 4, 1940:

[From the Boston Herald of February 4, 1940]

#### THE SHADOW OF MCKINLEY

It was inevitable that advocates of the renewal and extension of the Hull pacts should call attention to the last speech of President McKinley. A Civil War veteran, a staunch Republican, a former Governor of Ohio, chairman of the Ways and Means Committee which prepared the McKinley tariff bill, an associate of Mark Hanna, he was the embodiment of Republicanism at the turn of the century. Six months after he began his second term in 1901 he delivered in Buffalo a speech which was still echoing throughout the country when he died, assassinated, 9 days later.

In that address he carried the doctrine of reciprocity further than any of his predecessors. There is no telling how much more he would have modified his views or whether he would have recanted if he had survived.

The United States was not a creditor nation then, but circumstances were making it a power in the Caribbean and the Pacific. The strictly continental phase of our development had come to an end. The young giant was feeling its industrial and agricultural might, and visualizing the Stars and Stripes flying all over the world on ships laden with American goods. President McKinley, triumphant a second time over William J. Bryan, was reaching out in a more or less vague way for new, larger markets. His eagerness to obtain them had apparently made him turn his back on the high-protection dogma which had been so closely associated with Republicanism and was largely responsible for his second election.

In this mood he made his last address at the Buffalo exposition. Few were prepared for it. Hardly anybody had expected him to speak so emphatically. He said, among other things:

Our capacity to produce has developed so enormously and our products have so multiplied that the problem of more markets requires our urgent and immediate attention. Only a broad and enlightened policy will keep what we have. No other policy will get more. \* \* \* By sensible trade arrangements which will not interrupt our home production we shall extend the outlets for our increasing surplus. A system which provides a mutual exchange of commodities is manifestly essential to the continued and healthful growth of our export trade. We must not repose in fancied security that we can forever sell everything and buy little or nothing. \* \* \* What we produce beyond our domestic consumption must have a vent abroad. The excess must be relieved through a foreign outlet, and we should sell everywhere we can and buy wherever the buying will enlarge our sales and productions,

and thereby make a greater demand for home labor. The period of exclusiveness is past. The expansion of our trade and commerce is the pressing problem. \* \* \*

That speech will be referred to continually when the debate on the Hull pacts engages the attention of Congress and the country. To date the discussion has not produced anything new or startling. The short experience of the Nation with the agreements and the exceptional circumstances of the period have blurred the picture. Interests which objected to the arrangement a year or two ago are still antagonistic. Interests which see in them what McKinley and Blaine saw in something similar have not changed their attitude. The impressive, influential speeches are yet to come.

It is not unlikely that a compromise will emerge, under which the pacts and the salutary principles underlying them will be retained, with the Senate somehow receiving more consideration than at present, and with mechanics improved. A return to the old, time-consuming, pull-and-haul process of tariff making of the days of McKinley is not a pleasant prospect for even the most vehement critics of the Hull treaties.

### Aid for Finland

#### EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. SPRINGER. Mr. Speaker, the great majority of our people have the utmost sympathy for Finland and her people. I have not heard any expression in favor of Russia—but our people, without exception, express the greatest admiration for the brave Finns and they deeply sympathize with them on this grave crisis.

Finland has many near neighbors in Europe who can aid her and who should aid her in this great disaster. The problem of Finland is their problem. The result of this conflict between Russia and Finland will have a direct and far-reaching effect upon those near neighbor nations. Those European nations owe to Finland their wholehearted support and they should contribute unstintingly to Finland's cause.

Mr. Speaker, we of the western hemisphere have commitments which we must respect. We have our own problems to solve. Our economic conditions in this Nation are our first concern, and our own people must be rehabilitated and our own people must be properly cared for. This is our first duty, and that duty must be met.

May I say that in the event our Government should engage in making any loan, as a Nation, to Finland, we would thereby establish a precedent which I fear would become very embarrassing in the future, if, in fact, the same would not cause us to become involved in this European conflict. If our Government should make one loan to Finland—and I have the greatest sympathy for that nation—then I wonder how many European nations would negotiate a like service from us? And, in the event we should make one loan to any European nation at this critical period, how long would it be until we are asked to furnish manpower? If we should participate in this European war by making any loan, or loans, to belligerents we cannot now contemplate the far-reaching mental effect that overt act would have upon all other European nations who are unable to secure such assistance.

We have our own problems which must be solved. Let us engage in the solution of them and let us avoid any participation in this war.

Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD and to include therein a brief but very carefully written editorial which appeared in The Palladium-Item, of Richmond, Ind., on January 31, 1940, which follows:

[From the Palladium-Item, Richmond, Ind., January 31, 1940]

#### MORE WAR PROPAGANDA?

Get a copy of the January 29 issue of the magazine Life and turn to page 16. A subhead states: "The Great Isolationist dies as America moves toward a place of power in world affairs." The lead article is an editorial appreciation of the late Senator Borah.

In it the Senator is described as a loser in the battle to keep the United States from interfering in foreign affairs and pursuing an isolationist policy. Life says Borah's counsel of isolation was that of wisdom when our country was young, but that now that "greatness and power have been thrust unwillingly upon her," she cannot "shirk" her destiny.

Walter Lippmann is quoted: "What Rome was to the ancient world, what Great Britain has been to the modern world, America is to be to the world of tomorrow." If this is not propaganda to the effect that we must turn militaristic and go forth and try to conquer the world, what is it? That is what Rome and Britain tried to do.

In the article that follows this one Life puts up an argument for aiding Finland. "Implements of war are the one thing that Finland needs," says Life. It continues, "One thing certain is that if Finland falls and the Russians or Germans overrun all Scandinavia, both the pressure and the need for American dollars will be multiplied manifold."

A European, a Britisher, recently said the present war in Europe was a civil war; the rebellion of one part against the other. During our Civil War Britain and France gave every aid and comfort possible short of war to the Confederate States. It was quite apparent the motive behind this enmity toward the North was that the United States should be permanently divided and weakened. In the present war in Europe we are a bit better toward the British and French than they were toward us during our Civil War. We hope they will win, because we believe they represent the better cause.

The situation in Finland is not yet our concern. It is the concern of Europe and of Britain and France, and of all the neutral nations of that continent that do not want to be swallowed by powerful and unscrupulous neighbors. Finland is the left flank of the battle line occupied by the enemies of bolshevism and nazism. If the other Scandinavian nations are at heart enemies of those movements, if they are determined to hold them at bay, then they, not we, as yet, belong in the fighting line alongside of the Finns.

Europe was spoiled by our armed intervention in 1917. She now has the idea that we should send her armed help every time she gets into serious difficulties. If we give in again to this idea, then we will give in again and again, because Europe is always having recurring "civil wars." Then the end will be that we shall have to go forth and attempt to conquer the world, as Life and Lippman seem to urge. It would be the only way, we or our children would be told, by which we could attain lasting peace—the lasting peace that is already ours if we will but let Europe settle her own affairs, and we be sufficiently armed and cooperative with our sister American nations, also adequately armed, to make the rest of the world with its quarrels and conquests keep away from our hemisphere.

### Civil Aeronautics Authority Favorable Toward Increase in Noncollege Students Participating in Pilot-Training Program

#### EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

LETTER FROM ROBERT H. HINCKLEY

Mr. RANDOLPH. Mr. Speaker, a few days ago I placed in the RECORD a letter I had written to Robert H. Hinckley, Chairman of the Civil Aeronautics Authority, in which I advocated an increase in noncollege students participating in the pilot-training program. I am gratified at the reply received, copy of which is included, as follows:

CIVIL AERONAUTICS AUTHORITY,  
Washington, February 2, 1940.

HON. JENNINGS RANDOLPH,  
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN RANDOLPH: Thank you very much for your letter of February 1 and your fine expression of commendation.

With regard to your suggestion for increasing the noncollege quota from 5 to 20 percent, you will be interested to know that we have now enrolled this year approximately 8 percent instead of 5 percent, with the possibility of the percentage being still higher next year.

With all good wishes to you, I am,

Sincerely,

ROBERT H. HINCKLEY,  
Chairman.

### What Can We Do About Civil Service?

#### EXTENSION OF REMARKS

OF

HON. GUY L. MOSER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

RADIO ADDRESS BY HON. GUY L. MOSER, OF PENNSYLVANIA

Mr. MOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following personal address in the American Forum of the Air panel, Mutual network, January 14, 1940, on the subject, What Can We Do About Civil Service?

By an unflagging honesty in practice and a genuine sincerity of purpose, the present progress of disintegration of all semblance of merit under our civil-service system, as presently and for many years past administered, can be arrested and effectively stopped. Confidence can only in this manner be restored, individual initiative and enterprise be encouraged, and a genuine system of merit based on efficiency reestablished.

The act of Congress January 16, 1883, establishing the civil service, provided for open competitive examinations as therein described, and only permitted "noncompetitive examinations in all proper cases before the Commission, when competent persons do not compete, after notice has been given of the existence of the vacancy \* \* \*." Contrast this to the well-known and established practices of favoritism and prejudices manifestly rampant. Instead of extending the merit system, it crushes ambition, destroys initiative, and creates apathy, lassitude, and indifference, with its consequent enmities, jealousies, and other elements destructive of harmony so essential to efficiency.

This generation of Americans in its "rendezvous with destiny" has little in which to look forward to a career in the classified civil service.

When I was a young rural teacher in a single-room hilltop schoolhouse, ambitious to advance myself beyond the meager \$28 per month salary, the Railway Mail Service beckoned. I applied to the Civil Service Commission and received with my formal application a Manual of Examinations, containing a sample set of questions previously used in strict conformity with the provisions specifically set forth in the act cited. It was invaluable, as I burned the midnight oil in preparation for the examination. I passed fourth in the State of Pennsylvania, being offered a substitute's appointment, which I accepted within 3 months of the examination. Try and get a manual and match that record now. It cannot be accomplished. I cite this as an example of the Commission's conformity to the act of 1883, when it had only attained its majority after 21 years of existence.

In the years that followed, with requisite qualifying experience, I applied for but couldn't get permission to take an examination to qualify for post-office inspector, until I used the influence of a Member of Congress. Though I passed the examination in a class of seven, six of whom I believed competitors, I learned the examination had been noncompetitive, without the restrictive permissibility under the act having been met. I was even then denied appointment until years later a change in the national administration had been effected, establishing the complacency with which the Commission was then already yielding its prerogatives under the act.

Our Nation abounds in landmarks and epigrams of our form of democracy in a republic under our Constitution. In the Declaration of Independence, Thomas Jefferson penned, "All governments derive their just powers from the consent of the governed," only a corollary to the Divine injunction, "All things whatsoever ye would that men should do unto you, do ye even so unto them."

By the apathy of the citizens another Jeffersonian admonition relative to "external vigilance" was forgotten and his philosophy of democracy, "Equal and exact justice to all men of whatever state or persuasion, religious, or political," cast to the limbo so far as merit under present civil services can be reconciled.

When I became a Member of Congress, there was before our House Committee on Civil Service a bill (H. R. 2700), introduced by our distinguished chairman, providing for open competitive examinations for all persons already employed by the Federal Government. President Mitchell and others, speaking for the Civil Service Commission, opposed it. We had the votes to report it out 2 to 1, but an amendment to make it noncompetitive was offered and defeated 1½ to 1 after other opponents had left the executive session. It died in the committee exactly that way. I shall violate no confidences reflecting the change. However, in the Seventy-sixth Congress we have H. R. 960, proposing the same purpose of blanketing all prohibited positions under the act of 1883 into the classified civil service, subject to noncompetitive

examinations. With absent opponents and a change of pledged positions, it was reported out by scant margin and is on the House calendar. It has my opposition for reasons manifestly apparent.

Though the President in his message to Congress, January 3, only mentioned extension of the merit system, among others, as a desirable objective, I can neither reconcile it to be his aim to use patronage, by blanketing processes and noncompetitive examinations to create merit, nor square such course with his pronouncements in *Liberty* magazine in 1932 on the subject. Only recently he declared to me personally: "This country is still on a competitive basis," agreeing that "competition is still the life of trade." Competition, law observance, and the application of the philosophy of the Golden Rule, only, enhance merit.

### The Late Associate Justice Oliver Wendell Holmes

#### EXTENSION OF REMARKS

OF

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ADDRESS BY HON. WILLIAM N. MORELL

Mr. MAAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. William N. Morell, national president of the Federal Bar Association, at the tomb of Justice Oliver Wendell Holmes, Arlington Cemetery, on February 1, 1940, on the occasion of the Sesquicentennial of the Supreme Court of the United States, under the auspices of the Joint Committee of the Congress of the United States on the One Hundred and Fiftieth Anniversary of the Supreme Court of the United States:

It is appropriate, in commemorating the sesquicentennial of the Supreme Court of the United States, that the members of the bar make a pilgrimage to this hallowed place in Arlington National Cemetery—the grave of the late Associate Justice of the Supreme Court of the United States, Oliver Wendell Holmes. He brought to the Court high attributes of character and intellect, noble qualities of mind and spirit, the impress of which will remain a heritage of our people as long as the courts endure—as long as the love of justice lives in the soul of our Nation. We come to pay homage to him as a great prophet of the Court, as a brave soldier, and as a true citizen. His mortal remains rest in perpetual reunion with his comrades of the Civil War here on the hills of Arlington, overlooking the Capital of the united Nation which he served so valiantly in war and so wisely in peace. It brings to mind the verse of the poet O'Hara:

"The muffled drum's sad roll has beat  
The soldier's last tattoo;  
No more on life's parade shall meet  
That brave and fallen few.  
On fame's eternal camping-ground  
Their silent tents are spread,  
And glory guards, with solemn round,  
The bivouac of the dead."

APPOINTED BY THEODORE ROOSEVELT

It is not necessary to recount his many achievements as a soldier, citizen, and as a jurist before his appointment by President Theodore Roosevelt to the Supreme Court of the United States on December 4, 1902. We may recall, however, that Justice Holmes, as a valorous officer in the Union Army, was wounded in action in three separate engagements; that he had a brilliant career as a lawyer in active practice, as a law professor, as an associate justice, and as chief justice of the Supreme Court of Massachusetts. He was the son of an illustrious father and from him, no doubt, he inherited his genial wit, poetic imagination, and brilliant literary style.

BELIEVED IN THE WISDOM OF THE PEOPLE

It has been said by one of our great leaders of the bar that Justice Holmes' conception of the judicial process "is our best hope in the painful process of adjusting ancient dogma to the startling changes of the modern world." He was close to the heart of the people. He firmly believed that the law was a matter of slow evolution. The dissenting opinions of Justice Holmes constitute a vital link in the process of legal evolution. They bridged the gap from ancient dogma to modern realities and made the philosophic journey a less painful pilgrimage. He had a profound belief in the ultimate wisdom of the people and their essential capacity for self-government. He was not a hermit cloistered from the realities of life. He scorned false pretense. The spirit of legalistic sacerdotalism was not in Justice Holmes. Justice Holmes conceived the law as a reasoned adjustment of human relations.

The opinions and writings of Justice Holmes stand as a monument to his scholarship, his courage, and his vision. His influence in formulating constitutional doctrines is equalled only by Chief Justice Marshall. Theodore Roosevelt considered his appointment of Justice Holmes as an outstanding accomplishment of his administration. Well might he have been proud of that appointment.

#### THE COURT AND THE CONSTITUTION

While we are commemorating today the sesquicentennial of the Supreme Court, the Court in an important aspect is an extension of the Constitutional Convention of 1787. The convention wrote the Constitution, but the formulation of the prevailing concepts and doctrines of that document is the work of the Supreme Court. The opinions of Justice Holmes had a constant recognition of this fact during his 29 years on the Court.

#### JUSTICE HOLMES' MESSAGE TO FEDERAL BAR

The Federal Bar Association feels honored to have been selected under the auspices of the Joint Committee of the Congress of the United States on the One Hundred and Fiftieth Anniversary of the Supreme Court of the United States to render this homage to Justice Holmes on behalf of the American bench and bar. On the ninety-first anniversary of the birthday of Justice Holmes, March 8, 1932, the Federal Bar Association held its annual dinner in his honor. Although his health did not permit him to attend that dinner, he sent the following memorable message to the members of the association, a message which has the place of honor in the archives of the association, as well as in the memory and heart of each member:

WASHINGTON, D. C., February 29, 1932.

Gentlemen of the Federal Bar Association:

Your kind invitation for March 8 has been answered, I believe, in due form. But I cannot say farewell to life and you in formal words. Life seems to me like a Japanese picture which our imagination does not allow to end with the margin. We aim at the infinite and when our arrow falls to earth it is in flames.

At times the ambitious ends of life have made it seem to me lonely, but it has not been. You have given me the companionship of dear friends who have helped to keep alive the fire in my heart. If I could think that I had sent a spark to those who come after I should be ready to say good-bye.

O. W. HOLMES.

#### A SPARK KINDLES A TORCH

To those who come after he sent a spark which kindled a flaming torch. Its far-flung beams encompass us all. It is a perpetual light, which the profession, the bench, and the bar with reverence, affection, and respect will join in carrying on. That flame lives and is vibrant today—the Sesquicentennial of the Supreme Court. Hold high the torch which that spark has kindled. May its bright beams dissolve the shadows and darkness which hide the oppressed and may it shine forever as a beacon of inspiration in a troubled world.

### A Balanced Housing Program

#### EXTENSION OF REMARKS

OF

HON. EMMET O'NEAL

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ADDRESS BY NICHOLAS H. DOSKER

Mr. O'NEAL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Nicholas H. Dosker, administrator, city of Louisville Municipal Housing Commission, before the National Public Housing Conference, January 26, 1940:

Most of the mistakes of our early efforts at public housing were the result of our American weakness of attacking a great problem too hastily without proper study and research. Splendid as are most of our P. W. A. housing projects, and excellent as is the character of the accommodations they provide for the higher brackets of the low-income group, they nevertheless should have been built at the end, instead of in the beginning of a national housing program.

It was unavoidable that U. S. H. A.-aided housing should have been influenced in its early stages by the existing P. W. A. program. Therefore, some of the earlier efforts under the U. S. H. A., though they all serve only the lowest income third, still did not reach down far below the top portions of this group. The present policy of planning U. S. H. A.-aided projects which will provide decent shelter without frills within the financial reach of the vast bulk of the lowest income third, will, in our opinion, sell itself to the good sense of the American people. This does not discount the need for better housing for the highest bracket of the low-income third. It merely places the emphasis for Federal subsidized housing where the need is greatest. The extent to which low rents will be achieved

depends not only upon the close scrutiny of costs by the local authorities and the U. S. H. A., but in a large degree upon the cooperation given them by labor and the materialmen.

There is unquestionably an acute shortage of decent standard dwelling units now available to families of all low-income groups. But the needs of every community are not the same. What kind of housing shall we build? Where shall we build it? What low-income and racial groups shall we serve and in what proportion? How large are the local pools of available tenants from which we can draw? These and many other related questions are of deep concern to any local authority contemplating a housing program. The answers can be arrived at only by an intensive survey. Such a survey is an essential for any well-planned housing program. In Louisville we are fortunate in having one, and we have molded it into an elastic, workable, long-range housing program. We call this our 10-year plan.

In preparing this plan, our first concern was a complete and detailed study of families now living in substandard housing. To aid us in this work, we recently completed two very important surveys—one a real property, and the other a low-income housing area survey. The housing survey has become our chart and compass in analyzing both our present and anticipated needs in our sincere efforts to bring low-rent housing to our needy families. From this survey we learned the number of tenant families, by race, now living in substandard housing. The all-important data relating to incomes and rents now paid by these families are also pointed out. From this information elaborate tabulations are made dividing all tenant families not on relief into groups, and labeling these groups according to the agency from which they may expect assistance.

By this method we are able to pick out those families, all in the lowest-income third, which may look to the local authority and the United States Housing Authority for aid. At the very bottom of the lowest-income third is found that hopeless element of families whose exceedingly low incomes now prohibit our offering them dwelling units at such rentals as they can afford. Even though we are unable to presently offer them assistance, we have at least definitely established the number of such families by race, income, and current rents. From these data, and with a continued study of their living habits, it is hoped that some ultimate solution can be found to render assistance to this unfortunate group.

Above the lowest-income third set aside for United States Housing Authority assistance, we find a large number of families in the middle-income group who, though now living in substandard housing, have such incomes that private industry through research and study should ultimately develop low-rent housing for them without the assistance of annual subsidies, capital contributions, or local tax exemptions.

We now have in Louisville two housing projects built by the Housing Division of P. W. A. which offer dwelling units to families in the higher portion of the low-income third who come out of substandard housing. Our two United States Housing Authority aided projects now under construction, which will offer approximately 800 dwelling units to white families and 800 dwelling units to Negro families, are designed to meet the middle portions and as much as possible of the lowest portion of the lowest-income third—the only third helped by the United States Housing Authority.

We have just made application for a loan contract from the United States Housing Authority to build two additional projects. A way must be found, and we believe will be found, to build these new projects to serve the lowest portions of the lowest-income third. In these projects we expect to serve nobody with an annual income exceeding \$800, and we expect to provide shelter rents not exceeding \$8 per month for an average four-room unit. Contemplating this, we have secured the services of Mr. Walter R. MacCormack, dean of the school of architecture of the Massachusetts Institute of Technology, and under his guidance and based on a program to be outlined by him and ourselves, we are preparing to hold an architectural competition, under the rules of the American Institute of Architects, to develop an improved, sound, but inexpensive type of low-cost housing.

Although we realize that the population in most of our large cities is not increasing at the accelerated tempo suggested several decades ago by our city planners, we have, nevertheless, reflected in our suggested pools an anticipated increase in population in our low-income groups. We also considered that a small number of owner families now living in such deplorable and dilapidated housing that they can scarcely be called homes might be given consideration in future housing plans.

The second part of our extended plan deals with the study of the dwelling units in which these families now live. Although we know that in Louisville we have approximately 32,000 dwelling units which we class as substandard, we have never felt that this study was quite complete. The current definition of a substandard dwelling unit is so broad that when applied to some 32,000 dwelling units we still have only a mass of figures. To prepare for our study a more accurate detailed picture of our substandard dwelling units, they were divided into seven groups, ranging from structures unfit for human habitation to those barely substandard by occupancy standards. Although the study is not yet complete, a partial analysis of this data has presented many interesting facts. We know that ultimately we will be able to segregate these dwelling units into three principal types of neighborhoods. The first, of course, will be such areas as contain structures unfit for human habitation, in need of major repairs or those lacking proper plumbing facilities, or any combination of the above. These are the districts to which

we now point as our slum and blighted areas. Generally they are found in contagious areas. However, we do find single, scattered blocks throughout the city which present in themselves conditions quite as poor as those in our worst slums.

The second type district determined is one which offers a serious future problem, which, if left unchecked, will become the slum of tomorrow. This area is characterized principally as containing many old single family structures which are now being cut up and converted into multifamily buildings. In most cases these conversions are made without the addition of bathrooms and kitchen equipment, which force the unfortunate tenants to share these utilities which are so important to private use. We do know that unless measures are taken to arrest this wave of conversion and to stop the spread into these neighborhoods of all these factors which are so incompatible to better living, we are actually permitting the development of our future slums.

The third group, very much like the second, except that conditions have not developed to as critical a point, also present one of our future problems. With the knowledge of the families and neighborhoods to be served the basic points of our problem have been brought to light. The coordination of these two will serve as part three. When this relationship is studied and planned for a 10-year period with particular reference to our city plan, intelligent results will follow.

A city plan that proposes the development and addition of such important utilities as parks, playgrounds, schools, streets, parkways, community centers, and neglects the rehousing of those families now forced to live in substandard dwelling units presents only a portion of the picture. A more solid approach to the ultimate betterment of our city should in a measure be based on the replanning and construction of decent standard dwelling units to meet the needs of the now unserved low-income groups. A city with broad highways, magnificent parks, and tall buildings that hide miserable hovels which cost very large sums to support is not progressing on a firm foundation. Our cancerous slums that breed those things so incompatible with decent and better living are the areas heretofore overlooked in the planning of our American cities. These were perhaps not so much overlooked as they were considered diseases for which no cures were known. The current inability of private industry to cope with this problem and the opposition from pressure groups have been powerful factors which have contributed to their existence in so many American cities today.

In addition to slum areas planned for demolition and reconstruction there are numerous areas suggested for demolition only. These are the areas we hope to clear when vacant land is used for future development and the equivalent elimination clause invoked. These areas generally are small and scattered and are found principally surrounded by old-established industrial developments or adjacent to new, fast-growing industry. In such districts we know that existing residential development has no chance to survive and should be eliminated to provide expansion for future industry. In such scattered areas it would be impracticable to replace the worn-out, dilapidated structures with decent standard housing when areas more conducive to better living can be found.

In part 4 we concern ourselves with the design and construction of such dwelling units as will meet the rents outlined in part 1 and designed to serve particular income groups. In this connection we contemplate a competition among local architects for the design of our two anticipated projects. We feel that through this competition the many worth-while ideas which are currently discussed, but not put on paper, will be brought to the attention of the local authority and built into our future projects. It is our policy to continually keep abreast of such construction methods as will permit lower construction costs, which, of course, means lower rents to the low-income groups.

Part 5 of our ten-year plan concedes that all of the families of low incomes, now revealed by our research to be living in substandard housing, cannot be served by United States Housing Authority-aided projects, which are limited to the lowest income third. Those with incomes in excess of \$1,500 per annum, and many below that limit, can and we believe should be decently housed by private capital, either through new construction or through the rehabilitation of existing structures worth saving.

We believe it to be the duty of the local housing authority to do whatever it can, to correct, as far as it can, whatever bad housing conditions exist under its jurisdiction. In most cases beyond United States Housing Authority aid, it can only provide the leadership, and be the coordinating force, but that leadership, if vigorous and intelligent, should be able to make a community so housing-conscious that great good can be accomplished. Our present intention is to attempt to interest owners and mortgagees of substandard and blighted properties in a plan of neighborhood rehabilitation somewhat similar to that now being experimented with by the Home Owners' Loan Corporation in Baltimore and Chicago. As a result of such a plan much housing could be restored to its former substantial character, thus protecting equities in it which are now slipping dangerously because of neighborhood blight. Such a plan would do much to reclaim today the slums of tomorrow.

Another activity to which we are giving serious consideration is the assuming of leadership in attempting to interest the owners of vacant or partially built-up industrial subdivision sites, in the building of new, decent, low-cost houses for that part of the low-income group at the bottom of the middle-income third and therefore just beyond the reach of United States Housing Authority assistance, and also for some of those who may be barely within the lowest-income third, but who cannot be accommodated

in existing United States Housing Authority aided projects because more needy applicants are given preference.

The Federal Housing Administration has just issued regulations covering property improvement loans, under title I of the National Housing Act. This revised regulation seems to offer a splendid opportunity for hesitant capital to build low-cost housing on very favorable terms for those in the middle-income third. Several of our local owners of land contiguous to industrial districts are now giving serious consideration to this plan. Other avenues for proper housing activities outside the United States Housing Authority aided projects will unquestionably present themselves from time to time.

In part 6 we plan a study of existing laws incidental to the execution of our suggested plans. From the study of substandard dwelling units referred to in part 2 we expect to prepare such maps as will show the location of structures unfit for human habitation and those in need of major repairs. These data may well be used to inform our building inspector's office of the deplorable conditions that exist scattered throughout our city and of the importance of preparing or strengthening such legislation as is necessary to rid the city of these menaces to health and morals. It is possible, too, that some revisions to our present building code may be necessary before some of the planned activities may be effected.

All of this 10-year plan may not be accomplished, but we believe that armed with a detailed knowledge of exactly what we have to do to achieve ideal housing conditions in our city we will actually do a much better job than we would do if we did not set a high goal, the reaching of which would mean real housing progress in our city.

The avoidance of superlatives is difficult for those of us who have made a serious study of low-rent housing for the lowest income groups, and for those of us who think we can visualize its possibilities for transforming the outlook of the beneficiaries of this program from despair to hope—from the straw-grasping espousal of un-American panaceas to an unquestioning return to the American philosophy and all that it denotes.

We must remember that much must yet be done before our country is sufficiently sold on subsidized public housing to be as enthusiastic about it as we are. The decent housing of the lowest income third, at rents which they can afford to pay, is a program too important to be a football for partisan politics. It is big enough and broad enough, when properly understood, to demand the support of all thinking persons, regardless of political affiliation. It is a basic philosophy as fundamental as the American home itself. Its accomplishment represents not only a duty of a great, growing nation to those economic unfortunates whose present living conditions are a byproduct of the upward surge of our rapidly growing national economy, but also a duty to our own more fortunate progeny.

There is nothing radical in providing the means for obliterating, as far as possible, the spawning beds of radicalism, crime, disease, and immorality. Yet some of our friends would have us believe that our championship of this worthy cause marks us as "crackpot sentimentalists," if not potential enemies of the existing order of things. To me our efforts to eradicate the slums and effect their replacement by decent, low-rent housing for the lowest income groups, secured by Government subsidy when necessary, is merely an evidence of intelligent capitalism entrenching itself more firmly as the basic economic philosophy of American life.

We may not enjoy the applause of our contemporaries, but I am convinced we will earn and receive the plaudits of the next generation in proportion as we succeed in our efforts to improve the basic housing conditions of today.

### Gridiron Club Dinner, St. Louis, Mo.

#### EXTENSION OF REMARKS

OF

HON. ANDREW J. MAY

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ADDRESS BY HON. HARRY H. WOODRING

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Harry H. Woodring, Secretary of War, at the Gridiron Club dinner, St. Louis, Mo., January 30, 1940:

You have rung down the curtain on a stage that is a symbol of a great institution—a democracy of free people. Your gridiron is the expression of that freedom of speech, freedom of assembly, and freedom of the press that are cardinal principles of this great American democracy in which we live today.

Only recently in Washington the curtain was rung up on the stage where the last forum of true democracy holds sway—the third session of the Seventy-sixth Congress. It is the opening scene of the deliberations of a true democracy at work. All of us, I think, are impressed with the thought that this assembly of Congress represents one of the last of the world's great, true democracies.

In this tragic era in the life of our Republic, in both domestic and foreign affairs, it is well that we Americans take stock of and analyze our institution of government; determine in our own minds our course of direction as we face the fateful forties—not as partisans, not as Democrats or Republicans, but as Americans.

Elsewhere, in most countries of comparable importance, democratic processes have been temporarily or permanently suppressed. There has been an alarming growth of the idea—to which I cannot subscribe—that democracies are inefficient, outmoded, and unworkable. We have witnessed the phenomenal rise of the concept of the totalitarian state—only a new name for an ancient institution. We have seen old democracies forego some of the functions of democracy in the immediate interest of their national security.

Across the ocean a great war is being waged. During its progress the peoples of the nations involved not only suffer all the unspeakable horrors of modern warfare—devastation, death, disease, famine—but they are temporarily losing those hard-won personal liberties for which their ancestors fought and died. Instead of democracies, we have a modification of the idea of the absolute or totalitarian state. This hazard to free institutions should alone be sufficient cause for our democracy to remain at peace.

The totalitarian concept of the state has come down to us from ancient times. A modern exposition of this concept was given by Kant and Hegel. They declared that the state was omnipotent, infallible, and divine in essence. Some of their disciples went much further, holding that the state was bound neither by the principles of morality nor international law. This led to the view that the state must be self-assertive, aggressive, and militaristic, and that a superior civilization had the right, if not the duty, to impose its culture upon those less favored. Naturally, I do not suggest that any responsible statesman of the present day holds such an extreme view. However, it is correct to assert that in the totalitarian state governmental functions are performed primarily with a view to the advantage of the state and only secondarily for the benefit of the individual.

Strangely enough, the philosophy of Hegel—the deification of the state—and that of Marx—the glorification of the proletariat—appear to have merged. While the theories of communism differ widely from those of Hegel, the practical effects on the inhabitants of a country adopting either ideology seem to be almost identical—a ruthless suppression of all active or potential opposition to the government. This is the very negation of democracy.

European democracies engaged in the war have felt it necessary, in the interest of victory, to restrict greatly individual rights and privileges traditionally exercised by the people. Government by decree has to some extent superseded government by law. More or less strict censorship of the press has been adopted in some countries, while in others newspapers are either owned outright by the government or are published under rigid governmental control.

We may well congratulate ourselves that in America freedom still lives. Here, at least, democracy survives and flourishes. But we must remember that eternal vigilance is the price of liberty. It is not enough to talk about democracy. We must make it work. Marshal Foch once said that the French were an oratorical nation—because they had said a thing they thought they had done it. Some of us Americans are more or less like that. We make laws and speeches about our liberties and sometimes straightaway violate the spirit, if not the letter, of our declarations.

The Bill of Rights of our Constitution is the very soul of democracy. Freedom of speech, freedom of assembly, freedom of religion and freedom of the press—including freedom of opposition—are enshrined in our Constitution. Yet within 10 years after the adoption of the Bill of Rights the hateful sedition laws were enacted, which made it an offense to make false or malicious statements about the President or the Congress. As our hosts will recall, Dr. Thomas Cooper, a Pennsylvania editor, was fined and imprisoned for declaring that President John Adams was incompetent and that he had interfered with the administration of justice. Congressman Mathew Lyon was likewise fined and jailed for accusing the President of avarice and a thirst for ridiculous pomp and foolish adulation. I need not remind this audience that such comment on political leaders today would scarcely attract attention, much less land a man in jail. Otherwise, after tonight's performance, most of the St. Louis gridiron members would be in jail tomorrow.

I do not fear that we will again have to deal with repressive legislation of the type enacted in the Adams era. I do not think we will ever have a censorship of the press. Certainly, in office or out, I will always oppose such censorship, whether we be at peace or at war. I have sufficient faith in the loyalty of our American newspaper men to rely on their judgment in keeping the columns of the press free from anything that will give aid and comfort to our enemies.

However, I do fear that in a grave crisis there is a real danger that we may disregard some of the fundamental principles of democracy. This threat is a reality in Europe. Not long ago a distinguished British economist asked the question, "Is democracy

committing suicide in self-defense?" What would it profit a democratic government if it won a war, but lost its democracy?

In America our acute problem is not that of winning a current military conflict. Thanks to the blessings of a benign Providence we are at peace, and I am confident we are going to remain at peace. Recent enactment of our Neutrality Act and other steps taken by our Executive and Legislative branches, backed by almost unanimous public sentiment for peace, have greatly lessened the possibility of our involvement in the war.

Nevertheless, we cannot feign ignorance of the struggle being waged across the water, or of the issues involved. We cannot remain safely isolated and insulated behind the great moats of two oceans. America cannot possibly avoid the ultimate evil economic effects of this war. War is waste! The cost of that waste is assessed not alone against the vanquished, but also with tragic impartiality against the victor and the neutral.

An early and a lasting peace would be tremendously advantageous not only to the nations suffering the horrors of war, but also to the entire world and especially to the United States. There may be for us some immediate financial gain from war orders, yet an inevitable, tremendous economic loss in the readjustment period after peace. Our foreign trade and our domestic economy have already experienced tremendous dislocations. The shock of the conflict is felt throughout our social and industrial organization. Planning for the future necessarily must be contingent on events over which we have no control. The people of America, therefore, unite with all peoples of the world in the fervent hope and prayer that hostilities will soon cease and that a just peace will be proclaimed. Candor compels the observation that at the present moment there is nothing in the international situation that justifies the belief in an early end of the war. However, things sometimes happen with startling suddenness, and it is not impossible that a beacon of hope, of peace, may soon penetrate the thick fog of war. Therefore, we must at once be planning a program to take care of the serious economical and social situation that will confront this nation as soon as peace is declared.

While our eyes and our thoughts are turned abroad as spectacular events unfold on foreign battlefields, we should not permit ourselves to forget the present domestic scene. We are at a crucial point in the history of our democracy. There is need to concentrate our best thought, our best effort on our domestic problems. If these are solved we will retain the gains made by our democracy and continue to enjoy the fruits thereof. If we fail to solve these questions or neglect them, we will not only lose the gains we have made, but we may face the failure of democracy itself. Not only for ourselves but for the world we must preserve our American democracy. While we must not be oblivious to our international responsibilities, let us at the same time rededicate a considerable portion of our efforts to our own problems.

When this great conflict came to Europe last September our first thought was to insure ourselves against being caught in the greedy reach of the ugly tentacles of war. We have kept our ships from the zone of hostilities and thereby lost millions of dollars of normal exports, and we have sacrificed many of our rights under international law in order to lessen the danger to American lives and property. We have strengthened our Army and Navy. We are fortifying the house of democracy against outside attack. We must also preserve the house of democracy against the termites of social, political, and economic problems. Armies and navies do not shield us from internal deterioration.

The progress that has been made in the recent past is self-evident. Social advancement, unemployment compensation, old-age insurance, aid for our youth, our aged, and our physically handicapped, assistance to agriculture, extensive public improvements—all these have occupied our attention in the years just past. Much remains to be done. Some weeds must be pulled from our garden of progress. We must consolidate our gains. We still have poverty in the midst of plenty. Farmers are still selling products at less than cost of production. We must plan our fiscal administration so as to relate our Federal expenditures more closely to our income. Unemployed still walk the streets in a fruitless search for a job. Capital and labor, government and business, must learn more thoroughly the lessons of cooperation in the interest of the joint solving of our domestic problems.

The solution to these problems has been made tenfold more difficult by the hostilities in Europe. All the wishful thinking on this earth will not make it possible for us to retreat tortoiselike within our borders and let the rest of the world go hang. Though we can insulate ourselves from Europe in a military sense, we cannot hope to dwell unscathed from the social, moral, and economic consequences of this second World War.

It is to our disillusioned citizens whose judgment has been warped by long, desperate efforts to keep body and soul together that the promoters of political panaceas shout their propaganda of envy and strife, hatred, and intolerance. The gnawing pangs of a hungry man dim his ears to the clanking accompaniment of slavery in the siren song of Utopia.

Today, 1940, as never before does our democracy cry out for clear, dispassionate, critical, constructive thinking on the part of every American. It clamors for an open, unbiased mind. It places great stress on conscience, initiative, reason, morality, and discipline. We who would be true sons of democracy must separate the chaff from the grain in the political market place.

Democracy to win requires a suitable spirit as well as suitable institutions.

As we gaze on a world in which moral, religious, and political standards, won after centuries of heartache and struggle, are mined in a sea of oppression and hate, we see the necessity of pledging the best that is in us to the strength and the glory of our republic.

For more than 150 years our way of government has proved its temper; it has met the changing needs of a changing world and yet preserved our individual freedom. It is a priceless thing, our freedom—our democracy.

Other peoples may turn to the philosophies of Marx and Hegel. We want none of them. The democracy of Washington, Jefferson, and Lincoln meets our need.

As the curtain of this great symbol of freedom—the gridiron—is drawn until next year, our duty is crystal clear. In a strife-ridden world America must remain at peace. We must keep ever burning the torch of American democracy. When a war-weary world returns to sanity and begins to clear away the wreckage of destruction, let the scene be lighted by those beacons of American liberty—freedom of assembly, freedom of religion, freedom of speech, and freedom of the press—kindly lights that show the way for a world of free peoples to peace and happiness.

## Appropriations for Farm-Tenancy and Stamp-Plan Programs

### EXTENSION OF REMARKS

OF

HON. MARVIN JONES

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

TELEGRAM FROM THE CHAIRMAN OF THE LEGISLATIVE COMMITTEE, NATIONAL FARMERS' UNION

Mr. JONES of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram received by me from the chairman of the legislative committee of the National Farmers' Union:

ST. PAUL, MINN., February 3, 1940.

HON. MARVIN JONES,  
Chairman, House Committee on Agriculture and Forestry,  
House Office Building, Washington, D. C.:

One week ago at Chicago the national officials of the National Farmers' Union, with most of the State presidents in attendance, unanimously chose me as chairman of their national legislative committee. The next day at Chicago the affiliated members of the National Federation of Grain Cooperatives unanimously re-elected me president for the ensuing year. The affiliated members of the National Federation of Grain Cooperatives are large regional cooperative grain-marketing associations at Amarillo, Tex.; Denver, Colo.; Ogden, Utah; Kansas City, Mo.; Spokane, Wash.; Omaha, Nebr.; and St. Paul, Minn. Both the National Farmers' Union group and the National Federation of Grain Cooperatives enthusiastically and unanimously approved the statements of attitude on national legislation which I discussed with President Roosevelt on January 15, 1940. We have furnished to you a copy of that statement. Therefore, I authoritatively speak for these two great farm groups. We are most grateful for the fight you are making for appropriations to carry on the farm-tenancy program and we are equally in support of adequate appropriations for the stamp-plan program. How any informed and intellectually honest Congressman can oppose adequate appropriations for these two programs is difficult for our groups to understand. The two programs mean much more to our unfortunate and loyal American subjects than a couple of battleships. In a representative government it is our right and duty to follow Representatives in Congress and to advise our people relative to their political conduct. We greatly appreciate the criticism of Congress made by Secretary Wallace with reference to the economy drive made against agriculture while at the same time these economists are supporting huge appropriations for armaments. All of us are firmly supporting your intelligent and militant fight for \$25,000,000 appropriation to carry on the farm-tenancy program. We are equally militant in our support for substantial increase to the appropriations for the very important stamp-plan program. Regret illness precludes personal contact with you. We will be grateful if you will place this statement in the CONGRESSIONAL RECORD. Please accept our gratitude and best regards.

M. W. THATCHER,

Chairman, National Farmers' Union Legislative Committee;  
President, National Federation of Grain Cooperatives.

## One Hundred and Fifty Years of Census Taking

## EXTENSION OF REMARKS

OF

HON. MATTHEW A. DUNN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ADDRESS BY HON. WILLIAM LANE AUSTIN

Mr. DUNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Hon. William Lane Austin, Director of the Census, on the Washington Star Forum, February 5, 1940:

The authors of the United States Constitution saw the need for a census of the population every 10 years. They wrote into article one of the Constitution these words: "The actual enumeration shall be made within 3 years after the first meeting of the Congress of the United States, and within every subsequent term of 10 years, in such manner as they shall by law direct."

Please let me emphasize that last clause by repeating it: "In such manner as they—the Congress—shall by law direct."

The first census, as ordered by the Constitution, was taken in the year 1790, a full century and a half ago this year. It had but one major purpose: The determining of how many representatives each State was entitled to seat in the Lower House of Congress.

The story of the 1940 census, with its wide range of subjects and questions becomes much clearer if we understand what has happened in the meantime.

By 1918 our great patriotic leaders were saying that our newly won political independence was not enough. We needed economic independence. We still were bound to the Old World by our need for manufactured goods. We needed to encourage the building of factories in this country, to make ourselves more independent from European merchandise. But how? Obviously the primary need was to know what factories already were here, and thus be able to judge our various needs.

So, as authorized in the Constitution, Congress passed a law creating a census of manufactures. That was in 1810.

Thirty years later, farming had become such a far-flung American activity that there was wide popular demand for a census of agriculture; and Congress again extended the scope of the census. That was in 1840, and the following 50 years saw a number of further extensions of this work—principally into the field of social statistics.

I am doubly thankful to the Washington Star and the National Broadcasting Co. for this opportunity to talk about my favorite subject: First, it is the one hundred and fiftieth anniversary of the census; and second, it is my fortieth year as a census worker.

I do not wish to burden you with my personal experience, except that I can testify first-hand to many of the reasons why the 1940 census is what it is.

The census is the fact finder of the Nation. Its inquiries change or expand as the needs of the people change or expand, and those changes are made, on constitutional authority, by Congress.

This year Congress has decided we will take a census of housing. It is a subject we never have covered before. But Congress felt that with all the talk that a great home-building revival might be a major step toward prosperity, the Nation at least should know the facts. Congress, as is its custom, was acting in response to powerful public sentiment. That is the way a democracy works.

I began work in this Bureau at the time of the Twelfth Decennial Census in 1900—actually before there was a permanent Census Bureau established by act of Congress. In those days we had to build up an entirely temporary staff each time, and so we had to use men and women who had had little or no experience in census work. I was one of them then. We were all very earnest and as scientific as we knew how to be; but judged by today's standards, the 1900 enumeration was an impromptu and a hastily organized affair.

The permanent Bureau of the Census was established by Congress while we were in the midst of compiling the tables from the 1900 enumeration, and it made everyone connected with the work feel that at last the census had come of age. Even so, as I look back at our work for that period and compare it with what we are doing this year, I realize not only how the Census Bureau has grown, how it has matured, how it has found its feet, so to speak, but also how America has grown.

The America we analyzed in that year was a simple and an uncomplicated nation compared to what it is now. The census was less than half the job it is today. There were about 56,000,000 fewer people in the country than there are now, and farming was the principal occupation. Sixty percent of the people lived on farms, whereas today nearly 60 percent live in towns. The railroads were our main industrial achievement. The automobile was just a visionary novelty, and there were virtually no good roads, as we know them now. Airplanes and radios were merely something

for the crystal gazers. Thousands of other machines of today had not yet been invented, and the effects they would have on our whole pattern of living were, of course, undreamed of.

Thus the Census Bureau's activities and scope have grown in direct response to the growth of America. Through the complex tabulating machinery of the census they pass—employment; unemployment; citizens and aliens; the growth of cities; depression on the farms; variety and change in occupations; decline in the birth rate; the movements of people from farms to the big cities; the shifts in industrial centers from one section to another in search of raw materials; the increasing average age of our population; and many other significant long-time movements within our civilization.

Taking the censuses which reveal these important facts is in itself a tremendous undertaking. For one thing, there is not just one census this year. The Bureau is taking seven separate kinds of enumeration in 1940. The one which has most general interest is, of course, the census of population, but there are six other major subjects. Some of them already have begun. On January 2 approximately 6,500 trained men and women started out from the 529 different districts into which the United States is divided for census purposes. They carried with them the many varied questionnaires which are used in taking the census of manufactures, and census of business, and the census of mines and quarries. Every one of the 170,000 factories, over 3,000,000 business establishments, and 12,000 mining and quarrying operations are being covered by these enumerators. They will be laboring at this task until May or June.

The censuses which will begin on April 1, although a much greater task, will be done in a much shorter time. These include the census of population, the census of housing, the census of agriculture, and the census of irrigation and drainage. These enumerations must be completed within 30 days, and because of this a much larger number of census takers is needed than for the operations which began in January. Along about the middle of March the supervisors of those 529 districts which I mentioned before will begin examining and hiring more than 120,000 men and women, who will do the huge job of conducting the April censuses.

One hundred and twenty thousand people! That is nearly half as many as there are in our regular peacetime Army. I think you can imagine the technical difficulties which the employment and training of such a number of people involve. That they will be trained, and well trained, we know. Our plans have been developing for well over a year. You might be interested in a brief sketch of how this job is done.

The Census Bureau itself is a permanent division of the Department of Commerce. Our regular year-to-year staff, including administrators, division heads, special scientists, machine operators, and the force does not run more than 750 as a usual thing. This permanent staff is kept constantly busy with the various permanent activities of the Bureau, such as the compilation of vital statistics and the issuance of monthly, quarterly, and annual industry reports. But it is also the function of certain members of our staff to plan for the major census operations. It is the work of these men and women to make sure that the big censuses run smoothly.

As the time approaches for a major census, some of our experts begin planning the questionnaires which will be used. They are assisted at every point by specially appointed committees from business and industry, from other groups or organizations of citizens, and from well-known experts both in other governmental departments and in private enterprises. This work has been completed for our 1940 undertakings, and all the census forms, with one or two minor exceptions, either are published or in the hands of the printer.

Meanwhile, another group of experts has been mapping the country scientifically for census purposes. We call these men the geographers. They gather all the latest local maps of cities, counties, and States; and they break up the country into more than 140,000 small individual maps known as enumerators' districts. These little maps are complete in every detail, and each of them is, generally, the "beat" of one census-taker. In sparsely settled areas two maps are given to one worker, but in any event this Nation-wide pattern of territories shows the workers where they must work and eliminates duplication of effort.

Into the picture, at this point, step the men who have the fastest job to do. We call them the field division. They must recruit, organize, and train the people who come to your door and ask you the questions. First, they bring nearly 200 picked "key men" to Washington for 6 weeks of intensive schooling. Those who pass this grind successfully become "area managers" stationed at more than 100 control points across the country. Each "area manager" must train from five to eight district supervisors. Then the district men set up 529 district offices, in which they examine and select the workers. This work involves the preparing of detailed instruction books on each subject from housing to agriculture. It includes the locating of suitable offices in more than 600 locations convenient for the work. It includes the time schedule of each step, the preparing and distributing of supplies, and a thousand small details. And it must be done, from start to finish, in about 6 months, so that there will be no distractions during the "work month" of April, when every minute counts. Just before the big drive starts in April, all the key officials will gather at eight convenient centers across the country for a final intensive review of their campaign with experts from Washington. Then they will hurry home for a final checking-up of their staffs.

That is what I mean by saying that the 1940 census is a closer-knit and better-defined operation than ever before.

What I have just described is the census operation only for continental United States. It does not include the enumerations in America's outlying Territories, which also are being taken in 1940. These areas include Alaska, where the work is already well under way, and Puerto Rico, Hawaii, the Virgin Islands, Guam, Samoa, and the Panama Canal Zone. Conditions are so different in these outlying possessions that that is an entire story in itself. But the work is being done just as thoroughly as possible, even though we sometimes have to use dog teams and sometimes get the help of the Navy. Not only the population, but also the homes, the farms, the businesses and manufactures, and the mining and quarrying operations will be analyzed by the more than 2,000 enumerators for these areas.

In the Philippines a complete census was taken during January 1939, but it did not come under the Census Bureau. It was conducted by the Philippine government. However, on their request, we did loan them one of our best men to supervise the job.

Now, every time there is a census there are a few people who complain furiously that the Government is poking its nose into their personal affairs, and one or two already have said it about our current work. I want to show you how absurd that is.

In the first place, the questions we will ask you are not our questions but your questions. They have been pressed upon us by scores and scores of large and important organizations and groups of citizens, declaring the facts they will develop are vital to the general welfare. We don't originate questions; we don't have to. During the past 2 years literally thousands of questions have been urged upon us. And we have sorted them down, rejecting and rejecting until we have the minimum number of basic questions according to the most expert counsel we can obtain.

I have been asked if it is compulsory to answer the questions which the census taker will ask you. The answer is "Yes." And it is nothing new. The answers have been compulsory for over 100 years, but the only questions you must answer are the questions printed on the census schedule. If you suspect that a census taker is asking you questions not on the official list, you may require him to show you the official list of questions. And the same law which requires you to answer requires the census taker to keep your answers confidential. Moreover, it provides much heavier punishment for him. Should he violate his oath, he is subject to a \$1,000 fine or 2 years in prison, or both.

You also have a right to know that your reports to us remain confidential for all time. No Government bureau or agency can look into our files to find out about you. No person or bureau can get our files for any purpose—taxation, or criminal investigation, or anything else. That is the law, and it has been tested in the courts and upheld.

I hope you will remember that the census is nothing new and startling, but one of the oldest of Federal activities. It comes along, decade after decade, carried out in just about the same manner. A few new questions are added each time because of public demand, and quite often more efficient methods are introduced, but essentially it is just about the same thing your parents and your grandparents experienced.

The value of the facts developed may be judged by the willingness of everybody to concede they are the ultimate in accuracy and completeness. The reason is that no private enterprise has either the resources or the authority to conduct such a big undertaking.

And the basic soundness of the census is best illustrated, in my opinion, by the fact that we have no record of ever having been forced to put a citizen in jail for refusal to answer. Of course, we use all possible persuasive means first, and on a few occasions it has been a hard job, but thus far explanation has been enough.

Of course, we will prosecute any of our own employees caught violating his oath, for the validity of this whole undertaking depends upon the cooperation and good faith of the millions who participate in it.

I have talked to you principally about the historical development and significance of the census and about the mechanical task it entails rather than discussing the questions to be asked this year. Those questions will be presented from many angles, during the next 2 months, in many media of public expression—in the newspapers and magazines, on the radio, and in other public forums—even in the movies. I hope that this brief look behind the scenes at the evolution of the census idea, and the organization of the 1940 activity, will give you a better understanding of why each question is asked when you come to answer.

It is safe to say that this census is as important to the lives of all of us as any Government activity to be undertaken this year. Few of us ever will have a complete conception of it. For even we at the Bureau are frank to say that it is much more than a one-man job to be personally familiar with all the Bureau's complex measurements of America.

But parts of it will be of intimate value to every one of us. Parts of it will have direct influence on our own lives, our prosperity, our health, and our security. The census is in effect an activity conducted by an enormous corporation, of which there are 132,000,000 stockholders, and its assets are nothing more or less than those stockholders themselves and their productive wealth, whether in labor or in machines or in management. You govern and control this corporation, and through your representatives you have ordered that the inventory of your corporation's assets, which we call a census, be taken.

To make the census valuable for your use the facts reported must be accurate. When the census enumerator rings your doorbell in a couple of months, think of him as your representative, the man or woman who is in his own small way responsible for the inventory of your Nation's wealth. The findings of this great census will be merely what you tell this man, added to what 132,000,000 other people tell 120,000 other census takers. The more accurate the facts you give him the more complete and useful will be the results of the 1940 census and the more beneficial to you and to America will be the uses to which the material is put.

## Sugar

### EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

#### ARTICLES FROM THE SUGAR JOURNAL

Mr. PEPPER. Mr. President, the January issue of the Sugar Journal, published at New Orleans, La., which just came to me this morning, carries certain data which I hope every Member of the Congress will have an opportunity to study, because I believe that the voice of 21 sugar-growing States will be heard on the floors of Congress during the present session in protest against the all-too-severe limitations placed upon domestic sugar production.

I should like to have inserted in the RECORD the Sugar Journal's article captioned "Cutting Down on Cuban Sugar," as well as the article from the same publication captioned "Where the United States Gets Its Sugar."

Attention is especially directed to the paragraph in the first article which explains the figures which suggest an actual drop in Cuban importation in 1938 as compared with 1937.

I should also like to direct special attention to the second article mentioned, which groups the figures on cane-sugar production by Louisiana and Florida, the two most important cane-sugar-producing States. These figures reveal that Florida and Louisiana produced in 1937, 11.31 percent of our domestically produced sugar. Of this 11.31 percent, Florida's production was merely a fraction of the total. Florida is producing slightly less than 1 percent of the domestic production, or only 10 percent of the cane production of the continental United States.

I earnestly hope that at this session of Congress the foreign policy and the domestic policy of this Government with respect to the production of sugar are going to be reviewed and that particular emphasis will be placed upon our domestic capacity to produce articles of this character, with respect to which there is no domestic surplus. On this issue there must be one single principle upon which our eyes must focus: Our first concern must be the welfare and the prosperity of the American farmer and grower.

I ask unanimous consent that these two articles may be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Sugar Journal for January 1940]

#### CUTTING DOWN ON CUBAN SUGAR

The last bulletin on sugar and molasses issued by the United States Department of Commerce in the spring of 1939 shows that we imported into the United States from Cuba in 1936, 1937, and 1938 the following quantities of sugar:

	Raw	Fully refined
	Short tons	Short tons
1936	1,925,213	387,404
1937	2,089,324	354,943
1938	1,878,943	343,531

The value of this sugar was as follows:

1936.....	\$96,473,466
1937.....	103,807,698
1938.....	76,828,540

We then imported from Cuba large quantities of blackstrap molasses. The following table gives the importation and the value for the last 3 years:

	Gallons	Value
1936.....	184,282,000	\$9,229,000
1937.....	237,272,000	13,207,000
1938.....	131,240,000	5,847,000

We also imported considerable edible molasses into the United States from Cuba, as follows:

	Gallons	Value
1936.....	15,172,779	\$1,653,715
1937.....	8,211,947	1,239,284
1938.....	8,609,200	1,498,119

The total importations from Cuba of sugar, sirup, and molasses, in dollars and cents, for the 3 years were as follows:

1936.....	\$107,356,181
1937.....	118,253,972
1938.....	84,173,659
Total.....	309,783,812

It will be noticed that there is a great difference in the total value of sugar and sirup in 1937 compared to 1938. A large part of this difference is due to the fact that the excise tax of one-half cent a pound on raw sugar, which is absorbed by the exporters and does not show on the import value of the sugar, affected only a small part of the importation for 1937.

It will thus be seen that we are "giving Cuba a good deal of business." Actually, we have always bought more from them than they buy from us. We can go back to 1911, and for 4 years the average value of our exports to Cuba from 1911 to 1915 was \$72,875,000. For the same period our imports from Cuba averaged \$142,695,000. The percentage of our total exports to the whole world which went to Cuba was 2.9 percent, whereas the percentage of the imports or products we bought from Cuba amounted to 8.2 percent of the total United States imports. At this time we bought nearly twice as much from Cuba as we sold them. From 1911 to 1925 the percentage of total United States imports that came from Cuba ranged from 8.2 percent up as high as 10.9 percent. Thus, for a period of 15 years nearly 10 percent of our total imports came from the Pearl of the Antilles. From 1926 to 1930 our exports to Cuba ranged around 2½ percent of our total exports to all the world, whereas our imports from Cuba were around 5 percent of our world imports. From 1931 to 1938, inclusive, the percentage of our total exports that went to Cuba ranged from 1½ percent to 2.8 percent, whereas in the same period the percentage of our total imports that came from Cuba ranged from 4 percent to 5.4 percent.

Throughout the years, then, there has not been much change in the proportion of United States exports that went to Cuba as compared to the percentage of the total United States imports coming from Cuba. We have paid Cuba hundreds of millions of dollars more than we have received from Cuba.

In 1938 our trade with Cuba declined considerably. In fact, our imports went down nearly 30 percent. As sugar is the leading commodity, we have already explained why this is so—namely, the generally low price received for sugar. (Note italics above.)

We hear a lot about the necessity of buying so much sugar from Cuba in order to sell more of our products to the people of that country. It is particularly emphasized that we are selling a lot of farm products there. Here is what the record shows for 1938:

*Percentage of each economic class in our exports to Cuba*

Crude materials.....	4.8
Crude foodstuffs.....	3.0
Manufactured foodstuffs.....	23.9
Semimanufactured.....	13.5
Finished manufactured.....	54.8

Total..... 100.0

In 1938 only 3 percent of our exports to Cuba included crude foodstuffs and 23.9 percent manufactured foodstuffs. Thus, only a little over 25 percent of the exports came directly from the farmer. It is true that the total cotton and cotton products used ran about \$6,000,000, or a little less than 13 percent of our total exports. But this is the manufactured value, and the actual amount of cotton used could not have been over \$2,000,000. This is a drop in the bucket to our vast southern cotton production. One good-sized town in one State in the United States would buy that much cotton products in a year. The total edible animal products amounted to \$5,825,824.

Thus it will be seen that Cuba's consumption of food products and other farm products, while desirable business, does not bring

in any great wealth to the United States as a whole. If 100,000 more people were given employment in Louisiana alone, or 25,000 were allowed to become prosperous sugar producers, they would create a market much larger than that furnished by Cuba for farm products. Twenty-five thousand families, with incomes of \$1,000 a year, would spend \$25,000,000, and most of this would be for foodstuffs and the necessities of life. The American standard of living is so much higher than that of the Cubans, it would not take many people to counteract the small amount of trade we get from Cuba. Now, if all the sugar sections of the United States were allowed to produce more sugar, and we could grow in this country much of the sugar now imported from Cuba, we would not only keep the money at home but we would make this country richer. Without the consumer paying any more for his sugar, we could get more wealth spread around; more trade developed among ourselves, and we would be better off economically than buying twice as much sugar and a few other things from Cuba in order to sell them half as much again manufactured products and some foodstuffs.

Remember that the same manufactured articles—automobiles, machinery, chemicals, and so on—would be sold to our additional producers of wealth here, not only in like amount as the Cubans now buy, but to a much greater extent. In other words, the automobile manufacturer would sell more automobiles to the sugar growers of Louisiana, Florida, California, Utah, Oregon, and so forth, if the farmers there were allowed to expand their industry than he would to the Cubans, where we are now buying so much of our sugar.

Instead of trying to restrict the production of the United States, as an economic proposition, we ought to expand it and gradually cut down on the importations of sugar from Cuba.

It is not necessary to feel so sorry for Cuba. Every nation in the world throughout history has been able to adjust itself as certain emergencies arise. Cuba is a tropical island and there are so many things it could grow down there. It could develop its banana production alone and make just as much money, or more, than it does on sugar. If Cuba wants to go ahead and sell sugar to the rest of the world, that's fine, but if they think the price is too low, then they ought not to hope that the United States will help them out forever by giving them tariff preferential on sugar. Let them try some other products that will do well in the warm, congenial climate. In any event, we should cut down on our importations from Cuba and increase the home production.

WHERE THE UNITED STATES GETS ITS SUGAR

The Sugar Act of 1937 allocates the sugar supply of the United States as follows:

	Percent
A. From domestic producers, including island possessions.....	55.59
B. From foreign countries—Cuba, Philippines, etc.....	44.41
Total.....	100.00

The domestic producers' 55.59 percent is divided:

Beet sugar.....	41.72
Louisiana and Florida sugarcane (Florida only 90,000 tons, or 1 percent).....	11.31
Total for continental United States producers.....	53.03
Hawaii.....	25.25
Puerto Rico.....	21.48
Virgin Islands.....	.24
Total.....	100.00

Foreign countries and the Philippine Islands are allowed the other 44.41 percent of the sugar consumption of the United States. Of this 44.41 percent:

	Percent
Cuba gets.....	64.41
Philippine Islands.....	34.70
Other foreign countries.....	.89
Total.....	100.00

Let us translate these percentages into concrete figures. If the United States continental consumption is 6,800,000 tons—3,780,000 tons (or 55.59 percent) can be supplied by United States sugar growers, Hawaii, Puerto Rico, and the Virgin Islands, as follows (in tons):

Continental beet growers.....	1,577,016
Continental sugarcane growers.....	427,518
Total for United States growers.....	2,004,534
Hawaii.....	954,450
Puerto Rico.....	811,944
Virgin Islands.....	9,072
Total.....	1,775,468

Total for United States and island possessions... 3,780,000

Out of the remaining approximate 3,000,000 tons:

The Philippine Islands can sell.....	1,047,940
Cuba.....	1,945,182
Other foreign countries.....	26,878
Total.....	3,020,000

From this we will see that the sugar growers of this country, which includes Hawaii, Puerto Rico, and the Virgin Islands, produces only a little over one-half of the sugar we need.

We are, then, buying nearly one-half of the sugar used in this country from Cuba and the Philippines. Why is it necessary to do that?

The following table shows where the United States got its sugar during the year 1938:

Where our sugar came from in 1938  
[Raw sugar—short tons]

Continental beet.....	1,471,000
Louisiana and Florida cane.....	422,000
Hawaii.....	922,000
Puerto Rico.....	846,000
Virgin Islands.....	4,000
Philippines.....	958,000
Cuba.....	1,947,000
Others.....	150,000
Miscellaneous.....	1,000
<b>Total.....</b>	<b>6,721,000</b>

UNCLE SAM CONSUMES 6.8 CUPS OF SUGAR A YEAR (EACH CUP IS A MILLION TONS)

Two cups come from the 21 beet- and cane-growing sugar States.

One and three-fourths cups come from Hawaii, Puerto Rico, and the Virgin Islands.

Two cups come from Cuba, a foreign nation.

One cup comes from the Philippines, half way across the world—a foreign nation.

Value of raw and refined sugar shipped into continental United States during 1936, 1937, and 1938

	1936	1937	1938
Beet sugar.....	\$43,634	\$57,881	\$21,252
Cane sugar:			
Cuba, dutiable.....	96,473,466	103,807,698	76,828,540
Other dutiable.....	1,918,398	2,242,349	2,983,263
Philippine Islands, free.....	57,007,143	59,198,317	50,588,110
Hawaii, free.....	67,975,548	63,575,478	50,743,327
Puerto Rico, free.....	64,167,644	66,090,370	54,505,410
Virgin Islands, free.....	266,804	545,600	236,016
<b>Total.....</b>	<b>287,852,637</b>	<b>296,517,693</b>	<b>235,905,921</b>

As we are getting practically 3,000,000 tons of sugar from Cuba and the Philippines, it would seem that the common-sense thing to do is to allow the cane and beet growers of the United States to gradually increase their production. The quota on Cuban and Philippine importations can gradually be decreased.

Sugar is the only important food crop, or staple, that is not wholly grown within our own borders. Certainly we ought to increase our production from three and three-quarter million tons to a larger total. We might start with one-half million tons a year, gradually reducing the quota of Cuba and the Philippines. This one-half million could be divided up among the beet-growing sections of the United States and the cane-growing States of Louisiana and Florida, as well as to Hawaii and Puerto Rico.

### Neutrality

#### EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 6, 1940

ARTICLES BY LLOYD C. GRISCOM

Mr. PEPPER. Mr. President, in the October 28, 1939, issue of the Saturday Evening Post there appeared an article entitled "Give Me Allies to Fight," by Hon. Lloyd C. Griscom; and in the subsequent issue of the Saturday Evening Post of November 11, 1939, there appeared another article by Colonel Griscom entitled "Let the Neutral Beware."

In view of the importance to the country at this time of the subjects discussed in those two articles in connection with the efforts of the United States to preserve its neutral rights while war rages in Europe, I offer the articles for printing in the RECORD. I am proud of Colonel Griscom, an honored

part-time resident of Florida. I am proud of him as a great American. I append to the articles a statement from Who's Who, which gives eloquent evidence of the rare ability and background out of which come these two articles. I ask unanimous consent to have that statement also printed in the RECORD.

There being no objection, the articles and statement were ordered to be printed in the RECORD, as follows:

[From the Saturday Evening Post of October 28, 1939]

#### GIVE ME ALLIES TO FIGHT

(By Lloyd C. Griscom, former lieutenant colonel, United States Army, and liaison officer between General Pershing and British War Office)

A telegram reached me only a few days before half of the Seventy-seventh Division was to move into the front line. The windows of my office at divisional headquarters were rattling to the thunder of British guns; a few miles away the Germans were desperately trying to push the British into the sea. The message read as follows:

CHAUMONT, May 25, 1918.

Maj. LLOYD C. GRISCOM,

Adjutant General, Seventy-seventh Division:

Report G. H. Q. for duty immediately.

McANDREW, Chief of Staff.

Wars, I had always thought, were won on the battlefield, and I had come to Flanders hoping I could be somewhere near the center of activity. With a sigh of regret, I cleared my desk, packed my bag, and set off for Chaumont by way of Paris.

The next morning General Pershing intercepted me at the Hotel Crillon. He began in his usual brusque, incisive manner, "Sorry to take you out of the fighting line, but I've a far more important job for you. I need an experienced diplomat. You and I worked well together during the Russo-Japanese War, when you were minister at Tokyo and I was your military attaché. I won't give you any orders, but will you help me out?"

Clearly and directly the commander in chief explained what he wanted—someone to restore harmony behind the scenes between him and the British War Office in London. They were at odds over a fundamental principle of how American troops should be used. He was determined to form an American army as soon as possible; the Allies insisted that our soldiers should be brigaded with theirs.

General Pershing believed the chief difficulty was that direct communication with the British War Office was impossible. Any message from him to Lord Milner, the British Secretary of War, had to go across the Atlantic and back—from Chaumont to our State Department at Washington, to the British Ambassador there, to the Foreign Office at London, and finally to the War Office.

Neither side was necessarily to blame for misunderstandings. Disagreements were bound to occur between allies differing in temperament, background, experience, and concept of the war. Because the feeling had become so strong as to threaten successful cooperation, I was to go to London to speak for General Pershing. There could hardly have been a better illustration of Napoleon's famous dictum, "Give me an alliance to fight," than the story of my next 3 months.

#### INTO A FAMILY QUARREL

I spent 10 days at Chaumont, during which each department of the General Staff answered freely any questions I could think of to ask. Then I visited the American troops in the front line at Chateau Thierry and Belleau Wood. On the way to Boulogne I stopped to call on Col. Robert Bacon, the only other ex-Ambassador in the Army, who was General Pershing's liaison officer with the British G. H. Q. at Montreuil. He was dining with the British commander in chief, Sir Douglas Haig, that evening, and took me along.

Among the large group of officers present was General Lawrence, chief of staff. His first remark to me was, "Maybe you can put in a word for us in London."

"What do you mean?" I asked in surprise.

"Well, you'll find out, as soon as you get to the War Office, that they don't see eye to eye with us in the field. To be sure, they can call us by telephone and we can reach them in the same way, but in reality we are as far apart as though we belonged to another nation. This antagonism is hurting military operations. They supply us with arms and ammunition, and yet we feel their lack of confidence in the way we carry on the war. We're doing the best we humanly can; they aren't satisfied, but they can't show us how we can do any better."

Later that night Bacon gave me a sketch of the strained relations between G. H. Q. and the War Office. Quite naturally, he had no sympathy with the political cabal in London which wanted to remove Haig and was solely prevented by the fact that the British Army would not stand for it. Here was just another one of those astonishing situations that grow up in war and sometimes offer the gravest danger to its successful conduct.

This unexpected state of affairs brought home to me even more the gravity of my own mission. As I went up to London through the trim, rolling Kentish countryside, I sat wondering what the next few days had in store. I was like an ambassador arriving in a country in which he had no official standing, no high rank, no imposing staff, and no definite instructions to guide his actions.

My task was to win the confidence of three men—an English peer, a North-of-Ireland soldier, and a Welsh politician.

Lord Milner had served his apprenticeship under Cromer in Egypt, and had won his spurs as High Commissioner for South Africa before and during the Boer War. Although a bureaucrat of the old school, he was an able administrator who had the reputation of holding steadfastly to the course he thought right, no matter what opprobrium it might bring down upon his head.

The chief of staff, Sir Henry Wilson, had had a long career in the army and, owing to his services as liaison officer between the French and British earlier in the war, he was very close to Marshal Foch and his chief of staff, General Weygand. By some he was considered the foremost military mind of his day, clear and farseeing; by others he was regarded as little more than an eccentric and prejudiced intriguer.

Both of these men had not always seen eye to eye with the Prime Minister. Lloyd George, however, never let personal feelings influence his choice of the men who, in his opinion, could do their jobs best. He, too, aroused intense loyalty in some, and in others bitter enmity; in the army he was damned much more than he was blessed. He could and would shift like a weather vane if he thought it desirable. War was no time for a politician who had to probe public opinion here and test it there before he took action.

#### DRAFTED BY BRITAIN

At the war office, Lord Milner, very English, elderly, quiet, and self-possessed, stood up to greet me; he was glad I had come. No one else had yet brought him first-hand news of the Americans in battle. Wasting no time in preliminaries, he put a series of questions, and listened attentively to my answers. I could not judge what impression I was making; he appeared silent and uncommunicative by nature. However, I gathered he was apprehensive as to what General Pershing was going to do with our five divisions now in training with the British, and was afraid we were going to form them into a corps and move them away. Finally, in his unhurried way, he got up and opened a door behind him into a smaller room where two officers were seated at desks: "I say, I want Major Griscom to be a member of my personal staff. Couldn't you make a place for him here?"

Although it must have been a shock to have an officer of another nationality thus thrust upon them, Colonels Bowly and Amery said it could be managed easily, and before I knew it, I was established at a desk in the war office in a room next to the secretary himself.

One of their first questions was, "Are you on the general staff?"

"No."

"What do you know about the war?"

"Very little."

As soon as they saw I was not there to be an authority on strategy or tactics, or to instruct in any way, we got on without any nonsense.

Colonel Bowly conducted me down long corridors and presented me to Sir Henry Wilson, tall, lanky, with a large head and strong face—the most un-English person you could imagine. His first remark startled me: "Have you any news of my cousin?"

"What cousin?" I asked, bewildered.

#### A WAR OF WILSONS

"My cousin Woodrow. Has he taken back that statement about your 'being too proud to fight'?"

Sir Henry made no effort to conceal his dislike of our President. Every time I went to see him he started off with some thinly disguised slur, and I could not help resenting his sarcastic references. With full fine Gaelic fervor he launched himself into a dissertation on General Pershing's "ghastly mistake" in refusing to allow American troops to be brigaded with the British. He still hoped our commander would change his mind. He could assure me that the Prime Minister was not disposed to let the matter lie. "You lack staff officers accustomed to handling large forces of troops in battle. It has taken us 4 years to learn how; you can't learn in 4 months."

It seemed tactless for Sir Henry Wilson to start in by emphasizing so strongly the allied belief that our troops were of little value. However, I accepted his challenge. Our troops were being trained and had a far higher morale than he realized; he should not underestimate the ability and knowledge of the American Army officer; our West Point training was the best in the world.

He looked at me skeptically. "What difference do you think that makes over here? This is a modern war. The only experience that counts is what you get on the spot. Tell me, how soon do you think American troops can really render us any important assistance?"

Apparently the chief of staff enjoyed putting me on the defensive, but again I took up the cudgels. "They're rendering it right now. In a few months they'll be doing as much as anyone. By autumn they'll be a major factor in the war."

Sir Henry smiled at me again, condescendingly. "I'm an experienced soldier and I tell you it will take at least a year. Sometime in the summer of 1919—if we can hold out until then—the American Army will begin to contribute materially."

To find such unshakable prejudice on the part of the British chief of staff almost took my breath away. Obviously, any further effort of mine to convince him would be absolutely wasted, and I could not imperil my mission by entering into any altercation

with him. I wondered what would happen should his remarks come to General Pershing's ears. Then and there I made up my mind I was going to hear many things which, were I to maintain friendly relations, it would not be advisable to include in my reports.

I had not been in the War Office a week before I discovered that the English were taking their impressions from and basing their judgment of the American Army almost entirely upon French reports; a perfectly natural procedure, since our troops were fighting with French armies. To my astonishment, I found, again and again, that these accounts were extraordinarily inaccurate, colored, and even prejudiced. The result was that the whole War Office was remarkably misinformed of what our troops were doing or even what they had already done.

As soon as it could be arranged, I had an interview with the Prime Minister. I wanted to keep an open mind about this controversial figure, but his personality was so dynamic that I did not find it easy. From the moment we had shaken hands a torrent of words began to pour forth on the subject I would so much have liked to avoid. He seemed to feel a definite personal grievance at General Pershing's refusal to feed our troops into the depleted British divisions. His references and comparisons were so like Sir Henry Wilson's that there could be no doubt of their source.

Deciding to be perfectly frank, I told him General Pershing regarded the matter as settled; I could not possibly bring it up again. "Perhaps you can't," he said gruffly, "but that won't stop my doing it."

I left Downing Street understanding very well why General Pershing and the prime minister did not get on.

To make my position more authoritative for a time, I seriously considered building up a staff. The French must have had a dozen officers; even the Japanese had an imposing military mission. Soon it was apparent, however, that this would serve no good purpose. My task was to acquire the confidence of individuals. This was so purely personal that no higher rank or more imposing staff could help me. I said to myself, "I have a unique opportunity. Other missions, with their major generals and gold-braided aides, are isolated; the French have to walk about an eighth of a mile to get to Lord Milner's office, while I'm right in the heart of things."

The principal topic of conversation at the War Office continued to be American manpower. One day, Lord Milner, much disturbed, handed me a telegram from the British military attaché in Washington, who had learned unofficially that we intended to send over only two divisions in August and the same number each month thereafter. He said General Pershing had promised him six divisions in August. If there was any doubt about shipping, he could assure me formally that enough would be available to bring over at least a quarter of a million American soldiers a month. He believed General Foch, at the approaching meeting of the Supreme War Council, would demand our program for the next few months, and he was entitled to know. I telegraphed General Pershing at once, and in a few hours receiving a soothing reply that the two-division report was a false alarm. Lord Milner was once more restored to calm.

I was sent over to speak to the British for the Americans, but almost immediately our G. H. Q. began bombarding me with requests for information from the British which they could not get in any other way. Our Ordnance Department wanted to find out about a new English gun. How many were there? Could we get any?

Such information as this the British would, naturally, be very reluctant to part with. At first the official in charge was indignant. I kept quiet for 15 minutes while he elaborated on the colossal cheek of the Americans, and finally demanded, "Why the devil should we give you fellows these guns that we've worked so hard to develop?"

That was my cue. "In April 1917 our Congress declared war on Germany and we found ourselves engaged in hostilities with the German Army. During these months we've learned the British are also engaged in similar hostilities. Since our interests seem to be the same, we're venturing to ask you to tell us about this gun."

"Oh, come around in a couple of days and we'll have a memorandum ready for you."

The only department of the war office which I felt might have been somewhat more free and open was the intelligence. Colonel Nolan, the head of our service, was very anxious to get an accurate picture of what was going on in Russia; the United States had no adequate sources of information and the British were known to have most elaborate reports. I went to call on Maj. Gen. Sir George Macdonogh, their director of military intelligence.

#### ANOTHER WAR FOR INDEPENDENCE

I had been accustomed to go anywhere in the war office unchallenged, and walked unconcernedly past the barrier. Suddenly an office functionary told me sharply to get back. My feelings were somewhat hurt by this rebuff, although I could understand that all intelligence services would, naturally, be unwilling to explain their methods, which outlasted any particular war. Both the British and French guarded their secrets from each other, fearing, perhaps, that in 20 years they might be on opposite sides.

In telling Bowly about the incident, I dropped the remark, "I'll have to let Colonel Nolan know of this lack of sympathy in your

intelligence department." I meant to imply that we, on our part, might have to retaliate. I was sorry afterward.

Several days later I received a courteous invitation from General Macdonogh himself to lunch at the Carlton Hotel. I arrived to find almost every member of his staff there—obviously trying to allay any ill feeling I might cherish. General Macdonogh said frankly he thought there should be closer intimacy between their intelligence and ours; thereafter he was always ready to exchange information. In fact, I sent over so much material to Chaumont on Russia that Colonel Nolan assured me I was one of his best sources.

It was easy to see how misunderstandings could arise between peoples of different language, race, or traditions, but I was always surprised at the number of cracks that kept appearing in the armour of each ally. The distrust between British General Headquarters and the war office in London had its counterpart in the coolness between General Pershing and General March, chief of staff in Washington. Over and over again I found myself justifying General Pershing, not only to the English but to my own countrymen. Apparently among them also the feeling was widespread that General Pershing was not using our Army to its best advantage. Soon after my arrival I saw Admiral Sims, the commander of the American fleet in Europe. To my complete amazement, he was honestly convinced that the French and British criticisms of General Pershing were warranted.

I knew the admiral was in high favor in Washington and that any information he transmitted would be accepted for truth. I sat right down to try to show him he was totally misunderstanding General Pershing's intent. If there were a crisis, the British commanders had a free hand in using any of our troops in their area for defense. But in the case of small offensives, where their participation was quite unnecessary, Pershing objected to their being thrown in; especially when they were often arriving with thousands of absolutely green men among them.

Amusingly enough, when the admiral was discussing the Navy, his feelings toward the British were not at all the same. He said the only way he had avoided friction was to pretend not to notice some of the things they had tried on him.

Before I left I had the satisfaction of seeing the admiral's point of view veer around entirely, but this interview brought home to me the importance of having accurate information circulated among Americans about General Pershing and our Army. Every few days distinguished fellow citizens of mine would arrive in London, nearly all of them on some sort of official mission. If I could, I wanted to see that none who might have power to make trouble should receive erroneous ideas or become embittered through hurt feelings.

One of the evident places where misrepresentation of General Pershing and our Army could occur was in the English press; many of its articles were regularly reprinted in America. I did everything I could to get him a good press. A simple method was to arrange for leading journalists, such as James Barrie and Lord Milner's friend, Geoffrey Dawson, editor of the London Times, to meet him when they went to France.

Col. Charles A'Court Repington, of the Morning Post, was perhaps the foremost military critic in England and among the few who dared write what they thought. One week end, between tennis and charades, we struck up a bargain—I would keep him informed and he would show me what he was going to print. I would have done the same thing for any other writer, but nobody else wanted it.

One day came a letter from General Pershing; we needed 70,000 horses and the French could give us no more. Now it was up to the English. Lord Milner promised to take this up with the quartermaster general, Sir John Cowans, but nothing happened.

It is a very hard thing to get a good horse away from an Englishman, and I knew we would not want the horses they wished to get rid of. Therefore, I went around myself to see General Cowans, an imposing figure, a good 6 foot 3, very heavy, and habitually genial. When he heard what I wanted, he was non-committal. Fortunately, I discovered, in the course of the conversation, that we were both spending the week end at the Duchess of Marlborough's place in the country at Crowhurst. Feeling sure that would offer a better opportunity for persuasion, I abandoned my efforts temporarily.

The week end started off pleasantly enough, but in the middle of the first night a fellow guest awoke me, saying Sir John Cowans was very ill, could I suggest anything to do for him? I went to his bedroom. He was rolling about in absolute agony, the sweat pouring off him. I do not know why a fat man seems to suffer more than a thin one; perhaps it is because there is so much more of him, but, obviously, Sir John was in excruciating pain. It might have been gallstones, but I was reasonably certain it was appendicitis.

#### A GENERAL WHO DIDN'T DIE IN BED

We summoned a doctor. He gave General Cowans a little morphine and then ordered a purgative. I was horrified. If it really was acute appendicitis, then a purgative might be fatal. By this time all the other guests had gathered in the hall outside. I asked them whether they would back me up if I fought it out. They said they would.

I confronted the doctor. He declared he had made his diagnosis and given his prescription; he would not be responsible for Sir John's life if I persevered. I had visions of the flag on the

building of the Quartermaster's Department flying at half mast, all because of my interference. Yet I believed I was right.

An ambulance was called and the next morning we got General Cowans to the hospital at London. His appendix had just burst, but the infection had not spread. His physician said that, had he taken a purgative, he probably would not have lived. He never forgot this incident. He used to introduce me jokingly, "You know, this beggar saved my life," and thereafter he always did his best to help me out with the problems I brought to him. Eventually a horse trade was made whereby the British furnished draft animals for three divisions and we brought over heavy artillery.

At this moment a matter came up which, utterly ridiculous on the surface, threatened to disturb Anglo-American relations in certain high quarters. Col. Charles G. Dawes, general purchasing agent of the American Army, occupied a position far out of proportion to his nominal rank because he was General Pershing's best friend. He was a character if there ever was one. You have only to think of his nickname, "Hell and Maria," to get some inkling of his nature. He had found that Great Britain and France were actually bidding against each other for mules, horses, onions from Spain, optical goods, watches, field glasses from Switzerland, copper and all sorts of much-needed supplies in other parts of the world. He suggested a united Allied purchasing commission.

A meeting was arranged at which he could submit his plan to Sir John Cowans and other British officials. Sir John listened without enthusiasm, said stiffly and coldly, "Oh—ah—ouah—you know, we've so many important things on hand already, we'll have to put this matter over for a month."

Then Dawes rose from his chair, banged the table with his fist, delivered himself of a speech that would never be forgotten by those present. "No; you won't put this over for a month. You've been fighting this war for 3 years. Where have you got? Now we're here, and we're going to tell you how to run this war. It's time for you British to learn that if you're going to win, you've got to give up the methods of an effete monarchy."

"Effete monarchy" was too much for General Cowans. Furious, he jumped up. "I can't stand this. I'm finished." He walked out of the room and the conference broke up in confusion. The Cowans-Dawes affair had produced an open breach; you could not afford to have such misunderstandings between allies. I hoped that some opportunity might present itself for bringing about a reconciliation.

Everything else was driven from my mind, however, when one morning on arrival at the war office I was told I was to be included in the group leaving July 1 for a meeting of the supreme war council at Versailles. A distinguished party stepped aboard the special train at Victoria Station—Mr. Lloyd George, Lord Milner, Foreign Secretary Balfour, Premiers Borden, of Canada; Hughes, of Australia; Lloyd, of Newfoundland; and assorted secretaries and aides. We had the Channel boat to ourselves and zigzagged frantically back and forth, the radio aeriels crackling with messages.

#### LLOYD GEORGE AND THE TIGER

When teatime came, Mr. Lloyd George asked me to sit by him and he burst forth again on "General Pershing's great mistake"; he was even sharper and more severe in his criticisms than on the first occasion. There was nothing for me to do but preserve discreet silence until he ran down and shifted to his troubles with Clemenceau. He admired and respected the French Premier, but found it very hard to get on with him. "When we're together the sparks are apt to fly, but it always ends happily. I think we really have discovered a method of working together."

I started to express my great pleasure, but he went right on to discuss the British Army in the field, supplying statistics and details of the horrors of Ypres and Passchendaele, stressing the 700,000 men lost in the 1917 offensive. "It was a terrible blunder on Haig's part, and I'll never forgive him. It bled England white."

One of Mr. Lloyd George's weaknesses was his blind and bitter dislike of the military, although he could find few who did not think Haig was doing as well as was humanly possible. I thought it remarkable that he should pick upon an American officer close to Pershing as his confidant for scathing criticism of the head of his own armies.

The next morning I met General Pershing at the Rue de Varenne, and on our way out to Versailles asked his advice on the Dawes-Cowans imbroglio.

"Dawes is here in Paris," he said. "Why not see him yourself?" The Trianon Palace Hotel had been taken over for the meeting; I joined Bowly, sitting outside the long gallery which ran across the front. He said all I had to do was to wait there until the conference was over. One by one the leaders arrived—Balfour, Foch, with Weygand close behind; Pershing, followed by our Chief of Operations, Fox Conner; Clemenceau, who sat down at the head of the table.

The great glass doors were closed; the session was called to order. Clemenceau embarked on a lengthy harangue, his walrus mustaches wagging. Then he began banging the table, waving his arms, raising his voice, so that we could even catch a word or two. It was perfectly patent that wigs were on the green. Lloyd George leaned over to Lord Milner and then grew equally excited, shaking his fist, giving tit for tat. Clemenceau consulted Weygand and broke out again. General Pershing and Conner were going through papers and discussing something earnestly. After a while, however, they all calmed down enough to go on with their business.

It was a protracted meeting. To my astonishment, the minute the doors were opened, Clemenceau grabbed Lloyd George by the

arm and the two marched out and by us into the great restaurant room at the end of the gallery, where they sat down for a cup of tea. In a few moments both were laughing merrily.

The English always said some of the best business of bringing the Allies together and coming to important agreements was done over the Versailles teacups. Everybody gathered at little tables, nibbled sandwiches and cakes, sipped tea amid a buzz of conversation. It gave me an opportunity to find out what had caused the excitement.

M. Clemenceau had begun by saying the Allies were very badly off. He named the number of Allied divisions; the Germans had many more. Desperate measures had to be taken. There must be no holding back of men, or the war might easily be lost. While he was speaking, Lloyd George and Milner had their heads together. The French Premier was in the full flight of eloquence, when the British Premier interrupted, "M. Clemenceau, Lord Milner tells me our figures do not agree with yours."

"Marshal Foch himself gave me these. Who should know better?" The two Englishmen again conferred. "We're sorry, M. Clemenceau, but we can't make our figures coincide with yours. We show the Allies have 20 divisions more."

At this point Clemenceau's rage became monumental. He pounded the table, shouted, said it was intolerable that Lloyd George or anybody else should attempt to tell him how many divisions the Allies had. His figures must be accepted without question. He had the most absolute confidence in his military advisers. Lloyd George shouted back that he, too, had the utmost confidence in his military advisers. He could not permit anybody to tell him he was wrong. The British information was as good as the French.

In this grave crisis you could imagine the Allies quarreling about principles of strategy, but not about a matter of simple mathematics. A more ridiculous situation would be hard to conceive; it had an absurdity equaled only by the tea party Alice attended.

After fully 15 minutes of tension, it occurred to these gentlemen simultaneously to look at each other's lists. All was at once plain. Clemenceau had entirely omitted to include in his calculations the Belgian divisions which the English had counted in.

From all that I had seen and heard, the conclusion had been borne upon me that the best place for reconciling divergent points of view was a genial dinner table rather than a formal conference table. In my experience, difficult negotiations with no matter what nationality were always most successfully conducted when we talked things over as friends rather than officials. So many misunderstandings could be avoided if those at odds could sit comfortably down together; agreement would be well on the way if they were all smoking fragrant cigars, sipping whisky-and-sodas, laughing at an amusing story.

I was certain this would be the best means of bringing together General Cowans and Colonel Dawes, both such good fellows at heart. At my first opportunity I went to the Ritz to look up Dawes. As I entered his room he rose from his chair, lifting his arm as though to ward off a blow. "All right, Griscom, I know what you're going to say, but go easy."

#### THE DAWES TECHNIQUE

He was tall, thin, with a charming, whimsical sort of face, a man obviously full of good humor; certainly not the sort to prolong a quarrel. I began my little speech about the folly of antagonizing the British Army, and particularly its quartermaster general, who was so vital to Dawes' own plan.

"Wait, now," he interrupted. "I want you to hear my side. I found, years ago in business, that if you were talking to a fellow and he took a condescending attitude, there was no better way to negotiate than to haul off and hit him a crack in the belly. Then he began to notice who you were and to think you might be somebody. That's the principle I've adopted all my life, and I've never known it to fail yet. I don't actually hit anybody with my fist, but I do with my tongue. If ever a person was poisonously British, it was Sir John Cowans. I knew I would get nowhere if I didn't hit him. Crack! I did it, knowing exactly what I was doing, and I think you'll find it will work in the long run."

I could not help laughing; his explanation was so plausible. "If I can interpret your peculiar technique to Sir John and in some way bring about a reopening of relations, will you meet him halfway?"

"I'll promise to be as meek as a lamb."

"Fine. Come to dinner tonight and we'll have a glass of champagne on it."

Dawes occupied the seat of honor between Mrs. Leeds, our hostess, and Lady Sarah Wilson, aunt of the Duke of Marlborough, a most dignified, white-haired grande dame who had been a great figure in London society for a generation. I could not help overhearing the conversation. As soon as soup was served, the champagne began coming and the waiter started to fill Dawes' glass. "Here, waiter, you take that away. You get me a big cup of coffee and some cream."

Lady Sarah viewed him with surprise and endeavored to correct what she considered his bad manners: "Colonel Dawes, if you are dining as a lady's guest and want something different, don't give the order to the waiter, but ask your hostess. I'm sure she would be glad to order it for you."

"I'm a plain American and I don't pretend to understand these fancy European customs. We plain Americans like a big cup of coffee with our suppers. \* \* \* Say, I didn't catch your name. Who are you?"

"Lady Sarah Wilson."

"Lady Sarah Wilson. I can never get these titles over here straight. I'll give you a choice. I'll call you either 'Mrs. Wilson' or just plain 'Sarah.'"

Never in her experience had she encountered anything like this. But she was equal to the occasion: "Of the two, I think I prefer to have you call me 'Sarah.'"

"Then you, call me 'Charley,'" said the unabashed Dawes.

Before the dinner was over, they were having a wonderful time, and she asked him to come see her in London. It is certain she never forgot that evening.

#### A GOLF HUNT

As soon as I returned to London, I went down to see General Cowans, who was recuperating at his Sussex cottage by the sea. He loved golf, and, even though temporarily deprived of his favorite sport, he had found a method of enjoying the game. On sunny mornings he used to go down to the near-by links, choose a spot close to the rough where the seaside gorse grew in thickets so bristly and dense that it was practically impossible to get through. There he would sit, puffing away on his pipe, his retriever by his side. Soon a ball would come bounding along and disappear into the thorniest part of the underbrush. The players would approach, the caddy would say discouragingly, "You'll never find anything in there." The moment they were out of sight, General Cowans would whistle to the dog, it would dart off, and soon its master would be the richer by another golf ball.

I happened to arrive after a particularly lucky day; the general's pockets were bulging. He seemed in such good fettle that I ventured to remark I had seen Colonel Dawes in Paris. Although the first mention of this name put my host very much on his dignity, I boldly went on to describe Dawes' shame-faced attitude when I entered the room, and his motion to ward off my verbal blows, making my story as humorous as I could. General Cowans began to laugh, and I continued quickly, "After all, Colonel Dawes is General Pershing's most intimate friend; he has a serious scheme that both the general and the French War Office believe in. He has behaved in an extraordinary manner, but he is an extraordinary American."

Sir John's antagonism vanished. "I suppose it's time I learned something about Americans, if we're going to fight a war together. Probably I was never more insulted in my life, but you tell Dawes to come over again and I'll try to get on with him."

A remarkable friendship resulted. The two men, so entirely different, came to respect each other greatly, and, at the end of the war, parted on terms of unusual affection.

Even after repeated American successes in the field, the old friction over the separate American Army, which I thought had been buried in oblivion, again flared up in August. Lord Milner discovered privately that the American divisions were being removed from English areas. I had heard nothing about it, but came in for a full share of displeasure. He icily informed me that he thought the removal premature, and the manner of removal without consulting him showed want of consideration. He greatly regretted that our good relations should receive this blow and feared to tell the Prime Minister, knowing how angry he would be.

Here was a danger signal; I hurried to telegraph General Pershing. His reply was prompt and did not mince words. He had considered the matter settled. He believed he and Haig had full authority to make whatever arrangements were necessary.

Lord Milner said nothing more, yet there was an underground current of unrest about the War Office. Constant rumors were coming to my ears that the Prime Minister was very angry; he was merely waiting for the impending arrival of Secretary of War Newton D. Baker before demanding General Pershing's removal.

I knew the hotheaded Welshman was capable of anything, and I had no idea what effect a diatribe from him might have on Mr. Baker, who was entirely unknown to me. While I was waiting for something definite to take shape, Lord Milner said we were going to France again. Mr. Baker was already there, and I made up my mind, if possible, to bring the two Secretaries of War together. A meeting in France proved impracticable, but I met Mr. Baker and we traveled back to England together. I warned him in detail of the British disapproval of General Pershing and told him he should be prepared for criticism by the Prime Minister. He listened attentively, and then said noncommittally in his soft, gentle voice, "Thank you. Your information may be very useful." As to what he really thought, I could get no inkling.

At my house we found a message from the Prime Minister that he would disobey his doctors and come to London if Mr. Baker would not go down to the country to see him. He had something he felt he must say.

I believed General Pershing's fate might well lie in the balance, and waited with anxiety the result of the meeting. Mr. Baker returned at nightfall, as usual, calm and unmoved. I naturally asked him how things had gone. "I am entirely satisfied," was all he would say.

#### AMERICAN PAWNS

The next morning, however, when I reached the War Office, my ears were filled with the doings of the day before. Everyone was saying, "There's a great man \* \* \* a real statesman \* \* \* What an orator!"

I managed to piece together what had happened. Immediately after lunch, Lloyd George had half turned his chair so that he faced Mr. Baker, and began a vehement complaint: Great Britain

had stripped necessary Empire services of ships in order to carry American troops. They had scarcely arrived in British areas before General Pershing pulled them away. After 15 minutes, during which he became more and more wrought up, he ended with the categorical statement that, so far as Great Britain was concerned, the American Army was perfectly useless and the shipping devoted to bringing it over entirely wasted.

Mr. Baker now displayed in full measure his extraordinary gift for using the English language. He expressed profound astonishment at Mr. Lloyd George's accusations. He had just come from France. On General Pershing's war maps he had observed the number of German divisions stationed opposite the Americans and had been persuaded that our soldiers were at least detaining troops which might otherwise be added to the concentration against the French and British. He recognized the duty of the Prime Minister to employ the resources of Great Britain in any way that seemed most advantageous. Quite clearly, if carrying American soldiers to France was not the best use which could be made of British ships, Mr. Lloyd George ought to withdraw that service at once and devote them to whatever would be helpful.

#### MR. BAKER'S VICTORY

Gradually, as he went on, this little man lifted his voice and banged on the dinner table in just the same way that Lloyd George himself had banged it. "Mr. Prime Minister, we are not in need of advice from any foreign nation as to who should lead our Armies. General Pershing possesses the fullest confidence of President Wilson and myself, and except for the most unusual and sudden emergency, American troops must fight as American units and be commanded by American officers."

Lloyd George retreated precipitately from the attack, never voicing his demand that General Pershing be removed. With a few scattered remarks on the helpfulness to American troops of British training, he said he had to fight the war with Turkey and withdrew to his room.

Years later, Mr. Baker himself finished the story. When the time came to return, he set off with Lord Reading. About halfway to London, the Lord Chief Justice said, with diplomatic casualness, "Oh, by the way, Mr. Secretary, the Prime Minister asked me to excuse his not saying good-bye. Incidentally, he also wished me to say to you that you should think no more about the matter which he had raised for discussion after lunch."

The Baker episode was the nearest we ever came to an open breach. In a few weeks the worth of the American Army was so well demonstrated in the Argonne that no doubt could remain of the wisdom of General Pershing's position.

Events speak for themselves, but in a war the proof may be a long time coming. When human lives are at stake, every factor must be carefully weighed before a final plan of campaign is adopted. It is during such time of stress and strain that one ally may forget he has partners and that his idea is not necessarily the only one or the right one.

The clever and able Count Adalbert de Chambrun, who served many months as liaison officer for the French with General Pershing, once imparted to me his recipe for maintaining harmony between his two chiefs. "Every time I see General Pershing I tell him what a great man General Pétain is; every time I see General Pétain I tell him what a great man General Pershing is. After a time they both come to believe it." He said this to me half jokingly, but underneath was the fundamental principle upon which a liaison officer must work—the building and maintaining of confidence between the partners of an alliance.

Allies without faith are no allies. One of the greatest victories of the last great war was that the Allies, despite quarrels, criticisms, and disputations, ultimately did come to have faith in one another.

[From the Saturday Evening Post of November 11, 1939]

#### LET THE NEUTRAL BEWARE (By Lloyd C. Griscom)

A heavily laden freighter, the American flag whipping from her stern, was butting stolidly through the North Atlantic. Just off the Shetlands a grim, lean British cruiser shot up alongside, signaled, "Heave to." A boat put off, an officer boarded the freighter and demanded of the master, "Where are you bound?"

"Copenhagen."

"What's your cargo?"

"Pork."

"You'll have to go into Kirkwall for examination."

"But that's 150 miles out of my way. This is a neutral ship going to a neutral port."

"Can't help it. Denmark's an exporter, and not an importer, of meat. You'll have to prove it's not going to Germany."

The news came back to America that at Kirkwall officers had taken the freighter's manifest on shore for examination, gone through the cargo and checked the items, telegraphed to the contraband committee at London for instructions. Back had come the word, "Conditional contraband. Hold for prize court." At the hearing in London the captain could not prove his goods were not ultimately destined for Germany. They were condemned and sold for what they would bring. The proceeds were being held in England.

This was 1915. The same thing happened over and over with all sorts of cargoes—oil, cotton, copper—destined for Amsterdam, Rot-

terdam, Stockholm, other neutral ports. Again and again, I, like other international lawyers, was asked, "Have not we neutrals the right to ship what we want wherever we want? Have the British the right to slap new items on the contraband list whenever they please?" And more and more frequently, "Aren't we going to be paid for what the British take?"

#### THE BRITISH BLOCKADE

The principle of blockade was very simple—one side wanted to stop anything helpful to the other. In the process, international law as it had been known had been entirely altered. The layman, then as now, shook his head in bewilderment over whether rubber was absolute or conditional contraband, or what made a voyage "continuous." He wanted to know in plain, simple terms just how he was going to be affected.

The shippers were already feeling the pinch on their pocket-books. Their howls of protest rose higher and higher. If the cargoes had reached their destinations, they could have made huge profits; the British, they thought, were stealing these from them.

From the minute the Germans had invaded Belgium, my sympathies had been entirely with the entente. I was much concerned by the growing resentment against Great Britain. Public opinion was almost as much aroused against her as against Germany. She was fast making an enemy of the United States at a time when she could least afford our ill will.

One day of early November, when anti-British feeling was almost at the boiling point, I had a message from Paul Cravath, asking me to meet him at the Piping Rock Club. Wondering whether this was to be business or pleasure, I drove over from Syosset to Locust Valley through the narrow Long Island lanes brightened with autumn red and yellow. I found Cravath already there, a dominating figure, huge in build, who looked not only important but wise.

He had a very ticklish case on his hands. One of the clients of his firm, the Chicago packing house of Sulzberger & Sons, had a claim of several million dollars against the British Government for cargoes of meat condemned as contraband and sold by order of the prize court. Some months ago, Sulzberger had joined with Armour, Swift, Hammond, and Morris in appealing to the British Privy Council. The total damages for some 50 cargoes amounted to \$20,000,000, the largest case since the Alabama claims, paid by England after the Civil War.

Everybody realized the prize court was a purely partisan body, but the four law lords who acted as the judicial branch of the privy council were high-minded and impartial, comparable to our Supreme Court justices; they might easily decide the meat products must be paid for.

However, before the case came to trial, the British Government could interpose so many delays that the interested parties might be dead or the companies in bankruptcy; the Alabama claims had taken 8 years to arbitrate. Compromise was infinitely better than a remedy that came too late. The packers had sent a lawyer abroad to attempt a settlement out of court. His efforts had failed and the other packers had put the blame on the inclusion of the Sulzberger claims; the nominal head of that concern was known as an ardent and active pro-German. They now had decided to act on their own and had engaged as counsel Chandler P. Anderson, who had formerly been the able legal adviser to the State Department, and, until a few weeks previously, to the embassy in London. The Sulzbergers, left out in the cold, had come running to Cravath for advice.

"You won't find it easy to represent a house with a German name in England," concluded Cravath. "But no one is available in our firm. Will you go?"

I went home to think it over. Actually, the pros and cons of this case had already been set forth at length and eloquently. The shippers whose cargoes had been stopped had the most powerful lawyer that could be obtained—the United States Government. When the war had been hardly more than a few days old, Secretary of State Bryan had suggested to the English that they should accept the declaration of London of 1909, which put cotton, copper, oil, food, and other products on the free list. Although no nation had ever ratified the declaration, the British at first made some gestures toward observing it. However, in December 1914 Secretary Bryan felt compelled by their actions to send a very polite note to Sir Edward Grey, the British Foreign Secretary, hoping his Government would be as considerate as possible of our neutral rights. Sir Edward Grey, in reply, assured Mr. Bryan that, of course, every effort would be made to do so. However, the seizures continued.

#### THE BATTLE OF NOTES

In February 1915, Mr. Bryan had sent another note, this time a trifle firmer, and referring specifically to food, asking Great Britain not to put it on the absolute-contraband list. Great Britain said she would do what she could, but there was no way that she could see of distinguishing between food consumed by the German Army and food consumed by German civilians. She would have to keep right on seizing all that came her way, and offered Bismarck as an authority. The Iron Chancellor had said this practice was a justifiable method of shortening a war, if impartially enforced against all neutral ships, since it increased the difficulties of the enemy. In spite of Britain's conciliatory words, her actions said plainly. "These cargoes are not

going to get to Germany, international law or no international law, and we're going right on with our seizures."

Secretary Lansing replaced Secretary Bryan in the summer. We now insisted more crisply that American rights must be respected. The notes grew sharper and sharper. The British were offering as justification a doctrine which we ourselves had originated during the Civil War. At that time we had declared a blockade of the Confederate ports, but our comparatively small Navy could not at once make it entirely effective. However, in time, regular freighters found it unwise to attempt to run the blockade.

#### HISTORY REPEATS

In 1861, Nassau in the Bahamas had been a sleepy town from which only two steamers had cleared for southern ports. Two years later a swift, shallow-draft blockade runner was leaving every few days; under cover of fog and night, she could dodge past the sentinel guards into Wilmington, Charleston, and other southern ports. Trade in Nassau had increased thirtyfold. The warehouses contained more clothes, shoes, guns, and cutlery than the inhabitants could use for generations. To a lesser extent, the same transformation had taken place in Hamilton, Bermuda, and Matamoros, Mexico, right across the Rio Grande from Brownsville, Texas.

Confronted by this situation, the United States decided it was easier to intercept the cargoes before they reached the port of transshipment, and they invented the doctrine of "continuous voyage" to justify their seizures. Since the goods were obviously destined for the Confederacy, what difference did it make where they were captured? The Supreme Court of the United States, sitting in admiralty, declared the cargo of the *Springbok*, Nassau-bound, to be good prize, and likewise that of the *Peterhoff*, en route from London to Matamoros. In the post-war settlements, this doctrine was upheld and incorporated into international law.

As far as I could see, the packers had little hope of winning their case by relying on precedents. I should have to proceed by persuasion rather than by law. England was in an awkward position. She did not want to lose our friendship, but if she paid the packers' claims, it would set a precedent which might force her to pay out millions of pounds for similar claims.

I realized my particular mission might not only be difficult but even disagreeable. The British were certain to regard the Sulzbergers as Germans, and anybody who tried to make them pay money to their enemy was likely to be considered an enemy himself. Paradoxically enough, however, by paying an enemy, they would be helping to gain us as a friend. Settling the case would really be a contribution to friendly Anglo-American relations. I accepted Cravath's offer.

The first whiff of my case almost knocked me down. When I arrived to collect the data at the Sulzberger offices on First Avenue, I found myself right in the slaughterhouse. Everyone but me seemed to be totally unaware that anything was wrong with the atmosphere. I could hardly pay attention while the officials routed out boxes and boxes of documents, bound in huge files, classified according to items, destinations, prices, and dates. I beat a hasty retreat as soon as possible, wondering how anyone could work in such a nauseating stench.

I knew I was not going to win my case simply by brushing the dust off this trunkload of documents. If I tried to present my small claim separately, I would have little hope of receiving any attention. Somehow or other, I had to get my clients readmitted to the fold.

Essentially, all the packers' cases were identical. The Sulzbergers, whatever their origin or sympathies, were American citizens operating an American company under the neutral American flag. If the State Department would come right out and say the question of principle would not be settled until the claims of every single packer were also settled, then my clients could not be disregarded.

The affairs of the packers were under the watchful eye of Frank L. Polk, counselor for the Department of State, whom I had known as a young man in the law in New York. I walked up the steps of the State Department, sought him out, and told him what I was about to do. "Can you see any reason for distinguishing between these cases?"

"No," he declared. "Only the settlement of all will remove the bone of contention."

Since the other packers could now gain nothing by acting alone, I went to see Anderson, who was also in Washington. He agreed that we should present a united front, and we began discussing ways and means. It occurred to me at once that we would have difficulty making a favorable settlement as long as British officials could go through all our papers and read all our communications. Supposing negotiations reached a point where we could cable, "We're offered twelve million. Shall we accept?" If the answer came back, "Take it if you have to, but try for fourteen," clearly the British Government would be bright enough not to give us the fourteen.

#### AN UNDIPLOMATIC DIPLOMAT

Polk volunteered to help us out of our dilemma. We might store our confidential documents in the safes of the London Embassy, which would also transmit in code our messages to our clients. We got out paper and pencil, and a cable was immediately drafted to Ambassador Page, ending with the request that he give us "every unofficial assistance."

Thus having prepared the ground when we reached England, I thought it would save time and trouble in getting the papers past

the port authorities if the British Ambassador, Sir Cecil Spring-Rice, would drop them a word. Accordingly, I called on him. At the first mention of Sulzberger, he seemed to shudder. I had expected at least the courtesy of our profession, but, to my astonishment, met a wall of impenetrable frigidity. Facilities for me were out of the question. My errand was equivalent to aiding the enemy. He could not understand why Americans were not at that very moment in the trenches by the side of his countrymen—not realizing how much it might help to get them there if the Sulzberger thorn were extracted from the side of Anglo-American relations. Spring-Rice was obviously a very tired and exhausted old man, quite changed from the warm-hearted, quick-witted young secretary I had known years before.

Since I had pulled all the strings I could in Washington, I went back to New York to get my case in order. The Sulzbergers, to assist me in any way possible, sent from Chicago a serious-minded young lawyer named Brown, a specialist in international law, who was familiar with the material. He called my attention to sheafs and sheafs of invoices. "These cover shipments of casings. I don't see how they can be of any possible good to the enemy."

"What are casings?" I asked curiously.

"Sheep or pig gut used for sausage skins, violin strings, and medical purposes. You can't digest them, and I don't see how they could be used for anything connected with war."

I consulted a chemist, who confirmed Brown's statement that they were utterly without food value; obviously, therefore, here was one item which the British could not claim as contraband and object to paying for.

After the loss of the *Lusitania* and the *Arabic*, everybody had been nervous about crossing the Atlantic. Even though Germany had promised not to sink any more passenger ships without warning, we equipped ourselves with Gieve's waistcoats, made of rubber with cloth outside. The instant you were torpedoed, you pulled out a little pipe and blew and blew until you had blown a life preserver around yourself, quite safe and warm—unless you had a puncture.

Three days after Christmas I met Anderson and Brown at the Holland-America pier. "Rotterdam" was splashed in great red letters along the side of our vessel; they were lit up at night by bright lights, so that no mistake might be made. Newspaper photographers and reporters were all over the place. Col. Edward M. House was also sailing on some sort of mission—as the President's alter ego whatever he did was news. Cameras were flashing until the moment we backed into the river.

#### FLOATING INTRIGUE

On the voyage I saw a great deal of Colonel House, a thin little wisp of a man, so fragile that you would think he would blow away. He spoke in a voice that was scarcely audible, yet you could not help listening to him. In all my experience, no one ever gave me more the impression of being what you might call in simple terms a "wise man." He told me he was planning to see Sir Edward Grey and Lord Reading, the Chief Justice—just the two people who would have greatest influence in my case. He agreed as to the vital importance of settling this quarrel, and promised to speak a word for me if I needed it.

The passenger most in the limelight was Captain Boy-Ed, the half-Chinese, slant-eyed German naval attaché, whose recall had been requested by Washington because of his "improper activities." With spirits entirely undampened, he was devoting much attention to certain American girls. We used to watch his way with the ladies, wondering what plots he was putting them up to, and we were certain British agents were watching him too.

Outside Falmouth a little Navy patrol boat met us and guided us, zigzagging, through the mines into the harbor. British intelligence officers clambered on board and made straight for Boy-Ed's cabin and also the cabins of every one of his feminine admirers. Meanwhile we alien goats were separated from the British sheep, and while we stood waiting for officials to make up their minds about us, we saw Boy-Ed being led off the ship, protesting vigorously. The rumor went round that he was being taken away for examination.

Arriving in London, even in the gloom of January, had always had something of the cheerful excitement of arriving home ever since I had first lived there as Ambassador Bayard's private secretary. Now, however, I was struck by the air of depression. Somber-faced, set-jawed soldiers were drilling in every vacant square. When I reached the Ritz, they were even tramping back and forth in the Green Park right under my window. Warnings were posted in the room to keep curtains tightly drawn after dark, so that not a ray of light could escape. Anyone who left his shade up even a slint would be fined a pound.

#### WHAT HAPPENED TO BOY-ED

While I was unpacking there came a knock at my door, and who should walk in but Gerald Fitzmaurice, a secretary at the British Embassy in Constantinople when I was chargé d'affaires at Abdul-Hamid's court. Just as though 13 years had not passed since we had said goodbye at the gates of Isfahan, he remarked, with that queer, cynical smile of his, "Well, here we meet again. It's a long way from Persia, isn't it?"

"Where the devil did you come from, and how did you know I was here?"

He threw back his head and laughed. "Huh. Huh. That's my business, to keep track of suspicious strangers like you."

As soon as I discovered he was in the intelligence service, I asked him what had happened to Boy-Ed. It appeared that our travel-

ing companion had been brought to London almost frothing at the mouth, objecting vociferously that he had a safe conduct. Capt. Reginald Hall, of the Naval Intelligence, had silenced him in short order by saying, "We guaranteed the safe conduct of your person through England, but nothing was said about your papers and clothes. If I hear another word, I'll have you stripped naked here in this office and send you on board in that condition."

"Better watch your step, Griscom," he said, as he rose to leave. "We have our eyes on you."

I went on to dress for dinner. As I emerged from the hotel to take a taxi, I plunged into murky darkness. Along the streets only a few lamps with shades painted black or green emitted a faint flicker. It was said more people had been killed by the automobiles which dashed about without headlights than by the Zeppelins. At dinner everybody was discussing which part of a building was safest in case of a raid. If a falling bomb hit the roof, it would penetrate a floor or so; if it exploded in the street, it would blow in the lower stories. Obviously, the safest place was in the middle, and here space was at a premium because London buildings were not very high.

I saw the point of Fitzmaurice's jocular parting remark when, back at the Ritz, I discovered that my baggage had been thoroughly ransacked. In order not to lose a minute in getting our papers to safety the next morning, Anderson and I hurried around to call on Mr. Page. We found the embassy a perfect bedlam. It not only had to take care of vastly increased American business but also was handling German interests. The force had had to be extended until it was equal to our whole State Department staff before the war.

We told Mr. Page about our papers and messages, and said the only additional favor we would ask was that he or some member of the embassy should arrange our first call at the Foreign Office and intimate to them an "unofficial interest." He apparently considered we were trying to put him in a position where he would be making trouble for the British by helping to extract money from them, because, to my amazement, he announced freezingly, "Your case is a private one and you must handle it without any help from me. I am the official representative of the United States in England and, therefore, every act of mine is official."

This was an extraordinary statement from an experienced ambassador. Almost the first thing you learn in diplomacy is that the real accomplishments often come as the result of informal actions. All he had to do was say to Sir Edward Grey, "I'm not here officially and I don't know anything about this case myself, but I do know that my Government would like very much to see it out of the way."

Mr. Page was an excellent example of a man who had set out to be persona gratissima and had accomplished his end; no ambassador of ours was ever more liked. But from the point of view of the State Department he could hardly be regarded as successful. When he was charged to deliver a formal and disagreeable note to Downing Street, he would often soften it verbally so that it would lose its effect.

#### AN OUTCAST IN LONDON

Since I was unable to get any help from the Ambassador, I went to the counselor, Irwin Laughlin, who had been my first secretary in Japan, and asked him to make the introduction. It never occurred to me that he would think we were trying to hurt the English, but he, too, flatly refused. Knowing very well that the Embassy must have received the State Department's cable, I could not understand their attitude. However, with the Embassy hostile, there was no point in opening negotiations. We decided to notify Polk what had happened, and then sat tight and waited for developments.

At first I was glad of a little leisure, so that I could pick up the threads of former friendships and associations. Throughout the years I had kept up my membership in the Bachelors' Club. As I had always done when in London, I dropped in at the earliest opportunity and ordered some tea. All about me groups were conversing. I could not help overhearing their remarks. A young guardsman said there was going to be a big push in a certain sector, a fellow from the Foreign Office told some inside news, finally an old gentleman said it was a shame the Americans did not lend a hand, and the others chimed in with derogatory remarks.

I gulped down my tea and left hastily. I did not want to eavesdrop on their secrets. It was their club and their war, and no place for me.

On the street, a woman, seeing me in mufti, tried to pin on a white feather.

"I'm an American," I protested.

"Oh, one of those who're too proud to fight," she retorted, and threw the feather at me.

Everywhere I went I was asked, "Why doesn't America come in?" One old lady, in the presence of a company, embarrassed me by saying she hoped we were not so mean and cowardly a race as she had been led to believe. There was no arguing the point; neither she nor her friends were in the mood to listen. I could not get used to being treated as an alien by the same people with whom I had had so many good times.

I was glad and relieved when, after 2 weeks, we were summoned to the embassy. The State Department must have sent a sizzling cable, because Laughlin was now only too ready to cooperate. We should bring our papers over and he would arrange an interview at once with the Permanent Under Secretary of the Foreign Office.

Sir Eyre Crowe was very friendly and we got right down to business. The British Government would appoint a body of 12 men with whom we could negotiate, including himself, the legal adviser of the Foreign Office, representatives of the Admiralty and Board of Trade, the Procurator General, the Solicitor General, and, as chairman, Commander Frederick Leverton Harris, the head of the Blockade Bureau.

Before the first meeting of the committee, we set about lining up our cases. In the process I discovered that my clients were about to receive a severe financial setback. The British Government was planning to bar their products from being sold in England. I was sure the English could not know control of the Sulzberger company really belonged to American banks, mainly the Guaranty Trust Co., from which England had to borrow. In hitting the Sulzbergers, she was really hitting her best friends. I cabled Cravath that he should have the New York banks protest to the Midland Bank in England, which, in turn, should protest to the English Government. The ban never was put in effect.

#### ARISTOCRATS OF THE LAW

I realized, however, the English would never become enthusiastic over products labeled "Sulzberger." Better change the name, I suggested, and soon "Wilson hams" were on display in British butcher shops.

On some points I had to get a barrister's opinion—a momentous undertaking. He could only be approached through a solicitor, a humble fellow who prepared your brief, marked it in the corner with the price you would pay—four pounds, a hundred pounds, a thousand pounds—then sent it on to a barrister.

If he turned it down, it went to a second and even a third or fourth until finally someone deigned to accept it.

No American would understand the unique divinity which hedged about an English barrister. The story was current of a judge who, in the midst of a trial, looked up, glared, thundered, "Proceedings in this court will cease! There is a stranger within the bar!" Every eye was instantly focused on the unfortunate solicitor who had dared to lean over to whisper something to a barrister.

After what seemed to us an inordinately long delay, our solicitor sent word that the barrister would be ready to deliver his opinion at 4 o'clock the next day. He saw to it that Brown and I were 10 minutes early. As we passed the window we glimpsed a man reading and smoking, his feet on the sill and his chair tilted back comfortably. We entered the outer office. The clerk, recognizing the solicitor, asked rather curtly, "What are you doing here?"

"We've an appointment for 4 o'clock," the solicitor answered meekly.

The clerk looked at the clock. "Well, you may wait," he said, as though doing us a favor.

We waited. Not a second before the hour were we ushered in. The barrister spoke to the solicitor, but treated Brown and me as though we were not in the room. He pocketed our fee, delivered a very clear opinion, and then dismissed us without even an attempt at the ordinary courtesies. He had accepted the Sulzberger Co. as a client much as a criminal lawyer would take the case of some villain he knew to be guilty.

When we finally met the board we found it an imposing array of talent, containing some of the sharpest brains in England. Anderson undertook to debate back and forth the purely legal aspects of the case, and soon he and the solicitor general were engaged in learned disputations upon all the different precedents, the history of prize courts, blockade running, and the like.

I suggested the immediate elimination of casings from all discussion. "They are," I pointed out, "inedible and indigestible, in exactly the same category as the tins which hold sardines. You can claim the sardines themselves are food products, but it would be difficult to do the same with the tins."

The committee, which had begun by being very stiff, laughed and agreed to exclude the casings.

By merciful providence, Commander Harris and I took to each other from the start. I described to him the tremendous volume of accounts, affidavits, bills of lading involved. "We'll never read all this stuff. Let's try to find some way to settle it in principle, and then we'll hire chartered accountants to go through the mess and set up fair valuations."

"Yes," he assented. "I haven't any time either. Let's stick to that."

And we shook hands on it.

Shortly, Commander Harris asked me for a week-end to Leatherhead. His house, Camilla Lacey, had been built by Fanny Burney. He knew everything about her, had collected everything of hers he could lay his hands upon, had jammed every room with Burney memorabilia. When he drew from me the confession that I had never read Evelina, he brought out a copy, and, at his insistence, I read it and loved it. It formed a bond between us.

I found that the commander had also invited other members of the committee. We were served a dinner that had been prepared by the commander's famous chef, and afterward, over our port, they began chaffing me about my German clients, a very good sign.

#### FEATHERED RIDDLES

"You think your case is difficult," said Commander Harris. "Well, listen to this one. You Americans apparently wanted your canary birds, war or no war, and clamored so loudly for them that a group of neutral bankers decided it would pay to make up a big

cargo to fill this demand. From the Harz Mountains in Germany thousands of birds, worth several hundred thousand dollars, were shipped to a Dutch port and lay there for 2 or 3 months before being loaded on a Swedish ship. On putting out to sea, she was promptly hauled in by our blockading squadron and the cargo confiscated on the excuse that it was of German origin. The bankers employed a clever counsel, and soon we found we had stirred up a hornets' nest. He divided the birds into five categories and tried to argue that four of them, each worth thousands of dollars, could not possibly be considered of German origin \* \* \*. Look here," Commander Harris finished, and shoved over a memorandum. "That's the way they're classified."

1. Birds born in Germany and shipped out—indisputably German.

2. Fledglings hatched in the Netherlands while awaiting shipment, from eggs laid in Germany—German or Dutch?

3. Eggs laid in the Netherlands, but conceived in Germany—German or Dutch?

4. Fledglings hatched on Swedish boat—a floating bit of Swedish territory—from eggs laid in the Netherlands—Swedish or Dutch?

5. Eggs laid on Swedish boat—Swedish.

One of the interested parties went to a member of Parliament and suggested that he should ask questions about the case of the intercepted canaries.

It happened to hit the House of Commons' sense of humor and was greeted with roars of laughter. The members began speculating as to when a canary bird started acquiring a nationality—at the moment of fertilization, as an egg, at the time of hatching, or when it was mature enough to feed itself. Were the Dutch and Swedish Governments going to be involved over their canary-bird rights?

I spent several pleasant week ends with the committee and, on the surface, our business seemed to be progressing smoothly. Actually, at the regular meetings we were getting nowhere. Colonel House arrived at the Ritz from Germany on February 9, and I saw him daily during the 2 weeks he stayed. We agreed it was time for him to put in a word.

Nevertheless Colonel House left England and the business still hung on. The government, loath to pay out so much money unless absolutely necessary, interposed an endless series of delays, and I could see that years might go by before the finer points of international law could be exhausted. Not the least of our troubles were the barristers, who were constantly going off shooting. The solicitors recognized this as a matter of course, and could not understand our impatience.

We had to stay in London all week, and for exercise I used to drag Brown off on long walks about the town. He was efficient and hard-working and knew his job, but seemed to be getting little out of his first trip abroad. I did my best to stir up his interest in London. "There," I said, "is Buckingham Palace. The roof is covered with sandbags to protect the royal family from falling steel and iron."

He glanced up casually and grunted.

I thought I would try him on something modern. "Over on that great arch at Hyde Park corner is a searchlight and an antiaircraft battery."

Another grunt.

I showed him Stafford House, now a museum, but in my youth the home of the Dukes of Sutherland, where I had often been. I indicated the ever lovely view over St. James' Park; the bit of water and the stately Foreign Office as a background.

Brown only sighed deeply. "I wish I could be back again in my office in the stockyards of Chicago."

Brown had formed a deep-seated disapproval of monarchies and titles. He even looked askance at me because of my British associations. I told the committee about him, and they were delighted, making me repeat again and again his remarks about "arrogant aristocrats."

Finally, one day in March, Lord Reading sent for Anderson and me and made tentative inquiries as to our lowest figure for settlement. We set it fairly high; nothing was to be gained by concession. To our surprise, we met no opposition at all. Suddenly the Government capitulated. Our committee told me they had known all along they were going to pay eventually, but they had to put up a good fight. I always thought Colonel House's recommendation may well have turned the scales in our favor. The negotiations ended, as do few such long-drawn-out controversies, with friendliness on both sides. Each thought it had driven a good bargain.

The packers' case was historic because it settled a vital principle of international law, establishing that if a belligerent seized goods he could not clearly prove were contraband, then he would have to pay for them. The one great cause of friction between the British and American Governments was thus removed. The State Department could now stop bombarding England with disagreeable notes, and the way was paved for our ultimate entrance into the war on the side of the Allies.

The average reader, puzzling his way through his newspaper, may be no more at sea about his rights as a neutral than the expert steeped in Grotius and Pufendorf; the law is constantly being determined by changing conditions. Our case was won not so much because of precedents as because of the exigencies of the British; they needed a friend.

Before our departure we had one more example of the altering list of contraband. Anderson and I decided to celebrate the conclusion of our efforts with a good will dinner to the committee and include our unbelievably large array of counsel; not only did each packer have his own barrister but we had retained others to help prepare the legal briefs we were going to submit to the privy council. To our surprise the solicitors said they could not possibly attend unless, as one rather naively suggested, the permission of the barristers could be secured. This we did without difficulty.

The one person who refused to attend was Brown. The committee really wanted him produced, but he still felt that the dastardly British had behaved so badly to us in the Revolution that he ought not to consort with them. Anyway, he did not approve of their monarchical form of government.

About halfway through dinner, Commander Harris pulled out of his pocket a small piece of material about 6 inches long and 4 wide, which he handed to me. "Can you tell me what that is?"

I examined it carefully. One side was like fine cotton drill; the other was a shiny, smooth substance, semitransparent. The two were glued together. "I give up," I said.

"Did you hear that we had shot a Zeppelin down at the mouth of the Thames?"

"Yes."

"Well, the report was true. This is a piece of the bag."

"Yes," I said, still wondering.

"Do you see that shiny side? Do you know what that is?"

"No."

"Those are your damn casings, your sardine tins. If I had learned about this 48 hours sooner, you'd never have been paid for those. The Germans weren't importing them for sausages but for Zeppelins."

## Arizona Small-Mine Operators Celebrate the Second Birthday, February 10

### EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. MURDOCK of Arizona. Mr. Speaker, there is no question but that mining is one of Arizona's basic industries. Years ago it was the predominant industry. Later it became rivaled by livestock and agriculture. Since, however, so large a proportion of this State is known to be highly mineralized, and since so small a proportion of it can be used for agriculture, and so limited are the possibilities for stock raising, mining must continue to be an important leg of our industrial prosperity, if not the taproot of our economic growth.

There is no question but that mining as a whole has been in the dumps for a number of years and that several things are needed besides the presence of rich ore deposits to restore mining activity as it once was and as we would like to see it

again in Arizona. What are some of these needed steps which might be taken by proper governmental action?

First, is the protection of our present copper industry from ruinous competition from abroad. This step has been partially taken by the placing and retaining of an excise duty on foreign copper, thus giving a measure of protection to our own production. We must not let down on this protection.

Second is a satisfactory price for the precious metals, gold and silver, which are found rather extensively in Arizona. Government has recently taken this step to a certain extent by fixing the price of gold at \$35 an ounce instead of the old price of \$20.67 an ounce, and very recently by remonetizing silver at the ratio of 16 to 1. However, the silver bullion owners are paid only 55 percent for their bullion at the mint. These features of a recent act can but stimulate the mining of the precious metals and encourage mining of the baser metals having gold and silver as a byproduct. Of course, it must be understood that there are conveniences yet to be worked out with regard to the Government's purchase of gold, and there are injustices to be righted concerning the Government's enormous profit of 45 percent seigniorage on silver. No one has seen and emphasized these detailed reform needs concerning gold and silver so well as have the small mine operators of Arizona.

A third step is the discovery and utilization, in a broad program of national defense and economic development, of strategic war materials, especially minerals, in Arizona. It is well known in Arizona, if not outside, that manganese, tungsten, and some other strategic minerals exist in abundance within the State. To prove that fact and to get governmental action is the next step in mining. A beginning has been made; at this very moment men from the United States Bureau of Mines are exploring the mineral possibilities of Arizona. Soon we shall have their word, together with that of local authorities, as to what actually exists under our ground. Simultaneously with the outbreak of the European war, the Nation hastened to lay in stock piles of the strategic minerals. Perhaps unfortunately, this legislation was written by an eastern Congressman, but western Congressmen succeeded in writing in an amendment which provided for the Buy American Plan favoring the development of home production.

A fourth step calls for the introduction of new capital into the mining industry out West. That conceivably might be brought about in more than one way. To those of us who believe thoroughly in individual initiative and private enterprise, the thing could be done automatically, and private capital would eagerly seek investment in mining if prices were right. This raises the question of how prices may be made right. Several suggestions have been made by Arizona men designed to accomplish that end. Another proposal is that the Government liberalize its lending regulations so that governmental capital may be more readily available. This calls for a liberalizing of the Securities and Exchange Commission requirements and regulations, or perhaps an extension and liberalizing of Reconstruction Finance Corporation powers. One way to liberalize the R. F. C. powers would be to extend its loan provisions to strategic minerals and other than gold, silver, or tin, to which it is now limited. Another way to liberalize the R. F. C. would be to furnish it more funds from which mining loans could be made. If the Government turned back into the mining industry the 45 percent seigniorage profit which it makes on domestically mined silver, there would automatically be provided a large sum which ought to be loaned to mining men. Nothing is fairer or more just than this logical proposal.

These are only a few of the steps, unexpressed until the Arizona small-mines organizations crystallized them into plans and proposals. As I said to some small-mine operators in Ajo about the time the organization was born, "Your public servants need to be educated along these highly technical lines," and this young organization in Arizona, only 2 years old, has done a remarkable job of just that. The eyes of the mining industry are upon this Arizona organization and great things may be expected from such a remarkable 2 years' start.

## Reciprocal-Trade Agreements Favored by Hon. Frederick P. Kenkel, an Authority on Foreign and Domestic Commerce

### EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ARTICLE BY FREDERICK P. KENKEL

Mr. COCHRAN. Mr. Speaker, for many years I have been fortunate in enjoying the friendship of Mr. Frederick P. Kenkel, of St. Louis, a man who I feel is one of the outstanding authorities in this country on domestic as well as foreign affairs. Mr. Kenkel is a journalist. In 1930 Mr. Kenkel received the Laetare medal awarded annually by the Notre Dame University. He is a director of the central bureau of the Central Verein and editor of the Central Blatt and Social Justice, the official journal of the Central Verein of America, and the central bureau. This magazine has been published since 1909.

Mr. Kenkel received the Notre Dame medal in consideration of 35 years of service as an active, energetic journalist and for his constant espousal of sound social and economic teachings. Since 1895 he has fought, in the papers he edited and from the lecture platform, as well as through the medium of societies with which he has been affiliated, and their resolutions, the dangers of socialism on the one hand and of unscrupulous misuse of wealth and privilege on the other. He is essentially an exponent of a wholesome middle-class policy. He wants this class preserved, and, where it has vanished, restored. The farmer, the worker, the craftsman, the independent merchant and manufacturer, the "white collar" man, and the man in overalls alike, from his point of view, are to be provided with opportunity to attain and retain independence and to foster among themselves a sense of social responsibility. While the middle class, which is to be kept open to all, is, to his mind, the backbone of society and the state, he feels cooperation among socially and economically related individuals and groups filled with a sense of duty toward their families and society and the state is an essential demand for social harmony and true economic progress.

In view of Mr. Kenkel's background, I feel his views on the question of reciprocal agreements should be invaluable, and therefore, Mr. Speaker, as part of my remarks I include an article written by Mr. Kenkel published in the February issue of Central Blatt and Social Justice. The article follows:

[From the Central-Blatt and Social Justice]

#### THE PROXIMATE AND ULTERIOR PURPOSE OF OUR TRADE AGREEMENTS

Men profess to love peace; horror of war is expressed on every side; vehemently by those who realize best that our Nation, one of the "haves," is opposed to any change in the existing condition of things economic. But what of the nations left out in the cold? Is it reasonable to expect them to accept the status quo as permanent and therefore never to be questioned? To do so would be tantamount on their part to signing their death warrant. There would be little else left to them but gradual decay preceded by revolutions and civil wars. Therefore, the "haves" must either be willing to make concessions to the people who were so unfortunate to be the last out of the woods or expect to defend their empires with their armies and navies.

According to C. S. Richards, who reviews Professor Bonn's book, the Crumbling of Empire, in the South African Journal of Economics, the chapter devoted to empire making and empire breaking "raises many questions of vital importance at the present moment: the positions of the 'have' and 'have not' nations and of equality and inequality among nations."<sup>1</sup> As Mr. Richards remarks, in Bonn's judgment the conditions necessary to world peace are a return to universal free trade postulating the gradual removal of all tariff and other official barriers. As between conquest or federation, federation is shown to be the only sane method, implying a willingness on the part of the "have" countries to grant concessions and a more reasonable attitude on the part of the "have nots."

<sup>1</sup> Loco citato, Johannesburg, S. A., vol. 7, No. 3, p. 323.

Ours is one of the "have" countries, a fact of which we are inordinately proud. Now, while there are those who would wish us to assist the nations of the world toward peace and federation, there is little willingness on our part to grant concessions of an economic nature. To instance a point: Every trade agreement concluded by the State Department under the wise leadership of Secretary Hull has met with complaints and criticism, dictated to a great extent by ignorance of the facts in the case and an unwillingness to await results. Speaking for the National Cooperative Milk Producers' Federation, Charles W. Holman, its secretary, accuses the trade agreements of blocking farm relief and asserts that "opposition by the general public in the United States to trade agreements is growing." The opposition is said to be particularly keen among farmers "whose interests have been least protected in the agreements made to date."<sup>2</sup> Or, to quote Louis B. Ward, author of a pamphlet, *Business Is Business*: "America, by her reciprocal trade agreements program, protected foreign trade, but at the price of selling the farmer down the river to secure a more imposing export figure for products of industry."<sup>3</sup> A narrow opinion, contrary to the facts in the case and unrelated to the broader aspects of the situation.

Mr. Hull has successfully refuted the criticism opponents of the reciprocal-trade agreements have leveled at them. The letters he addressed to Senators CHARLES L. McNARY and ARTHUR H. VANDENBERG on December 16 last are of interest in this regard. The Secretary of State reminds the former that, when addressing the American Farm Bureau Federation at Chicago on December 5, 1939, he had presented to his audience "conclusive evidence of the advantages secured by the country as a whole, and more specifically by our farmers, from the operation of the trade-agreements program." Moreover, that he had "also indicated some of the urgent reasons why this Nation, in its own best interest and in the face of the present grave emergency conditions, should continue to adhere to the policy underlying that program."<sup>4</sup> There is no mention in Mr. Hull's statements on this subject of national economic self-sufficiency, one of the outstanding phenomena of our days, the influence of which on the welfare of the nations of the world is so far-reaching. But he does speak of the numerous trade restrictions, such as foreign-exchange controls, quota restrictions, export-import license agreements, and other similar devices which serve as trade barriers. They are to an extent the aftermath of the World War; at its close, "everywhere the condition was one of serious dislocation and maladjustment in both agriculture and industry," as the Secretary of State said in his address, *War, Peace, and the American Farmer*, delivered before the American Farm Bureau Federation.

The obvious need at that time was, Mr. Hull stated on this occasion, "the restoration of normal and healthy trade relations among nations as the only possible means of establishing secure foundations for enduring peace and for the economic well-being of the peoples of all nations." But that is, as the speaker emphasized, "exactly what did not happen. Instead, the world pressed 'headlong down the perilous road of narrow nationalism.' On all sides there grew up a vast network of trade restrictions and other impediments to normal economic intercourse, imposed according to the mistaken theory that such extreme measures would bring greater prosperity. Instead new dislocations were added to the old. Agriculture and other supplies piled up in some parts of the world with no way to sell them. At the same time other regions were living on short rations, their purchasing power seriously reduced by inability to sell their industrial and other surpluses to foreign lands."<sup>5</sup>

Mr. Hull might have added, as proof of a further and more permanent result of national economic self-sufficiency, the introduction or extension of the cultivation or manufacture of products not hitherto produced or dumped on the world market in great quantities by countries forced or tempted to adopt this course by the ramifications of international affairs. Unfortunately, our country, together with other nations, was guilty of "great mistakes of policy" which "contributed greatly during the twenties to the impairment of the whole world economic situation" and culminated "in the great general break-down at the end of the decade."

"We refused to face the realities of the situation," Mr. Hull asserts. "We raised our tariff sharply and indiscriminately and thus made it impossible for other countries to keep up their purchases of our farm and other products and at the same time make payments on their debts to us. We then tried to escape the consequences by loaning the money to pay for our own exports. Finally, after announcing in 1928 our intention of once more raising our tariff, we capped the climax of an ever-narrowing economic policy by putting on our own statute books in 1930 one of the most ill-timed and costly pieces of legislation in the entire history of this country—the Hawley-Smoot Act."

What followed is, indeed, "painful history," to use Mr. Hull's expression. The tendency to adopt economic self-sufficiency spread to all parts of the world, with results from which the farmers of our country will continue to suffer if "the clogged-up channels of mutually beneficial trade between our country and other countries"

are not reopened and kept open. To do so is the purpose of the Trade Agreements Act of 1934.

Fully in accord with the policy pursued by the Secretary of State toward attaining this end, the President in a noteworthy passage of his recent annual message declares authoritatively:

"For many years after the World War blind economic selfishness in most countries, including our own, resulted in a destructive mine field of trade restrictions which blocked the channels of commerce among nations. This policy was one of the contributing causes of existing wars. It dammed up vast unsalable surpluses, helping to bring about unemployment and suffering in the United States and everywhere else.

"To point the way to break up the log jam, our Trade Agreements Act was passed, based upon a policy of equality of treatment among nations and of mutually profitable arrangements of trade."

Ultimately, President Roosevelt insists on the importance of the Trade Agreements Act and that it should be extended "as an indispensable part of the foundation of any stable and durable peace." The old conditions of world trade, he continues, "made for no enduring peace; and when the time comes, the United States must use its influence to open up the trade channels of the world in order that no nation need feel compelled in later days to seek by force of arms what it can well gain by peaceful conference. For this purpose we need the Trade Agreements Act even more than when it was passed."<sup>6</sup>

There is meaning and logic in the President's further statement that our Nation would find it difficult to exert its leadership "when the time comes for a renewal of world peace . . . if this Government becomes a dog in the manger of trade selfishness." And while "the present President of the United States" subscribes to and follows Washington's precept, warning the nation against entangling foreign alliances, he asserts the belief that "trade co-operation with the rest of the world does not violate that precept in any way."

The Hawley-Smoot tariff has amply proved the contention that the protective tariff on imports tends to destroy foreign markets of the farmer's surplus. This has resulted in conditions even the numerous well-meant efforts of the Government for the rehabilitation of agriculture have not surmounted. The farmers of our country do not, as a body, enjoy prosperity. King Cotton is sick even unto death and his realm, the South, is facing a pitiful economic situation from which there seems no escape. In spite of the evident results of economic nationalism on agriculture and industry, "the only suggestions seriously put forward by opponents of the program (of trade agreements) are," as Mr. Hull remarked on the occasion previously referred to, "poorly disguised maneuvers to return this country to the Hawley-Smoot embargo policy or its equivalent."<sup>7</sup>

The author of these sentences clearly stated in his letter to Senator VANDENBERG what, in his opinion, "the interests of this Nation demand under existing abnormal conditions—an emergency method of adjusting our tariff structure with a view to obtaining, through reciprocal reduction of trade barriers in foreign countries, better market outlets abroad for our great exportable surpluses of farm and factory products. This means that we must have a method by which we can adjust our tariff rates below the embargo levels of the Hawley-Smoot Act."<sup>8</sup> But due care would be observed "to make sure that the branches of production immediately concerned, in agriculture and in industry, are amply safeguarded." An almost superfluous assurance; we are so wedded to the existing tariff policy, and business, so sensitive to interference with the monopolistic privilege the tariff endows it with, that no far-reaching departure from the existing order of things is possible. Free trade is, for the present at least, out of the question. Trade agreements are evidently the only means we have at our command to mitigate the effects of the Hawley-Smoot embargoes and to aid a distracted world to open up the badly clogged channels of international trade.

It has been said the existing governance over society by the capitalism of the present makes for a state of perpetual war. Almost 40 years ago a former Secretary of the Treasury—Shaw—told the student body at Harvard University the new century would witness a tremendous, bitterly fought, international trade war between England, France, Germany, and our country, with the markets of the world for their aim. This prognostication proved only too correct. In fact, Japan, Italy, and a few other countries are now participating in the struggle. In a lecture delivered a little over a decade later before the Army War College at Washington, D. C., Henry C. Emery, professor of economics at Yale University, declared: "The most recent wars, such as the Boer War and the war between Russia and Japan, have unquestionably been primarily economic in their nature; and if I have been correct in my statements regarding the economic changes of the last generation and their effect on the increasing race consciousness and feelings of international hostility, we may be sure that even more completely than in the past nations will seldom go to war except for commercial advantage, but will ultimately resort to arms when con-

<sup>8</sup> Department of State Release No. 699. Washington, Dec. 16, 1939, p. 4.

vinced that by victory they will secure for themselves the necessary means of their commercial welfare."<sup>9</sup>

The wars of the past 25 years have underscored with a stylus dipped in blood the opinion expressed by Professor Emery, whose address was published in 1914 by the War Department for distribution in connection with the educational work of the Army. Historians of the future will view the catastrophic results of the wars we have witnessed since 1914 with astonishment over our apparent inability to realize that the days of purely national existence of states and nations have passed. They will deplore the fact that our times should have produced no statesmen capable of imbuing the nations of the world with the conviction existing conditions demanded of them the acknowledgment in fact of the solidarity of the human family. Once upon a time there was fought a stiff tariff war between New York and Connecticut. How ridiculous this event appears to us today. Among the reasons responsible for the World War the tariff laid by Austria-Hungary on Serbian pigs—caused by the machinations certain competing manufacturers of armaments had been guilty of—was not the last or least. And thus throughout the centuries strife has been engendered and wars fought to satisfy either the need or greed of peoples.

Our receding from the position we assumed by adopting the "Hawley-Smoot embargoes" grants, therefore, a ray of light and hope, sustained by the President's words regarding the obligation of the Nation to open the trade channels of the world with the intention of promoting international peace. Whatever the outcome of this policy may be, it is a commendable effort to veer away from economic nationalism, of which Pius XI says the state has made itself guilty, having become "a slave bound over to the service of human passion and greed."<sup>10</sup>

### Subsistence Relief Bill for Emergency Areas Due to Droughts, Floods, and Other Acts of Nature in the United States

#### EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. EDWIN A. HALL. Mr. Speaker, the introduction of this measure is an indirect result of conditions which were experienced in my own congressional district in the southern tier of New York State during the past summer when a 10.71-inch deficiency in rainfall during our normal growing season of 157 days caused an acute and in some cases disastrous shortage in subsistence roughages.

That meant what it means in every part of the country when anything of the sort happens. It meant that our farmers were faced with the alternative of selling off a large part of their stock at a terrific sacrifice or else buying roughages at exorbitant figures not consistent with good farm economy.

The shortage amounted to something like 50,000 tons of hay and 25,000 tons of ensilage, both figures spelling disaster for a great many farmers unless we could obtain hay at nominal prices for the relief of our farmers. I say "nominal prices" because of the fact that very little hay is grown in our area for the commercial market. At least 95 percent of it is grown for subsistence purposes only and is absorbed by the livestock on the farms where it is grown. Roughly, I would say that the average cost of such hay in the mow is less than \$4 per ton, represented in labor, team time, transportation, taxes, and other overhead. This means that for the farmer to go out and buy subsistence hay at more than let us say \$8 or \$10 a ton, even in an emergency, would be thoroughly disastrous in farm economics. It would sink the average dairy farmer.

But when we sought to obtain, through the various agencies of Government, the shipment of hay into that drought-stricken area to be distributed by Government agencies at a maximum price of \$10 a ton (which was all that sound farm economics dictated), we ran head-on into the fact

that no law existed permitting such relief in subsistence crops for animal consumption, regardless of the emergency. The Agricultural Department was willing enough and so were the various farm agencies, but none of them had any legal right or power to do the thing which had to be done if any real assistance within economic reason were to be given to our farmers.

As an example, the Farm Security Administration was perfectly willing to make loans for the purchase of hay. But what point would there be in a farmer's borrowing money to buy subsistence hay at \$18 to \$25 a ton? His business simply could not stand it even though he were able to borrow in unlimited amounts.

So what we have tried to do in this bill which has been prepared after extended conferences and detailed investigation—what we have tried to do is define a policy for Government relief, which is not a grant, covering such cases all over the country in the future—emergencies due to acts of nature, such as fires, frosts, droughts, insect plagues, earthquakes over which the farmers, ranchers, and husbandrymen of those areas have no possible control and to which they are certainly not contributive in any way through negligence or bad-farming practices.

I neglected to say that one argument which was raised against Government relief such as we asked for at the time, and such as other areas over the United States are bound to need from time to time, was that the purchase and transportation of hay or roughages of any kind by the Government for resale to emergency-area farmers at nominal prices, for subsistence purposes only, would conflict with commercial operations.

That is why we have undertaken in this bill to draw the proper line of distinction between subsistence crops and commercial crops and to set up some other definitions highly essential to the establishment of a reasonable Government policy covering such emergency relief. Our definitions may not in every circumstance coincide with dictionary definitions, or even the definitions which are taught by some agricultural colleges. That is to say, they may not go as far. But they are practical, as every farmer, every ranchman, every husbandryman in the United States will recognize.

In this bill we have established these definitions and then we have done what has been done so often in the past few years. We have stated the intent of the Congress. In other words, we have attempted to outline the policy of the United States Government in such matters, making it entirely plain that here is no interference with any commercial crop, its movement, or its use.

Then we have undertaken to outline, first, what a condition of emergency is, how it is created, and how it becomes an official fact.

We have protected its establishment as an official fact so that it will be impossible to dip into the Treasury of the United States for so-called relief or emergency purposes in just any old case. The Secretary of Agriculture, the Governor of the State, and the Farm Bureau people who are on the ground must not only be satisfied, but they must certify to the existence of such an emergency due to an act of Nature.

Then we have provided for an easy, foolproof, chiselproof method of giving direct relief within the shortest possible time without unnecessary red tape. We have provided against profit by the Government or by the individual distributors, and in section V of this bill we have provided for a fine of \$1,000 or a year in prison, or both, for chiseling, falsification of returns, resale of relief subsistence, and we have also suggested the sort of bookkeeping which we believe the taxpayers have a right to expect when Federal moneys are used for this or any other worthy relief purpose.

Finally, I want to make it plain that this act probably will not do my people in the Thirty-fourth Congressional District any particular good this year. It comes too late. The damage has been done in my district, and it is rather tremendous damage, too, because no such law as this was on the Federal statute books among all the relief laws that have

<sup>9</sup> Some Economic Aspects of War. Washington, 1914, p. 11.

<sup>10</sup> Quadregesimo anno. Oxford ed., p. 40.

been passed. What we are trying to do here is to prevent the same sort of economic disaster in the agricultural structure in other parts of the country due to a lack of scientific approach to emergency relief problems until they have become disasters.

There is nothing of the "grab bag" about this bill; nothing of the "pork barrel." We have tried to draft a sensible, practical emergency measure which I think will be recognized by farmers, ranchmen, and husbandrymen generally all over the country as the same sort of honest help which one farmer would extend to his neighbor if the other neighbor were in difficulty.

Call it a helping hand from Uncle Sam if you want to. It is just that. There is no radicalism in it, no paternalism, no socialism, or communism. It is as sound as the foundations of a well-built barn.

[From the Binghamton (N. Y.) Press of February 3, 1940]

#### THE DIFFERENCE

Aside from its deliberate approach to a well-demonstrated problem in farm economics, Representative ED. HALL's proposed measure for emergency subsistence relief in case of droughts or other acts of God is a good example of the difference between New Deal legislation and old-fashioned American legislation on the same subject.

One might also say that it is a good example of the difference between the Republican viewpoint and the New Deal viewpoint. That is particularly true of the formula which it sets up for the administration of necessary emergency farm relief. It is a workmanlike job. Rules of administration are not left to the discrimination of quasi-judicial, quasi-administrative body. No new bureaus or agencies are established to carry through its provisions. Not only is the intent of Congress established by a flat statement on the subject, but an exact process by which the emergency is established and through which aid is given is delineated in full outline.

Further, the measure carries penalties—and they are stiff ones—against chiseling. Those penalties are not limited to the recipient. They are also aimed at the distributing agency, and even include Government employees who falsify reports.

As Mr. HALL says, it isn't a "grab bag" or a "pork barrel." It isn't loose at the purse strings. It is a strict formula, and yet there is no delaying and entangling red tape to it. An economy-minded Congress, rather sick and tired of the creation of new agencies for every conceivable act of government, should welcome it as establishing a new pattern in such matters.

### Reciprocal-Trade Agreements

#### EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. H. CARL ANDERSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include that portion of the resolutions adopted at the Twenty-first Annual Meeting of the Minnesota Farm Bureau Federation on January 17, 1940, relating to trade agreements.

This resolution, I believe, represents the opinion of the majority of farmers in the State of Minnesota, and it will be noted that this resolution differs with the attitude as expressed by the national organization of the Farm Bureau Federation:

#### II. TRADE AGREEMENTS

While supporting generally the continuance of reciprocal-trade agreements, we demand that no such agreements be consummated, the effect of which may or would be to force or hold domestic prices on any farm products below parity level. Any other course would justify the condemnation of any such agreements by all agricultural groups: Now, therefore, be it

Resolved, That in the negotiation of any reciprocal-trade agreement that—

1. No tariff concessions be made on items in any treaty or agreement the effect of which would be likely to reduce or hold the domestic price of any farm commodity below parity;
2. Full hearing be given to spokesmen for producers of agricultural commodities affected in any way by treaty concessions, with a guaranty of consideration of such representations, and assurance that no treaty shall be completed until a full and complete record of such hearings has been made available; and
3. That the United States Senate must approve each proposed treaty or agreement in its entirety in order to make it effective.

Also, Mr. Speaker, under permission given me in the House, I include herewith in my remarks a letter received from Mr. W. S. Moscrip, president of the Twin City Milk Producers Association, St. Paul, Minn., which clearly expresses the opinion of that association, an organization of farmers in Minnesota, in reference to the reciprocal-trade agreements.

It will be noted that Mr. Moscrip's organization backs up the Minnesota Farm Bureau Federation in the resolution concerning trade agreements.

TWIN CITY MILK PRODUCERS ASSOCIATION,  
St. Paul, Minn., January 30, 1940.

HON. H. CARL ANDERSEN,

House Office Building, Washington, D. C.

DEAR MR. ANDERSEN: Newspaper reports of the appearance of Edward O'Neal, president of the American Farm Bureau Federation, before the Ways and Means Committee, give the impression that this federation favors reciprocal-trade agreements. The newspaper reports of his statement do not indicate that the proper safeguards for American agriculture, as we in Minnesota understand such safeguards, were included.

For your information as to the position of the Minnesota Farm Bureau Federation, I am enclosing a printed copy of the resolutions passed by this organization at their annual meeting in St. Paul on January 17, 1940. I have marked in red the resolution, which is No. 2, regarding trade agreements. Article 3 of this resolution, it would seem to me, ought to meet any fair-minded person's ideas as to the proper procedure in approving trade agreements or treaties.

Have we reached a point in this country where we are fearful of entrusting to the United States Senate the duties which unquestionably are theirs under the Constitution, namely, the approval of trade agreements and treaties? If this is true, we had best recognize it by doing away with that body and resigning ourselves to dictatorship, such as is apparently desired by this administration.

If we have not, then Congress should assert itself by so amending the Trade Treaty Act as to require Senate ratification, court review, and a return to our constitutional government.

Your best efforts to secure such an amendment will be greatly appreciated.

Yours truly,

W. S. MOSCRIP

### Aid for Finland

#### EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

EDITORIAL FROM THE MILWAUKEE JOURNAL OF FEBRUARY 2, 1940

Mr. THILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of February 2, 1940:

[From the Milwaukee Journal of February 2, 1940]

#### IT MEANS GUNS, BULLETS, AIRPLANES

Odd Nansen, son of the explorer, clarifies the question of aid to Finland—that is, he clarifies by explaining just what the Finns need and expect. He said while in Milwaukee:

"Everybody in Finland and in Scandinavia knows what Finland means when it specifies a loan for 'governmental purposes.' That means but one thing. It means guns, bullets, airplanes."

The request, then, is for American economic participation in the war, not by our citizens but by the Government. It amounts to making an end of our formal neutrality.

That the sympathy of Americans is with Finland has been abundantly demonstrated. The public has expressed sympathy in two ways: In condemnation of Russia and in contributions for the relief of Finnish war sufferers.

There has not been anywhere near the same expression for a course that might involve us in war and would certainly make an end of our neutrality. Some few men in Congress have urged such a step. There was the proposal to lend \$60,000,000 for arms, and the plan to sell 10,000 of our new rifles to the Finns at \$1 each, although they cost \$100 each to make. This would amount to a war subsidy of \$990,000 on one shipment.

In general, public expression shied away from that. Congressional leaders backed off from it. And President Roosevelt neatly sidestepped. Some of his lieutenants said they would fight for the proposals if he would give the word, but he did not give it.

Instead, there has evidently been the feeling that if we gave enough for nonmilitary purposes, we could, perhaps, avoid facing

the question of military aid. Proposed congressional help now calls for nonmilitary loans, of a size yet undetermined. One such loan is already in effect.

But this does not meet the need, as Finland and those who speak for her make clear. They are frank. Here is no attempt to propagandize America, to mislead this country. The request is for guns, bullets, airplanes. Finland, looking at the size and man power of her foe, foresees defeat unless it is war aid that comes. Food, hot coffee, bandages, medicines will not do. These have their place, and no doubt Finland is grateful. But it has to be guns to repel invaders and planes to shoot down the bombers if Finland is to survive.

So we have to face this question. There is no dodging. We might as well stop beating around the bush. Either we abandon our neutrality and become the ally of Finland or we do not meet the Finnish needs and requests. And if we do abandon our neutrality, we have no idea or assurance where we will stop. Will we be on a battle line before it all is over?

America laid down a principle in October. It was clear and definite. We would have no part in the European war—and that meant any fighting across the Atlantic. This time European conditions and developments would not succeed in sucking us in. Shall we abandon that clear resolve now?

It is the very essence of this question of military help to Finland.

### The Venezuelan Trade Agreement

#### EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

STATEMENT BY HON. JOHN M. HOUSTON, OF KANSAS, BEFORE THE WAYS AND MEANS COMMITTEE

Mr. HOUSTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement I made before the Committee on Ways and Means:

Mr. Chairman, it is my intention to discuss at this time only the very serious effect the Venezuelan trade agreement will have on the oil industry in Kansas.

The Venezuelan trade agreement, by including the petroleum excise taxes in its provisions, has turned the machinery of control of the Kansas petroleum industry over to a few major companies who are importing foreign oil. The amount that these companies will import and dump into the domestic market will determine the amount which the small wells of Kansas will be permitted to produce. The costly exploratory work which has been done in Kansas in recent years and which has added millions of barrels to the Nation's oil reserves must be discontinued because the importers are encouraged by the Federal Government to bring in cheap oil, which may be sold at so low a price that it would be unprofitable for Kansas to search for new fields and pools.

This oil question is of vital importance to Kansas. Of the 52,500,000 acres in the State, 40,000,000 are now classified as potential oil and gas land and over 13,000,000 acres are now under lease for oil and gas production and exploration. Out of the State's 105 counties, oil has been found in more than 60. Approximately 40,000 persons are employed in the Kansas petroleum industry, and in a single year farmers and other landowners in oil-producing areas received over \$10,000,000 for rentals and an additional \$10,000,000 for royalties. The oil industry has invested over \$400,000,000 in my State.

This indicates the importance of the domestic petroleum industry to Kansas. So long as the watchful eye of Congress was upon the importers, the domestic market, in which Kansas has its part, was not seriously disturbed by the Venezuelan oil. Today that protection has been removed. By reducing the excise taxes on crude oil and on fuel and gas oil and by freezing the other taxes, the power of Congress to supervise these imports through its consideration every 2 years of the oil excise taxes has been taken away. There is nothing now to prevent the importers from bringing in unlimited quantities of cheap petroleum to the damage of the Kansas petroleum industry.

Kansas has been one of the leading States in the movement for conservation of our petroleum resources. It is a member of the interstate oil compact. The State regulatory body has held the production of Kansas in restraint in order to prevent a wasteful overproduction of this irreplaceable resource. In every way Kansas has cooperated with the Federal Government and with other State agencies in the operation of what we believed was a national program for conservation. A part of that national program was the practical control of imports by Congress. With that control now gone Kansas wonders what is left of the national conservation program.

The wells of Kansas are not all large ones. The greater part of them are older wells of settled production. The cost of production from these wells, involving heavy labor charges per barrel, makes it impossible for the stripper wells to compete in the same market with the low-priced foreign petroleum.

Kansas has been forced to sell its oil for a long time in a restricted market. Its outlet has been estimated at about 4.45 percent of its potential oil production. In spite of this the Kansas producers have asked no special favors but have merely urged that they be accorded an equitable part of the oil market between the States. This has been done so far as practical in the past. The new competing factor which will be introduced into the situation through the Government's encouragement of cheap foreign imports may reduce the outlet of Kansas oil to far less than the 4.45 percent which it has been enjoying up to the present time.

The local communities and the State of Kansas receive large revenues from taxes levied upon the Kansas petroleum industry. These revenues will be greatly reduced in proportion to the amount of the former Kansas market which is taken by the imported oils. This will constitute a very serious blow to a State which has been carrying heavy loads.

Kansans believe that it is improper and grossly unjust for any agency of the Federal Government, through favoritism shown to a few big importing oil companies, to jeopardize the well-being of one of the principal industries in the State of Kansas. Without subsidy and without the requirement of repayment, the petroleum industry has paid out, year after year, hundreds of millions of dollars in investment, in rentals, in bonuses, and in wage checks. It was able to do this because the Kansas petroleum industry could rely upon a certain share of the domestic market. The assurance of that share was definite so long as Congress maintained its biennial supervision over the excise taxes. Now that the importing companies have obtained, through the Venezuelan treaty, the official approval of their importation, Kansas has no assurance of any definite part of the petroleum market. The industry in my State will be unable to make any plans for the future.

The independents are in the petroleum industry in Kansas largely because the antitrust laws made it possible for them to compete. They have their lives invested in this industry in my State. They will not stand idly by and permit a few importing companies to take this from them. They will not understand why this Congress cannot protect them.

I cannot afford, because of any program or policy, to fail to insist that Congress must now correct a serious mistake that turns my people over to the control of a few whose interests are so dangerous. This treaty, so far as my people are concerned, nullifies the antitrust law as it applies to the oil industry.

### Importations of Oriental Starches

#### EXTENSION OF REMARKS

OF

HON. STEPHEN BOLLES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

LETTER FROM THE CORN INDUSTRIES RESEARCH FOUNDATION

Mr. BOLLES. Mr. Speaker, I desire to extend my remarks and include therein a letter from the Corn Industries Research Foundation of New York, as follows:

May we call your attention to the fact that during December the importations of oriental starches were the largest monthly total of all time, in spite of ample domestic cereal and root crops for starch-making purposes.

This heaviest total on record is the highest since February 1937, a year of high corn prices following drought. The total importations for 1939 were over 400,000,000 pounds, an increase of 67 percent over 1938.

Our advices are that this increase is partly due to the closing of European markets and amounts, in effect, to the dumping of the entire oriental starch production on our markets, in exploitation of the binding of these products on the free list under the Netherlands trade agreement.

Increased plantings of tapioca are reported from oriental starch-producing regions, indicating a continued increase of competitive pressure upon the domestic situation.

In this connection you may care to note a highly interesting finding, developed in the course of an investigation on starches recently completed by the United States Tariff Commission, showing in an advance copy of the text of its report that in 1937 these imported starches accounted for 44 percent of the starch consumption in those industries in which domestic and imported starches competed.

## The Forest Service

## EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

## LETTER FROM HON. GIFFORD PINCHOT

Mr. HOPE. Mr. Speaker, no man in America has a better right to speak on behalf of conservation than Gifford Pinchot. For almost 50 years he has been a leader along that line. His work in the field of forestry speaks for itself. He not only knows forestry from a technical and professional standpoint, but his long experience as the head of the Forest Service enables him to speak as an authority on forestry in its relations with the Federal Government.

In view of the efforts which are apparently now being made to transfer the Forest Service to another Government department, the following letter from Mr. Pinchot is of great interest:

1615 RHODE ISLAND AVENUE NW., WASHINGTON, D. C.,  
February 3, 1940.

HON. CLIFFORD HOPE,  
House Office Building, Washington, D. C.

DEAR CONGRESSMAN HOPE: I am taking the liberty of calling your attention to the renewed attempt of the Interior Department to get the Forest Service and the national forests away from the Department of Agriculture.

There is no good reason for the proposed transfer of the Forest Service or any part of it. Moreover, it would be a severe and unnecessary blow to the farmers of America. The Farm Bureau Federation, the National Grange, the Farmers Union, the National Cooperative Council, the Federation of Milk Producers, and other farm organizations have made official protest against it.

So have the National Federation of Women's Clubs, the American Forestry Association, the Association of State Foresters, the Society of American Foresters, the National Livestock Association, the National Woolgrowers' Association, the National Lumber Manufacturers Association, the California and other western chambers of commerce, the Izaak Walton League, the Camp Fire Club of America, etc.

The users of the national forests and the people of the 11 States which include most of the national forests, and their representatives in Senate and House, are overwhelmingly in favor of letting the Forest Service be. There is also strong opposition in the Central and Eastern States.

This is no partisan question. I fought the transfer when Republican Secretaries of the Interior tried for it under Coolidge, Harding, and Hoover, just as now. Under any administration it would ruin the service.

Nothing whatever is to be gained by tearing the Forest Service out of the department where it belongs, grew up, and has done such admirable work. No one pretends that it could do better elsewhere than where it is now.

Every Chief Forester has been dead against it. Every Secretary of Agriculture for the last 40 years has emphasized the close relationship of forestry with agriculture. The national forests are important parts of the agricultural equipment of America. They are cooperating forms of land use, built on the soil. To separate them would deeply injure both.

As the President himself said last December, "the forest problem is part of the broad problem of modern agriculture." Forest conservation is an indispensable part of agricultural conservation. Trees are an important farm crop. They help sustain farm enterprises, lessen erosion and floods, serve irrigation, and contribute to livestock pasture.

The Forest Service is in close, constant, and necessary cooperation with more than half of the other organizations in the Department of Agriculture, such as the Soil Conservation Service, the Agricultural Adjustment Administration, the Farm Security Administration, Agricultural Economics, etc.

All but an insignificant minority of conservationists oppose taking the national forests or the Forest Service (in which the conservation policy originated) out of its present location. This move would amount to a most destructive attack on the national conservation policy.

The Interior Department is not fitted to handle the national forests. Its chief function with respect to public lands, under the laws of Congress, is to pass them into private hands. Again, the Interior Department centralizes its work in Washington. The Agricultural Department decentralizes. The Forest Service decides local questions by local men on local grounds. Centralization would cripple it.

The national forests are handled for production from the soil. The national parks are not. That the parks are in the Interior Department is no reason whatever why the national forests should be there also.

Because Theodore Roosevelt recognized that the Interior Department's handling of the national forests was a public scandal, he secured their transfer to the Department of Agriculture, where their administration has become a model of clean, competent, publicly approved efficiency, unsurpassed by any Government bureau.

The Interior Department has no claim whatever upon the national forests. Ambition for power is no good reason for upsetting a layout that works superbly where it is.

The transfer would seriously disable the Forest Service, cut off essential cooperation with other bureaus, injure the users of the national forests, and hurt and affront the farm interests of America.

Only the strongest constructive reasons could justify the transfer. As a matter of fact, every reason of morale, cooperation, natural relations, tradition, and good work are against the transfer. Why rock the boat?

Sincerely yours,

GIFFORD PINCHOT.

## Undominated Labor

## EXTENSION OF REMARKS

OF

HON. JAMES SECCOMBE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

## RADIO ADDRESS BY FRANK T. BOW

Mr. SECCOMBE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Frank T. Bow, general counsel for the National Council of Independent Unions, over the Columbia Broadcasting System, January 31, 1940:

Ladies and gentlemen, I am going to start my very brief talk by asking you a question. This question is directed to the men and women who are or who have been union members, but I hope you of my audience who have never been union members will think about it too.

The question is really in two parts. First, do you consider yourselves actually free people in union affairs? That may seem a strange query, but bear with me a minute. Don't answer it too quickly. Reserve your decision until you have heard the second part of the question, which is this: Can you say what you please about the conduct of the affairs of your union; can you speak out about union policies; can you make your officers do what you want them to do; make them refrain from doing that which you do not want them to do; do you control the election of your officers, both local and national; can you demand and get complete, honest, and understandable statements of where your union money goes; can you resist an assessment, let us say an assessment for political purposes, levied upon your pay; can you do any or all of these things fearlessly and as of right without being driven out of your union by some self-appointed and self-perpetuating officers and deprived of your right to earn a living? Can you? I hope that your answer is "Yes"; but I know that in too many cases your only honest answer must be "No." And if your reply is "No," my good union friends, you are not free men and women and you cannot, without a cruel penalty, exercise the rights which are inherently yours as American citizens. The question boils down to just about this: Do you and can you run your own union for your own benefit or are you exploited for the benefit of union leaders who tell you what to do and you do it or else?

A man who holds his job and earns his living solely by his ability and willingness to do his work is truly a free man economically, and he can look the world in the face and tell it what he thinks on any subject anytime. That man represents the American ideal of free, independent worker. He symbolizes undominated labor, undominated by anyone.

If, in order to keep his job and earn his living, a man has to depend upon something else besides his ability and willingness to do his work, or if he has to think as his employer thinks, say what his employer wants him to say, keep silent when his employer wants him to keep silent, stay out of a union if his employer does not like unions, or join the union his employer directs him to join, that man is not a free man. He is dominated by his employer.

If that man, our worker about whom we are talking, may not question or even oppose effectively the policies of his union leaders without being given the quick choice of dropping his protest or getting out, or remaining docile and jeopardizing his right to

work by offending his own so-called leaders, if he must pay when they say "pay," strike when they say "strike," he is still not a free man. He is just as effectively dominated by the ruthless men who have saddled themselves upon him as he might be by his employer.

In neither case does he approach the American ideal of undominated labor.

Let us take a recent instance that all of us know about. The leader of one of the biggest unions in the Nation has imposed an assessment, a tax, of \$2 upon each of the half-million or so members of the union, for a political campaign fund. The disposition of that money is in the hands of one man. Now, I ask you this: Did the members of that union vote upon or agree to have anything to say about that tax? You know they did not. And will they have anything to say about what will be done with the money? You know they will not.

Now, among the members of this union there must be Democrats, Republicans, Socialists, and, in the light of newly discovered purity and Americanism of its leaders, even Communists. The Democratic members of the union will not want their money to go to the Republican campaign fund; the Republican members will not want it to go to the Democratic Party; and the Socialists and Communists will not want it to go to either of the major parties. Can they do anything about it? They cannot. And if they make any protest about it, out they go. Or can they repudiate their national officers at the next election of officers? Again the answer is, they cannot. Nothing so old-fashioned and democratic as the election of national officers by the members is permitted. Finally, are the members of that union free and undominated labor? I leave the answer to you.

Here is a strange thing. The ideal of undominated labor is the ideal of independent unionism, of unions run by members for the benefit of the members and wholly controlled by the members. Yet the wholly undemocratic, even autocratic, union I have just been talking about is viewed with warm approval by those great idealists who have to do with the labor policies of our National Government, while the free, democratic, independent unions are looked upon with disfavor and suspicion and are treated as an unwelcome intruder. But let me add this: The more our independent unions are abused the stronger and more enduring they become. The fact that they have had to compete with Government-favored unions has made them depend upon service and responsiveness to their membership for their strength. The result is, unhappily for those who would destroy us, that independent unions are stronger today than ever before.

The National Labor Relations Board has been a relentless offender in this respect (as is evidenced by the investigation of the Smith committee in the House of Representatives) and independent workers will not forget it. The Labor Board has two standards of dealing with unions—one for nationally affiliated unions and one for independent unions. Let me give you an example. The Labor Board has used its power to destroy independent unions and prevent them from representing their members because the union was guilty of using the bulletin board of the employer for its notices. Ridiculous? Of course it's ridiculous. The Labor Board would not think of permitting on an election ballot the name of such a contaminated, independent union. Yet recently the Board helped, without a quail, in the certification of a nationally affiliated union in the moving-picture industry whose most active representative was accused of having taken a loan of \$100,000 from an executive of the industry which employed his members at the time he was said to be breaking a strike for that industry. But an independent union, on the contrary, may not even use the company bulletin board without a "crack down" from the Labor Board.

In the majority of instances the members of the big international unions have about as much to do with the management and control of their union, as union men, as a buck private in the Russian Army has to do with the policy of the Kremlin.

Those of you in my audience who are not union members may say, "Well, the law will protect union members from injurious and unjust practices by union officers. Why don't they turn to the law?" I ask you, "What law?" There is no law to protect union members from the cruelest injustices by their officers, practices which deprive the members of independence, self-respect, and a livelihood itself. They are defenseless so far as the law is concerned.

The conditions which created an atmosphere or attitude among those who govern us favorable to the kind of unions which dominate their members and use them as pawns and unfavorable to undominated labor and independent unions was brought about by the political power of the leaders who profited from it.

Conditions which will encourage or enforce free, democratic procedure and will relieve union members from corrupt, autocratic domination by self-appointed, self-perpetuating officers as well as by antisocial employers, will be brought about by the political power of those who are offended by injustice and have suffered from it.

The right of men to "unions of their own choice" is a hollow mockery to many of them until they are effectively guaranteed the further right to the democratic management of those unions for their own benefit and the benefit of their fellow employee, to the end that all American workmen may approach the independent-union ideal of truly "undominated labor."

Independent unions believe in and shall use all the force at their command to preserve the right to organize and bargain collectively with their employer, as well as the preservation of the right to strike or the right to work. They believe the 8,000,000

of the working men and women in the country that are members of the two quarreling international unions should have the right to belong to those unions if that be their free choice; and that the 35,000,000 independent working men and women not members of the international unions, by the same token, should be permitted to exercise the same rights and remain independent, if that is their choice, without coercion and threats by union leaders or domination by biased governmental agencies. The aim of the independent union is to bring about industrial peace, for the real and final sufferer in industrial warfare is not the leader who pockets the dues derived from the workman, but the individual worker and his family. The independent unions are constantly striving for a better, fuller understanding between capital and labor, for to them it seems inconceivable that these two great forces composed of men and in the age of an enlightened and advanced civilization would permit intervening forces, whether of their own inception or by the organization of outside influence, to create jealousies, hatreds, and suspicion for the driving of a wedge between them, to the destruction of harmony and cooperation.

I desire to express to the Columbia Broadcasting System the sincere appreciation of the National Council of Independent Unions for the time which they have extended to us to bring you this message, and this appreciation comes too, I know, from all members of independent unions throughout the Nation and all other who believe in "undominated labor."

## The Bulwark of the Republic

### EXTENSION OF REMARKS

OF

HON. WILLIAM W. BLACKNEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. BLACKNEY. Mr. Speaker, with the approach of Washington's Birthday, February 22, it is natural that we should devote some time to the consideration of the influence which America's greatest hero, soldier, and statesman has had upon our great Republic. To me, the most outstanding work that Washington accomplished was his invaluable aid in the formation of the American Constitution, which, although 152 years old, is still the oldest active political document existing in the world today.

Therefore, we are confronted with this arresting paradox: The United States, the youngest of the great nations, is at the same time the oldest government.

Since 1787, when our Constitution was adopted, civilization has been a world of tumbling thrones, prostrated dynasties, overturned constitutions—of new empires, new republics, new and constantly varying conceptions of states—yet in this epoch of upheaval during the last 152 years, one political entity, and one alone, has remained intact; that is the Constitution of the United States of America.

Our Constitution is not self-perpetuating. If it is to survive it will be because it has public support—active support, not passive. The Constitution of the United States is the final refuge of every right that is enjoyed by any American citizen. So long as it is observed, these rights will be secure. Whenever it falls into disrespect or disrepute the end of orderly organized government as we have known it for 152 years will be at hand.

Calvin Coolidge said:

The Constitution represents a government of law. There is only one other form of authority and that is a government of force. Americans must make their choice between these two. One signifies justice and liberty; the other tyranny and oppression. To live under the American Constitution is the greatest political privilege that was ever accorded to the human race.

When the Constitution was formulated in 1787, one world war had recently ended and civilization was entering the eclipse of a new and great one. Then, as now, half the world was prostrated by the wounds of fratricidal strife. As Washington said, "The whole world was in an uproar" and he added that the task "was to steer safely between Scylla and Charybdis."

The problem, then as now, was not only to make "the world safe for democracy" but to make democracy, for which there is seemingly no alternative, safe for the world.

Impoverished in resources, exhausted by the loss of the flower of their youth, demoralized by the reaction from feverish strife, the forces of disintegration had set in in the United States between 1783 and 1787. Law and order had almost perished and the provisional government had been reduced to impotence.

It was then that Washington's greatest service was rendered to his country. The Thirteen Original Colonies were then governed by the Articles of Confederation, weakly drawn and unsatisfactory in their nature. Jealousies had arisen between the 13 States so that instead of having one United States we had 13 independent States, each striving against the other.

Washington for years had advocated a strong central government. His experiences in the revolutionary world had deepened that conviction. The first final step in the formation of the American Constitution was made in 1785 when the States of Maryland and Virginia endeavored to arbitrate their differences growing out of commerce on the Potomac River.

The meeting of the delegates was called for Alexandria, but later they met at Mount Vernon, and the agreement reached between those two States was called the Mount Vernon Compact. The following year, 1786, a call was issued by Virginia to all of the States to meet at Annapolis for the purpose of regulating commerce and other questions of mutual interest. This finally resulted in the call for the great Convention to be held in Philadelphia in 1787, not for the purpose of drawing up a new Constitution, but for the purpose of revising and perfecting the old Articles of Confederation then existing.

The history of the world presents very few historic events more important than the Constitutional Convention. Our American credit was gone, our business was paralyzed, lawlessness was triumphant. Not only between class and class, but between State and State, there were acute controversies and an alarming disunity of spirit. To weld 13 jealous and discordant States, demoralized by an exhausting war, into a unified and efficient nation against their wills, was a seemingly impossible task.

The Convention met on May 25, 1787, in the Old State House in Philadelphia, then a city of more than 30,000 people. The Convention met in a hall about 50 feet square, whose walls were already eloquent with sacred memories. There the Second Continental Congress had met, and there the Declaration of Independence had been signed. The delegates could from time to time hear the solemn reverberations of the old Liberty Bell, which from the belfry had "proclaimed liberty throughout all the land unto all the inhabitants thereof."

Seventy-two leading men in the Colonies had been selected as delegates to the Philadelphia Convention, as each State was permitted to send as many delegates as it pleased, the States, however, to vote as units. Each of the Thirteen Colonies selected delegates with the single exception of Rhode Island, which at that time was in the remorseless grip of demagogues. Rhode Island showed no desire to enter into a union, neither did she show any desire to cooperate with the other States, and became so disloyal that Washington called her action scandalous.

While 72 delegates had been selected, the highest number that attended at any one time was 55, and at the time of the adoption of the Constitution only 39 remained to finish their great constructive work, and to sign the Constitution which was to immortalize their names.

These delegates constituted a cosmopolitan group; there were merchants, financiers, farmers, doctors, educators, soldiers, and lawyers. Of these 55 delegates who participated in the Convention, 39 had been members of the First or Second Continental Congresses; 31 of them were lawyers; 8 of them had already helped to frame the constitutions of their respective States, and 24 of them were college graduates. This last statement is a remarkable tribute to the intellectual caliber of the Convention. To say that 24 men out of 55 were college graduates at a period 152 years ago is rather a remarkable statement and shows the great care which the

various States exercised at that time in the choosing of delegates to represent them in the National Convention.

It is significant to note that of these college graduates, nine were graduates of Princeton; three of Yale; two of Harvard; two of the College of Philadelphia, now University of Pennsylvania; four of William and Mary; and one each from University of Oxford, Columbia, Glasgow, and Edinburgh.

Of these 55 delegates, 2 of them towered above the rest: Benjamin Franklin, enjoying world-wide fame, was possibly the most versatile genius of the eighteenth century and universally known and honored as a scientist, philosopher, and diplomat; and George Washington, whose fame even at that day had won the admiration of the world as that of a true and unselfish leader of men.

It was Washington's great patriotism and love of country and strength of mind and purpose that made the Convention possible and the adoption of the Constitution assured.

Washington did not have the passionate and fervored eloquence of a Patrick Henry, nor the matchless logic of a John Marshall, nor the philosophical brilliancy of a Benjamin Franklin, nor the scintillating mental acumen of Alexander Hamilton, but he towered over and above these men as the polar star of American freedom and patriotism.

Washington was the master dreamer of the age. Although a cold, practical businessman in other ways, he dreamed a dream of a united country, of happy homes, of churches where one could worship God according to the dictates of his own conscience, of schools where the youth of America could attain their education—and this dream came true.

So at the beginning of the Philadelphia Convention the first action was the unanimous choice of Washington as President, and he presided over the 4 months' deliberation with unusual and commanding ability.

The delegates to the Convention were comparatively young men, the average age being a little above 40. Franklin, the oldest member, was 81 years of age; Washington was 55; James Madison was 36; Edmund Randolph was 34; Alexander Hamilton was 30; Charles C. Pinckney was 29; and Dayton, of New Jersey, the youngest member of the Convention, was only 27.

This Convention assembled behind closed doors, and the public was not admitted to the various sessions. There was a gentlemen's agreement among the delegates that none of the proceedings should be made public, and this gentlemen's agreement extended during the entire 4 months of the Constitutional Convention.

Many highly controversial questions came before the Convention which required the tact and ability of the chairman at all times to hold the Convention within bounds. Many compromises had to be made; between the North and the South; between the small States and the large. In order to insure the support of the small States it became necessary to agree that every State, regardless of size and population, should have equal representation in the Senate; namely, two to each State. Then, to conciliate the larger and more populous States, the membership in the House of Representatives was made to depend on population so that these large and more populous States had greater representation in the House than did the smaller and less populous States.

The slave issue was a cause of bitter discussion. The Southern States wanted the slaves to be included as population in determining the number of Representatives each State should have in the lower House. The Northern States bitterly opposed this and so as a compromise, we have the famous three-fifths clause which allows three-fifths of the slaves to be counted as population.

On September 8, 1787, the draft of the committee on detail was approved and a new committee was appointed to revise the style and arrange the articles that had been agreed to by the Convention. This committee was one of exceptional strength. Its members were Dr. William Samuel Johnson, a graduate of Oxford; Alexander Hamilton, brilliant New York statesman; Gouverneur Morris, a profound mind with an unusual gift for lucid expression; James

Madison, a true scholar in politics; and Rufus King, a great orator of his day.

September 13, the printed copies of the report of the committee on style were ready, and 3 more days were spent by the Convention in carefully comparing each article and section of this final draft.

On September 15 the work of drafting the Constitution was regarded as ended, and it was adopted and ordered to be engrossed for signing.

The Convention had been in session for 81 continuous days; during that time probably more than 400 hours were consumed in debate and if these debates had been fully reported they would probably have filled at least 50 volumes.

The delegates of the Convention, however, worked so efficiently that the net result of their work, the Constitution of the United States, consisted of only about 4,000 words, 89 sentences, and about 140 distinct provisions.

Lord Bryce, a distinguished English statesman and author of the *American Commonwealth*, in paying tribute to our constitutional forefathers for their terseness of English and the brevity of their statements, said:

The Constitution of the United States, including the amendments, may be read aloud in 23 minutes. It is about half as long as St. Paul's Epistle to the Corinthians, and one-fourth as long as the Irish Land Act of 1881. History knows few instruments which in so few words lay down equally momentous rules on a vast range of matters of the highest importance and complexity.

Even including the 21 amendments, the Constitution after 152 years of development barely exceeds 7,000 words.

What remarkable self-restraint! Single opinions of the Supreme Court on a single phase of the Constitution can be cited which are as long as the entire Constitution.

On September 17 the Convention met for the last time. The document was engrossed and laid before the members for signature. Of the 55 members who had attended, only 42 remained, 3 of whom refused to sign the Constitution. They were Edmund Randolph, George Mason, and Elbridge Gerry.

While the members had not been unconscious of the magnitude of their labors, they were quite insensible to the magnitude of their achievement. The historian Bancroft says they were awe-struck at the result of their labors.

Before the Convention adjourned they resolved:

That the preceding Constitution be laid before the United States in Congress assembled and that it is the opinion of this Convention that it should be submitted to a Convention of delegates, chosen in each State by the people thereof, under the recommendation of its legislators, for ratification; and that each Convention assenting to and ratifying the same should give notice thereof to the United States in Congress assembled.

A sufficient number of States having ratified the Constitution, the Continental Congress reported a resolution for putting the new Government into operation and on March 3, 1789, the death of the old Confederation of States was announced and on April 6, 1789, George Washington of Virginia was declared President by Congress, and on April 30, he was duly inaugurated.

While the Constitution apparently only deals with the practical and essential details of government, yet underlying these simple but wonderfully phrased delegations of power is a broad and accurate political philosophy, which goes far to state the "law and the prophets" of free government.

There are six basic principles of the Constitution to which I wish to call your attention briefly:

First. The first is representative government.

Nothing is more striking in the debates of the convention than the distrust of its members, with few exceptions, of what they call democracy. By this term they meant the power of the people to legislate directly and without the intervention of chosen representatives.

They believed that the utmost concession that could be safely made to democracy was the power to select suitable men to legislate for the common good, and nothing is more striking in the Constitution than the care with which they sought to remove the powers of legislation from the direct action of the people.

Our Government is not a pure democracy, where the people assemble directly to transact the business of the government but is a representative Government because the people act through their agents in transacting governmental business.

Second. The second and most novel principle of the Constitution is its dual form of government.

This constituted a unique contribution to the science of politics. This was early recognized by de Tocqueville, one of the most astute students of the Constitution, who said that it was based upon a wholly novel theory, which may be considered a great discovery in modern political science.

Previous to the adoption of the Constitution, it had not been thought possible to divide sovereignty, or to have two different sovereignties exist at the same time in the same Nation. However, these two sovereignties do exist, the Nation and the State. A citizen is at the same time a citizen of the United States owing allegiance thereto and also a citizen of the State, owing allegiance to that sovereignty.

The Federal Government has jurisdiction over the general affairs of government while the State has jurisdiction over matters particularly pertaining to the State administration.

Sixty-five powers are given to the Federal Government and seventy-nine are withheld, of which thirteen are denied both to that Government and to the constituent States. Forty-three of the sixty-five powers given to the Federal Government are expressly denied to the States; while, as to eighteen powers, the grant is concurrent.

At the time of the adoption of the Constitution, the States were very jealous of any encroachment upon their power and the doctrine of States' rights was developed to the maximum degree. But the tendencies in more recent years are toward centralization in the National Government, to the detriment of the State. As a result several scores of governmental bureaus assume powers formerly exercised by the States. There should be a happy medium between these two extremes if we are to have a government of the people, by the people, and for the people.

Third. The third principle was the guarantee of individual liberty through constitutional limitations.

This certainly was a great American contribution to the science of government. In all previous government building, the State was regarded as a sovereign, which could grant to individuals or classes certain privileges or exemptions, which were called liberties. Thus the liberties which the barons wrung from King John at Runnymede were virtually exemptions from the power of government.

Our constitutional forefathers did not believe in the sovereignty of the State in the sense of absolute power, nor did they believe in the sovereignty of the people, in that sense. They believed that each individual, as a responsible moral being, had certain "inalienable rights" which neither the State nor the people could rightfully take from him.

Under the guarantee of individual liberty a man, by virtue of his inherent and God-given dignity as a human soul, has certain specific rights, such as freedom of the press, liberty of speech, property rights, and religious freedom, which no one can rightfully take from him, without amending the Constitution.

Our forefathers believed in individualism. They were animated by a sleepless jealousy of governmental power. They believed that the greater such power, the greater the danger of its abuse. This theory of government gave a new dignity to manhood. It said to the State: "There is a limit to your power. Thus far and no farther, and here shall thy proud waves be stayed."

Fourth. Closely allied to this doctrine of limited governmental powers, even by a majority, is the fourth principle of an independent judiciary and the creation of the Supreme Court.

Our independent judiciary has been called the balance wheel of the Constitution and, to function, it must be beyond the possibility of attack and destruction.

This country was founded upon the rock of personal and property rights and the sanctity of contracts. The several

States are forbidden to impair the obligation of contracts, nor can Congress take away life, liberty, or property "without due process of law." The guaranty is as old as Magna Carta; for "due process of law" is but a paraphrase of "the law of the land," without which no freeman could be deprived of his liberties or possessions.

In order to protect these rights our Constitution created an independent judiciary. It throws about the individual the solemn circle of the law. It made the judiciary the final conscience of the Nation.

One of the greatest clauses of our Constitution is that which created the Supreme Court of the United States, now consisting of one Chief Justice and eight Associate Justices. This Court during the formative period of our country's history was under the leadership of Chief Justice John Marshall, fourth Chief Justice of the United States, from 1801 to 1835. It clarified and interpreted the Constitution which our forefathers had built. Our Supreme Court is the safety valve of the American Government.

Under our theory of government Congress is the legislative department of government, the President is the Executive, and the Supreme Court is the highest judicial body, not only in the United States but throughout the world. It has been wisely called the highest intellectual forum in the world. May our Supreme Court continue to maintain the high standard which it established during the formative and growing periods of this Nation.

Fifth. The fifth basic principle of the Constitution seeks to prevent the concentration of power in any one man or body of men by a complex system of checks and balances.

It deliberately delays and restrains both the Congress and the Executive to give ample opportunity for deliberation. Thus our forefathers created a bicameral Congress, a powerful Executive, each of which had power to check the other and both of which could in turn, be restrained by the system of short and fixed tenure of office.

The question of the wisdom or the folly of the framers of our Constitution in creating checks and balances could safely be left to any experienced Member of Congress, and such would probably say, with practical unanimity that it were much better that a few good laws should fail of passage by reason of the cumbrous machinery of legislation, rather than the country should be overwhelmed by a destructive flood of unwise legislation, which a single-chambered Congress, subject to no check from the Executive veto, would make possible.

The question of the checks and balances turns largely upon the question whether the real need of the public is for more or less laws. If the interests of the people require efficient power in grinding out new laws, then the framers of the Constitution made a great error; but if the welfare of the people is best subserved by the fewest possible laws and it be thought that a nation is best governed when it is least governed, then the system has been, and still is, admirably efficient in requiring that no law should be passed until after a period of careful deliberation, and then only when two different departments of the Government concur in its wisdom.

Sixth. The sixth basic principle of the Constitution is the joint power of the President and Senate in the determination of the foreign policies of the United States.

This peculiar feature of the American Constitution has been the subject of world-wide comment in the last decade. While such comment was generally hostile, it is interesting to note that the present tendency of many European governments is to imitate the American plan of imposing such joint responsibility upon the executive and legislative departments of the Government.

It is especially important in these days of unrest and of depression to become students of our great fundamental law. It has been our guiding genius for 152 years, from the time when our country consisted of 3,000,000 people along the Atlantic seaboard to today, with its 130,000,000 people.

We are an emotional people, and deep and quick in our sympathies. All too frequently in recent years we have been beguiled in our domestic affairs by appeals to our hopes and

to our fears. In our international outlook, we have been in constant danger that frantic appeals to our prejudices, and equally frantic appeals to our sympathies, would breed a tension or intolerance or an unreasoning devotion to causes abroad that would bring into our country all of the hates and the cleavages of sympathies which underlie the appalling situation in Europe.

In a topsy-turvy world in which many sins are being committed in the name of democracy, we must distinguish between real democracy and the sham and pretense which seeks to masquerade under democracy's cloak.

We must remember that no government can be automatic; that it depends upon the intelligence, the integrity, and the loyalty of her citizens.

The public schools and colleges of our country should present as one of their major subjects a close study of the underlying thought and principles of the American Constitution, because if the youth in our schools of today receive a proper conception of the importance and dignity of the American Constitution, then the future of our beloved Nation is assured.

### Management's New Responsibilities in Our Changing Social Economy

#### EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ADDRESS BY C. M. CHESTER, CHAIRMAN, GENERAL FOODS CORPORATION

Mr. KNUTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Mr. C. M. Chester, chairman of the General Foods Corporation, before the United States Potters Association, on January 23, 1940:

Allow me—at the outset—to tell you how deeply I appreciate the honor which you have accorded me by this invitation to speak here tonight.

All of us have a little of the Christopher Columbus spirit in us. We like to make happy discoveries of our own—and I have just recently made one for myself. You see, over a period of years, I thought I knew most of the things to be proud of, as I surveyed the American industrial landscape. But not long ago, to my chagrin and delight, I found that I had overlooked one of the most admirable examples of organizational honor and integrity and co-operation in the whole land.

My only alibi is that perhaps I have been too preoccupied—as management generally is today—with the complications and problems of my own business duties; and I regret that I have known all too little about the fine traditions of the American pottery industry. For it is a stimulating story, gentlemen—an inspiring example of teamwork—and I think a lot of other businessmen and industries need to learn more about you and your good work.

At General Foods, we are proud of our pioneering background; and one of our divisions, in fact, is operating on the same historic site of its founding before the Revolutionary War of 1776 \* \* \* and you pottery makers can look back a long time, too. James Bennett started the first pottery in 1834. The pottery industry is an American tradition of more than 100 years' standing, and yours is one of the oldest trade associations in the country.

But what impresses me is this: Hallowed traditions have not been allowed to become cobwebs shadowing your industrial thinking. Steadily, you marched forward behind the banner of progress. You had the inheritance of pioneers to inspire you to pioneer yourselves.

For example, 40 years ago the United States Potters' Association was encouraging friendly and mutually fair relations with its employees and joining with them in collective bargaining in regard to wages and hours. You long ago set a fine example in cooperation and mutuality of interest between management and labor.

And it is to be regretted that our pottery industry today, despite its internal harmony, should be suffering because of external influences. You have taken a lot of beating from the competition from the cheap-labor countries. And how can your workers expect to compete, when we realize that your industry pays an average of 72 cents an hour, compared with the 4½ cents an hour paid on other shores?

What is the answer? The only suggestions I have are these: Make the truth widely known. Bring your problem fully before

the American public and Government officials. Public education is still a crying need but it is making headway.

However, you realize no doubt that your troubles are not unique. Every industry—and every individual manufacturer—faces difficult problems today. And we have learned from hard experience that industry cannot be coddled and wet-nursed back to robust health—it has to figure out its own salvation.

After all, this is a man-made empire—hewn out of the wilderness, with the Almighty's blessing. At the moment, we're still a free people. Our destiny still is in our own hands.

But along with the realization of self-determination and self-betterment, there is, too, the imperative warning at this critical hour that those of us in industry, business, agriculture, labor, and government who have been elected to posts of responsibility must today dignify the mandate from the people by manfully and intelligently and cooperatively shouldering these responsibilities.

It is the wisdom of history that challenges those who seek to shun the mature duties of mature men and women, and, above all, calls to book those among us who are slackers in trusteeship.

These latter are the guiltiest—the willful slackers in trusteeship. Too easily they abdicate, when troubles and complications challenge their traditional rights to a place in the sun. They are too ready to resign themselves to cynicism—too prone to forget that ours still is a new, free, growing civilization, rich in resources.

I'm afraid some of your friends and mine—some of these slackers in trusteeship—have succumbed temporarily to helplessness, something after the fashion of a famous doctor recently.

This doctor, I am told, woke up the other night. He complained plaintively to his wife of a headache. He groaned and he moaned. Finally his wife turned on the light at the night table.

"Robert," she said, "what is the matter?" And the doctor moaned just like the thousands of patients he had treated so successfully, and he said, "My head aches. My head is splitting."

By now his wife was fully awake. She said impatiently, "Robert, why lie there moaning? You know what to do—you're a doctor. Why don't you get out of bed and do something? You can cure that headache."

But her husband was stubborn. He groaned, "How can I?" And she cried, "How can you—what?" And the doctor said, "How can I do anything now? My visiting hours are from 2 to 6 in the afternoon."

A lot of people, I think, are also groaning about their headaches, when they could do something about it. They could, that is, if they manfully and intelligently shouldered their responsibilities, based on our great inheritance of trustworthy economic and social pathology.

We have possibly entered the most fateful year in our history. A fearless approach to the difficulties we face is the duty of all who can even remotely contribute to their solution.

What, briefly, is the national situation today?

First, beyond our borders 20 nations have abandoned democratic government. Six of the eight most powerful are at war. There is unrest everywhere.

Cruelties of daily occurrence that find their counterpart in the Dark Ages.

The ruthless use of armed might against weaker nations.

Dictators, loss of religion, loss of liberty, loss of hope.

And in our own country, 10 years of increasing debt, with no end in sight. In 1938, Government expenses absorbed the equivalent of all the income produced in every State west of the Mississippi River.

Vast reservoirs of capital lying dormant in our banks, afraid to venture to the aid of productive enterprise.

Millions still unemployed; annually 600,000 men and women seeking and many failing to get employment; and, in consequence, challenging the system which permits these things to exist.

Class consciousness greatly accelerated; the "have nots" against the "haves," the growth of the "Government owes me a living" school.

And, most dangerous of all, the insistent determination of the disillusioned or the vicious to make our system of free enterprise so unworkable that frustrated people will have no more of it and seek an answer to their justified demands in some of the alien philosophies with which we are being infiltrated.

These facts are known to you. Their cumulative recital is only for the purpose of throwing the spotlight on them and emphasizing their seriousness.

By no action of ours, I fear, can we at the moment greatly affect the course of events outside our borders, but we can help to rebuild America on a 1940 pattern, avoiding the pitfalls of the past, and by so doing we can make this country the model that may again appeal to the disillusioned people of other lands, who, after the war, will seek some safer road to happiness.

#### AMERICA'S LIABILITIES

Now, I am no prophet of doom. But let's look clear-eyed at the situation.

First, for more than 10 years America has experienced subnormal business activity and abnormal unemployment. It is the longest period in our history when business did not rise to new high peaks of prosperity. We have plunged deeply into debt. Taxes are higher and national income lower.

Right here in Washington your search will rival that of Diogenes if you try to find the man who knows when our Government will stop going further into debt.

Harmony between government, business, and labor is necessary for the security of America's priceless system of business enterprise.

But, unfortunately, such harmony has only reached the gesture stage.

How, in all conscience, can we solve unemployment except through increased production and lower costs, so that purchasing power can be increased? Yet when there have been moments that business had the ball and started to run with it an unexpected tackle was too often made, and employment and national income failed to gain.

What is the real objective of those who make these tackles? Is business being punished for past decades, or is there a blue print somewhere for some new kind of system? If there is, we business-men should see it. If it is something better and will bring more happiness to more people, we are for it. But if it is only a revamped form of the fallacious doctrines so often disastrously tried out in certain other countries at various times in history, then we must fight against it with every resource we have.

A decided majority of business people accept the principles of collective bargaining and sound labor practices; of old-age unemployment insurance to an extent that our economy can assume it without danger; of reasonable regulation of our security markets; of aid to depressed farm regions; of help for people out of work who cannot find work.

Nevertheless when such changes are effected with what many believe to be a purpose to place private business enterprise under complete political control; when business is hampered instead of encouraged; when 10,000 Government agencies issue regulations having the effect of law, and not one human being can know or understand them all—then loss of confidence is inevitable. The millions of people who do have money to invest are fearful. They do not want to risk investment in a business when they are uncertain as to whether it may be taken over by government. They do not want to venture their savings in enterprise when it is faced with unnecessary restrictions and dangers of destruction by excessive taxes.

There is no need to tell this audience the details of some obvious remedies.

A detailed blueprint of recovery has been worked out by a group of men who seek recovery chiefly because their jobs and the jobs of their employees depend on recovery. I refer to the National Association of Manufacturers. At the Congress of American Industry last month a program and platform were adopted.

In addition to the platform, the association in the last year or two, has drawn up in detail many changes needed in laws affecting business to make such legislation and its administration workable and fair, resulting in greater cooperation and effectiveness.

The association has done a job of this type on all phases of important business legislation. But more than that, it has set up principles for the guidance of its own membership.

For instance, it has written down principles for the best possible relations of business with its investors, employees, suppliers, dealers, and consumers. It is promoting health and safety for workers, scientific and market research, and all other known sound practices within industry. Furthermore, it has a program under way to get this news to the general public.

Other trade associations are working along similar lines. The net effect should be an upward surge of progress within industry. And with or without public education programs, such progress cannot forever remain a secret. But there is not plenty of time, and proper publicity should be used—and more of it—to interpret to the public what is going on.

Furthermore, business in this day of the expert asks that the local, State, and Federal Governments be operated on the same expert efficiency lines.

#### DUTIES OF MANAGEMENT

In light of all this the question then follows: What can be done about it? It is not for me to suggest what government and labor can do about it, but I am sure one of the greatest contributions must come from the managers of industry. That is the field I know best, and if you will bear with me, I would like to discuss the question briefly from that standpoint.

#### LABOR RELATIONS

The business manager must make a study of the whole field of employer-employee relations. More, he must keep in touch with the situation as it changes from day to day. Once, most of the managers worked in the ranks; they knew how their fellow workers thought and felt. But too often today's management becomes insulated from former working mates because of a cordon of assistants and secretaries, and through distance in cases where plants and offices are located in many States.

I consider it one of the prime duties of management to keep in close harmony with the employees. The executive manager should frequently make the effort to go in person through his plants and offices and use his eyes and ears—yes, and his mind and heart.

The manager obviously cannot do the whole job through personal contacts. He needs adequate assistance—soundly trained industrial-relations specialists.

Every little grievance—real or imagined—should be observed as it sends up its first sprout, and should be attended to before it grows up into trouble. Every effort needs to be made to see that employees are fairly paid and treated. After all, managers and wage earners have every reason to get along together—they are business partners, or should be.

Also, the industrial manager today, in his jack-of-all-trades role, must become a public-relations expert.

Above all, whether a company sells directly or very indirectly to the public, the good will of the public—the consumers—is vital.

The consumer is the person with both the family budget and the ballot. If he is sold on the integrity of manufacturing, he trades more freely, and, furthermore, he turns a deaf ear to unjust attacks.

Incidentally, one of the shortcomings of business management is its frequent lack of political sense. We know how to make products well, but we often fail to grasp public attitudes. On the other hand, it is unfortunate that so many highly popular politicians have so little understanding of economics and business.

In training our future business leaders we should make sure that they master public trends of thought and feeling.

And, we might add, in developing politicians for America every effort should be made to give them a thorough schooling in economics and practical business problems. In the meantime people on both sides of the fence need to try hard to overcome their shortcomings in these respects, if they want to avoid further serious mistakes. Conflict is too expensive. It hurts most the national economy. It is senseless and unnecessary.

Industry within itself can do some of the job of restoring employment and aiding recovery. The key to more jobs is found in public purchasing power. If the public can buy more things with its dollar, there will be more buying—hence more jobs. To bring this about there must be constant increases in industrial efficiency, making for lower prices. We, of course, also need the public back of us to demand utmost efficiency in the handling of public funds, so as to moderate the tax load on business. But within the field of business itself the congress of industry has mapped out practical suggestions for increased efficiency.

We must have new industries—new and better products, new jobs and services. We must become explorers again—treasure hunters in the new frontiers right here in our midst.

I, for one, am surprised to realize that only one or two American manufacturers out of every hundred have a research laboratory. And few indeed seem to be using the new techniques of market research. True, industry in this country has done a better job than industry in other countries. But we can and must do more.

#### INVESTOR RELATIONS

What about money—the stimulation of investment?

Probably a fair job has been done in the handling of stockholders by most leading companies. The millions of American investors undoubtedly will have a better feeling when some of the obstacles to sound business recovery are cleared away. Many stockholders have little understanding of the enterprises in which they have invested. The need of more stockholder education and cultivation is imperative.

#### COMMUNITY RELATIONS

By now I hope that I am making what I believe is a significant point in our quest for better times. To my mind, recovery is a patient step-by-step job of self-betterment—the taking of infinite pains, the steady search for new efficiencies.

Thus, for example, I believe more and better work is demanded of industrialists in the community where any plant is located. The main thing here, of course, is to have enthusiastic workers. But the handling of visitors, telephones, and mail are more important than we used to think.

The appearance of the plants—inside and outside—has a decided effect on the community. The local plant manager and his assistants should be trained to become a vital part of community life. All such activities in the community, multiplied a thousand times, give the voting and consuming public its impression of American industry. Industry is more efficient in America than anywhere else, but mere efficiency is no longer enough. We must have public support and approval.

#### MANAGEMENT'S JOB

We could go on and on lining up the challenging duties of modern management. We can point out shortcomings easily enough and we also can show improvement. Still I believe that management in production, distribution, finance, and many other fields has made more progress in the past 10 years than in the preceding 20, and in the next 5 years I believe it will march ahead as much as it did in the past decade.

As a matter of fact, it is vitally necessary that it do so. If another economic hurricane hits America, the fury of a disillusioned public must not be again directed at management, if we want our system of private enterprise to pull through.

To reach this goal a responsible manager of enterprise can help, first of all, in his own sphere of influence, by getting an outstanding job done to obliterate the likelihood of ill will, so that there can be no just basis for attack.

Secondly, by making sure his motives and accomplishments are properly understood by outside contacts.

And, thirdly, by working together with other leaders in united efforts to raise the standards of business as a whole and to let the country know fully and frankly what is being done.

#### AMERICA'S ASSETS

All these are but highlight details in a huge and complicated job—the imperative job of making this isolated citadel of freedom a prosperous land again.

Survey the scene. Sample the ore in the mountain. Analyze the economic factors. And inevitably you find that the gold salted away in those Kentucky hills is but a tiny nugget compared with the untapped national riches that fairly clamor for the pick and shovel.

America may be in a puzzled, disillusioned condition today, but it is not worn out physically, mentally, or spiritually.

Americans are a mixture of many backgrounds and forces which seem somehow to cause an explosion of the atoms, resulting in a new high for ambition and restlessness. They marched from East to West until stopped by the Pacific Ocean. Are we stopped? Not yet! Today we are in the process of pushing forward to some new kind of horizons through laboratory and test tube and inventive genius. There are fires of destiny smoldering among our people—we would like to go places and do things.

Look at our assets.

America is something new in the world from the standpoint of things material. It is demonstrably the world's leader in industry, commerce, and wealth. It produces within its borders most of the things it needs. It has become a leader in science, education, literature, arts, the professions, agriculture, mining, and many other fields. We know in America most of us enjoy standards of living higher than elsewhere—higher than any earlier generation.

An American worker can buy more of almost everything with an hour's labor than can the citizens of other leading nations. Our task is to help more workers to buy more of these comforts of modern existence.

Despite the airplane and fast ocean ships, the Atlantic and Pacific Oceans are two of America's mighty assets. They will be for a long time to come. Other assets are friendly neighbors—Canada and Latin America. We are, therefore, better able to concentrate on our domestic problems, with a minimum of worry about dangers from abroad. To our geography are added other material blessings of Nature—wide variations of climate, soil, and minerals, and supplies of oil, lumber, and waterpower.

#### THE GOLDEN RULE RESTORED

Balance it up, the debits and the assets; the blunders and follies and selfishness, and the signs of new determination to heed industry, which says: "Let's get back to work—let's work together."

Can we make a go of it? Yes; we can. The opportunities and the resources in men, money, and machines are here. But will we?

Possibly it all sums up to this: We'll just have to put more of the Golden Rule into our daily lives. We have got to be less selfish, less casual, and very much more responsive to our duties as citizens, if this system we call American enterprise is to survive.

For free enterprise is in danger. It can't stand up indefinitely under the barrage of calumny, debts, taxes, and unemployment of the last decade; and if free enterprise goes, liberty as we knew it goes with it.

We are sometimes prone to forget that the right of individual liberty in America was not the gift of a king. It was won at the point of a bayonet and pitchfork; but we, for some reason, think that it has become a right in perpetuity, that it will last through the ages. Such thoughts are sweet but only an illusion.

To save our country from disaster and to keep it on the road of progress who in honor can do less than perform faithfully and well the role of good citizenship in this our free democracy?

To do so may mean sacrifices on our part, but the road of individual freedom which winds through the years from Concord up to the present day, was paved in sacrifice. It would never have been built by those too timid to speak their thoughts or man the ramparts. Their courage left us this free America, and the thought I would leave with you tonight is that we turn anew to the lesson written in the eighteenth century upon glazed ware, and find courage in self-sacrifice and self-accomplishment from those pioneers who said:

"No handicraft can with our art compare,  
For pots are made of what we potters are."

Nils Pearson

#### EXTENSION OF REMARKS

OF

HON. B. J. MONKIEWICZ

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ADDRESS BY BERNHARD KRAFFT

Mr. MONKIEWICZ. Mr. Speaker, the community in which I reside is proud of its population. It numbers among its residents a great variety of Americans and people of many extractions. Among its leading citizens, as in many other communities of my State and a great portion of these United States, are the descendants of the Swedish race. A quiet, respectable, peaceful people; lovers of good, conscientious, hard work; earnest in their endeavors and devoted to the

principles of this country, they have become a valuable asset in our American life. Their contribution to the culture and refinement of our country, as well as of the world, through their achievements in the fields of art, the sciences, music, and literature is of inestimable value.

The city of New Britain, Conn., is honored by the fact that for a great many years it had had as one of its residents Nils Pearson, a leader of these people and one of the founders and the first grand master of the Vasa Order of America. On October 8, 1939, at the dedication of a monument erected over Nils Pearson in Fairview Cemetery, an address was delivered by Bernhard Krafft, of Buffalo, N. Y., present grand master of the Vasa Order of America, which address, under leave to extend my remarks, I hereby insert in the Record:

Members of the Vasa Order of America and assembled friends, ladies and gentlemen, it is with deep reverence in our hearts that we are gathered on this solemn occasion to pay homage to the everlasting memory of Nils Pearson, the principal founder and first grand master of the Vasa Order of America. Only too well do I realize that nothing I could possibly say would add to the affectionate regard and high esteem, in which he has enshrined himself with all who had the privilege of knowing him or working with him, nor with the many thousands who today enjoy the benefits of his stalwart, constructive and, above all, sincere leadership. Yet it is only appropriate that a fitting record should be left to eternity of the virtues and achievements of a man that so nobly and unselfishly gave his very all in the service of his fellowman.

Nils Pearson was born in Sweden, the province of Blekinge, on April 24, 1850. As many other young men of his day, he felt an irresistible urge to travel in quest of greater opportunities, and this brought him to America in 1884, where he settled here in New Britain, Conn. Of his early life we know but little, except that he came here equipped with a good education and thorough training in his chosen field of engineering.

As all genuine men, so was Nils Pearson unassuming and plain. He cared not for pomp or ceremony, nor for ostentatious recognition of his life's accomplishment. Were he alive today, he would not have allowed us to single him out from among others of those early pioneers. Still his services to the Vasa Order stand out like a glittering beacon in the darkness of the night. Truly he earned the name of the "Grand Old Man" of the Vasa Order, and as such he will always live in our grateful memory.

The Vasa Order of America never had a truer exponent than Nils Pearson of its adopted motto: "Generosity, truth, and unity," and by an abundant display of all these sterling qualities he endeared himself to us all. Truly he was generous, and gave freely in his untiring effort to serve and assist his less fortunate fellowman, and what makes his star shine brighter in the blue sky of our souls is the fact that he did it unassumingly and without thought of reward.

Those that were associated with him through his long and honorable life, and therefore knew him best, proclaim him as being scrupulously honest. To them his word was his bond. The many problems of those early struggles to establish our order he faced squarely and courageously, never choosing the easiest way out, but facing each issue as it came up with determination and devotion to duty. Sham and hypocrisy were no part of his nature, neither was there ever anything artificial detected in his make-up. Nils Pearson was true to every trust confided to him; he was genuine.

It was not only new opportunities, however, that faced these early pioneers, but also serious problems. Most of them had suddenly become separated, at least temporarily, from both family and friends, and been placed in an altogether new and strange environment. In case of eventual misfortune they stood alone and had nobody to fall back on. To aid and assist his fellowman has long been recognized as a legendary virtue of the Swedish people, and this tendency soon found an outlet among the early settlers to band themselves together in fraternal groups for mutual aid and self-protection.

Nils Pearson was a firm believer in the age-old axiom that in unity there is strength. With this conviction firmly established in his mind, he soon visualized the importance of bringing these many small, independent groups together in a Nation-wide association, and this theory became an established fact in 1896, when the Vasa Order of America was organized.

At the outset, the purpose of the order was mainly directed toward aiding and assisting the Swedish immigrant in case of sickness and distress, and to safeguard for him an honorable funeral. In later years, however, as the Swedish immigration has more and more decreased, a new field of service has been entered upon, which is directed toward the younger element in an attempt to have the characteristics and cultural inheritance of the Swedish people kept alive and perpetuated to generations to follow.

Today we find locals of the order working for the above-stated purposes in every town or hamlet in both the United States and Canada, where people of Swedish birth or extraction toil and build. Thus it can truly be said, that the little seed which Nils Pearson planted 43 years ago, has grown from a small sapling to

a large and strong tree, that today spreads its protecting branches all over the American Continent.

After a long and meritorious life, and having reached the ripe old age of nearly 88 years, Nils Pearson's journey came to an end in Caanan, Conn., where he died on February 9, 1938. The grand lodge of the Vasa Order of America, holding its triannual convention in Philadelphia, Pa., concurrent with the tercentenary celebration of the first Swedish settlement on the American continent, decided by unanimous vote to erect a fitting monument to its principal founder and first grand master, and the result of that decision stands now before you, ready to be unveiled.

By that mandate we are here today to consecrate the grave and for all time enshrine the memory of Nils Pearson. He is no longer a trusted member of our council, nor is he still toiling with our problems. He has completed his journey through life, and now entered "that unknown country, from whose bourne no traveler returns." But, even if he has left our midst, his name will leave with us an inspiration and a benediction, giving us strength and courage to carry on where he left off. He lived in the belief, that even if we today are forced to taste occasional sorrow, by concerted effort it will be a happier tomorrow. Yes; that is the kind of meditation that gives comfort to the human soul and brings out what is fine and noble within us.

My friends, a great life like that of Nils Pearson never dies, because great deeds are imperishable. He who loves his fellow man, who accomplishes something for human happiness and human good, who lives not to himself alone, but freely and fully for all mankind, lives on in the hearts and minds of their fellow man—he knows not death. And so will the memory of Nils Pearson live as an inspiration for us to cherish and cultivate the structure that came out of his foresight and genius—the Vasa Order of America.

### What Some Southern Editors Think of the President's "Squeeze" Plan

#### EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. HOFFMAN. Mr. Speaker, the President is ever giving advice, ever suggesting new experiments. Not so long ago he said, "The South should get out of hock to the North."

Presumably he meant that the South should build its own factories, furnish the money for development of its own industries.

To the President's statement the Charleston (S. C.) News and Courier (Democratic) in part, had this to say:

The South can build factories. . . . Why does it not? The people are afraid of his government. They are afraid of him . . . afraid of his laws . . . in terror of his new, his strange, his multifarious forms of taxation . . . of the competition of his government with concerns in which they might invest. They see Government building houses and renting them. Why should they put money into houses and lots? They see Government developing electric power. They steer away from purchase of bonds and shares in private corporations selling electric current.

They are afraid to take a mortgage on a farm for they are not sure how long Government will permit it to be tilled. For the same reason they hesitate to buy lands. They cannot lend money at 6 percent, for Government, as a lender, underbids them. They behold Government borrowing billions and practically compelling many of the banks to lend it. . . . They interpret him as an advocate of currency inflation, and that means debt repudiation.

Before their eyes is the evidence every day that if they buy shares in any industry, they who have sweated, sacrificed, and saved . . . Government may destroy its values. Yes, Mr. President, thousands of our people have thousands of dollars lying idle in banks. There was never before such a plethora of the stuff. Our people, those who have money, are not only without faith in Government, but are rapidly coming to believe that Government is their enemy, and that they prefer to have their properties in hock to the North than under the club your Government swings over them.

The above does not come from a partisan Republican, nor from a so-called Northern Conservative Democrat; it comes from the South, and if the South can shake off its blind adherence to a party label, the New Deal reign of business oppression will be ended and there will be no third term.

## Address of the Postmaster General

## EXTENSION OF REMARKS

OF

HON. MILLARD F. CALDWELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ADDRESS BY HON. JAMES A. FARLEY

Mr. CALDWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. James A. Farley, Postmaster General of the United States, at the dedication of the new Federal building, Pensacola, Fla., on Tuesday, January 23, 1940:

Ladies and gentlemen, I am happy to join with Senator CHARLES O. ANDREWS, Representative MILLARD F. CALDWELL, and other Federal, State, and local officials in dedicating this Federal building to the needs of Pensacola.

The best measure of a community's growth and progress is the history of its postal receipts, and, judged by that standard, Pensacola has every reason to feel proud of its record down through the years.

Although Florida was ceded to the United States in 1819, the first record of a United States post office here was in 1822. There are no figures available on the receipts for that year. But 5 years later, in 1827, the net receipts totaled \$1,123.44. Pensacola had hardly begun to grow.

The intervening years, however, have been marked by the steady march forward of your city, and last year the postal revenues reached the substantial sum of \$182,200.30. It was this increase in revenue which justified the erection of this excellent building, which houses not only the post office but other agencies of the Government, as well.

The gain in income is only one of the many remarkable changes which has taken place since the early day when Pensacola first became a link in Uncle Sam's far-flung postal system. The delivery of a letter was something more than a routine governmental transaction in the far-off period of the 1820's. There were no trains, no airplanes, and no motor cars to rush delivery of the mails from one end of the country to the other.

When the office was first established, there was only one mail route reaching Pensacola from the outside world, and this route involved a long and tedious journey by stagecoach and horseback for the letter carriers of that day. By 1830 there were three routes coming here, but the method of transportation was essentially the same. A letter from a sister State up north took several weeks in transit.

The high-speed service now in operation presents a picturesque contrast to those early days. In one swift flight letters are borne across the continent in one night by means of the air mail service. For the regular mail service, the Department at Washington employs every device of rapid transit which the ingenuity of man has been able to develop. Some of the methods employed include special high-speed mail trains, motor trucks, and underground tube service in the larger cities.

This advance in the methods of communication has helped to bring the people of Pensacola closer to every spot on the civilized world. The businessman, corresponding with a customer in a far-off State, is not compelled to wait weeks and months for an answer to his query. The individual, who has a friend or relative on the Pacific coast, or even in a foreign country, may write a letter with the assurance that a reply may be expected in a reasonable time.

The size of this gathering here today indicates that the citizens of Pensacola are proud of the building that has been erected here. Those present may observe its attractive appearance. It is of contemporary design with limestone and stucco walls, limestone trim, and wood, and double-hung windows. The building is three stories high and has ample accommodations for the post office, the Federal court, the United States marshal's office, and other governmental agencies. It will be adequate to meet the needs of this city and the surrounding territory for some years to come.

The construction of a Federal building at Pensacola is part of a policy and a program adopted by the administration in power at Washington to meet a pressing national need. The economic depression which overtook the United States nearly a decade ago resulted in the loss of employment for millions of worthy citizens who had no other means of subsistence but their daily toil.

In 1936, Congress moved to meet this emergency in part by enacting the Emergency Construction Program Act. The purpose of the act was to utilize the credit of the Government in providing work for the unemployed on useful and worth-while public projects. The administration proceeded in the belief that to use Government funds in this manner was not only sound public

policy but good business as well. In the past, the erection of a public building in a growing community has proved itself to be a wise investment and there is reason to believe that the buildings constructed under the present program will also justify themselves from the economic standpoint.

I am pleased to report that in the great task of economic rehabilitation and readjustment, the administration has had the constant support of the two Senators from your State, Senators PEPPER and ANDREWS, and also of the Florida members in the House of Representatives. The loyalty of the Florida delegation has been a potent factor in the success of the administration's program.

It has been charged that the money spent on public works has been wasted. That is a gross misstatement of the facts. In a program of such magnitude there may have been some miscalculation and occasional waste, but for the most part, the money spent was translated into property that today is worth all the dollars invested in it.

The Government has constructed or repaired about 200,000 miles of public highways, built more than 7,000 miles of storm and sanitary sewerage, erected 32,000 bridges, and put up a vast number of up-to-date public buildings. Large areas of grassland in the farm belt have been reforested—a form of soil conservation that should be of great help in preventing the type of dust storms which plagued the country a few years ago.

There is not time here to review all the worth-while things which the country has secured for the money invested. It is sufficient to note that the physical plant of America is in better shape today than it ever was before because the Government had the foresight to employ the Nation's idle manpower during a period of economic stagnation.

While the Roosevelt administration has been sharply criticized for its policies, a study of the various measures written into law will convince any fair-minded person that the sole purpose behind them was to protect and preserve the economic security of the great mass of American citizens. If conditions were ideal, of course, it would be better to get along without such legislation. But the fact remains that to refuse Federal aid for the farmers, the workingmen, and the needy unemployed under the kind of conditions which have prevailed, would be nothing short of a reckless gamble with the Nation's future.

Individuals may differ about the merits of the administration's agricultural program, yet every person who has explored the subject is ready to admit that some form of Federal aid is absolutely necessary.

A good example of the kind of legislation sponsored by the administration is the Social Security Act—the most humane piece of legislation ever written into the statutes of the United States. Payments under the act are beginning this year. When it is in full operation the Social Security System will help to stabilize the entire economic structure, besides providing assistance for a most worthy class of citizens.

It may be objected that the United States got along fairly well for a century and a half without the Government setting up this form of social insurance for the old folks. That is correct, but conditions are radically different from what they were in former times.

There was a time when the United States was largely a nation of farmers; and when old age came to the tiller of the soil he could sit before the fire in his own homestead and let the children carry on. But with the development of an industrial civilization all that has changed.

Many millions of men now toil for wages in factories and shops; and with the speeding-up process the man of 40 is haunted by the fear that he may be thrown out of his job for a younger man. It is easy enough to say that the average man on average wages should save enough to live in idleness in old age, but you and I know it simply is not so.

And so millions of men, worried about the future, have lived in constant fear. And this fear makes for a resentment against the entire social system, the kind of resentment which so often in the past has helped fan the fires of social revolution.

Under the new Social Security system, the worker will have the satisfying knowledge that provision has been made to take care of him when he is no longer strong enough or swift enough to carry on.

The banking structure in any country should be a major concern of government. The savings of the people should be given every safeguard to make sure that they are not lost or wasted by those who operate the banks. Yet, before the present administration came into power, it is an unpleasant fact that more than 10,000 banks had failed over a period of years, resulting in enormous losses for the most thrifty citizens in the communities where the banks were located.

The Roosevelt administration moved swiftly to correct that condition. Today every bank deposit up to a maximum of \$5,000 is insured and the number of failures has been reduced to a fraction of what they formerly were. This is another example of a wise government taking necessary precautions to protect the interests of its citizens.

One of the major causes of the economic collapse of a few years back was the wholesale issuance of securities that were either worthless or worth only a small part of the value they were supposed to represent. Many thousands of honest investors were the victims of this vicious system. Since then the Securi-

ties and Exchange Commission has been created to exercise supervision over the issuance of stock certificates. The former wholesale swindling of investors has been stopped.

It would be possible to continue indefinitely the list of worthwhile measures which have been enacted for the sole purpose of promoting the general welfare. These laws were not put there to promote the well-being of any favored class or group. They were designed to aid the great mass of average American citizens who have every right to the full protection of their Government.

The country has been rocked and shaken during the past few years by explosive controversies over the merits or demerits of legislation enacted by Congress to deal with domestic problems. There have been heated exchanges and many exaggerated statements have been made by partisans on both sides. This is the accepted American way and I doubt if any serious-minded people would have it otherwise.

But when all the record is in, I think that the great majority of the people, regardless of party, approve of the outstanding measures taken by the administration to promote the general well-being. It was a period that called for strong leadership and the public was fortunate to have a man in the White House who measured up to the test in every way.

No matter what our viewpoint on domestic issues, the need for national unity in the face of turbulent world conditions was never greater than it is today. It is the fervent wish of us all that the United States may continue to go forward along the pathway of peace and progress.

In his message to Congress on the state of the Union, President Roosevelt voiced the need for a united people in compelling language when he said:

"These words 'national unity' must not be allowed to become merely a high-sounding phrase, a vague generality, a pious hope, to which everyone can give lip service. They must be made to have real meaning in terms of the daily thoughts and acts of every man, woman and child in our land during the coming year and the years that lie ahead.

"For national unity is, in a very real and deep sense, the fundamental safeguard of all democracy."

Under the wise leadership of President Roosevelt, this Nation has made substantial progress in finding a solution for the same kind of economic and social problems which have brought about such fateful consequences in other lands. The solution has been found within the framework of traditional American principles and institutions.

The lesson for the United States is to continue along the course already charted. The ideal of national unity and national prosperity can be achieved in no other way.

## Emancipation Day—A Verse for the President's Birthday

### EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

POEM BY GEORGE SANFORD HOLMES

Mr. LEWIS of Colorado. Mr. Speaker, in praise of the humanitarian purpose—the treatment of victims of poliomyelitis, or infantile paralysis—to which are devoted the proceeds from the dinners, balls, and other entertainments held on January 30 in celebration of President Roosevelt's birthday, Mr. George Sanford Holmes, of Denver, Colo., wrote the following poem:

EMANCIPATION DAY—A VERSE FOR THE PRESIDENT'S BIRTHDAY  
(By George Sanford Holmes)

Somewhere today a child strapped to a bed,  
Or manacled in steel, with shining face  
Will smile at thought of you and know the brace  
That harnesses him to patience will be shed.  
Somewhere a mother, when your name is said,  
Will breathe a prayer and wish you health and grace,  
The while she sees a loved one romp and race  
And dance on limbs restored as from the dead.  
A new emancipation day is this,  
For shackled prisoners of paralysis;  
With purse and power a mighty land responds,  
To ransom captives from their lingering bonds,  
Its gold and genius pledged to your decree  
That youth enslaved to "polio" go free.

## Reciprocal-Trade Agreements Raising Havoc With West Coast Lumber Export Trade

### EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. ANGELL. Mr. Speaker, I have often called to the attention of the House the importance of the forest industry to the people of my section of the country—the great Northwest—and to the serious plight in which that industry now finds itself. Since 1934 there has been a loss in excess of a billion feet of forestry products annually in offshore trade. This has affected, directly or indirectly, every family in the Pacific Northwest. It has meant the loss of thousands of jobs in this industry as well as unsettling employment in many other operations directly connected with this undertaking. The loss of a billion feet of lumber from our trade means the loss of 2,000,000 days of work every year, aggregating \$12,000,000 in wages.

Export trade in this industry, which formerly employed 12,000 sawmill and logging-camp workers, now employs some 4,000, resulting in a loss of 8,000 jobs for these workers.

Half of the territory of Oregon and Washington is forest land, and more than half of the industrial pay rolls in the two States comes from this one industry. This territory alone has the largest supply of exportable Douglas fir of any section in the United States. The Federal Government, forestry departments of Oregon and Washington, and private owners of forest areas are cooperating to the fullest extent in an endeavor to preserve this great industry and to preserve its continuity by selected cropping, reforestation, and other safeguards to insure a continuous crop.

Markets for our forest products have been lost or curtailed by our own operations under the reciprocal-trade agreements, foreign discriminatory or preferential tariffs, barter systems, quotas, limiting the volume of imports, exchange controls, managed currency, subsidized shipping, and other methods designed to place our own export trade at a disadvantage. In cooperation with others in the House and Senate I have introduced H. R. 7463, designed to give some relief by placing the power in the Maritime Commission to give lumber and manufactured timber products the export shipping services contemplated in legislation previously enacted by the Congress. This legislation is designed to make American lumber and manufactured timber products competitive in the major markets of the world insofar as it is affected by transportation. It is hoped that this legislation, with such amendments as may be deemed necessary, will be enacted at this session of the Congress, in order to afford some relief to this great industry.

Mr. Speaker, as a part of my remarks I ask leave to include an address recently delivered by Mr. W. B. Greeley, secretary-manager of the West Coast Lumbermen's Association, dealing with foreign trade in west coast lumber. Mr. Greeley is an outstanding authority on this industry, and this address is most informative and thought-provoking.

It is important to note that Mr. Greeley in his statement calls attention to the fact that four-fifths of the offshore lumber business of the west coast has been lost in the last 10 years and that the reciprocal-trade agreements have not only failed to restore our lost trade overseas but they have left lumber in a worse condition than it was before this policy was launched. He also states that protection of our domestic markets in the United States should be the first concern of the west coast lumber industry. Unfortunately, the reciprocal-trade agreements thus far negotiated have not only failed to protect this American market for American products but they have lowered the bars not only to increased Canadian importations of lumber products but have also, through the most-favored-nation clause, opened our

markets to the other lumber-producing countries of the Old World.

Mr. Greeley's address is as follows:

**THE EXPERIENCE OF WEST COAST LUMBER IN FOREIGN TRADE—WHERE DO OUR INTERESTS LIE?**

This is a plain, unvarnished talk. Passing by the glowing generalities usual in discussions of foreign trade, what are the cold facts in the situation of west-coast lumber?

**THE WEST COAST HAS LOST MOST OF ITS EXPORT TRADE**

The first cold fact is that our industry has lost four-fifths of the offshore business which we had 10 years ago. In round numbers we have lost a billion board feet in our yearly export volume. Roughly, \$15,000,000 to \$20,000,000 less business each year; and eight or nine thousand less jobs in our sawmills and logging camps. From an industry exporting 15 or 18 percent of our production, we have become an industry exporting 5 or 6 percent.

The whole American lumber industry has lost two-thirds of its overseas lumber market. All American lumber exports have dropped from 3,000,000,000 to 1,000,000,000 feet a year. Prior to 1930, American sawmills led the world in international lumber commerce. Now we have dropped to fifth place. We are surpassed by Sweden, Finland, Canada, and Russia. And Poland was about to crowd the United States into a still lower notch before the war broke.

Of all American species of lumber, Douglas fir has suffered most heavily in export trade. The American hardwoods have lost 45 percent of their former volume, southern pine has lost 63 percent; Douglas fir has lost 79 percent.

**RECIPROCAL AGREEMENTS HAVE NOT RESTORED FOREIGN LUMBER MARKETS**

The second cold fact in the west-coast situation is that the reciprocal-trade agreements have not only failed to restore our lost trade overseas, they have left lumber in worse case than before this policy was launched. In 1933, 1934, and 1935, west-coast lumber on the one hand and British Columbia lumber on the other had reached a fairly stable division of markets. The United States was well protected for the American industry by the tariff and excise tax. The British Empire was well protected for the Canadian industry by preferential tariffs. The net effect of the trade agreements with Canada and the United Kingdom has been to tear down the protective wall around the United States, not only for the benefit of Canada but of every other lumber-exporting country in the world, while leaving the protective wall around the British Empire practically intact. It is probably true that our high-priced clear and shop items have moved to Great Britain a little more freely under the very limited concession from the preferential lumber duty contained in the trade agreement with the United Kingdom of 1938. But our status as a supplier of the United Kingdom remains substantially unchanged. We get only the business, either in volume or in grade, that the mills in western Canada cannot supply.

That is where we stand with the entire British Empire.

For example, while the United States pays South Africa a tremendous bonus for her gold that country's discriminatory tariff against American lumber is still in full effect.

On the other hand, imports of Canadian fir and hemlock into the United States have increased about fivefold. Under the old division of markets we sold, annually, in the British Empire about double the volume of lumber that British Columbia sold in the United States. The reshuffle has enabled British Columbia to sell in the United States, prior to the emergency war purchases of England, three times the volume of our lumber moving to the entire British Empire. In the plain terms of business accounting, a former trade balance of 2 to 1 in favor of the American industry has been converted to a trade balance of 3 to 1 in favor of the Canadian industry.

While there have been slight changes favorable to lumber in other trade agreements, nowhere in all 20 of them has any real market been opened that would compensate for the domestic business we have turned over to Canada. The record of diminished west-coast exports speaks for itself. The role of the west-coast lumber industry in the foreign-trade program of the Government appears to be that of the sacrificial lamb, offered on the altar of Canadian appeasement. It is not surprising that the proposed renewal of the Foreign Trade Agreements Act brings no resounding cheers among west-coast lumbermen.

**THE HANDICAP OF HIGH LABOR COSTS—IN FOREIGN TRADE**

There are more cold facts that we should face. And one of the coldest is that the high cost of labor in the manufacture of west-coast lumber is probably our greatest handicap in competing for world trade. Let us analyze our situation fairly, and not try to make the reciprocal-trade policy a scapegoat for all our troubles. In round figures, the lumber industry of western Oregon and Washington pays an average wage 20 cents per hour higher than that of British Columbia, and must carry a higher overhead cost of 40 or 50 cents per thousand feet because of the shorter work week imposed by Federal law and labor relations. The unemployment and social-security benefits accorded employees by American law cost this industry another 40 cents per thousand feet. The labor cost of production in the Pacific Northwest is from \$3.50 to \$4 per thousand feet higher than in our competitor industry on the north.

I do not assume that this tells the whole story of comparative production costs in Canada and the United States. But it is self-

evident that the pinnacle of high labor cost on which the west-coast lumber industry finds itself, operates with special disadvantage in competing with Canada for world markets. Especially is this true when, as in the case of British Columbia, our rival maintains an aggressive foreign-trade policy, designed to keep its lumber competitive in the markets of the world—a policy expressed in dealing with labor, in port and stevedoring charges, in export shipping subsidies designed to aid lumber in most of the trade routes of the world. All of which is best expressed by the difficulty of the west-coast industry in holding its place in open markets where there are no discriminatory tariffs, like those of China and Japan.

**PROTECTION OF DOMESTIC MARKETS SHOULD BE OUR FIRST CONCERN**

From our experience in these competitive relations, it seems clear that protection of our domestic markets in the United States should be the first concern of the west coast lumber industry. Those are the marching orders of this association, from our committee on governmental relations. A test came in connection with the Canadian trade agreement of last year. It promised a further, though far from adequate, reduction in the preferential lumber tariff of Great Britain—when and if the American excise tax is wholly abolished. This was obviously an invitation from the State Department to go along in its quest for export markets, at a sacrifice of domestic trade. We said that, notwithstanding our desire for greater outlets overseas, protection of the American lumber market must come first, that the excise tax on lumber imports should be renewed. That was done, and it should remain the cornerstone of west-coast policy.

As part of the same necessary protection of the home market for the industry and labor of the United States, whatever may be done in renewing the Foreign Trade Agreements Act, there are some things that should not be done.

The trading powers of the Department of State should be limited to the adjustment of duties. They should not be permitted to invade the internal labor and recovery policies of the United States, as was done when the last Canadian trade agreement wiped out the requirement that imported lumber be marked to show its country of origin.

In the second place, reciprocal trading should not be permitted to destroy the well-established principle in American tariffs—of equalizing foreign with domestic costs of production. The present Foreign Trade Agreements Act suspends section 336 of the Tariff Act of 1930 as to any article covered in a reciprocal-trade agreement. As to such articles, the President, the Tariff Commission, and Congress are powerless to make any tariff adjustments to protect American wages or other production costs against the lower costs of imported goods. And nearly every trade agreement has bound certain commodities on the free list and thereby taken from Congress the power to establish any duties on such commodities. Thus, in the trade agreement with Sweden wood pulp is bound on the free list. As long as that agreement stands the United States has tied its own hands from providing any protection for its own wood-pulp industry. If the Foreign Trade Agreements Act is renewed it should at least reinstate section 336 and thereby restore to the Tariff Commission its function of adjusting duties within the limits prescribed by law, in order to equalize foreign with domestic costs of production.

In the third place, the trading powers conferred upon the State Department should not bind the Government of the United States against the adoption of antidumping duties necessary to offset the depreciation in foreign currencies. It is true that every trade agreement contains an article which permits either party to offer amendments in the event of wide variation in exchange. But the State Department is evidently unwilling to invoke this reservation unless serious injury is demonstrated by some American industry. And then relief would be subject to the long delay of negotiating all of the questions that have arisen on either side under a particular agreement.

For more than 4 months Canadian dollars have had an official, established discount of 10 percent or more in American dollars. This new factor in competition is affecting the importation of Canadian lumber and shingles. There have been periodic attacks upon the American wood-pulp industry by the depreciated currencies of northern Europe. In 1932 discount rates in north Europe exchange, of from 25 to 30 percent, dealt a body blow to the wood-pulp industry of the Pacific Northwest; and in 1939, before the outbreak of war in Europe, a similar situation had our Northwest pulp mills working at half capacity and millions of feet of hemlock logs left in the woods.

We can readily visualize the economic warfare that will follow the end of the present conflict in Europe. Every country involved, and the suffering neutrals as well, will seek to recover their lost trade, to reemploy their men in industry, to speed up economic recovery. We will go through a long period of unstable currencies and of "managed" inflations to stimulate the industries of particular countries. It would seem essential that the United States retain the right to deal with these threats against our home industry and employment by some clean-cut, generalized form of antidumping duty to take up the slack in foreign exchange, and that our country should not be compelled to deal with these trade crises through the slow process of renegotiating a score or more separate foreign trade agreements.

This is all to say that, if the reciprocal-trade policy is continued, it should be brought into harmony with the labor policy of the United States; with our monetary policy and gold-purchasing program; and also with the essential needs of our home industries for

protection from sudden disruptions and changes in economic conditions abroad. On the one hand, the United States has set out on the most advanced program in the entire world for protecting its labor—in wages, working hours, compensation when unemployed, and pensions in old age. But another division of the Government, in its pursuit of international commerce, destroys the safeguards and aspirations for American labor. It would certainly seem that now is the time to unify these two Federal policies on some common ground.

There is one other thing which I believe should not be done if the Foreign Trade Agreements Act is renewed. It should not remain a "star chamber" affair. American industries are entitled to know what is proposed in a trade agreement before the Government is irrevocably committed to it; entitled to an opportunity to point out how a pact will work, so that errors may be corrected before the deal is ratified. This would be accomplished by a requirement for Senate ratification. At the very least, a proposed trade agreement should be published and cooled off for 60 days prior to its final acceptance by the Government. This would enable affected industries or labor groups to point out its precise effects and thereby better enable the State Department to review its own work while there is still opportunity for change.

#### SHOULD THE FOREIGN TRADE AGREEMENTS ACT BE RENEWED AT ALL?

At about this point many of you are saying, "Then, why not ditch the whole works?"

Perhaps the only practical answer is to let the Foreign Trade Agreements Act die and be buried, without benefit of clergy. But before throwing our clods of earth upon its coffin, I suggest we stop, look, and listen.

I don't need to tell the men in this room how seriously the west-coast lumber industry needs the large trading area and range in lumber orders that can be obtained only when a substantial foreign market supplements our domestic market. Or how much better balanced and more economical is the utilization of our timber when orders for export cutting are plentiful. One of the serious losses in recent years has been the wastage of raw material, the greater cost of production, and the glutting of the domestic market with low-grade 1-inch and 2-inch items, because of the dearth of export business.

Nor do I need to emphasize how heavily the loss of export markets has fallen upon a number of west-coast tidewater communities and their labor. Nor how the economy of the whole Pacific Northwest has suffered from the "missing ships and missing men" that were formerly engaged in offshore trade. Within the past 5 years 41 substantial mills have dropped out of the west-coast lumber industry. Upward of 2,500 jobs have gone with them. The great majority of these mills were in tidewater communities; and had been maintained substantially by offshore trade.

The practical question is, Adhering to what we regard as necessary protection of our domestic markets, can we then recover the greatest volume in business overseas by killing the reciprocal-trade policy, or by continuing it in modified form?

Here I suggest a few more practical facts to consider:

First. If Congress declines to renew the Foreign Trade Agreements Act, no new agreements can be negotiated; but the Canadian agreement is an international obligation and will presumably run for the full 3-year term from its date of ratification. That means for 2 years more—unless Congress should intervene with compulsory adjustment or cancellation.

Second. Lumber has already taken the worst punishment that can be administered under the law. Our duties have been cut to the maximum extent allowable, and the benefits of that cut have been extended to every country in the world that ships lumber to the United States. We have put our share into the contribution plate for international commerce and peace. Possibly from now on we may get some returns.

Third. A number of trade agreements remain to be negotiated, including Argentina and other Latin American countries, Australia, and South Africa. Some of these will doubtless materialize and some will not. But it is not inconceivable that a continuation of the reciprocal-trade program may reopen important offshore outlets to the west coast lumber industry, and I believe I am justified in saying that the State Department recognizes our emergency in lumber exports and will keep lumber in the forefront of negotiations where there is opportunity for additional foreign markets.

Lastly; and this, in my judgment, is the most important fact on our foreign-trade horizon. We are in a world of numerous and complex trade barriers and we will see a fresh recurrence of them in the struggle for recovery following the present war. Even now, all around us, there are discriminatory tariffs favoring the products of one country over another; bilateral agreements or barter deals between two countries from which the rest of the world is shut out; managed currencies, designed to give the products of one country a competitive advantage in the markets of another; export or shipping subsidies, designed to reduce the cost of getting the products of one country into foreign markets; exchange controls, which limit the purchases of foreign goods by citizens of the countries concerned; and so on, and so on.

These are the conditions that the west-coast lumber industry must meet and overcome if we are going to trade abroad. They are not conditions that we can overcome ourselves. They are beyond the possibilities of trade promotion; most of them are beyond the possibilities of price cutting. Very largely, these barriers to trade can be broken down only by our Government. And to do that, our Government must be armed with trading powers. It

must be able to bargain across the table. "You do this for my industry, and I'll do that for your industry." I cannot picture important headway being made in removing the barriers against our lumber overseas, except through the principle of reciprocal trade.

Nor can I picture the west-coast lumber industry as content to quit the export field or wait, like Elijah, for the ravens to bring an occasional order. We need export markets. We should be aggressive in going after them. I believe we will gain more overseas trade in the long run if the reciprocal approach to this maze in the commercial relations of the world is retained.

But its retention should carry real safeguards. While reciprocal trading is probably the best key to the closed doors of offshore markets, its use should not permit one industry, however limited its political influence, to be "sold down the river" for the advantage of more powerful industries. And certainly foreign trade pacts should not be permitted to reduce the employment or lower the working standards of American labor.

While I believe lumber should support the reciprocal principle, we justly demand a far better application of it than we have had thus far.

#### St. Lawrence Seaway

#### EXTENSION OF REMARKS

OF

#### HON. PIUS L. SCHWERT

OF NEW YORK

#### IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. SCHWERT. Mr. Speaker, my colleague from the great State of New Jersey, MARTIN J. KENNEDY, has offered a measure requesting that all negotiations for a St. Lawrence seaway pact be suspended until a very thorough study and survey of the subject can be made. When original negotiations began the subject was considered to be solely in the nature of a treaty, and it would therefore be a subject only for Senate consideration; and it would require a two-thirds vote of that body. We learn from recent statements that authorization for this deep-waterway canal may take the form of an agreement between United States and Canada under a resolution which would require only a majority vote of both Houses.

It therefore behooves every one of us, Mr. Speaker, to carefully study and weigh the many interesting and expensive problems presented to the United States, to the State of New York, to my own congressional district, and to every taxpayer by this proposed St. Lawrence seaway which has been under discussion by conferees of the United States and Canada for some time. If the problems are considered in a nonpartisan manner by any of the above groups to which it might be presented, the final decision of these considerations would favor the immediate adoption of the previously mentioned Kennedy measure; and the final decision, following the investigation mentioned in this measure, would, I believe, be against approval of the project—at least at this particular time. I therefore hope my colleagues will bring the Kennedy bill before the House for adoption, so that proper investigation and hearings can be held on this most important subject. Do not accept it as a minor piece of legislation, overshadowed by appropriation and war questions—it is important now, and it will always be an important question.

While respectfully requesting approval of the Kennedy bill, may I take this opportunity of setting forth reasons why, in my humble opinion, the St. Lawrence seaway should not be approved at this time. It is my belief that completion of this seaway pact would strike a disastrous blow at established United States business, to say nothing of the additional burden placed upon the taxpayer to build and maintain it.

Let us analyze a few of the questions already presentable for our consideration: Is such a seaway project commercially and economically sound? Commercially we must admit that at present there is no lack of adequate, low-cost transportation in the territory the completed seaway would serve. Economically we must also admit that at this very time we, as a Nation, have reached the ceiling of our debt

limitation. We, in this Congress, are endeavoring to reduce Federal expenditures, while improving our various arms of defense, and we have been eliminating items much smaller than this seaway project in our effort to accomplish this result. The whole expenditure would be made on borrowed money, and we have borrowed close to the limit. Under present financial conditions it is therefore unsound economically to begin a new unnecessary project at this particular time.

The cost figures now being studied by the conferees are not new figures—statements made bringing out the fact that some of the cost figures are 10 years old. Therefore, other details of this seaway are being ironed out by the conferees before they have the present cost of the completed power and waterway development before them. Is this method of procedure good business, or is it economically the way to approach this question? As an example of increased costs we might refer to the increased cost of battleships as shown during recent hearings. Would we not find similar increases in the cost of this seaway—especially over a period of 10 years?

From a commercial viewpoint again: We read statements that this seaway will result in a saving of 10 cents to 12 cents per bushel on wheat exportation. These figures are ambiguous, because the entire cost per bushel of shipments to New York amounts to approximately 6 cents. Thus the maximum saving that could be brought about would be between 1 and 2 cents. As a matter of fact, recent figures tend to prove that our wheat-growing center is not in Minnesota or Wisconsin, as mentioned so often, but it is in Kansas. I believe that the gentleman from Kansas [Mr. Hope] will agree with this statement.

Now, as to the question of tax burden, would we receive corresponding benefits from the increase in taxes caused by this seaway project? Here we must refer to the last figures available, and these are becoming ancient history. These figures give the over-all cost at about \$543,000,000, with New York State paying \$90,000,000, the United States Government paying \$125,000,000, and the balance of \$328,000,000 to be paid by Canada. The cost does not seem large when compared with many other congressional figures, but it does seem large when you compare it with the reductions the present Congress is endeavoring to make in our governmental expenditures. But there are other questions presented by these figures which make it unwise to hurriedly approve this unnecessary project at this time. We find that the Dominion is to receive credit for construction already undertaken by it and that this would materially decrease Canada's portion and increase the United States and individual State payments. It also appears that Canada will receive credit for such expenditures as the Welland Canal. This canal is wholly in the province of Ontario, controlled entirely by Canada, and, while it does help New York harbors on Lake Ontario, it was primarily built to help the Canadian cities. Should we be retroactive in this project and allow United States to pay for this canal wholly within and entirely controlled by Canada and which was built many years ago? Payment now (same as credit allowed Canada) would not give us any new or additional benefit from our tax dollar.

Let us look at the situation from the angle of States removed from the area of the St. Lawrence seaway; for example, let us consider it from the viewpoint of the taxpayer residing in the State of our majority leader, Mr. RAYBURN. This State of Texas pays 3.2 percent of the Federal tax bill, and with the Canadian credits now being considered—which will boost New York State's share to approximately \$130,000,000—the taxpayers in the great State of Texas will be paying \$16,000,000 as their share of this seaway project. None of these taxpayers would receive any benefit from that portion of their tax dollar used for this \$16,000,000 expenditure. Yes; we grant that one section of the country should help another section of the country in necessary and beneficial expenditures. At present this project seems to fall in neither of these categories. What applies to Texas taxpayers applies to taxpayers of other States of the Union.

We cannot overlook the fact that the proposed waterway would be ineffective about 43 percent of the year. This is

because of weather conditions in the various waters affected by the waterway. Winters, such as we now seem to be having, would increase this percentage of ineffectiveness. Are we getting corresponding benefits when we make this unnecessary expenditure for a project to be ineffective 43 percent of the time?

At this point we might pause and ask, Are we considering this waterway as a means of transportation, or are we in reality using that phase as a subterfuge to bring about a power project that would eventually make the T. V. A. look small? Originally Canada was against the waterway. Since the outbreak of the present war she has become more conscious of her need of hydroelectric power. As a matter of fact, prior to the passage of the neutrality bill, industries at Buffalo and along the Niagara frontier were receiving enticing inducements to locate in Canada—more hydroelectric power for Canada will cause greater inducements to be made—thus we are practically helping Canada to induce our industries to locate in Canada if we build this waterway to furnish them hydroelectric power. As to power being cheaper—is power cheaper near Niagara Falls than it is in other portions of the State? As a matter of fact, hydroelectric plants are continually facing increasing competition from improved, high-pressure, high-temperature boiler and engine, and from the Diesel engine.

There has been a power authority in New York State for the last 8 years, and it has had about \$600,000 of the taxpayers' money; but about all the State has received in return is a set of plans for a St. Lawrence power development—rather an expensive set of plans for our New York taxpayers. Possibly the present treaty conferees are thinking of these plans more than of the transportation on the proposed waterway. Is it possible to provide power which will result in serious transportation difficulties? Such action would not mean increased benefits from our tax dollar.

Let us now turn to the transportation question. Would the St. Lawrence waterway divert traffic from American transportation systems, including motortrucks, steamship lines, and railroads? The gentleman from Michigan [Mr. DONDERO] recently stated that in 1938 21 percent of the United States commerce moved on the Great Lakes. That is indeed a large percentage, and practically all of it moved in United States vessels. The completion of the waterway through the St. Lawrence would cause this traffic to be diverted from these United States ships. We hear the plan referred to as a seaway plan, which would cause one to believe that the cities on the Great Lakes would become practical ocean ports. This is a fallacy insofar as the larger ships are concerned. The proposed channel, with a depth of 27 feet, would close the seaway to about 95 percent of the United States merchant marine, and to all foreign liners. Only small foreign tramp steamers could use Great Lakes ports as seaports. Competition with cheaply operated foreign steamers of this type would drive both Canadian and American-owned ships to a minimum of operation and possibly cause them to cease operations entirely. This would be more than a diversion of traffic from our own steamship lines.

How about the diversion of traffic from motortrucks and railroads? If a study of traffic on the Great Lakes is made, it will be found that the greater portion of this traffic is handled by railroads and motortrucks at various ports on the Lakes. Completion of the St. Lawrence waterway, therefore, would not only divert 21 percent of our commerce to foreign tramp steamers, but in so doing it would eliminate this business entirely from the railroads and motortrucks leading into and out of our various lake ports. It is estimated that the seaway would divert 3,500,000 tons of traffic from the railroads. May I be frank at this point and state that my own congressional district would be about the greatest loser of any along the Great Lakes. Great Lakes steamship lines, elevators, railroads, and truck lines all cooperate in traffic movements in my district and all would be disrupted by the St. Lawrence waterway project.

What effect would the St. Lawrence seaway have on rail, water, and highway freight rates? Competition with cheaply operated foreign tramp steamers would not only give them most of the Great Lakes commerce, but it would entirely dis-

rupt our various traffic rates and throw our rail, water, and highway freight rates entirely out of balance.

Would the effect of this waterway be detrimental to employment, purchasing power, and industry generally? May I answer this question by giving the effect on my own district? We would lose approximately \$50,000,000 worth of business annually. No locality can lose this amount of business and not have greater unemployment, greater loss of purchasing power, and a detrimental effect on industry generally. Labor used on the ships, on the docks, in the elevators, on the railroads, in the trucking business, and other incidental lines would be materially—and in some cases entirely—eliminated, resulting in a great increase in unemployment.

In 1939 more than 50 percent of every tax dollar in Erie County, N. Y., was for relief, and any increase in unemployment would be disastrous. An increase in unemployment means a decrease in purchasing power and thus a decrease in other lines of business and industry; the result is more trouble ahead. All the capital invested in Great Lakes shipping in Buffalo would be lost. The waterway pact would cause further lack of confidence in the investing public; it would cause the investors to hesitate at a time when we must build up rather than tear down their confidence; this would affect industry generally. Pay-roll reductions would bring corresponding reductions in general business. We have spent much money in an effort to improve business and increase sales. Should we reverse this process by building the St. Lawrence waterway project?

Would this project reduce tax returns by impairing property and rental values? Business could not be reduced and capital impaired without impairing property and rental values and thus reducing tax returns. Another phase of the present waterway discussions is the proposed increase of water diversion from the Great Lakes for the Chicago Drainage Canal. Prior to allowance of present amount of water diversion it was said that this canal would bring seagoing craft from New Orleans to the Great Lakes. This never materialized as it was planned; and, as I remember it, this Chicago project was going to help Buffalo. Well, the result on Buffalo was that the level of the lake has been so lowered that at the last session of Congress I had to request deepening of the Buffalo Harbor in order to allow lake boats to come into the harbor with a full cargo. Conferees are now talking of a gentlemen's agreement between Canada and United States to allow more than the present limit of fifteen hundred cubic second-feet to be diverted at Chicago. The present limit was established by the United States Supreme Court. Thus, this project, including this greater water diversion at Chicago, would result in a further lowering of the water levels and the possible closing of Buffalo and other lake ports, unless we again turn to another large expenditure for deepening all lake harbors. Do you think that impaired property and rental values and reduced tax returns would be the result? There can be but one answer. We are for Chicago, but not to the detriment of all other lake ports.

Aside from commercial and economic reasons, is this the proper time to conclude this treaty, or agreement, with Canada? We are, in reality, making a pact with a belligerent nation—Canada is a province of the British Empire—and thus we are opening our neutrality position to serious criticism. It has already been mentioned that the Welland Canal is entirely within the borders of Canada. Completion of this waterway will open up a 2,687-mile seaway, but the entrance to this seaway will be entirely within the borders of Canada—note portion of the St. Lawrence River entirely in Canadian territory. If at any time we have difficulties with Canada, this entire 2,687 miles of waterway will be in control of Canadian actions. Our relations with Canada have been beyond criticism, and yet we grant them more privileges now than they grant to us, and we will be assisting them more than we assist ourselves in the completion of this so-called St. Lawrence waterway. Many are now beginning to call it the Alice in Wonderland pact because they cannot understand what is really behind it.

The above questions are all worthy of careful investigation and study. They would indicate to me that there is no honest

excuse for spending untold millions of the taxpayers' money for an entirely new project which would simply compete with existing transportation agencies which cost the taxpayers nothing. Let us, therefore, get behind the Kennedy measure—study and investigate—before we vote and authorize further expenditures for this St. Lawrence Waterway. Let us look before we leap.

In the past, Congress has shelved the St. Lawrence seaway. I believe a careful investigation will find Congress following its own excellent previous example when the proposal is brought up, as a treaty before the Senate or as an agreement before both Houses of Congress.

I thank you.

### Cotton Export Subsidy

#### EXTENSION OF REMARKS

OF

HON. STEPHEN PACE

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

Mr. PACE. Mr. Speaker, a small portion of the funds appropriated by the 1939 session of this Congress for the removal of surplus agricultural commodities was devoted to the payment of a small subsidy under the cotton-export program.

The operation of this program has produced good results, and I believe the Members of Congress would be interested in the following announcement made by the Department of Agriculture on January 30, showing that for a period of 6 months, or since July 27, 1939, when the program began, sales and deliveries of cotton and cotton products have totaled 6,214,000 bales, as against total exports during the entire 1938-39 marketing year of only 3,327,000 bales of cotton. The announcement of the Department is as follows:

The Department of Agriculture announced today that the rate of payment under the cotton-export program would be reduced to zero on cotton and on card strips and comber waste, effective at 2 p. m., eastern standard time, January 30, 1940.

Present rates of payment on cotton products other than card strips and comber waste will be continued.

Suspension of operations under the cotton-export program, except for cotton products, was made necessary by the fact that commitments under the program are nearing the total of available funds. Funds remaining on hand, however, are sufficient to make payments in connection with the exportation of cotton products equivalent to approximately 70,000 bales.

Sales and deliveries of cotton and cotton products as of January 29, 1940, under the cotton-export program totaled approximately 6,214,000 bales. This total includes sales and deliveries of cotton products equivalent to 333,000 bales.

The sales and deliveries so far this year (under the cotton-export program, which became effective on July 27, 1939) compare with total exports of 3,327,000 bales of lint cotton during the entire 1938-39 marketing year.

### Brotherhoods on S. 2009

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

#### LETTERS FROM BROTHERHOOD OF RAILROAD TRAINMEN

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

BROTHERHOOD OF RAILROAD TRAINMEN,  
MINNESOTA STATE LEGISLATIVE BOARD,  
Minneapolis, Minn., January 26, 1940.

HON. JOHN G. ALEXANDER,  
House Office Building, Washington, D. C.  
DEAR CONGRESSMAN ALEXANDER: May undersigned respectfully direct your attention to the omnibus transportation bill, S. 2009,

and the House substitute for S. 2009, now being considered by the Senate and House joint conference committee?

The United States House of Representatives on July 26, 1939, passed the following amendment, introduced by Congressman VINCENT F. HARRINGTON, of Iowa: "Provided, however, That no such transaction (consolidation, merger, purchase, lease, operating contract, or acquisition of control) should be approved by the Commission if such transaction will result in unemployment or displacement of employees of the carrier or carriers, or in the impairment of existing employment rights of said employees."

This amendment proposes to protect the jobs and working rights of railroad employees. Without protection of the Harrington amendment it is expected that 200,000 railroad workers will lose their jobs.

May I respectfully advise that we insist upon retention of the Harrington amendment in the omnibus transportation bill, or any other transportation bill? In event of failure of the Harrington amendment to pass, we respectfully request you to vote against the report of the joint conference committee. It is clearly discernible that the railroads desire authority through the omnibus transportation bill to blot out jobs of great numbers of rail workers through consolidations or reduced expenses resulting from consolidations.

Your consideration and cooperation in support of the Harrington amendment, designed to protect the jobs and working rights of rail workers, will be greatly appreciated, as well as your opposition to any report of the joint conference committee that does not contain the Harrington amendment.

Respectfully yours,

G. T. LINDSTEN, *Chairman.*

GRAND LODGE, BROTHERHOOD OF RAILROAD TRAINMEN,

Cleveland, Ohio, January 30, 1940.

The following is text of my letter addressed to Senators WHEELER, of Montana; DONAHAY, of Ohio; TRUMAN, of Missouri; WHITE, Maine; and REED, of Kansas; and Congressmen LEA, of California; CROSSER, of Ohio; BULWINKLE, of North Carolina; COLE, of Maryland; WOLVERTON, of New Jersey; HOLMES, of Massachusetts; and HALLECK, of Indiana; all members of the Senate and House joint conference committee on the omnibus transportation bill:

"I am deeply concerned about the omnibus transportation bill as passed, in different forms, by the Senate and House of Representatives.

"Railroad employees have been told that this is not 'consolidation legislation,' that it will not bring about widespread consolidations of the railroads, and that even if it does, the bill gives adequate protection to railroad workers. I have contended from the beginning that this is 'consolidation legislation,' that it will bring about widespread railroad consolidations, resulting in creation of ghost communities, and in throwing into the breadlines over 200,000 railway employees; that no adequate protection is afforded the employees; that the bill is designed to give railroad bankers a free reign in consolidation procedure, subject only to the graces of the Interstate Commerce Commission, and accordingly enactment of this legislation will mean that the Congress has abdicated to railroad bankers and the Interstate Commerce Commission by delegating authority to consolidate the railroads, without imposing any just and adequate standards for the protection of the traveling and shipping public and railroad employees.

"Who is right? If we harken to the voice of financial interests, to railroad interests, and to some representatives of railroad labor when they are not talking for the consumption of railway employees, all that I have said of this legislation, and more, is true and is confirmed by the very interests supporting this legislation.

"The Association of American Railroads declares that this bill will 'facilitate' railroad consolidations. The Wall Street Journal of January 17, 1940, declares as follows:

"The Interstate Commerce Commission anticipates renewed activity toward railroad consolidations and is hopeful that pending carrier legislation liberalizing merger provisions will stimulate the trend."

"Mr. George M. Harrison, a member of the Committee of Six, and chairman, Railway Labor Executives' Association, testified before the House Committee on Interstate and Foreign Commerce as follows:

"Through consolidations we will get a greater amount of economies, undoubtedly get rid of the weak lines that are now presenting a serious problem, and do much to strengthen the transportation industry. \* \* \* Now, if our recommendations in that direction are adopted, we are firmly convinced that there undoubtedly will be a good many consolidations, whereby the transportation industry, with particular reference to the railroads, can be strengthened. \* \* \* There is no good in a consolidation unless it has the effect of strengthening the financial ability and reducing the amount of the burden that is placed upon the industry." (Hearings, H. R. 2531, pp. 213-214.)

"It is not being honest with railroad employees to contend that the omnibus transportation bill does not have as one of its major purposes the expediting of widespread consolidation of American railroads in the interests of improving profits.

"I have repeatedly stated that such a program would add 200,000 railroad workers to the ranks of the unemployed. Is this a fact? Is this an overstatement? I submit the following from the Wall Street Journal of January 17, 1940:

"The savings, main purpose of mergers, and increase in efficiency in consolidation probably would be substantial. \* \* \* Estimates

have been made that if all of the possible or logical consolidations and coordinations were an accomplished fact, savings in railroad operations of as much as \$500,000,000 annually could be brought about."

"It is reliably estimated that 80 percent of the savings from consolidations will come out of the pay rolls of railroad workers. Eighty percent of \$500,000,000 is \$400,000,000. According to the official records of the Railroad Retirement Board, based on the wages actually received by the total number of workers employed, the average annual wage of railroad workers in 1937 was \$1,108. According to the middle of the month count of the Interstate Commerce Commission, the average annual wage was \$1,781, but it should be understood that this is a fictitious figure and not a true average annual wage. Consolidations would naturally eliminate the part-time employees first, so if we are to arrive at an accurate estimate of the total number of employees eliminated by railroad consolidations, the Retirement Board estimate, which includes all workers employed by the industry, would give us the most accurate results. Considering \$1,108 as the average annual wage of railroad workers, the \$400,000,000 annual 'take' from railroad labor would eliminate 361,010 employees. Even if we use the fictitious average annual wage used by railroad and financial interests, 224,593 employees would be eliminated. We have every reason to rely upon the Wall Street Journal's estimate of the contemplated savings, for the omnibus transportation bill proposes to give to the railroads and their bankers the initiative in railroad consolidations. The Journal of January 2, 1940, states that this legislation 'would give back to the railroads initiative on consolidation proposals.' In Mr. Harrison's testimony, above cited, he declared that the reason they were asking for repeal of the 1920 Transportation Act was to get rid of the uncertainty of Government action 'and the danger of having some governmental officer without practical experience, perhaps, trying to lay out the physical operations of the railroads \* \* \*'. In other words, give the railroads a free hand in consolidations.

"In any event, I am extremely conservative in estimating that enactment of this legislation will throw 200,000 railroad workers into the bread lines.

"It is contended that the original drafts of S. 2009 and the House substitute for S. 2009, commonly referred to as the omnibus transportation bill, give adequate protection to railroad employees. What are the facts? The original draft of these bills authorized the Interstate Commerce Commission to approve railroad consolidations without even so much as public hearings. Through the vigorous protests of this brotherhood, that feature of the bills was eliminated. It is said that 20 railroad labor organizations favor this legislation and only this brotherhood opposes it. The same was true with respect to the original draft of the bills which contained the iniquitous provision permitting approval of consolidations without public hearings. The Brotherhood of Railroad Trainmen was right then, and a consideration of the facts we are now presenting to you will prove that this brotherhood is right now.

"It is true that the omnibus transportation bill does contain references to the protection of employee interests. For instance, it requires that 'the Commission shall give weight to \* \* \*, where appropriate, the interest of the carrier employees affected.' It is a slander upon the intelligence of railway workers to assume that they would accept such weak and meaningless language as adequate protection against the desire of railroad bankers to consolidate railroads in the interests of greater profits.

"This bill is also defended on the grounds that the so-called Washington jobs agreement of 1936 will protect the railway employees. If you will permanently disemploy a quarter of a million railroad workers, somebody must absorb that pay-roll loss. In the hearings above referred to, Mr. George M. Harrison declared that 'the entire economies possible (from the 1936 Washington jobs agreement) will be absorbed by labor for the first year and a half and thereafter it will accrue to the corporations.' He is also on record before the House Interstate and Foreign Commerce Committee, March and April 1936, as declaring that that agreement would cost the railroads nothing, so great would be the savings over a period of years. Who is going to pay the cost of this threatened destruction of the jobs of a quarter of a million railroad workers? It is obvious that railroad workers and public relief agencies will absorb the loss, much to the profit of railroad financial interests. Let it further be recorded that railroad workers believe that a dismissal wage is no just substitute for a job. They want the right to work, not to be forced to surrender their jobs for a pittance. Following the signing of the Washington jobs agreement of May 21, 1936, I said the following of this agreement:

"I want to emphasize that so far as the Brotherhood of Railroad Trainmen is concerned, the agreement with the carriers relative to consolidation and coordination can in no sense be interpreted to mean that the way is clear for railroad consolidations and coordination. This Brotherhood will continue to fight as vigorously as it always has, such efforts to economize at the expense of humanity \* \* \*. We have now entered into an agreement with the carriers, designed, not to improve the standards of living or working conditions of railroad workers, but to share with them a small portion of the booty that would come to the coupon clippers if Wall Street's demand for 'economy' at the expense of humanity is carried out."

"That is our position today. That is the position of the rank and file of all classes of railroad workers today. Congress would break faith with a million railroad workers if it used the Washington jobs agreement as a flimsy excuse for turning over to railroad bankers and the Interstate Commerce Commission our only mass transportation agency for the purpose of impairing it through consolidation for greater banker profits. Furthermore, you would be breaking faith with the millions of people who depend upon the railroads in small communities throughout the Nation. As quoted herein, Mr. George M. Harrison declared that this proposed legislation would 'undoubtedly get rid of the weak lines,' but I submit that the people who are dependent upon these weak lines for their means of livelihood, small-business men as well as railroad workers, consider the 'weak lines' just as indispensable to their community life as the financially strong railroads.

"No one can intelligently consider the problems of the railroad industry without understanding that that industry is characterized by 'feast and famine.' There are bankrupt railroads and railroads in an unsound financial condition, largely so because they have been milked by the rich and powerful railroads and by railroad bankers. But there are also railroads that are among the best dividend-paying corporations in the Nation. In 1936 the Chesapeake & Ohio Railroad paid more in dividends than it paid in wages to its employees; as recently as 1936 the Bessemer & Lake Erie Railroad paid 1,100 percent dividends. It also paid 1,100 percent dividends in 1931, the year prior to the railway wage deduction. The Senate financial investigation of the railroads revealed that this industry is wasting a million dollars a day. It has been estimated that if the Government took over the railroads and paid a fair return to the security holders on the true value of the present investment \$500,000,000 in dividend and interest charges could be saved annually. The Wall Street Journal is interested in saving \$500,000,000 annually in the railroad industry. So am I, but I think the savings should come from those who are responsible for the present condition of the industry and not by defating communities throughout the Nation, aggravating our unemployment and general economic problems, and imposing the burden upon the innocent and those least able to bear it. That is the issue presented by this legislation.

"In view of present economic conditions in this country, the Congress simply must not enact legislation that will cause great unemployment throughout the Nation. The economic efforts of adding a quarter of a million railroad workers to the ranks of the unemployed, reaching as it would down into almost every community throughout the Nation, with its consequent creation of ghost communities and the deflation of business on a Nation-wide scale, is fraught with imponderable disaster. When we consider the past record of financial exploitation in the railroad industry, and realize that the omnibus transportation bill is proposing to turn over to the very financial interests that have plundered the railroads the 'initiative' and encouragement to launch this deflationary consolidation program in the interests of banker profits, in an industry that admittedly is wasting \$365,000,000 annually mainly as a result of the policies of these financiers, it is unthinkable that any Congressman or Senator would favor it.

"The Harrington amendment to the omnibus transportation bill, enacted by the House, effectively guards the people against this ominous threat to their prosperity and welfare. The amendment is as follows:

"*Provided, however,* That no such transaction (consolidation, merger, purchase, lease, operating contract, or acquisition of control) shall be approved by the Commission if such transaction will result in unemployment or displacement of employees of the carrier or carriers, or in the impairment of existing employment rights of said employees."

"All classes of railroad employees, various civic, fraternal, professional, and business groups have signed petitions in favor of the Harrington amendment. Many city councils and local officials throughout the Nation have signed these petitions. The people generally, and the rank and file of railroad employees in particular, do not want this disastrous program of railroad consolidation. So far as I know, or have been able to ascertain, not a single representative of organized labor, including the railroad-labor groups, has ever spoken one word against the Harrington amendment. No railroad worker, and no one dependent upon the railroads for their means of livelihood and their community life, except railroad bankers, could oppose the Harrington amendment.

"As a member of the joint conference committee considering the omnibus transportation bill, I urge you to retain the Harrington amendment in any report you may make. It would be far better for the country and for railroad workers if you would report out no recommendations than to recommend transportation legislation that did not contain this amendment. If this bill should ever become a law without the Harrington amendment, and railroad bankers should launch their program of eliminating a quarter of a million railroad workers with consequent disastrous effects upon communities throughout the land, I assure you the Congress will soon have discovered that it has not solved the railroad problem, for the Nation-wide protest against this program of Wall Street railroad consolidation will compel a new and more equitable solution of our transportation problems.

"Sincerely yours,

"A. F. WHITNEY, President."

## The Attempt to Smear Dies

### EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

EDITORIAL FROM THE TERRE HAUTE (IND.) STAR OF  
FEBRUARY 3, 1940

Mr. JOHNSON of Indiana. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial in the Terre Haute Star of February 3, 1940:

[From the Terre Haute (Ind.) Star of February 3, 1940]

#### THE ATTEMPT TO SMEAR DIES

The Dies committee has been extremely unpopular with the left wing of the New Deal Party. It has been unpopular in the White House because some of the best supporters of the Roosevelt program have fallen under suspicion by testimonial evidence of having supported subversive activities.

The White House was definitely opposed to continuance of the committee, with Mrs. Roosevelt serving as one of its chief spokesmen. The President did not remain passive, but let it be known his attitude, although his criticism could hold little force because it was based upon the very thing that some of his favored committees had followed. He did not want publicity based upon mere evidence before the committee and he did not like some of the methods of obtaining evidence, yet the infamous Black committee was upheld in its seizure of telegrams and no word of condemnation was uttered when they were published. It apparently makes a difference about whose ox is gored.

The overwhelming vote for continuance of the Dies committee could not be countered by anything but subversive activity. Accordingly, Representative Hook, Democrat, of Michigan, caused to be introduced into the CONGRESSIONAL RECORD a series of letters which attempted to link Representative Dies with one of the "shirt" movements.

David Mayne, of Washington, now has admitted forgery of the letters. By whose instigation it is not revealed. After the revelation of the forgery, Representative Hook attempted to withdraw publication of the letters from the CONGRESSIONAL RECORD. That move was blocked as it should have been. The record should stand in order that the full evidence may be available in the future. It is only proper that the full record stand in order that there may be a proper division of persons and determination of who stands for what when all information is at hand.

## La Mont Boilers

### EXTENSION OF REMARKS

OF

HON. JAMES G. SCRUGHAM

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

ARTICLE FROM THE WASHINGTON SUNDAY STAR OF  
FEBRUARY 4, 1940

Mr. SCRUGHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from the Washington Sunday Star of February 4, 1940:

[From the Washington Sunday Star of February 4, 1940]

LA MONT BOILERS GIVEN CAREFUL TEST BY NAVY, FOUND WANTING, SECRETARY EDISON REVEALS—REFUTES CHARGES CONTAINED IN SERIES OF FRANKLIN ARTICLES

Boilers now being used by the United States Navy in its new fighting ships are superior to the La Mont type as exploited in Europe, according to Secretary of the Navy Charles Edison, and there is no basis for any statement that German warships, ship for ship, are the superiors of American vessels.

The Navy Department has made lengthy tests of the La Mont boiler and has been guided in its adoption of boilers for its new ships by the results of these tests and tests of other boilers of competitive design. It is the sincere belief of Navy leaders that the boilers which have been adopted as the result of these tests are the best which have yet been developed to meet the needs of the American Navy.

As a result of tests which have been in progress for several years, Secretary Edison stated the La Mont boiler has not been approved as satisfactory for naval use, nor has it revealed superior characteristics which warranted special consideration by the Navy Department in one way of sponsoring further development of the La Mont boiler.

Moreover, Mr. Edison declared, the German Navy, after starting out experimentally with the extremely high boiler pressures, which are an outstanding feature of the original La Mont boiler design, have been backing away from these high pressures and now are working with pressures reported to be identical with those employed in our latest naval vessels.

#### TESTS AUTHORIZED IN 1933

Mr. Edison pointed out that the La Mont boiler situation has been "a long drawn out procedure, and this isn't the first time the question has come up." The use of high-pressure and high-temperature boilers, he said, is not limited to the La Mont type of boiler.

Naval records show that the Naval Boiler Laboratory was authorized on October 20, 1933, to test the La Mont boiler and that necessary construction at the laboratory, in the Philadelphia Navy Yard, was begun shortly thereafter. The inventor, former Lt. Comdr. Walter Douglas La Mont, graduate of the United States Naval Academy in 1910, began experimental work in the field of high-pressure steam generation in 1918.

"With reference to the Bureau's authorization of the test of the La Mont boiler," the Navy Bureau of Engineering stated in an official report signed by its then Chief, Rear Admiral Harold G. Bowen, now head of the Naval Research Laboratory, to Senator WALSH, of Massachusetts, chairman of the Senate Naval Affairs Committee, released for publication for the first time, "it is the policy of the Bureau to require that equipment to be tested at naval laboratories to determine suitability for naval use be completely developed beyond the experimental stage.

#### INVENTOR USED LABORATORY

"The La Mont test was authorized under special conditions not ordinarily accorded other exhibitors in that the La Mont boiler was entirely experimental and had not been erected or tested prior to installation at the boiler laboratory. A section of the boiler laboratory was assigned to Mr. La Mont for the erection of his boiler, which was occupied without cost to Mr. La Mont for a period of over 3 years.

"To operate his boiler, makeshift pumps and other auxiliaries were employed by Mr. La Mont. Air for combustion was supplied from the navy-yard mains rather than by a blower, as in a ship-board installation. Under these conditions it was impossible to get complete data during the test of the La Mont boiler to determine its suitability for naval use.

"Shortly after the test was authorized Mr. La Mont informed the Bureau that unless unforeseen delays occurred his boiler would be ready for test within approximately 2 months. However, it was found that the boiler as originally designed required numerous modifications, and it was not until January 11, 1937, more than 3 years after the test had been authorized, that the development had proceeded far enough so that Mr. La Mont was able to present his boiler for test. For more than 3 years the facilities of the boiler laboratory were available to Mr. La Mont, during which time he had the help and advice of members of the laboratory's staff."

Abridged tests of the La Mont boiler were completed on February 6, 1937, according to the Navy Department record.

#### OPERATED ONLY 130 HOURS

"Since suitable auxiliaries are a most essential part of a forced circulation boiler, and since the La Mont boiler was equipped with makeshift auxiliaries, the boiler could not be given the usual complete set of laboratory tests to determine its suitability for naval use," it was explained.

It was impossible to determine the net steam output of the unit or the efficiency of the entire unit, nor was information obtained concerning the extended reliability of the unit or its maintenance requirements, it was stated by the Naval Bureau of Engineering.

"The efficiencies obtained during the test of the La Mont boiler were not as high as those being obtained with modern naval boilers employing natural circulation," the Bureau stated officially. "It is also significant that because of the large amount of development work that was necessary after the erection of the La Mont boiler at the laboratory it was operated but 130 hours during the intervening 3 years. In view of the above, the small capacity of the boiler, the considerable number of modifications that would be required for a naval installation, and the lack of suitably designed auxiliaries, the unit could not be approved as being suitable for naval use."

Secretary Edison said that soon after he came to the Navy Department, in 1937, his attention was called to the La Mont boiler and that he had gone to the Philadelphia Navy Yard.

#### PRELIMINARY DESIGN OFFERED

"It was a little thing, what we call a breadboard model, demonstrating a principle rather than being a boiler," he told newspapermen.

Mr. Edison said he had satisfied himself that the La Mont people were "getting every attention from the engineers" and were being afforded every facility to make their demonstrations.

After completion of the tests Mr. La Mont submitted to the Navy Department a preliminary design of a destroyer-size boiler, which he proposed to build and which he proposed the Government should purchase under a special arrangement, the Bureau of Engineering reported. There were no available funds, however, for further development of the boiler by the Navy, and Mr. La Mont was told that if further development were accomplished commercially and if the Navy's experiments with the high-pressure, high-temperature, forced-circulation type boiler should indicate its suitability for naval use, "the Bureau would then be interested in a test of a full-size La Mont boiler and would welcome the boiler into the competitive field."

In view of the rapid developments which were taking place in this country and abroad in the use of high pressures and temperatures in both commercial and naval fields the Navy Bureau of Engineering carefully followed these developments, having in mind the possible naval application of machinery installations employing higher pressures and temperatures.

#### BRITISH MAKING TESTS

Referring to the claims that the La Mont type boiler is being used abroad while being ignored by the United States Navy, the Bureau of Engineering reported that "the general situation in the German Navy in regard to boilers, temperatures, and pressures is known to the Bureau of Engineering."

"The troubles and delays, which the developments in German naval engineering have given rise to have also come to the attention of the bureau," it was stated. "In connection with the use of the La Mont boiler abroad it should be noted that the designs now being employed are an outgrowth of the original La Mont design, which the bureau believes did not prove satisfactory. From information available to the bureau it is apparent that the development of the La Mont boiler abroad has resulted in a boiler which does not have the attractive features of extreme low weight and low space factors which the original La Mont design contemplated. It is also known that an experimental La Mont boiler has been installed in a British destroyer. The working pressure of this boiler is 290 pounds, and the efficiency 71 percent at an evaporation of 121,500 pounds of steam per hour. At approximately the same evaporation the modern 600-pound natural circulation boilers, being installed in our destroyers have by actual test shown an efficiency of 84.5 percent. Since boiler efficiency is a very important factor in the over-all efficiency of a machinery installation, a vessel fitted with our modern naval boilers would show a very appreciable fuel saving with resulting increase in cruising radius over a vessel fitted with boilers similar to the La Mont boiler installed in the British destroyer, all other conditions being equal.

#### COMPLETE BOILER NEVER DELIVERED

"In connection with the use of forced-circulation boilers, it is the opinion of the naval boiler laboratory that it is quite possible by judicious changes in design to so raise the capacity of natural-circulation boilers that they can successfully compete with forced-circulation boilers in weight, space, and cost, still retaining other desirable characteristics inherent in the natural-circulation boiler."

As regards the so-called water-wall structure, which is a prominent feature of the La Mont design, Mr. Edison stated that this type of boiler was developed as early as 1850 and is not confined to the La Mont boiler. The Navy Department in 1929 authorized a test of the original La Mont inventions as applied to water walls in boilers, he said. These tests did not demonstrate that the La Mont water walls were suitable for naval use, he said.

La Mont never delivered a complete boiler with necessary auxiliary equipment of a size suitable for installation in a naval vessel to the Navy for test, Secretary Edison said. Nor has there been a profitable exploitation of the La Mont boiler for commercial use, he indicated.

Secretary Edison said he had been told by Mr. La Mont at the time his boiler was under test at Philadelphia that this represented a new design, which was in many respects an evasion of his previous patents, to which rights had been obtained abroad.

#### ANOTHER DESIGN USED ABROAD

"So the design of boiler that is talked about in this article—the Jay Franklin series—is not the La Mont boiler that is being exploited in Germany," Mr. Edison commented.

Summarizing his experience with the La Mont problem, Mr. Edison said:

"I was faced, when the final wind-up came, with this situation: We have only limited funds to carry on development. Mr. La Mont asked that the Navy carry on the development of his idea for him at Navy expense. The tests in the laboratory had not progressed to a point and were not conclusive in any way. They did not prove anything because all these auxiliaries, such as the main circulating pumps and that kind of thing, were makeshift. \* \* \* It was just a small-scale thing that didn't show as much promise as other types we were working on then.

"We tried to get in other competition, and Admiral Bowen had been successful in getting Foster-Wheeler to submit a boiler, and

Babcock & Wilcox. I was faced with this patent situation, which wasn't clear at all. We could not get up a boiler which would evade or get around all of his previous patents. I was faced with a complicated and unknown patent situation—one that was fraught with danger of suits. I was faced with a rather curious group of associates. I didn't know whether we could preserve the secrecy, or whether this would leak on over to foreign countries, and I was faced with lack of funds and an unproven article. To weigh that against having other types which were properly made by large companies which gave equal promise to the La Mont, it just seemed useless to go on putting up more money to develop this.

#### WANTED NAVY FINANCING

"We made the proposition that he go ahead and get somebody to build his boiler and finance it. We were interested, and if he could only bring it about and have it developed, going ahead and getting himself financed and build it, we would test it, and if it was acceptable we would be glad to consider the purchase of it. He didn't want that. He wanted us to finance the development of it.

"Finally he came back with another proposition, in which he said he would get somebody to finance the construction of a full-size boiler, and then they would build it and submit it for test, but if the test proved satisfactory we would have to buy it. \* \* \* He might make a thing that would fit in a ship and still pass the engineering specifications, but which would not be suitable for us. I refused to buy a pig in a poke. I told him to go ahead and develop it, like everybody else does. \* \* \* You must create your product, and then we will consider buying it. We will put you on an approved list of bidders. And that didn't satisfy him.

"As far as I know, Mr. La Mont has just an idea about a boiler. He tried to sell it to somebody to make money, and he is trying to get the Navy to finance it so that he can sell it to make money for himself, and the Navy doesn't want to."

Mr. Edison said that the Navy's present standard of 600 pounds and 850 degrees of temperature in boiler operation has been demonstrated sufficiently to show "a very large saving in fuel which means a longer cruising radius, saving in weight and space that can be used for military benefits, and so is generally accepted now by the Navy as a perfectly reasonable standard."

#### GERMANS REDUCE PRESSURE

He said that the Germans had started the other way, at the extreme upper pressure limits of around 3,200 pounds, but that the German Navy has reduced its designed pressures for steam installations to approximately the United States Navy's current practice of 600 pounds, according to currently believed information. He indicated that it is possible that difficulties experienced with materials and auxiliary equipment when using the high pressures and temperatures was the cause of the reported reduction in pressures used in the German Navy, and that gains in weight and space through the use of high pressures and temperatures were offset by a lack of reliability and ruggedness through trouble with auxiliary equipment and pipe lines.

Mr. Edison said there is no available information indicating that the Germans have employed the La Mont boiler in their famous pocket battleships, but that on the contrary the recognized authority, *James Fighting Ships*, states that eight Diesel engines are used for propulsion of these ships.

Mr. Edison's determination that the United States Navy shall remain abreast of all technological developments in order that our fighting ships may be the most modern in every particular it is possible to produce is well known. He has instigated a renaissance and enlargement of the Naval Research Laboratory, making it independent of the Navy Bureau of Engineering and responsible directly to his own office. He has added the patents section from another bureau to the laboratory and personally prevailed upon Admiral Bowen, recognized as one of the Navy's foremost advocates of applied research, to take over the leadership of the unit.

#### RESEARCH BEING FOSTERED

Admiral Bowen now is building up a national research advisory body composed of the Nation's foremost industrial and research leaders to cooperate in keeping the United States Navy abreast of the latest technological advances in every field which holds promise of being useful to the service.

Not only has Admiral Bowen used every effort to expand our research and make it applicable to improvement of our naval forces, it is pointed out at the Navy Department, but he also has sought to break up monopolies in the supply of any essential materials or equipment to the Navy and to introduce free and open competition in the hope that quality may thereby be improved. Most famous of his "monopoly smashing" campaigns had to do with the supply of boilers for naval vessels, and as a result there today is free competition in this field, which for many decades has been virtually limited to one company. It is known that he welcomed the efforts of a boiler company new to the naval field to obtain licenses to the La Mont boiler in the hope that this boiler might be developed to a useful stage and offered to the Navy in a usable form.

Secretary Edison stated positively that the new American super-heat control boiler being installed in new United States naval vessels is superior to the German La Mont boiler for pressures now being used in our Navy and understood to have been adopted for the German Navy. He showed that no efforts are being spared by the Navy to keep abreast of all developments, and that when a better boiler is produced it will be used.

## Farm Program of Oklahoma Emergency Association

### EXTENSION OF REMARKS

OF

HON. PHIL FERGUSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

#### RESOLUTIONS BY THE OKLAHOMA FARMERS' EMERGENCY ASSOCIATION

Mr. FERGUSON. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD a copy of a set of resolutions adopted by the Oklahoma Farmers' Emergency Association.

The matter referred to is as follows:

We, the duly selected members of the resolution committee of the Oklahoma Emergency Association, meeting in the Hucksins Hotel, Oklahoma City, Okla., at our fourth annual meeting, the 8th and 9th days of January 1940, respectfully submit for your consideration the following comments and resolutions:

1. We heartily endorse the fundamental principles of the present Farm Act.
2. We favor amendments to the present act as their needs appear. Progress in present farm legislation has been the result of experience and any radical change would nullify this progress.
3. We believe that any successful farm program must be built around production control and soil conservation. We favor rigid production control.
4. We recommend that greater stress be placed on the soil-conservation features of the present act.
5. We feel that instead of continuing to call for funds from an already overburdened Treasury to support our program, that a tariff be placed on each commodity to support its own costs. We urge that the three leading farm organizations of the United States, the Farm Bureau, the Grange, and the Farmers' Union, join in a united front favoring the passage of Senate bill 2395, calling for the certificate plan. We favor dissemination of any information pertaining to the so-called certificate plan.
6. We recognize that the present Farm Act is facing emergency. Farmers must cooperate in their fight to save the act, since war appropriations and other emergencies are demanding more funds. Farming, being a basic industry, must not be jeopardized in order to appropriate more funds to meet other emergencies which may appear. History proves that war always brings overexpansion of agriculture, resulting in disastrous farm prices. The present Farm Act attempts to meet this emergency.
7. We favor crop insurance and recommend that it be extended to cotton.
8. We recommend that the multiple land-holding clause of the present act be modified to the extent that an operator would not be penalized on land not under his control.
9. Recognizing the widespread benefits of education and information as it applies to long-time agricultural problems, we recommend that State administrative officials give more time to placing this information before the public, particularly to county committees and other county agricultural leaders.
10. We recommend that the \$10,000 limitations of the agricultural conservation payments be eliminated so long as these payments are earned in conjunction with a tenant who operates the farm.
11. We recommend that commodity loans be continued and recognize the widespread benefits derived from the ever-normal granary. We also desire that these loans be made on a conservative basis, without undue risk to the Federal Government.
- It is our observation that under the present loan program a wide variation of service charges is being made upon redemption of warehouse receipts by producers before maturity of the loan. It is apparent that charges set up under terminal warehouse agreements are higher than those regularly applying on warehoused wheat outside the loan program. These charges must be more uniform, and farmers demand a voice in determining tariff schedules with the thought of entering into a bilateral agreement which will apply to all interested parties.
- We believe the economic location for storing farm commodities is close to the point of origin, namely: Farm and country warehouse storage. We suggest that encouragement be given and regulations be adopted working to that end.
12. We request that Senate bill No. S. 2585 be enacted, thus returning to the various State cooperatives the funds that are justly theirs.
13. We commend the Commodity Credit Corporation of the Agriculture Department for the making of the cotton loan in 1939 and urge that such loans be made available prior to the beginning of the harvesting of the crop upon which the loan is to be made.
14. We request that interest rates on Federal land bank loans be reduced to 3 percent and that legislation be enacted which will extend the present Commissioners land bank loan for 3 years beyond the present expiration date.

15. We endorse the principles and purposes of the Tenant Purchase Act and, in order that adequate finance may be provided, we request that the Federal Government extend to agriculture the same privileges that have been extended to the urban population under the Federal Housing Act by guaranteeing payment of principal and interest on funds provided for the purchase of family-size farms.

Respectfully yours,

RESOLUTIONS COMMITTEE OF OKLAHOMA FARMERS  
EMERGENCY ASSOCIATION,  
ROSCOE F. KEIFFER, *Chairman*, Helena;  
S. M. FORBES, Marietta;  
STEWART EADES, Piedmont;  
IRVIN C. ANDERSON, Waukomis,  
W. L. HUTCHESON, Frederick.

Harry Bridges

## EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 6, 1940*

EDITORIAL FROM THE PALISADIAN, OF PACIFIC PALISADES,  
CALIF.

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Palisadian, of Pacific Palisades, Calif.:

[From the Palisadian of January 12, 1940]

### I PLEDGE ALLEGIANCE

Harry Bridges' announced intention of becoming an American citizen "at the earliest possible moment" would seem to place him in a quandary knottier than any problem he has run up against in all his stormy career as a left-wing labor czar. Either he has changed his un-American views or else he hasn't studied carefully the nature of the oath a candidate for citizenship must take.

Here on the west coast where Bridges is known best, and where tens of millions of dollars have been lost in 5 years of violent, Bridges-dictated strikes, there is only scorn for the notion that Bridges can square his un-American activities by taking the oath of citizenship. Bridges' victory in the deportation hearing cannot erase his abuse of businessmen for pursuing their American right to engage in free enterprise. And his frank contempt for property rights, his open use of the strike—not as a means for securing the rights of labor but as a strictly offensive weapon for the destruction of employers as a class—sound suspiciously Stalin-esque to American ears. It will be a strange sight to see Harry Bridges, the ruthless, power-mad strike dictator, whose every act attests his distaste for democracy, with his hand solemnly raised, pledging allegiance to the American flag, American institutions, and the American people.

## Montreal Slaps United States Business in the Face by Opposing Seaway

## EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, February 6, 1940*

Mr. GEHRMANN. Mr. Speaker, I wish to say a few words about the attitude of Montreal, Canada, regarding the St. Lawrence seaway, that I hope will be ratified before this session of Congress comes to an end. Montreal is evidently not in agreement with the rest of the Dominion on this question. I am unable to see why this enterprising Canadian metropolis, situated as it is at the head of the St. Lawrence River, should not be the leader in urging ratification. I wish to quote part of a resolution which was offered by two of Montreal's aldermen early in January of this year, and I quote a few sentences therefrom:

Whereas the canalization project sponsored by certain groups is liable considerably to hamper the progress of the Harbor of Montreal, and as such becomes detrimental to the Canadian metropolis;

Whereas it is necessary to save for our sons the inheritance received from our forefathers; and

It is moved that the executive committee be requested energetically to oppose the project through the city council, to resort immediately to necessary steps to prevent the realization of the plan.

Montreal is the enterprising Canadian city of 850,000 population located upon the banks of the St. Lawrence River, which began as a royal colony 3 centuries ago, later became a military settlement and the clearance port of the early fur trade. Its present dominance as a great financial and shipping center came about through the stranglehold it has upon, and its ability to hold back, full economic development of a continent—that portion of the Dominion of Canada which lies to the westward of it and a large section of a friendly neighbor country, our United States of America. Blind to her best interests, Montreal clings to the past. Much of the prosperity that has fallen upon Montreal has been the direct gift of the American people, who have made heavy investments in enterprises financed from Montreal and who as tourists have left millions in that city and the Province of Quebec of which it is the metropolis.

### GRATITUDE, THY NAME IS MONTREAL

What Montreal calls her "inheritance received from our forefathers" is the ability to levy local tribute on all water freight that comes out of or seeks to enter the Great Lakes Basin. The bulk of the commodities are transshipped to or from large steamers at Montreal. This costly transfer and its delay would be dispensed with if the ocean craft had access into the Great Lakes Basin, the world's outstanding area of arrested economic development. The Great Lakes Basin is 1,200 miles long east and west, and 600 miles wide north and south. It is a vast region that is the very heart of the United States and the Dominion of Canada, with five sparkling deep-water lakes holding the potentialities of a colossal commerce that is straining and groaning for the low-cost waterway outlet denied them. The entire Great Lakes water route to the Atlantic is now open to boats of 20-foot draft except for the 184 miles between Lake Ontario and Montreal. Along this bottle-neck of canals and locks boats cannot pass that have a draft over 14 feet. Montreal would keep it that way always, and thus remain forever the head of ocean navigation. The United States of America has been very kind and friendly to the Dominion of Canada. Nothing has been withheld from Canadians or Canada.

Generally speaking, the people of Canada have been perfection, both as neighbors and as American citizens and non-citizens who have taken permanent residence in the United States. The natural expansion of industry and commerce that Montreal's water front dog-in-the-manger policy has kept away from the Province of Ontario and the Canadian midwest is held to have been largely responsible for considerable of this migration across the border southward. It is estimated that the present "Canadian stock" living in the United States and being supported by wages and income obtained in the American Republic numbers approximately 4,000,000, and the present total population of Canada is only two and one-half times that, or roughly 10,000,000 inhabitants. Hence, whatever boom would come to the United States from the modernization by Canada of its canals in the St. Lawrence River over the objection of the single city of Montreal will be directly shared by the thousands of Canadians who have shifted over into the United States and who for the most part live in the eight States that border on the Great Lakes. Canadian born on both sides of the frontier who are victims of the Montreal squeeze play partake with Americans in the benefits of the completed St. Lawrence waterway. Every year there is a large company of Canadians who have made their fortunes in the United States who return to Canada to settle down and take it easy for the rest of their lives. And every day of the year many Canadians who work in the United States return to Canada for the night meal, their slumber, and breakfast. These Canadians pass back and forth daily into New York, Vermont, Michigan, and Minnesota.

Perhaps the best indication of the extent to which Canada has been fostered and favored by the people of the United States is the investment picture. At the close of 1938 in a tabulation by the Department of Commerce it was shown that \$3,722,000,000 of American capital had gone into the Dominion

of Canada, both direct investments such as branch plants, mining properties, and other Canadian bonds and securities. Canadian figures of American investments in Canada are higher. At the close of 1937 they were said to be \$3,932,000,000, while British investments in Canada at that time were stated to be \$2,685,000,000. The United States Treasury also has kept the Canadian gold and silver mines going on a profitable basis for the last 7 years. The tourist industry constitutes Canada's biggest "take" in cash from the United States. Last year it was more than \$250,000,000. President Roosevelt's recent proclamation declaring 1940 to be "Travel America Year" which includes Canada, has raised the hopes of Canadians to double that sum. There have been some lucky breaks for Canada in the trade agreements with the United States—formerly the imports of Canadian shingles into the United States had been limited to 25 percent of the American annual consumption of shingles. This restriction was removed, and with shingles on the free list, Canadian shingles are pouring into the United States. The duty on Canadian lumber has been cut in half. The duty on live cattle was reduced 50 percent and the same tariff reduction was made on pulpwood and book paper. On account of the war in Europe, there has been a stoppage of imports to North America of newsprint and wood pulp from Norway, Sweden, and Finland.

These products enter the United States duty free from Canada but with the Canadian dollar devaluated 10 percent and more, the Canadian profits have been tremendous on both newsprint and wood pulp. Friendship of one country with a neighbor nation no matter how strong the heart interest may be is on firm footing only when there is a reciprocal conciliation of interests, and a fair exchange of good offices. It can never be wholly one-sided and last, for the time is bound to come when the nation that freely gives all and gets nothing in return but rejoinders such as Montreal's demand "to save for our sons the inheritance received from our forefathers" at the expense of 40,000,000 American people living in the Great Lakes Basin, is bound to awaken and ask "Why should this be?" Montreal, while the man-made head of ocean navigation into the international St. Lawrence River at the same time is the foot of the God-made system of fresh water rivers and lakes upon which the commerce of the interior of North America to survive and expand must be given deep water to pass into the economic heritage of a continent. Only a few feet of new depth for an extremely short distance is needed. And with the St. Lawrence canals deepened to 27 feet, the best engineering opinion is that Montreal would still remain the chief doorway of the outgoing and incoming trade of the Great Lakes Basin and thrive and prosper as never before. The foregoing facts and conclusions are addressed jointly to the North American people in the hope that they will stand together for the full and rational development of this American Continent.

#### SEE CONTINUED BENEFITS FROM PROJECT

This great undertaking should not be considered as purely of sectional benefit. I am sure that when this waterway is completed all the people in the United States and Canada will share in the advantage this great, modern transportation system will bring to this entire North American Continent. President Roosevelt recently stated in part as follows:

I wish the public to be assured not only of continued unremitting effort to complete the seaway and power development, but also of my strong conviction that recent events have helped to clear the way for action upon the broadest lines of public benefit. The use of electric energy is gaining so rapidly today that no sane person would dare to assert that, after the 7 years required for construction of works, St. Lawrence power would provide a surplus above actual needs. As a matter of fact, careful studies have shown that there will be a serious shortage of electric energy in the Northeast before the project can be completed. The Great Lakes-St. Lawrence project is in keeping with the spirit of the times and with the policy of cooperation now firmly established on this continent. For the United States and Canada to demonstrate the full value of such policy on a frontier that spans a continent would contribute immeasurably to security and progress in the Western Hemisphere.

There is absolutely no one that questions President Roosevelt's complete loyalty to the cause of the seaway. But it is encouraging and significant that the last Republican Presidential candidate, Governor Landon, of Kansas, is also very

much for it and advocated it not only as a candidate for President but as Governor long before he thought of becoming a candidate. On March 12, 1934, Governor Landon sent a petition to the United States Senate urging ratification, and among other things said:

I demand the setting aside of special privilege and sectionalism in the consideration of this great national and international undertaking. In voicing that demand I speak for the homes, for the industries, for the agriculture, for the united common need of a great body of the American electorate, impelled by one great desire—that the doors of transportation opportunity shall be opened to the widest possible extent by bringing the sea base into the heart of the North American Continent.

The St. Lawrence seaway treaty failed of ratification, not because of any lack of merit but because in the campaign for the improvement too much stress has heretofore been laid on the purely local benefits of the seaway and not enough attention has been given to acquainting the people of those sections not immediately tributary to the Great Lakes with the benefits which will accrue to such sections. The fact is that it will benefit 43 States and 130,000,000 people. To California we can truthfully say that the principal market for the product of its people—their oranges, grapes, and figs—is now, always has been, and always will be, in the midcontinent of America; to our friends from Georgia we can say that the market for peaches, peanuts, and pecans would soon be more than doubled if the treaty is ratified; to the people of Connecticut we can say that their market for watches and nutmegs would increase by leaps and bounds; to the people of Louisiana that they would sell more rice, and that the port of New Orleans would do more business than ever before, if the empire to the north of it were fully developed.

#### SEAWAY WILL HELP THE RAILROADS

I believe it is a historic fact that every great improvement, whether in the case of building railroads into new territory or the deepening of great rivers, have all been subject to opposition on the part of local interests, which think up imaginary fears and fail to realize that improved transportation results in increased commerce, benefiting directly or indirectly all sections. I am convinced that the building of the St. Lawrence seaway will not injure the railroads or throw their employees out of work; that it will not in any way interfere with the proper use of the Mississippi River or the Missouri River for navigation. On the affirmative side, I subscribe to the definite belief that the completion of the seaway will greatly serve the economic and transportation needs of a vast area of the United States and should, therefore, be considered solely from the national point of view. I have not stressed the fact that the starting of this great work will put thousands of unemployed to work. I have preferred to stress the great future advantage to our country, and especially the fact that all of us should view this treaty in the light of the benefits which it confers on the people of the United States and Canada as a whole.

### Reciprocal-Trade Treaties

#### EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 7, 1940

STATEMENT BY CARL H. WILKEN BEFORE WAYS AND MEANS COMMITTEE

Mr. GURNEY. Mr. President, during this session of Congress there is much interest in the reciprocal-trade treaties. I have before me a very fine statement by Carl H. Wilken, secretary of the Raw Materials National Council of Sioux City, Iowa. I think this statement contains very valuable information on the employment question and other things of interest to all Members of the Senate. I ask unanimous consent that the statement be printed in the RECORD, together with a schedule accompanying the statement.

There being no objection, the statement and schedule were ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Ways and Means Committee, and fellow citizens, my name is Carl H. Wilken, of Sioux City, Iowa. First of all, I am an American citizen, interested in the welfare of my fellow men. Second, I am secretary of the Raw Materials National Council of Sioux City, Iowa, an organization supported by \$10 memberships, and I have personally donated 2 years of time without salary. Third, I am chairman of the Progressive Farmers of Iowa, a farm organization in northwestern Iowa, southeastern South Dakota, and northeastern Nebraska. We are not a pressure group, but interested in saving our democracy. Up until 3 years ago I was an actual farm operator and for 3 years served as a member of a county committee on the Triple A program.

I think it was Frederick Taylor who once said that "the world lost 4,000 years of progress and many lives because no one took the 20 minutes off to learn how to lay bricks properly." The people of the United States have lost billions of dollars of income, suffered depressions, war, and misery because so few have taken the time out to analyze the operation of our economy and the operation of money in the trade relationship of the different groups in our Nation.

The subject before your committee is that of reciprocal-trade agreements with other nations and their effect. It is impossible to analyze the economic and monetary effect of such trade agreements without a fundamental analysis of our economy such as I will give to you. Without such an analysis any discussion of foreign trade will be based on theory, wishful thinking, pressure groups manipulation, and politics. From the research of the Raw Materials National Council we established a quite definite mathematical formula showing the operation of our economy. This formula we call 1-1-7, meaning that for each dollar of farm income we will have \$1 of factory pay rolls and \$7 of national income. The seven times being the average turnover of the dollar by the duplication of the use of money received from the sale of farm products. For example, if I, as a farmer, receive 80 cents a bushel for corn, I have \$800 income from each 1,000 bushels. When I trade the \$800 of income for products handled by the local merchant, he also has \$800 of income and has \$800 to reorder goods from the wholesaler and the wholesaler has \$800 to reorder goods from the factory, etc. But if I receive only 40 cents a bushel for the 1,000 bushels of corn, I have only \$400 to spend, the merchant has only \$400, the wholesaler has only \$400, and factory has only \$400, etc., or approximately one-half as much as in the first illustration.

When this formula was first brought forth in the Senate farm hearings in Sioux City, Iowa, in 1937, as a part of that testimony, it was buried in that record. Since that time, however, we have been able to practically prove its accuracy. The Farm Journal, published in Philadelphia, Pa., in the December issue, 1939, on page 14 carries an editorial stating that a billion-dollar increase in farm income will result in at least \$7,000,000,000 increase in national income, and that a 50-percent increase in farm income would result in jobs looking for men instead of our present unemployment situation. The Country Gentleman, part of the Curtis Publishing Co., of Philadelphia, has also accepted the formula as being accurate, and in the January issue on page 7, they carry an article by A. W. Rucker, of Eddy Rucker Nickels & Co., of Cambridge, Mass., analyzing the accuracy of the 1 to 1 part of the formula, or the direct relation of gross farm income to factory pay rolls.

If the committee desires, I will make both the article in the Farm Journal and the Country Gentleman a part of the record. As proof of the relationship of the gross farm income to factory pay rolls and gross national income, I wish to file an 18-year table from 1921 to 1938, inclusive, giving the record of gross farm income, factory pay rolls, and gross national income.

The average relationship for the 18-year period as 1 to 6.99 or roughly 1 to 7. One of the interesting facts disclosed by the table is that the relationship between gross farm and gross national incomes in 1926, generally recognized as a year of 100 or parity, is also 1 to 6.99, or the same as the average for 18 years, thus proving the accuracy of the commodity index in determining relative price relationship of various commodities.

Statistical record of the operation of our national economy

Year	Gross farm income	Factory pay rolls	Gross national income
1921	\$8,900,000,000	\$8,300,000,000	\$62,300,000,000
1922	9,900,000,000	9,100,000,000	61,100,000,000
1923	11,000,000,000	11,000,000,000	59,200,000,000
1924	11,300,000,000	10,500,000,000	71,900,000,000
1925	12,000,000,000	10,800,000,000	76,500,000,000
1926	11,500,000,000	11,400,000,000	80,200,000,000
1927	11,600,000,000	11,200,000,000	82,900,000,000
1928	11,700,000,000	11,300,000,000	84,100,000,000
1929	11,900,000,000	11,700,000,000	81,100,000,000
1930	9,500,000,000	9,600,000,000	75,400,000,000

Total	170,600,000,000	162,900,000,000	1,192,600,000,000

<sup>1</sup>Preliminary estimates for 1938.

With this mathematical relationship in existence, we automatically have a condition under which normal production and parity prices or equal exchange relationship are a normal base for prosperity and full employment. The instant farm prices drop below parity our primary income resulting from the sale of units of farm products times price is reduced and results in an equivalent reduction in factory pay rolls, and the collective income is reduced seven times that amount.

Economics has been made a rather deep subject and has even been confused with social legislation. Basically, however, after removing all the mystery surrounding economic discussions we usually end the year with two columns of figures, income and disbursements, with the income side of the ledger at the present time being balanced with deficits.

Mathematically, income consists of units of wealth produced or services performed times price. At the present time we are engaged in reducing both factors in the equation. On one hand we are reducing the number of units of wealth produced and the number of hours of labor and on the other hand through the reciprocal-trade agreements reducing the price per unit. There can be only one answer if such policies are continued and that's national bankruptcy.

A good example of what happens can be found in a comparison of production of farm products in 1928 and 1932. According to the agricultural yearbook of 1935 the production of those 2 years was approximately the same, but due to the price drop the gross farm income in 1932 was \$6,400,000,000 less than in 1928, and the national income due to the seven times turn was \$43,000,000,000 less in 1932 than in 1928. We have no quarrel with the theory of foreign trade as expressed in the reciprocal-trade agreements, but no agreement should be made allowing imports of raw materials or manufactured goods below the domestic parity price level. To allow imports at less than parity forces our price below parity, thus cutting off our flow of money from the sale of new wealth, and reduces our domestic market, which should be our first consideration.

Our Constitution was written to provide for a republican form of government and also for an economic democracy. To accomplish the latter objective the Constitution provided that Congress should have the right "to coin money and regulate the value thereof." The issue of money is easy with present types of printing presses, but to regulate the value of the dollar requires that we regulate the value of the wealth that the dollar is exchanged for. The point of parity is a 100-cent dollar, and as authority we wish to quote from the report prepared by the Senate Agricultural Committee, No. 1295, and Calendar No. 1347, as of November 16, 1937. On page 14 of that report you will find that in 1926 we had a 100-cent, or parity, dollar, and the only year since 1800 that the people of the United States have regulated the value of our dollar. During all of the other years, because of speculation and foreign manipulation of prices and money, the raw-material producer or the producer of the real wealth has been short-changed.

Our forefathers were fundamental economists and recognized the fact that in order to protect the value of our dollar they would require a tariff. Therefore the first session of Congress, 151 years ago this spring, passed a tariff act, the third act of that session. With this principle of tariffs, which are monetary adjustments, the United States in 151 years reached the point where 130,000,000 people do approximately 50 percent of the world's business. Strange as it may seem, because we haven't got the good common sense to mark the price properly, we are going bankrupt because of the business we do. The growth of the United States can be traced to the tariff, because there is no nation in the world today that has made similar progress under a free-trade principle. The reason back of it all is that with the aid of tariffs we were able to produce our own raw materials for industry at an American price and the turn-over of the dollar made it possible to build our present standard of living. In the words of Abraham Lincoln, we had both the "goods and the money."

The only criticism of our tariff system is that it has not been equitable for all groups in the past and is not equitable at the present time. In our Nation we have 48 States, 40 of which are principally raw-material producing and 8 industrial States. Equal tariff protection must be granted for the 40 States as compared to the 8.

Because of the natural conditions of development of our resources, tariffs on raw materials could not be effective until 1910. In 1910, because of the normal increase of population and the increase resulting from immigration, our consumption of raw materials and finished goods reached a balance with our production. As a result, our first parity period for a hundred years was a natural condition, in the 5 years from 1910-14, often called the golden age of agriculture. Any period of parity or equal exchange values will be a period of prosperity, because that is the point of mathematical accuracy and full operation of the law of supply and demand. Since 1910 we have been in a physical position of production to regulate the value of our dollar at 100 cents and to maintain parity prices. Our mental attitude and lack of knowledge as to the operation of our economy have prevented us from doing so. Our tariff problem today is not a question of high or low tariffs, but a parity tariff or one that will permit us to regulate the value of our money at 100 cents and to maintain a parity price relationship between raw materials and finished goods. There cannot be any half-way mark in the matter of tariffs. They are all wrong or right to a certain extent. The extent to which we must have tariffs is the parity price level.

Tariffs should be made on a mathematical or index basis instead of by pressure groups.

That they are still being made through pressure groups is self-evident from the breaking down of negotiations with Argentina

and Chile in regard to farm products and copper, because of the political "heat," as we call it.

Inequality of tariffs, under the present agreements, can be proved from the record. For example, the so-called Smoot-Hawley tariff, which increased the disparity between the raw-material producer and industry has not been repealed during the past 7 years.

As a result, tariff reductions under the trade agreements have been mostly on raw materials.

For example, in the CONGRESSIONAL RECORD of Wednesday, June 15 (legislative day June 14), 1938, you will find in a speech by Congressman CASE of South Dakota a tabulation of tariff benefits received by the steel industry. The table was originally prepared by Senator Oddie and brought up to date from the records of the United States Tariff Commission by Hon. ANDREW J. MAX, chairman of the House Committee on Military Affairs, and is so set out in the discussion by Congressman CASE:

*Imports and production of crude and semifinished steel in the United States and cost to American public of duties on crude and semifinished steel products*

Year	Imports of crude and semifinished steel	Duties collected on imports of crude and semifinished steel		Domestic production of steel ingots and castings	Cost to American public of duties on crude and semifinished steel
		Total	Per ton imported		
	<i>Gross tons</i>			<i>Gross tons</i>	<i>Duties</i>
1922	11,703	\$198,102	\$17.00	8,900,731	\$151,312,427
1923	23,991	641,295	26.73	44,943,696	1,101,344,694
1924	38,841	744,443	19.16	37,936,969	726,775,951
1925	85,756	1,161,035	13.55	45,393,524	615,032,250
1926	126,006	1,487,576	10.89	48,293,763	525,919,079
1927	110,573	1,299,014	11.75	44,935,185	527,988,420
1928	110,011	1,290,975	11.73	51,544,180	604,613,231
1929	67,659	1,206,325	17.83	56,433,473	1,006,208,824
1930	72,700	854,556	11.75	40,699,483	478,218,925
1931	115,699	1,011,626	8.74	25,945,501	226,763,679
1932	78,419	638,720	8.14	13,681,162	111,364,659
1933	28,716	329,082	11.46	23,232,347	226,763,679
1934	24,629	366,201	14.87	26,055,289	387,442,147
1935	33,159	437,823	13.20	34,092,504	450,022,241
1936	50,104	585,254	11.68	47,757,856	557,928,558
1937	54,965	795,816	14.47	50,569,000	731,733,439
Total	1,043,531	13,047,843	13.93	600,424,723	8,408,961,511

It is interesting to note that the steel industry, with total assets of \$4,430,855,614, as given in the Iron Age of April 1, 1938, received in the way of tariff benefits from 1922-37, inclusive, a total of \$8,468,961,511, or almost 200 percent of their total assets.

It is also interesting to note that they enjoyed the benefit of a tariff system which gave them a protection of \$8.14 per ton on crude and semifinished steel in the year 1932 and \$14.47 in 1937.

I am not giving this because I feel that steel has too high a tariff; it should be protected up to parity so that the steel industry can pay American wages for iron ore, coal, manganese, and other products that go into the manufacture of steel and make a fair profit. But I feel that the producer of raw materials has a right to equal tariff protection.

It would appear from our research that the steel industry could well afford to divulge their secrets of maintaining adequate protection and help the raw-material producer up to a parity with them. Such a move would make it possible to increase the annual production of cars a million and a half annually, thus increasing the output of steel tremendously.

That the farmer is not receiving equal protection can be proved from the fact that the prices of his products in many cases are being set by the world market which is approximately one-half of our parity.

And it is not due to surplus production. I will quote from Trade Information Bulletin No. 839, a compilation of imports and exports from 1926-37, inclusive, by the United States Department of Commerce, from the monthly Summary of Foreign Commerce, December 1938, compiled by the Department of Commerce, and from the National Provisioner, issued July 1, 1939.

In 1938, using 500 pounds per head as the amount of meat products imported in the form of live cattle, the record shows exports of meat products of 158,000,000 pounds; imports of meat products, 148,000,000; imports of live cattle, 424,022, or, at 500 pounds each, the equivalent of 212,000,000 pounds of meat products. This gave us a net income of meat products of 202,000,000 pounds in 1938, with one-third of our population hungry.

In the first 5 months of 1939 our imports of meat products, as given on page 33 of the National Provisioner of July 1, 1939, totaled 56,600,000 pounds, and our exports approximately 54,000,000 pounds. On page 42 of the same issue, we find that cattle imports were 460,381, or the equivalent (using again 500 pounds per animal) of 230,190,000 pounds, or a net import for the first 5 months of 1939 of 232,790,000 pounds, with a third of our population still hungry and hogs selling at 5 cents a pound, or the world price.

Under our system of handling exports, all exports sell at the world price which in the case of the buying power of England, as compared to that of the United States, is approximately 52 percent of our parity price level. Imports are, of course, purchased at the world price.

With our parity price level almost double that of the world the economic law "that goods flow toward the highest market" attracts foreign products to our shores unless protected by parity tariffs.

For example, on page 35 of the National Provisioner, issue of July 1, 1939, we find the interesting information that in the week of June 15 to 21, 1939, 3,237,702 pounds of meat products came into the harbor of New York City alone from 15 different countries, namely, Argentina, Brazil, Canada, Cuba, Denmark, Estonia, Holland, Italy, Latvia, New Zealand, Norway, Paraguay, Poland, Switzerland, and Uruguay. It is only natural that such an amount of imports would tend to break our prices to the world level, even though the record shows we had a shortage of meat in our own Nation.

On the other hand, in 1937, when we had an exceptional amount of Polish hams, the record in Poland was one of malnutrition. In other words, with our tariffs below parity, we will attract all world surpluses and even deprive the other nations of food until our price level reaches the world level.

If, on the other hand, we were to adopt parity tariffs, we could have parity prices for farm products and our national income would be increased approximately \$20,000,000,000 annually, our foreign trade would be increased, and our labor would not be on relief.

I know that thought is contrary to some of the theories that we have, but I will prove it by a simple example.

In Iowa we produced in 1939 approximately 500,000,000 bushels of corn. If the Iowa farmer were receiving 40 cents per bushel more, the farm income would be increased by \$200,000,000. With the seven times turn of the dollar our national income would be increased by \$1,400,000,000 from the Iowa corn crop alone, or approximately one-half of all our foreign trade in 1938. Yet we refuse to trade in our domestic market with our own people.

In Iowa we have all sorts of merchants, and it should be self-evident that the increased income would permit a greater purchase of both domestic and foreign products.

With parity prices for farm products and an approximate national income of from eighty to eighty-five billion dollars as a result we would increase our foreign trade.

This can be proved by an examination of the records. In the period 1926-30, for example, our average imports of meat products amounted to 144,000,000 pounds, as given on page 32 of Trade Bulletin No. 839 by the Department of Commerce. This can be compared to 148,000,000 pounds in 1938.

But in 1926-30 we received parity prices, produced more meat products than in 1938, with 9,000,000 less people to feed.

If we had the same per capita income in 1939 that we had in 1926-30, we would have required approximately 5,000,000,000 pounds more of hogs and cattle, either through domestic production or imports.

I would like to analyze briefly what can be done with our principal surplus crop, cotton. Under the operation of the present trade agreements, the South has consigned itself to the production of cotton at the world price. They can have parity prices for cotton if they will change their direction. With parity tariffs, here is a simple example of what can be done:

We are importing approximately 2,000,000,000 pounds of fats and oils. With parity prices and the increased buying power, our Nation could easily consume an additional 1,500,000,000 pounds, or roughly, the equivalent of 15,000,000 acres to produce the imports and additional consumption.

It would not be necessary to produce the vegetable fats and oils because with parity tariffs the revenue from fats and oils which we could import would make the monetary adjustment in trading the cotton in the world market at the world price.

On the other hand, if other nations refused to trade with us, we could, if necessary, divert our cotton acres to crops producing fats and oils.

Using the 1922-29 period, however, as a base, it would be logical to assume that if the United States took world leadership in financial affairs that our parity price would soon become the world price, thus bringing about world prosperity, and cotton could be sold at a good price in the world market in the same way that it was sold from 1923-29.

The record of 1937 of increased world consumption of cotton with the price boom resulting from drought in the United States in 1936 is proof that world consumption of cotton could consume all production at our parity price level.

Advocates of the present policy of our trade agreements claim that they are seeking world peace. World peace is an impossibility with mass poverty prevailing throughout the world, and if mass poverty continues in our own Nation we will continue to have class hatred and unrest.

The only way to world peace is for the United States to take world leadership, restore the fair income from world production of real wealth, and prevent the collapse of our international monetary system.

With the United States doing half of the business of the world, the rest of the world cannot be prosperous while we are going into bankruptcy, and we cannot have prosperity without parity prices for our wealth protected by parity tariffs.

If this committee wishes to be of service to the United States and the rest of the world, as I am sure it does, it ought to recommend that all trade agreements be adjusted on the basis of our parity price level. I am sure that the members are all agreed that our democracy, established to provide equal opportunity for our citizens, also contemplated equal tariff protection for all groups.

If such a step were taken and a foundation of parity prices for basic farm crops established, in 6 months the depression would be a sad memory of sincere mistakes; in a short period the seemingly unbalanceable Budget could be balanced for the simple reason that the sale of our annual production of new wealth would create the necessary income; and in 18 months jobs would be looking for man at a decent wage.

## Foreign crops displace American farm products

[From a compilation by the Research Division of the Raw Materials National Council]

[Following are the cold figures on the effect imports of foreign agricultural and allied products have upon the American agricultural picture. The figures are for 1935, 1936, and 1937]

Commodity	Unit	1935				1936				1937			
		1935	Foreign values	United States displacement	United States acres to produce	1936	Foreign values	United States displacement	United States acres to produce	1937	Foreign values	United States displacement	United States acres to produce
Corn imports	M bushel	43,242	\$20,288,097	\$60,864,291	1,840,000	31,471	\$16,082,000	\$48,246,000	1,326,000	86,337	\$56,184,000	\$168,552,000	3,680,000

Total foreign value			1,346,430,429				1,414,821,000				1,801,513,000		
United States displacement				3,917,120,642				4,244,463,000				5,404,539,000	
United States acres required to produce					102,461,118				108,490,570				122,741,280
*Less the above nonagricultural products which total			533,769,966	1,260,809,898	29,000,000		545,056,000	1,635,168,000	32,744,000		664,711,000	1,994,133,000	35,507,000
Total agricultural displacements			812,660,463	2,656,310,744	73,461,118		869,765,000	2,209,295,000	75,746,570		1,136,802,000	3,410,406,000	87,234,280

1935 used as the average.

2 Displacement of acreage by crude petroleum imports figured on the basis of power alcohol required to replace such imports.

NOTE.—When processed, transported, and sold in the retail market, the domestic raw materials that would be produced, if it were not for the products imported, would represent still greater value than the figure shown in the last column for each year above. Producing, processing, and transporting such goods made from domestic materials would provide jobs for every available worker in America.

## Our Relation to World Peace

## EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 7, 1940

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask to have inserted in the Appendix of the CONGRESSIONAL RECORD a brief address on Our Relation to World Peace, delivered by me on the invitation of the Women's National Democratic Club at their first open forum on Tuesday, February 6.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Before proceeding to a discussion of the topic assigned me on this program, let me acknowledge my wholehearted approval of the series of symposiums to deal with vital public questions which has been arranged by the Women's National Democratic Club and which this meeting tonight inaugurates. The wider the appreciation and the better the understanding of the problems and of the policies of our Government the better for the Government and for the country.

Let me commend those women who are responsible for these meetings, for their energy, their public spirit, and their party loyalty.

Let me also applaud the words and sentiments of those who have preceded me—Chairman Farley, Representative Rayburn, and Mrs. Roosevelt—and let me bespeak my own appreciation of the privilege of participating in tonight's forum.

You have asked me to direct my words tonight to the subject of peace in the world. That is a subject which has engaged the thoughts of mankind and called for their supplications for centuries—indeed ever since the birth of Christ, the first apostle of peace and good will.

And yet today in this twentieth century, this age of enlightenment, this age of peace talk on every hand, and treaties to outlaw war, we find the whole world menaced with wars as terrifying, as cruel, and as devastating as any the world has ever known. We witness unspeakable tortures and purges and whole peoples facing annihilation or servitude.

The immediate and particular aspects of this immense subject of peace in the world, of which I shall speak on this occasion, are the questions relating to what our Government and our own citizens in this United States of America ought to do, and what we ought to refrain from doing under the existing circumstances in order, first, to insure against our involvement in the war in Europe or in the Orient; second, to safeguard our own security with some thought for the security of the Americas collectively; and, third, to do anything we can—consistent with our own neutrality and non-involvement toward peace for the world, if and when such becomes possible of attainment—and we may pray that it will be soon.

No one may appraise the final consequences to those nations, peoples, and governments engaged in the war; nor the consequences upon the world—indeed upon the whole fabric of human society. We only know that if this war in Europe is long continued, and if it spreads, the devastation will be beyond reckoning and very likely beyond repair within the span of anyone now living.

If we agree, and I believe we do agree, that our objectives are to keep the United States out of war upon any other continent, and to maintain at all costs our own peace and to keep the United States secure against attack by any foreign aggressor, and to encourage and to promote peace throughout the world, then it follows that our governmental policies, our courses of action, as well as our restraints and inaction, must conform to these objectives.

I believe the rank and file of our people are increasingly militant in their opposition to war or to any action by our Government that may be said to tend in that direction.

One gratifying element which gives strength and support to the cause of peace in the United States today is the resistance of our people to propaganda. Some of this propaganda originates with selfish interests in our own country who seek profit or advantage for themselves. Some originates with conscientious but misguided persons who allow their sympathies to warp their judgments. Much of it originates overseas with groups and governments that assume that the participation of the United States in the war would be to their advantage.

But our people for the most part are evidencing a determined purpose to treat the present war in Europe objectively. They are refusing to become bewildered and confused and misled by the devices and the importunities of those who would lead this country into war.

I believe they are increasingly wary of any foreign entanglements and increasingly insistent upon real neutrality; and this sentiment on the part of the public is finding reflection in Congress and with all the officials of our Government.

The imperative necessity of maintaining our neutrality is one of the cardinal points upon which the President, the Congress, and the country, regardless of party, are today in complete accord.

Of course, that is easier said than done. It involves many difficult decisions. We cannot altogether obliterate our natural sympathies for certain nations now at war, and our natural abhorrence of the tyranny, the persecutions, and the war lust of those who rule other than the belligerents. But we must be guided by our heads rather than by our hearts.

With reference to the question of our own security, we are taking necessary and adequate steps to strengthen our own defense on land, on sea, and in the air. We are of common mind and purpose on that objective. Our differences relate only to some of the details.

We are spending immense sums of money for our national defense and preparedness—not as a prelude to war, not for weapons of offense, but as an insurance against war.

Finally, we come to the question of being prepared to do our utmost to further the ends of peace for the world whenever and wherever the opportunity presents itself.

But let me say at this point that if anything in the realm of political affairs has been clearly proven by the events of the past 25 years, it is that the United States cannot promote world peace or save democracy by joining in a European war.

Out of the World War of 1914-18, into which we finally entered to save the world for democracy, has come communism, fascism, and nazi-ism elsewhere in the world, and in our own country—a post-war period of political and social stagnation which culminated in the economic collapse of 1929 and the ensuing depression—more severe and more prolonged than we have ever before experienced.

So our approach to the goal of peace for the world and our consideration of what we can do to that end must be one of watchful waiting, meanwhile doing all within our power for the preservation of our own peace, safety, and security in this dark hour in the world's affairs.

I submit that this is not a selfish course, but a prudent and a sensible one. Such a course does not rest upon the premise that we are indifferent to what transpires in Europe and are unaffected thereby. It rests upon the assumption that the preservation of our heritage, our own democracy, and the freedom for which our forefathers fought and died a century and a half ago, will not only serve the interests of our own Nation, but will contribute measurably to the post-war rehabilitation of the world.

The great majority of our people definitely reject the concept that the role of the United States is to defend right against wrong everywhere in the world—to oppose aggressors everywhere and to defend international morality.

I have no hesitancy in asserting that that is not the position of the President—nor the position of the Democratic Party, nor the position of the Congress. It is not a party question at all.

Indeed, on this entire subject of peace in the world and the foreign relations and foreign policy of this Government we are dealing with matters which transcend all questions of party. We are dealing with this question not as Democrats but as Americans. And it is my conviction that in the main essentials, we have a high degree of national unity and patriotism.

We all desire world peace. We all desire to aid in world peace. We have given evidence of that desire at every turn since the end of the World War. The President left no stone unturned to prevent the outbreak of the present war in Europe and has made it clear that our Government stands ready to assist in a just and enduring peace.

## Small Business the Key to Recovery

## EXTENSION OF REMARKS

OF

HON. CHARLES L. McNARY

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, February 7, 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Ohio [Mr. TAFT] at Miami, Fla., on February 3, 1940, entitled "Small Business the Key to Recovery."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure to come to the sunny shores of Florida from the snows of Washington, even if I may only spend a week end here while the Senate is in session. This is the Nation's winter playground. It seems too bad to interrupt a pleasant vacation with a serious political discussion, and perhaps you will not have much time to think about it during the rush of the winter season here. But when the vacation is over, and you go back to your homes in

the North, or settle down to a Florida summer, you must look ahead to your decision in November in the most important political election this country has ever seen. Shall a New Deal administration govern this country for 4 years more? There may be some New Deal policies which should be continued. There may be differences on details, but there is a fundamental issue between new dealers and antinew dealers, and this is it. Shall the administration be guided by a belief that the Government can produce prosperity by means of Government bureaus and Government regulation and Government in business itself? Or shall it rely on the restoration of private enterprise and individual business activity?

#### THE NEW DEAL HAS FAILED

We have tried New Deal methods for 7 years, and they have failed to produce recovery. There are still more than 9,000,000 people unemployed in the United States, whereas after every past depression we have always returned to a condition in which any man who wanted a job could get a job. It is true that we are better off than we were on March 4, 1933, at the very bottom of the depression, but the only fair comparison to make is with the years which have followed past depressions. For 5 years, from 1925 to 1929, the national income—that is, the income of all the people put together—averaged \$80,000,000,000. In 1939 it was only \$68,000,000,000. There were 10,000,000 more people in 1939 among whom this income had to be divided; therefore the average income was 20 percent less in 1939 than it was in the twenties.

To be equal to the condition at that time, we should now have a national income of \$88,000,000,000 instead of \$68,000,000,000. It is certain that if there were any such increase in income, \$20,000,000,000 a year, there would be jobs for all of the 9,000,000 unemployed. The New Deal promised to restore agricultural prices, and many of its most radical measures, both with respect to devaluing the dollar and with respect to regulating individual activities, have been allegedly for the purpose of raising these prices. Yet today farm prices are no higher than they were in October 1933, 6½ years ago, before any of the New Deal farm-control measures were adopted, and before we embarked on the Warren policy of increasing the price of gold.

When I was in the Legislature of Ohio and any problem arose, the easy solution always suggested was to pass a law, and most of the laws passed were entirely useless. The New Deal has improved on this theory. Whenever anything appears to be wrong, they not only pass a law, but they create a bureau, and they give the bureau power to adopt regulations. In the course of a few years the regulations are 10 times the size of the law, and every day in the Federal Register are printed pages of bureaucratic regulations which enlarge the law until it does not even resemble what Congress actually intended. As the law increases in size, of course the bureau adds more employees to go out and enforce these detailed rules in every business and every farm. Unfortunately these laws and regulations are not only useless, like our Ohio laws in the old day, but positively harmful.

The basic principle of the New Deal is to effect prosperity by economic planning, enforced by Government regulation. In that purpose it has utterly failed. And it has failed particularly in restoring happiness and income to the underprivileged, for whom it daily weeps crocodile tears of sympathy. There are more underprivileged than there ever were before; more people with a bare living or not enough to live on than in the happy and new-dealless twenties.

#### THE ONLY CURE IS THE GROWTH OF PRIVATE ENTERPRISE

It is obvious that the present condition of unemployment and hard times can only be cured by putting men back to work in private industry. The new dealers have done the best they could. They have increased the Federal employees from 563,000 to 932,000 in 7 years, unhampered for the most part by civil service, and they have increased the Federal pay roll by \$1,200,000,000 a year. But, of course, this is a mere drop in the bucket. The more active and prosperous private industry is, the more people are employed. And so the whole problem is to encourage the development of private business, large and small.

How is it to be encouraged to grow? After New Deal experimentation we at least know what will not put people back to work. They won't be put back to work by vast Government deficits or the pouring out of Government money to great numbers of city and farm workers on the alleged ground that consuming power must be increased. Whatever the reason is, apparently you can't produce prosperity by increasing consuming power, for in the last 7 years the Government has spent \$21,000,000,000 more than it has taken in in taxes, and most of it has gone with the idea of increasing consuming power. Of course, relief is absolutely essential, as long as present conditions continue, to meet the unemployment situation in the city and the abnormally low prices in the country. But the idea that relief and doles and farm subsidies will produce prosperity or prime the pump has been exploded by actual experience. No people can spend itself into prosperity.

The cycle of increasing prosperity in the past has been set in motion, not by increased consumption but by increased production; by the constant growth of private enterprise. We hear a great deal about big business and this country being a country of big business, but it did not grow in that way, and, in my opinion, the growth depends far more on little business; on encouraging every man to start new one-horse businesses; on encouraging one-horse business to grow into big business. We are still a country of little business. There are over 1,600,000 independent retail establishments; there are 176,000 independent wholesale establishments; there are 170,000

active manufacturers; and of all these establishments, more than 99 percent employ fewer than 500 men and women each.

This country grew from a small Nation of 4,000,000 people scattered along the Atlantic coast to be in 150 years the greatest Nation in the world. There has been a constant increase in the number of men and women employed, and it has been due to the beginning of new businesses and their growth. That is the only reason why millions more people were employed in 1930 than in 1900. There has been a constant incentive to every man of energy or initiative to start for himself. He has always felt in America that if he was willing to put his time and money into some business of his own, and if he was willing to work harder than his neighbor and had better than average ability, he could provide for himself a better income, a better standard of living for his family, a better education for his children, and a better provision for his widow after his death. He was assured that through his own efforts he could improve his condition over that of his less industrious or less competent neighbor.

The process of investment, both by those who establish their own businesses and those who assist others, has been with the same motive. We have in America today a great plant on which employment depends. There are thousands of cities with every type of building from sheds to skyscrapers. There are thousands of industrial plants; a great railroad system; a great utility system. Every stick and every stone represents money which some man or some association of men saved and put into permanent improvements for the purpose of providing better for their future and for the future of their families. There is hardly a small town in the United States where there is not some industry; certainly no towns where there are not a large number of small, individual business enterprises.

My own belief is that big business is not the leader; that most big businesses are likely to reach a point at which they are more or less stable. When times are prosperous they increase employment; when times are poor they decrease employment. But sound growth depends on the constant influx into the economic system of new enterprises which put one man to work, then two men, then hundreds of men, and in rare cases hundreds of thousands of men.

#### THE NEW DEAL HAS STOPPED AMERICAN PROGRESS

Our trouble today is that this whole process has been checked, and that more people have gone out of business in the last 6 years than have gone into business. I have gone up and down the streets of small towns and talked to the butcher, the baker, and the grocer. There is hardly a man who would not like to sell out his business if he could only insure himself a small but steady income. There is hardly a man who will encourage anyone else to go into the same kind of enterprise. He no longer feels that success depends on his own efforts or ability. He has a dozen reports to make out every month to the State and Federal Governments, and at least half a dozen different taxes to pay.

The small-business man is more discouraged than the big one because he must do his own bookkeeping and reporting. Every other day some Government agent drops in to read his reports and make him do them over again because he isn't keeping his books the way some bureaucrat down in Washington thinks a green-grocer ought to keep his books. He has almost as many Government agents calling on him as the farmer has. He hasn't time to attend to his own business, and certainly not time to develop new ideas and expand the business. This is the actual condition in America today, which has checked all initiative and enterprise.

It is said that everything has changed; we are in a new era; the frontiers have disappeared; we are a mature nation about to go into a decline. I don't believe it, and certainly you in Florida have no reason to believe it. You are enjoying prosperity here, and you are enjoying it because even Government regulations can't altogether curb the American spirit under conditions such as exist in this imperial State.

From the first introduction of citrus fruit into the peninsula by the Spaniards, on through Flagler until the present, Florida has been built by private enterprise. It has not been built by the big corporations which the newspapers refer to as big business, but by thousands and hundreds of thousands of individual men and women, rich and poor. This State, with its beautiful cities and great resorts along both coasts and in the interior, is a monument to the traditional American spirit. If anyone is looking for frontiers, Florida fills the bill.

But Florida, while the most spectacular, is not the only State which has been able to rise even above New Deal bureaucracy. We have only to look at Texas and its magnificent cities. If you are talking about physical frontiers, they disappeared 50 years ago, but we did not know, until assured by New Deal pundits, that that fact meant an end to progress. Frontiers consist of more than free land. America has the same inventive genius it always had, and every day are developed new products of adventurous chemists in the fields of metallurgy, fabrics, and other materials. For instance, out of Savannah we can see for years ahead a great new development of the South's pulp and paper resources. There are brand new frontiers which can be endlessly extended.

What has checked this progress, where it is not pushed irresistibly forward by conditions which rise above discouragement as here in Florida? Without question it is New Deal government policy. There is a determined hostility in many Government departments to the development of private industry. The Government includes many men who desire to change our system to a form of state socialism and who spread a doctrine of hopelessness about the future of private enterprise.

You can see it in much of the action taken by Government departments before the Temporary National Economic Committee. They seem to be more anxious to prove that private industry cannot be carried on in free competitive style, that monopoly is inevitable, and that Government must regulate it, than they are to remove restraints on business activity. They are showing a hostility to our whole system of life insurance, one of the most typical developments of American life and the best method of encouraging and investing the savings of the Nation. No true new dealer believes in saving. There is even a suggestion that the Government should go into the insurance business.

The S. E. C. has certainly gone far beyond its original purpose of protecting investors against fraud and through its unnecessary restrictions and red tape has retarded the investment of money in private enterprise.

There is nothing which so completely discourages the growth of private business as Government competition, and it is impossible to compete with an institution which has no need of balancing its budget. In the T. V. A., in certain parts of the housing program, and in other fields, the Government has gone into business itself.

I have spoken of the Government regulation of little industry in all fields, but I could call attention particularly to the National Labor Relations Board, the S. E. C., the Wage-Hour Administration, the Walsh-Healey administration, each with its own inspectors piling up vast records which no one will ever look at except for the purpose of determining the amount of waste paper which can be chopped up and used again for New Deal bureaus. However hostile the New Deal is to business generally, it is assuredly the friend of the waste-paper industry.

Of course excessive taxation is a tremendous discouragement, and creates a whole crop of regulators of its own. Taxes today have reached the tremendous total of \$18,000,000,000 a year in the United States, or 26 percent of the national income. In other words, the Government absorbs 25 percent of the activity of its people, and for the most part the cost of this activity must be carried by the other 75 percent. That means that everyone's reward for hard work and initiative and daring is cut down 25 percent, whereas the chance of failure is even greater. The tremendous surtax has almost stopped the investment by wealthy people in industry involving the slightest risk. The average wage earner pays 20 percent of his income in taxes, and therefore he has little left to put aside to help him start business by himself or join with others. Taxes today have reached \$317 for every employed person in the United States, and corporation taxes have more than doubled in the last 6 years.

Not only that, the tax system has been employed for the political purpose of redistributing income, which means that the rewards of initiative are less, and certainly far less permanent. Taxes are imposed for economic planning purposes, like the tax on undistributed profits still advocated by Mr. Eccles. The drastic effect of this tax was to prevent small companies from building up the reserves necessary to assure their permanence and growth. In short, New Deal policy is alone responsible for strangling the growth and development of private industry which has brought us out of every past depression to a condition of greater prosperity.

#### THE REPUBLICANS CAN RESTORE PROSPERITY

What can the Republican Party do if it is returned to power? It unquestionably has to meet certain increases in Government expense, at least for the time being. It must and should afford adequate relief to the poor. It must and should assist the farmer whose prices are far below what they ought to be in proportion to city wages and industrial prices. It must and should continue reasonable old-age pensions and unemployment insurance. All these things should be done. They can be done more economically, and more equally, and more efficiently than the present system, as I have explained in other speeches. But the total expense of all these activities is not even a severe burden if private industry can be restored to what it should be by Government encouragement instead of Government hostility. America is rich enough to be humane and generous to all.

In the first place the Government should at least keep out of business itself. Projects like the Tennessee Valley Authority, to the extent they have actually been undertaken, must be completed and operated, but they can cooperate with private industry instead of supplanting it.

In the second place, regulation can be reduced. Take the National Labor Relations Board. It was created for one laudable purpose—to enable men who wished to organize to do so without compulsion from their employers. After listening to the hearings before the Education and Labor Committee, I am convinced that this purpose would and should have been accomplished without undue friction and without unnecessary strife. It certainly could have been accomplished without the outrageous perversion of justice which has occurred because of the Board's prejudice against employers and even against the older unions. I believe the present Board should be abolished and a new one set up on which employers and employees are represented rather than left-wing enthusiasts. I believe that most of the amendments proposed by the American Federation of Labor should be adopted, including those to assure to craft unions their right to exist; to permit an employer to express freely his views on bona fide unions which are contending in his plant; to regulate definitely the question of elections and the form of ballot.

In addition, I believe there should be a separation of the judicial and prosecuting functions of the Board because no board can

fairly be a judge in the prosecution of a case which it has initiated. If employer and employee know that their disputes will ultimately be submitted to a fair tribunal, acting under the provisions of definite law, it will in nearly every case compel an amicable adjustment in the early stages of the controversy.

Nothing threatens to throttle small business today as much as the wage-hour law. Big business can conform; little business often cannot do so and survive. I believe it should be amended to put in effect merely a minimum-wage law—one to prevent oppression in those cases where the ordinary processes of collective bargaining do not work because of lack of organization. It should not be used to move industry from one section of the country to another. The whole idea of government regulation of wages is contrary to the collective-bargaining theory. If carried to its logical conclusion, it means the end of all labor unions and the end of all industrial freedom, for, if the Government once assumes the job of fixing wages, there is no place left for democratic leadership among the employees themselves. Let us place a ceiling over hours and a floor under wages, but let us make sure there is plenty of headroom left between the floor and the ceiling for the development of new enterprise in every section of the United States.

The Securities Act can certainly be amended to be what it was intended to be—a protection against fraud and not a weapon by which the Government attempts to say what investment is wise and what is not wise. As far as possible, necessary laws should be police regulations, enforced on the complaint of those who may be injured, and not administered on hypothetical and theoretical grounds by thousands of agents running loose over every business and every farm in the United States. It is right for government to be a policeman to keep open the traffic of free enterprise, but not the maiden aunt of every business.

I have only mentioned a few examples of particular bureaus which have operated to discourage reemployment, but there are scores of other bureaus whose agents do more harm than good. In particular, the administration of those laws which exist can be changed until they are administered in a spirit of helpfulness to private industry, and not of hostility. We need a government sincerely anxious to make the present system work, and not to change the system. We need cooperation and not threats. Government should be the friend and not the foe, or the fussy critic, of the small-business man.

In the tax field, there may be little chance for reduction until prosperity increases, but there is certainly opportunity for a change in the system. The pay-roll tax is particularly oppressive on industry. Yet in the end it is a consumption tax, increasing the taxes of every wage earner as well as employer, directly or through increases in the cost of his food and clothing. It puts a premium on getting rid of employees and increasing unemployment. Even a general sales tax would be less stifling to business and employment, without being any more burdensome on the wage earner. The very taxes planned to promote the wage earner's security in the future in fact promote his insecurity in the present.

The high surtax rates discourage the investment by wealthy individuals which should be most helpful in creating employment. In particular, I believe the capital-gains tax should be repealed or substantially modified so that anyone who does put his money into enterprise may have an opportunity to make a substantial profit in those cases where he does not suffer a loss. For 6 years taxes have been developed on the theory that all profit is immoral, and ought to be taxed out of the window. Only in the reward produced by profit has America been built up and employment been increased.

There are many policies in which the Government can assist industry directly, without regulation. A complete study of the housing policy should be made, with the idea of further stimulating private activity in that field where so much employment can be created, with less direct Government operation. The farmer can be assisted without telling him what he can plant and what he can't plant. The farmer can certainly be assisted by protecting him against the importation of foreign products in direct competition with what he is raising. The administration of the reciprocal-trade treaties is inspired by the free-trade principles of the Secretary of State. The Republican Party believes in imposing and retaining a tariff equal to the difference in cost of production abroad, where wages are low, and the cost of production in this country, where we enjoy an American standard of living.

In short, the policy of the New Deal must be reversed. It is leading us inevitably to increased Government regulation and activity, and the gradual absorption of all industry into a collectivized state. It is driving us inevitably to a condition in which neither rich nor poor shall have the economic liberty or freedom which we have heretofore enjoyed as one of the fruits of the Revolution of 1776. We can dispute as to the details of this policy or that policy, but fundamentally the new administration must restore confidence and prosperity and encouragement to the little-business men of the United States, and those thousands who would like to become little-business men on their own account. They must be made to feel that their freedom and liberty in the conduct of their business is the constant concern of every department of the Government; that the Government is ready to help to keep open the channels of trade against Government regulation and private monopoly alike. We are interested in security; yes, but opportunity and not security is still the goal of American youth; yes, and even of the middle-aged and old folks of America today. America itself is still, thank God, a young country. If you need proof, look about you.

National Defense  
EXTENSION OF REMARKS  
OF  
HON. ROBERT R. REYNOLDS  
OF NORTH CAROLINA  
IN THE SENATE OF THE UNITED STATES  
Wednesday, February 7, 1940

RADIO ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a copy of a radio address which I delivered several evenings ago entitled, "Actual National Defense."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Good evening, ladies and gentlemen, permit me in the outset, please, to thank the management of the National Broadcasting Co. for this opportunity to discuss the all-important subject of national defense, a subject in which we are all interested at this particular time, in view of the conditions which we find existing throughout Asia and Europe.

Everyone is talking about national defense. Well, what do we mean by national defense? Are those words to be taken literally, thus meaning to defend the Nation? If so, then we must defend the Nation from all enemies, not only from without but also from within.

I am of the opinion that the Nation is in more danger from its enemies within than it is at the present time from its enemies without.

In addition, so I may not be misunderstood, I desire to make a statement in the form of a question: In speaking of national defense, what is meant—defense or offense? There is a radical distinction between the two. Do we mean soldiers and equipment to defend this Nation on our own shores, or is it that we mean soldiers and equipment for the purpose of engaging in an offensive campaign on foreign shores? Our national-defense program should interest itself exclusively in preparing an adequate national defense for the purpose of protecting ourselves against the enemies from without—that is, for the purpose of keeping the troops of foreign nations from landing upon and invading our shores—and that being the case, we should take into consideration the amount of money to be spent and the sort of equipment for which we should spend that money.

For the present we may well assume that there will be no invasion of the United States from the north across the Canadian border. Certainly for the time being, at least, and for many years to come we need not fear an invasion of armed forces from the south across the Rio Grande.

We need not fear an invasion from either the north or the south because the nations engaged in war in Europe will be so thoroughly weakened at the end of this present struggle that it will take a quarter of a century for them to reconstruct their armies and rehabilitate their nations, and none of them would be in a position to attack us in the Western Hemisphere for many years to come.

At the present time we are building up our defense forces in the Panama Canal Zone and in addition to that we are making secure the Atlantic approach to the Panama Canal Zone by strengthening our outposts in the Caribbean. We have defenses in the South Atlantic but none in the North Atlantic. In reference to the latter, I wish to repeat the suggestion that at this time it would be well if we could peacefully acquire the British islands of Nassau and Bimini, which are just a stone's throw off the coast of Florida, and also Bermuda, which is only 500 miles due east off the coast of North Carolina, which would provide us with outposts in the North Atlantic. The acquisition of these properties would go far toward strengthening our national defense in the Atlantic.

As to defenses in the Pacific, at Honolulu we have one of the most powerful outpost defenses in the world, perhaps only second to the British fortifications in Singapore. In passing from the Panama Canal Zone northward, may I say that at this time when we are negotiating with the Republic of Mexico, in regard to settlement of certain claims, it would be well to attempt to acquire Lower California, which is Mexican territory. This would add greatly to our defense locations in that particular section of the Pacific.

As to defenses in the far north, we should establish air bases at Nome, Wainwright, and Fairbanks, Alaska. Also establish an outpost in the form of an air base on Little Diomed Island, in the Arctic, which is only about 5 miles from Russian territory. Then develop air bases in the Aleutian Islands, one of which is but a few hundred miles from Japanese territory, and with the development of this line of defenses from the Arctic to the Panama Canal Zone we would be able to defend ourselves adequately and safely from the aggressions of an enemy force arriving from Russia or Japan.

Now, I believe in an adequate national defense. I believe we should have a standing army sufficient to provide a nucleus of officers from its ranks in case of war and conscription of man power. This coupled with our development of the Reserve Officers Corps and the development of our National Guard, which units would likewise be in a position to provide us with sufficient men of military training to step into the ranks of commissioned officers.

I believe in an adequate national defense for defense purposes only and I do not think that at this time we should go hog wild in spending money for armaments—battleships particularly—when there is no possibility of our being attacked for many, many years to come, even if then. But as to airplanes, let us continue their development because if ever we are attacked they will be our first line of defense. Today with airplanes carrying mounted guns of 1½-inch caliber as well as a number of machine guns, and travelling at the rate of 400 miles an hour we need have no fear of the enemy in the Atlantic or the Pacific, or from across our two borders.

The English and the French are not able to land any troops in Germany, nor have the Germans been able to march into France, notwithstanding the fact that those nations are in immediate proximity of one another. How, therefore, can any reasonable person suspect that enemy forces thousands of miles away could be landed on our shores or marched across our borders. Let's be reasonable about this whole national-defense program, and let's have an adequate national defense for defense purposes only.

Now, as to the enemies within, they are innumerable, and there is more danger to be expected from the enemies within than there is from the enemies without. These enemies within our Nation are ignorance, disease, unemployment, subversive forces, such as communism, nazi-ism, and fascism, alien saboteurs, and spies. Ignorance, disease, and unemployment are the cause of all disloyalty. If we are going to defend the Nation we must defend it against these enemies as well as from foreign enemies.

Today, we are spending as much to quiet the unwarranted fear of a foreign enemy as we are spending on all the education in the United States. Our people would be happier and more content with our form of Government if their physical needs were given additional care and if our millions of unemployed were provided jobs.

The first defense of any nation is loyal citizens, and they must be backed up not only with education, health, and employment, but with all the resources of a nation developed to the highest stage of perfection.

Annually \$10,000,000 are being spent in the United States for Communist activities. The fact is, the auditors for the Dies committee, after auditing communistic accounts in New York City banks alone found that \$10,164,730 had actually been spent by the Communist Party. It has been conservatively estimated that 78,000,000 copies of newspapers, magazines, and bulletins are circulated in the United States annually in the form of subversive propaganda by the Communist Party, which seeks to overthrow the Government of the United States.

As to saboteurs and spies, Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, Department of Justice, recently revealed that his division of the Government is receiving daily 217 complaints of espionage and sabotage. These complaints are rolling in at the rate of 78,000 annually. Just think of it. Since the declaration of war in Europe more complaints are being received by the Federal Bureau of Investigation daily than were received yearly prior to the declaration of war in Europe on September 3, 1939. Yes, I believe in an adequate national defense, and that adequate national defense should be in the form of defending ourselves from the enemy from within as well as the preparation to defend ourselves from the enemy from without.

In connection with it all, may I say that I have a five-point all-American program, and that program is as follows:

Point No. 1. Keep America out of war. This may be accomplished by remaining neutral. Keeping ourselves from becoming involved in any entangling alliances. Preparing for ourselves an adequate national defense for defense purposes only. Stopping the tremendous amount of propaganda that is taking place in this country today by word of mouth, by foreign lecturers and alien socialites who are honeycombing this country, and by the distribution of propaganda literature.

Point No. 2. Register and fingerprint all aliens so that we may know the location of every alien within our midst and what he is doing. When I refer to aliens I mean those who have arrived here illegally and remained illegally, and those who arrived legally but have remained illegally, neither class of which have applied for American citizenship. By the registration of these aliens we could more easily place our finger upon saboteurs and spies.

Point No. 3. Stop all immigration into this country for the next 10 years, or until such time as our own 10,000,000 unemployed have been provided with employment. Poverty and unemployment breed discontent. There should be jobs for American citizens.

Point No. 4. Deport all alien criminals and undesirables. A former Commissioner of Immigration of the Department of Labor stated before a committee here at the capital that there are in this country today 20,000 habitual alien criminals. Why should we countenance them? Why should they be permitted to prey upon the American people since former Attorney General Homer S. Cummings stated that crime in America today costs the taxpayers of this Nation \$17,000,000,000 annually?

Point No. 5. Rid this Nation of all "isms," communism, fascism, and nazi-ism, and let's fight one as enthusiastically as we would another. This country is big enough only for Americanism.

If you favor my five-point program I should like to hear from you by letter. On the contrary, if you are opposed to any one of the five points which I have just enumerated, I should like very much for you to write, providing me with your suggestions as to how best to defend America from within, as well as from without. I thank you.

### National Automobile Dealers' Association Convention

#### EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, February 7, 1940

ADDRESS BY DONALD R. RICHBERG

Mr. MALONEY. Mr. President, I ask unanimous consent that I may have inserted in the Appendix of the RECORD an address delivered by Donald R. Richberg at a convention meeting of the National Automobile Dealers' Association in the District of Columbia on January 23, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If the N. R. A. had been stricken down by the Supreme Court alone, it would be alive and flourishing today, although probably under some other name, and I am sure, under a different management. But the Supreme Court only destroyed an institution which was committing suicide.

Most of you remember what happened. We launched "a great cooperative movement throughout all industry." Its goal was (in the language of the President) "the assurance of a reasonable profit to industry and living wages for labor, with the elimination of the practical methods and practices which have not only harassed honest business but also contributed to the ills of labor."

The Recovery Act not only challenged management, labor, and government to play well their parts and to perform fully their share of a common task, it also offered to all an opportunity to spend more time working together and to waste less time fighting one another. But one of the saddest lessons taught by the N. R. A. was that it is much easier to induce men to fight for their special interests than to cooperate in advancing general interests.

In the early days of the N. R. A. a good many people "got religion," and actually devoted long hours to projects for the common good. But more and more it became evident that conflicting economic interests cannot be wholly reconciled, and that the eternal price of peace is compromise. This usually means that the big fellow agrees to take less than he could probably force the little fellow to give. A peacemaker may persuade the big fellow that this is both the noble and the smart thing to do. But somehow the little fellow who has peacefully lost his shirt, but saved his undershirt, is seldom satisfied.

So it happens that government is called upon, first as an ineffective conciliator, and then to fight the battles of the weak against the strong. And a democratic government is likely to leap into the fray because it is inevitable that the weak have more votes than the strong. You have noted that for many decades labor, unorganized and economically weak, sought first the conciliatory aid and then the militant support of government in its struggle with powerful employers. And with the growing strength of organized labor we now observe that each of these economic contestants is seeking to win by adding political power to its economic strength.

Likewise in economic struggles between big and little business, between sellers and buyers, between manufacturers and distributors, between producers and consumers—we find that large groups of weak, dependent individuals are calling more and more upon government to fight their battles with what is commonly described as "concentrated wealth."

The N. R. A., which was designed not to be an arbiter but to be a conciliator, failed to meet this demand. The little fellows in business, the farmers, even industrial workers to whom it rendered a great service, watched with suspicion which easily became hostility, and seldom cordially supported the N. R. A. But "big business"—the reputed parent of the N. R. A., although wholly innocent of such a conception—"big business" never accepted the basic principle that industry should be cooperatively organized and operated under a limited governmental supervision. Big business, along with little business, agriculture, and labor, had a lively fear that the prescription of "cooperation under governmental supervision" was just a sugar-coated poisonous dose of political, socialistic control of business.

It is far from my intention today to rehash many discussions of the unreasoning nature of this fear. Let me only reassert my

conviction that the choice we have been facing for many years is not between pioneer individualism and State socialism, but is a choice between self-government in industry, under a limited but necessary governmental supervision, and a complete political control of industry.

Since the end of the N. R. A. we have been moving steadily away from the principle of self-governing industry into more and more political control. The Robinson-Patman Act, the Wagner Act, and State and National price-maintenance laws may seem obvious examples of this trend; but there is even greater significance in increased judicial support for agriculture, industrial and financial control measures, and their administration.

It is also evident, particularly in the extensive investigations of the Temporary National Economic Committee, that every aggressive group of business interests, every organized geographical or industrial section, is promoting some sort of National or State regulation of business which it is hoped will advance the special interests of one group necessarily at the expense of many others.

It does not seem to be realized by any particular group—or else nobody cares—that the inevitable product of all these varied pressures will be an all-pervading political control of our economy—not the elimination of monopolies and unfair competition but the regulation of prices, wages, and business practices by a government charged with the impossible duty of protecting the business, the profits, the employment, and wages of a host of organized minorities, while, at the same time, obligated to protect all the people as consumers from exploitation by these legally protected special interests.

Inevitably most seekers for political favor are going to be disappointed, because legislation can seldom be so one-sided as to serve their interests alone. Public utilities had their day of extravagant favoritism and grants of monopolistic privilege; and now, from the staggering railroads to the weeping electric power companies, they are shouting and groaning over the hardships and injustice of political regulation and Government-supported competition.

Organized labor, with just cause, sought political aid in its struggle for economic power; and now it faces a rising demand that its increased power shall be balanced by legal obligations to fulfill the responsibilities that go with power.

Farmers sought Government aid, with just cause, to raise prices and to assure them of some reward for their labor; and now they find that such political assistance carries with it the obligation to accept political control of their uses of their own land.

Businessmen sought relief from price discriminations; and now find themselves enmeshed in a vast net of legal obligations to conduct their business according to vague and complicated rules, which even their political regulators cannot explain except through expensive litigations and volumes of judicial rulings.

It should be evident, even to the most ardent advocate of special legislation, that, while he may save his individual white shirt today, he is doing his part to put the Government into the business of making black shirts and brown shirts which he will have to wear tomorrow. He is doing his part to make inevitable a political control of all business in the not distant future.

Let me say in conclusion that I am not criticizing or opposing the effort of any economic group to protect and to promote its interests by seeking political aid in a struggle to survive against the competition of a more powerful group. It is idealistic to think in terms of the general welfare. It is far sighted to sacrifice an immediate gain for an ultimate greater gain. But everyone who is self-supporting has to meet the practical problem of how and where he is going to earn a living today; and in a general scramble to get help from the Government he will feel that he should not be left behind to enjoy the dubious satisfaction of independent bankruptcy.

But I would say to any industrial group: Do try your best to work out your problems within the industry before you invite political regulators to take the management of your business out of your hands. If you have the organized strength sufficient to have a law passed for your special aid, you must have a power which can be wielded effectively in self-protection of your interests. If that power cannot save you and in desperation you turn to political saviors, then I would say with no irreverence—God bless you and God help you!

### Neutrality

#### EXTENSION OF REMARKS

OF

HON. JOHN A. DANAHER

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, February 7, 1940

ADDRESS BY PROF. EDWIN M. BORCHARD

Mr. DANAHER. Mr. President, I respectfully ask unanimous consent to include in the Appendix of the RECORD a remarkable address by Prof. Edwin M. Borchard, who is

Hotchkiss professor of law at Yale University. At South Orange, N. J., on January 27, 1940, speaking before the Yale alumni, he delivered an address upon the question of United States neutrality. Since it bears so markedly on the problems confronting our Nation, and because of Professor Borchard's unquestioned status in the field of international law, I feel that it is a document of such public interest that it should be incorporated in the RECORD at this time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The subject that has been assigned to me, the Question of United States Neutrality, arouses a counterquestion, "Why should there be any question about it?" The answer lies in the fact that conflicting voices have arisen in the land to counsel, on the one hand, complete abstention from Europe's (and Asia's) wars, that is, neutrality; and, on the other hand, aid to one side to assure victory for the favored belligerent; that is, intervention. The administration seems to have adopted for the present an ambiguous course, politically precarious and legally doubtful, of hoped-for abstention but nonmilitary participation. It may not be without interest to trace the path by which the country reached its present state of divided counsels.

The historic beginnings in America were simple and clear. The fact that the colonists had been parties to practically every European war of the eighteenth century, of which they were sometimes the cause and practically always the unwilling victims, fortified the moral justification for their political emancipation from Europe. The Europe they saw was the Europe that we see—an interminable series of feuds which place now one country and now another in a position of temporary domination. While relief from these incessant struggles was not the primary motive for the American Revolution, the early statesmen found in such relief a decided and highly prized advantage. History, geography, and hard experience thus conditioned the origins of American foreign policy. Whatever the division of opinion on domestic policy, there was no division on detachment from European wars. Even those who favored the French Revolution, like Jefferson, did not dream of intervening, and when in 1793 the French invoked the alliance of 1778, the treaty was interpreted so as to justify American neutrality. In 1798 the Congress went so far as to denounce the treaty unilaterally. Washington's Farewell Address did not lay the foundation of American policy. It merely reaffirmed it. As far back as 1776, and, indeed, at the very time the French alliance was under discussion, John Adams expressed a common conviction when he opposed any agreement that would entangle the Republic in the future wars of Europe. He added: "We ought to lay it down as a first principle and a maxim never to be forgotten, to maintain an American neutrality in all future European wars."

Whatever the name that may be given this policy, it was a natural policy, the only one consistent with American self-preservation, and in fact a boon both to Europe and the United States. It was founded on common sense and had as its natural corollaries the doctrine of nonintervention in the internal affairs of other countries and of recognition of political facts as they evolved through internal revolution or external changes. As Secretary Hay once remarked, the foundations of American foreign policy were of "limpid simplicity."

Within these clear guiding lines the Nation flourished. No one seriously questioned the importance of abstention from Europe's wars. In the process the United States was enabled to make numerous contributions to international law, and especially to the law of neutrality, such as the proclamation of 1793, the acts of 1794 and 1818, the doctrines that "free ships make free goods" adopted by the Declaration of Paris of 1856, and the campaign for the freedom of enemy private property at sea, which has been advocated by Secretaries of State, congressional resolution, and by Theodore Roosevelt himself, who recommended it as a matter of "humanity and morals." The United States was in the forefront of every movement for strengthening the rights of neutrals, and the constructive character of the nineteenth century was hospitable to such a policy. It is a major calamity that the Wilson administration, even before entering the European war in 1917, found in the war's alleged moral aims a justification for not defending the most time-honored rights of neutrals and the freedom of the seas. No one can tell when, if ever, that lost ground may be recovered. One can only be certain that the violations of law then committed and tolerated have helped to increase naval armaments in every maritime country and made life more precarious for all neutrals, because it has become more dependent on force and less on law.

How has it come about that the sound doctrines on which the Nation achieved respect, greatness, and well-being became the subject of attack not merely from Europe but in intellectual circles in the United States? Before attempting to answer this question, something should be said concerning the philosophy and history of neutrality.

#### II

Neutrality as a principle and a practice was a concomitant of the maturity of the modern state system. It represented a triumph for reason and sanity in a world that had not yet overcome the habits of war. Sir Thomas Barclay, writing in the *Encyclopædia Britannica* in 1911, deemed it the highest achievement of international law. It was a matter of slow growth. It was not easy, from the thirteenth to the seventeenth centuries, to win the right to stay out of the wars of other peoples. States, especially small ones,

were almost compelled to join in the wars of larger neighbors, and often to risk their existence on their ability to pick the winning side. But when neutrality had acquired a fully accepted legal status in the sixteenth and seventeenth centuries, it was realized that a contribution toward the welfare of mankind had been made, for large areas of the world could now cultivate the arts of peace when others decided to go to war. From the eighteenth century onward the path of progress was deemed to lie in the firm abstention from other people's wars and in the development of that privilege into a legal system. Toward its perfection the United States made notable contributions.

Illusions concerning the state of the world were not then so common as they are now. It was not assumed that in a highly competitive world of hundreds of millions of people of varying outlook, wealth, territory, mores, with unfair competition a common practice, all conflicts could necessarily be avoided. The effort of constructive statesmanship was devoted to ameliorating tensions, to deflating the causes of conflict, to devising mediatory and arbitrary methods of conciliation and settlement, to keeping alive an atmosphere conducive to negotiation, to preventing fundamental, especially ideological, cleavages between peoples. The Treaty of Vienna kept major peace in Europe for a century, and modifications were facilitated by a comprehensive European outlook. No super-state was assumed. No panaceas were proposed, because statesmen respected their reputations. As the international structure was at best a delicate one, it had to be treated with a certain degree of discretion and caution. No undue demands were made upon it. Moral judgments on fellow members of the state community were generally withheld. Such policies, while they did not profess to afford a guaranteed cure for war, nevertheless did much to ameliorate its occurrence, kept a large part of the world at peace, narrowed the area of conflict, and were conducive to sensible treaties of peace.

From the fiery crucible of many a war there was gradually evolved a group of principles and rules by which belligerents and neutrals achieved reasonably definite guides for the conduct of their reciprocal relations on land and sea. The neutral refrained from military aid, the belligerent permitted nonmilitary trade. No nation was always a belligerent, and even the belligerents, while under temptation to overstep the bounds when under pressure, appreciated the necessity for rules of law as an alternative to anarchy and unregulated force. Treaty, custom, prize courts, claims commissions, diplomatic settlements, had over a period of four centuries developed a great body of rules founded on intelligent principles—not necessarily on logic—for regulating the relations between belligerents and neutrals. These were known to informed persons and afforded a compass by which to guide the ship of state through dangerous waters. Belligerents had an incentive to observe them in order to hold down claims and to avoid the risk of adding to the list of their enemies; neutrals, in order not to expose themselves to legitimate criticism, damages and attack, and risk plunging their people into war.

#### III

A system of independent states of varying size and power could not, however, develop a legal system such as prevails within each of the states. There a legislature or lawgiver in more or less continuous session relieves social strains by frequent changes in the law, and a balanced division of governmental powers helps to maintain, after a fashion, the social equilibrium. The system of independent states is far too primitive for so organic a legal system. Many of the political errors of recent years have been due to the easy but unfounded assumption that there is a close analogy between the law within a state, whereby the unruly are haled before the civil authorities, and the international system, in which no nation is authorized to assume the role of policeman or judge. Law is built on experience with human conduct and propensities. The moment even municipal law exacts too much it proves unenforceable. Witness the experiment with prohibition. International relations are much less susceptible of external control. Any attempt to impose a rule which does not grow out of previous experience is almost sure to fail. Thus mere hatred of war is not enough to justify extravagant hopes of a fundamental change in international relations.

Neutrality, as a legal status, grew out of this painful experience with war. It finds its source in candor, in the obligation to hold the scales even, to remain friendly to both belligerents, to lend support to neither, to avoid passing judgment on the merits of their war. It assures both belligerents that they are dealing with a friend, not a disguised enemy. The belligerents must know who is in the war and who is not. In return for obligations assumed by a neutral, the belligerents undertake to respect his rights as a neutral, including the right to stay out of the war. There are those who regard this life-preserving role as insufficiently heroic and who recommend joining in foreign wars on the "right" side as a "world service." But they seem unaware of the humiliations which the "servant of mankind" brings to his own people and the confusion which interference in foreign quarrels spreads to the rest of the world.

#### IV

This is not the place to examine how the United States slipped into the European war in 1917. In brief, however, the reason is to be found, I fear, in a departure from those fundamental precepts of candor, impartiality, and detachment which neutrality imposes on a neutral. You cannot help one side at the expense of the other and hope to remain neutral or escape the penalties of unneutrality. You can't have it both ways. If you wish to remain neutral you

must also respect the obligations of neutrality, know what is neutral and what is not, and display some capacity to handle yourself. You can't ask immunity for Americans on armed belligerent merchant ships. You can't write notes to one belligerent for the record only.

And now we come to the question how neutrality as a principle and a policy for the United States came to be disparaged. It was partly due to the war, pictured as a crusade for righteousness, and partly to the theory consecrated in the Covenant of the League of Nations that the way to insure peace was to enforce it by joint action against an aggressor. The impractical and dangerous character of the assumptions on which this theory is based were not perceived by its more trustful devotees. Apart from the fact that it was designed to hold down the status quo of 1919, it stands to reason that important nations cannot be threatened by their fellows with starvation and boycott and force as weapons without stirring emotions that are the very reverse of peaceful. And, as was predictable, the attempt to apply the system of sanctions in Manchuria and Ethiopia created new cleavages and provided new causes of conflict among the nations. It has necessarily stimulated the urge for self-sufficiency and conquest. It has encouraged the growth of armaments, for prospective coercion and coerced alike.

With such a system, neutrality is necessarily incompatible. Accordingly, neutrality, and especially American neutrality, was vigorously attacked as selfish, immoral, and cowardly. One of the leading spokesmen of the new theory of peace by force, Professor Fenwick, exclaimed: " \* \* \* Neutrality must go as a legal conception." It was asked, with the utmost sincerity, how could anyone conscientiously remain out of the posse comitatus when an aggressor was on the loose? The long-established rules of international law, which had been founded on practical experience, were now disparaged as inconsistent with the new theory which conceived the world as divided between peace-loving and warlike nations. We were to quarantine the aggressors, in the name of what was called collective security, international cooperation, and preventing war. Intervention, not neutrality, was to become the way of life for the United States.

But how the bad were to be made good, and especially democratic by starvation and hostile measures short of war was left unexplained. It looks as though the new methods oversimplified the problem of peace and war and neglected many elemental facts of international relations. For example, the new theory overlooks the manner in which wars arise; the complex causes of war, historical, psychological, and economic; the nature of nationhood in the modern world, including prestige and "face." The theory proceeds from the assumption that the distempers and discontent that move masses of men have a moral origin; it overlooks provocations to resentment but condemns the expression of resentment; it overlooks the fact that the term "aggressor" is a call to arms and at once raises the temperature; it overlooks the fact that historians after decades of investigation usually are unable to reach a unanimous judgment on how blame is to be distributed, assuming such a task to have any value. It overlooks the fact that the life of nations is not static but dynamic and that nations rise and fall; that no country can be guaranteed against the consequences of maladministration, against a falling birth rate, against deterioration of its resources, physical and spiritual; that the attempt to maintain an unhealthy status quo might be anything but constructive. The modern distempers, aggravated by 20 years of misunderstanding, have made peaceful change exceedingly difficult. Admitting that many current invasions of territory are or seem unjust, the remedy of general intervention and especially United States intervention might be worse than the disease.

The position of all neutral states has been physically and morally weakened by the neutral surrenders of 1914-17, by the political disrespect for neighboring neutrals manifested on the part of the belligerent states, and by the ideological attack on neutrality as immoral. It would be unfortunate for the European neutrals if the pillars sustaining neutrality were to be further undermined.

V

The United States policy toward Europe and Asia has been torn between nonintervention of the traditional kind, wrongly called isolation, and intervention on behalf of righteousness. The conflict of ideologies has troubled the country ever since 1917. It lay at the root of the struggle to enlist the United States in the League of Nations and of the effort to frame a neutrality statute. The non-interventionists, fortified by those who wished to take from the President the temptations to quarrel which led the United States into the last war, sought to provide for equal treatment of all belligerents, with as little Presidential discretion to favor one side as possible. The interventionists sought as much opportunity to discriminate against "aggressors" as they could get, with wide Presidential discretion in applying the statute and in adopting implementing regulations.

The expression of these conflicting views in legislative bills and statutes makes interesting history. After the ratification in 1923 of the Kellogg-Briand Pact, which was construed to enlist the United States in the enforcement of articles 10 and 16 of the Covenant of the League, numerous movements were initiated at Geneva and elsewhere to draw the United States into definitions of "aggression," into "consultative" pacts, into commitments to apply or tolerate sanctions, and other devices calculated to enable the United States with certain other powers to "enforce peace," as it was called.

Numerous resolutions were introduced in Congress to enable the President to cooperate with other countries in placing an arms

embargo on "aggressors." Some of these resolutions passed the House. One also had passed the Senate in 1934, when, on reconsideration, an amendment was adopted providing that all arms embargoes authorized by it were to be applied impartially to all parties to a foreign war. Although apparently approved by the administration before adoption, approval was later withdrawn, for when the bill was returned to the House it was allowed to die.

Then came the Nye investigation, with its somewhat extravagant finding that munition makers and bankers had caused our involvement in the last war. This view, combined with a growing belief that unneutrality had actuated American policy in 1914-17, led to the Neutrality Act of 1935 embodying the impartial arms embargo, loan embargo, prohibition of American travel on belligerent vessels, prohibition under Presidential discretion of the admission of submarines, and the Munitions Control Board. The act was applied in the Chaco war and also in the Italian-Ethiopian war of 1935-36. Nevertheless, after the League declared Italy to be the aggressor, efforts were made by the administration to place what was called a moral embargo on certain other commodities, such as copper, oil, trucks, tractors, scrap iron, and scrap steel. This was not authorized by the statute, and the injunction broke down when the League powers found themselves unable to agree on how to apply sanctions against Italy.

But the demand for commodity embargoes with Presidential discretion in their selection was reflected in the bill introduced in 1936. That particular demand was defeated; critics pointed out that it would have violated treaties and afforded wide opportunities for discrimination between belligerents. But in the act of 1937, such a discretionary embargo on secondary commodities was authorized with a cash-and-carry provision applicable for 2 years. This was designed to insure that no American vessels or American-owned cargo would be found in a war zone, yet that American trade might continue if cash were paid and if the foreign buyer carried the goods away in foreign vessels. The President was given the power to bring the act into operation when he found a state of war to exist.

On the first occasion for the application of the 1937 statute, namely, the Sino-Japanese war, the President declined to find that there was a state of war because it was said no war had been declared. Most wars are undeclared. It was said also that the reason for not bringing the act into force was that it would have operated to the advantage of Japan. However that may be, China was granted a large loan by the Export-Import Bank, and extra legal executive moral embargoes against Japan were enjoined upon American manufacturers. This injunction was at variance with article 5 of the Treaty with Japan of 1911 which prohibited discriminations in trade. It was said that Japan was violating the Nine Power Treaty and the Kellogg Pact—vague political documents hardly permitting of such easy, unilateral judgments. But possibly the country may have acquiesced in this departure from the Neutrality Act of 1937 and in the subsequent discriminations against Japan.

Impartiality and neutrality began further to weaken, as Germany invaded neighboring countries and the war clouds gathered in Europe. In January 1939 the President came out for "measures short of war" against aggressors. In the 1939 revision of the Neutrality Act the arms embargo was repealed. It was repealed to enable the United States to supply arms, ammunition, and airplanes to the Allied Governments, material which for physical reasons Germany could not get. The mere change of law by a neutral during war is not illegal, provided it strengthens his neutrality. But when made for the benefit of one side while weakening abstention and neutrality, it is not privileged. Nevertheless, it is probable that the majority of our people were willing to take the chances of reprisal by the disfavored belligerent, although they were not adequately informed, I believe, of the risks they were running and the precedent they were creating. The expired cash-and-carry provisions were revived, and in addition the President was authorized to establish combat areas where no American vessels could ply.

Finished bombing planes are now being supplied to Great Britain and France; cotton, which is but ought not to be contraband, is being sent to Britain by the United States Government; merchant ships armed with four 6-inch guns are admitted to our harbors as peaceful vessels, and other acts are being undertaken the legality of which on the part of a neutral not only a lawyer might question. In the case of the Russo-Finnish war, the Neutrality Act has been left unapplied, again on the alleged but irrelevant ground that no war has been declared. But here also the departure from the statute probably has popular support. It is understood that planes contracted for by the United States have been released to Finland, a \$10,000,000 loan has been granted by the Export-Import Bank, and further public loans are now under discussion. Again it is proper to observe that these acts are not consistent with United States neutrality.

This brief recital will have indicated that in spite of statutes and of the desire of the country to remain out of war, and presumably to remain neutral, the urge for discriminatory treatment of "aggressors" has powerful support. Yet it is well to know that, however the discrimination may satisfy emotionally, the risks involved cannot be overlooked. Admiral Stark, if correctly reported, recently asked for a fleet large enough to defeat four great powers in hypothetical combination. It is quite natural that hostile discriminatory policies would create the thought that such powers might become combined enemies of the United States. This invited danger is the only reason that I can see for this extraordinary expansion of the armed forces of the United States, for it would appear that the gradual weakening of Europe and Asia is relatively strengthening

the position of the United States. But if we are to embark as a nation upon the policy of influencing the outcome of foreign wars by discriminatory acts against disfavored belligerents, in whatever interest it may be done, it is well to recognize that neutrality has been departed from and that the risk of war is invited. And it is quite probable that if the aid rendered proves insufficient, more aid will be sought and given until the commitment proves irretrievable. And if, perchance, it should prove unavailing, humiliation would be the least of the consequences. A growing accumulation of resentful enemies would be very likely. Even Emerson's intelligent aphorism that it is the task of the wise to undo the harm done by the good will be academic. This is quite apart from the internal risks of dividing our own people, of bankrupting the country, of impairing the political and social order at home. Guizot, the great French historian, remarked in his reference to George Washington: "It is the property of great men, even when they share the prejudices of their time of their country, to know how to get free from them and how to rise superior to their natural habits of thought."

The very fact that emotionally we are so nearly unanimous in wanting one side to win should make us especially wary of the risks we are taking and of the responsibilities that we are incurring in giving assistance to that side and handicapping its enemy. Difficult problems often present such dilemmas, but it is well to be clear that we cannot under the guise of neutrality undertake unneutral action and expect indefinitely to escape the consequences. Whatever the policy desired by the country at large, there ought to be no misunderstanding as to what we are doing and the legal and political risks that are involved.

Considering the numerous unsolved domestic problems that now confront us, many of them legacies of the last intervention in Europe's wars, it would seem that a more effective service to humanity could be performed by solving our own problems and by saving the United States and this continent for constructive post-war contributions in healing the wounds of war than by participating in this latest of the series of conflicts in other continents.

**Home Defense Force Plan**  
**EXTENSION OF REMARKS**  
OF  
**HON. STYLES BRIDGES**  
OF NEW HAMPSHIRE  
IN THE SENATE OF THE UNITED STATES  
*Wednesday, February 7, 1940*  
ADDRESS BY E. G. B. RILEY

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by a gentleman of my state, Mr. E. G. B. Riley, on the subject of a home defense force plan. The address was delivered under the auspices of the Veterans of Foreign Wars. The subject is a timely one, and I think the address will be of general interest.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Every hour finds this country drawing nearer to a state of war. Every day finds us responding more and more to the most insidious campaign of propaganda that has ever been directed against any nation.

The keynotes of this propaganda are sympathy and hatred. Recognizing the futility of again being successful by a direct appeal to have us join them as allies on foreign soil, Great Britain and France are now fostering an indirect plan which is accomplishing the desired end.

The ravaging of Czechoslovakia and Poland by Germany and Russia did not result in any direct aid reaching them from Great Britain and France, even though such aid had been promised.

The shadow of Munich spread even to these shores. Then came the diabolical raid on Finland by Russia.

Having witnessed the desolation of Poland, brought about by means of control of the air, the Allies were aware of Finland's inability to permanently withstand the assaults of the Russians unless proper aviation equipment were provided.

This country, in order to keep free of foreign entanglements, passed our neutrality laws. These laws prohibit our vessels from entering into designated war zones, which zones are the waters contiguous to the combatant countries. These laws also restrict us from sending munitions of war to any of the combatant nations and, further, restrict our Government from making loans to any nations that are in default of indebtedness to the United States. These laws further restrain this country from delivering to any combatant nation munitions of war, including airplanes, unless same are paid for and title passed in this country before shipment.

Immediately after these laws were passed Great Britain and France set out to circumvent our neutrality legislation by inflam-

ing, through propaganda, public opinion against the nations whom they were fighting and against those whom they might be expected to list as their enemies in the future.

When Finland was invaded by the Soviet Republic the natural effect was to arouse our sympathies for that nation, although it must be stated that it was most undiplomatic to have our administrative heads give public expression to such sentiments. These expressions showed distinct prejudice and disqualified this Nation from acting in the capacity of peacemaker.

Great Britain and France are the two nations most vitally interested in having Finland successfully oppose Germany's ally, the Soviet Republic.

It would have been the most natural sequence to have these two nations, Great Britain and France, supply Finland with the necessary four or five hundred airplanes which were so urgently needed.

Instead of so doing, through their propaganda this country has been placed in the position of apparently denying most vital aid, in the form of airplanes, to Finland. British propaganda has succeeded to a point where we have relinquished title to airplanes manufactured for the United States Government, and we have delivered some of these planes to Finland. To make matters worse, these airplanes, or munitions of war, were delivered in American ships to Norway, where they were transshipped to Finland, one of the combatant nations.

Further responding to this campaign of propaganda, ably disseminated through the medium of one pro-Ally columnist, our Government has already made loans to Finland through the governmentally owned Export-Import Bank. This action can definitely be considered by the Soviet Republic to be a hostile act, thereby threatening our neutrality. The desired funds for Finland could be properly provided for by the issuance of Finnish governmental bonds subscribed to by individual citizens and corporations of the United States.

We Americans have not forgotten that during the early days of the last World War millions of dollars were spent on propaganda to force our country to join the Allies in making war on Germany and her allies.

History reveals that these millions were, from the Allies' standpoint, well spent.

We entered into the "war to end all war," and we won the war. As victors, what did we accomplish?

Did we succeed in freeing any oppressed nation?

Did we succeed in spreading Christianity throughout the world, or did we aid in the maintenance of the Christian church?

Did we make safe for democracy any nation or group of nations?

Did we for even one short generation insure the safety and security of our children?

Did we end all war?

No; we did not accomplish any one of these desired objectives.

The last war brought the deepest sorrow to millions of Americans who lost their husbands, sons, and relatives through sudden death.

Millions of other Americans witnessed the anguish and suffering of their relatives, who came back maimed and gassed, and who, after years of indescribable existence, passed on to join their more fortunate comrades, whose lives were snuffed out on the battlefields.

At this time thousands of those who only 23 years ago constituted "the flower of our American manhood" are lingering in veterans' hospitals suffering untold misery.

Other thousands of our brothers can be seen still carrying the scars of war which time cannot erase.

What a terrible price to pay even for a victory won over an enemy who was attempting to invade our homeland; but, alas, we have not even this consolation. The sacrifice of our blood was made on foreign soil thousands of miles from the United States.

Of lesser importance were the results inflicted on our economic life. The World War is directly responsible for the terrific unemployment conditions under which we have been and are now staggering. The war was further responsible for the incomprehensible debt burden of over \$42,000,000,000, which debt we evidently cannot reduce and which our children and their children will be unable to pay.

At the present rate of spending the United States will reach its debt limit of \$45,000,000,000 before May 1, 1940. Any nation which cannot live within its income and which cannot borrow additional funds is headed for bankruptcy.

Bankruptcy is the forerunner of revolution and revolution means communism.

Our request for repayment of the billions of dollars loaned to our Allies to finance them during the World War has for years brought the same response, viz, "It is impossible for us to pay."

American troops and American dollars saved the homelands of both England and France. These countries could not return all our troops, but they could have repaid the billions of dollars taken from you and your families by taxation to save their homes and industries.

A short time ago it was announced by a member of the British Cabinet that this war was costing England \$30,000,000 a day.

If that nation had paid \$30,000,000 daily to the United States for a period of less than 5 months, its full indebtedness to the Nation would have been paid in full and your tax burden would have been reduced.

This conclusively proves that it was not inability, but unwillingness, that caused England to default on her indebtedness to the United States.

This can likewise be said to be true of every other nation now in default of its debt.

It would be amusing were it not tragic to look over the record to see how numerous have been the occasions when our United States have been made the diplomatic and financial dupe of foreign nations.

During the World War our so-called diplomats, supervised by our national governmental heads, elected to keep us out of war, were placed on the international merry-go-round, and eventually we were dragged into the conflict.

We have not forgotten the many secret international conferences in which personal envoys of the then President participated.

We have not forgotten the powers delegated to individuals by Congress, which powers were so exercised as to result in placing our sons and brothers in the first-line trenches on foreign soil.

We could have maintained our neutrality had we not responded to the wiles of skilled foreign statesmen and the propaganda of the Allies.

Secret treaties or agreements, not ratified by the Senate, were other determining factors in making the United States one of the combatant nations.

We now, in spite of past costly errors, are again being asked to have Congress waive the power, vested in it by our Constitution, to ratify all treaties.

Congress is being asked to agree to a violation of our Constitution through the subversive method of calling a trade treaty a trade agreement.

A treaty must be ratified by the Senate, and the practice of eliminating this necessary ratification by our representatives in Congress by designating a treaty as an agreement must be most strongly condemned.

No matter what nomenclature is employed, any such action is a distinct violation of the Constitution of the United States.

It is now plainly evident, by the haste of the combatant nations to negotiate reciprocal-trade treaties, that such treaties are being used as instruments to defeat their enemies.

Such treaties or agreements have been proven to be more efficacious than battleships, armies, and other recognized war weapons.

We must insist that our unalterable rights, as set forth in our Constitution, be observed and that our destiny be not placed in the hands of one individual or a small group of individuals, none of which has been elected by the citizens of this Nation.

It is not necessary to be a trained economist to know that with our minimum wage and hour laws, we cannot compete with countries which pay wages of from 10 to 20 cents per day.

There are many industrial and agricultural products produced in other countries, which cannot be produced and profitably exported by our citizens.

Why, therefore, should our workers and farmers be encouraged to go after world markets when, after we have secured these markets, we find that we have to sell these products at a figure below our cost of production? In addition, in cases similar to cotton, we have to pay the producers an additional sum over and above that received by them to compensate for their loss.

This situation is certainly economically unsound, but when one finds that in order to sell these products at a figure below our cost of production, we are further compelled to reduce our tariff rates on other articles on which we have been making a profit, it is high time to call a halt.

There is not a single industry in the United States that can plan with any security for the future, as it may at any time find that under a new trade agreement this country is flooded with the same products that the said industry produces.

Americans can and have always been able to successfully compete with other nations when not handicapped by laws that raise the cost of production and which take away much needed protection that makes possible the payment of adequate wages. There can be no valid reason for refusing to have all trade treaties or agreements submitted to our Senate for ratification as provided for in our Constitution. We must insist that this constitutional course be followed.

Trade treaties have no more value than treaties of any other form, and the terms of treaties are only lived up to when it is expedient.

The Prime Minister of Great Britain, in an international broadcast on January 31, 1940, apologized for the fact that Great Britain was not living up to the terms of the trade treaty entered into between his country and the United States.

This action conclusively proves that all such treaties are of no value and often lead to disruption of domestic affairs.

You are now witnessing a demonstration as to how dangerous a trade treaty of any character can be if abrogation becomes necessary. On January 26, 1940, a trade treaty with Japan, entered into in 1911, was terminated by our Congress.

This was done to show our disapproval of the violation of the Chinese people by the Japanese.

What will be accomplished by this abrogation only the future will bring forth, but we do know that at this very hour we are nearer to a diplomatic break with Japan than ever before.

We at least, have, in this case, the consolation of knowing that our Congress is aware of existing conditions and will act accordingly.

Many believe that we are driving Japan into a position where she will be forced to agree to the partition of China with Soviet Russia.

Should this course be followed, you will find Japan allied with Russia and Germany, and then further international chaos will result.

A large army and navy has been, many times, as history shows, the deciding factor in bringing about war.

The terrific cost of maintaining and equipping large land and sea forces soon proves most burdensome to any nation. In order to justify this cost of maintaining a large armed force, administrative heads, responsible therefor, attempt to prove their value—hence wars of aggression and conquest.

Within the last 6 months two nations, Germany and Russia, intoxicated by the power of their armed forces, have drawn the European countries into the maelstrom of war.

Americans want, and will willingly take, no part in this war.

We must not be cajoled or coerced to enter into a war of ideologies.

We must curb our official sympathy for the oppressed, recognizing that we are not in a position to be of material aid to them.

No one can be blind to the fact that we are debt-ridden and have reached the limit of our national indebtedness. We are not in a financial condition that will permit us to finance the formation, transportation, and maintenance of an Army to fight on foreign soil, and, of greater importance, we are not willing to sacrifice American lives for the defense of foreign soil.

Any such course of action would, within a very short period of time, bring about national bankruptcy, which is the forerunner of revolution.

Now is the time to prevent our entry into this war!

With this objective, I respectfully submit for your approval a home defense force plan, which, if properly enforced, will insure the safety of this Nation against invasion, and will enable the United States to maintain its neutrality.

We must provide that a well equipped efficient home defense force is immediately formed on an economically sound basis.

We must also provide that the said home defense force cannot be sent out of the United States, and is to be utilized only for the defense of the United States.

Those serving in this defense force should not be subject to draft or conscription.

The training of this force should be under United States Army supervision and control.

Such a home defense force could be organized without any great loss of time at a small fraction of the cost of those military plans now being considered in Washington.

During the last 7 years, the United States has spent over two and one-half billion dollars training 2,000,000 Civilian Conservation Corps (C. C. C.) boys and many of these are now in camp in perfect physical condition. These boys, with the consent of their parents, should if they volunteer, be made the basis of the new home defense force.

Those volunteering would be transferred from the C. C. C. to the new home defense force at the same rate of pay as they now receive. Thus, there would be no increase in cost with resultant higher taxes.

On January 29 of this year it was officially announced by the acting director of the C. C. C. that after filling the 67,000 vacancies that existed in that organization, 105,000 additional applications for enrollment had to be rejected.

This fact conclusively proves that a numerically large home defense force could be immediately formed.

Should it become necessary to enlarge this force by reason of there being an insufficient number of volunteers from the C. C. C. camps, preference on the enlistment rolls should be given to the sons of those on relief.

No person engaged in gainful employment should be accepted in the home defense force.

Every religious creed would gladly work to sustain any home defense force formed to protect our churches and homes.

Every organized worker would welcome the formation of a home defense force which would not disrupt industrial or agricultural labor.

Every citizen would reap the benefits of security at a most economical cost.

I contend that this home defense force plan, if placed in immediate operation and if properly administered, would result in our country remaining at peace.

## Women's Patriotic Conference on National Defense

### EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 7, 1940

ADDRESS BY COL. OSWALD W. MCNEESE

Mr. OVERTON. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an address delivered by Col. Oswald W. McNeese, of the National Guard Bureau, before the Fifteenth Annual Women's Patriotic Conference on National Defense on February 1, 1940. Colonel

McNeese was formerly adjutant general of the State of Louisiana.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

If I may say so, it is a mark of intelligence and insight into the problems of national defense for you ladies to desire to be brought up to date in your knowledge of the National Guard. The National Guard, as the volunteer citizen soldiery of the Nation is perhaps that part of our armed forces with which you, as a whole, are best acquainted, simply for the reason that it is so widespread. But even so, I may be able to enlighten you further, in this brief talk, by telling you just how the National Guard, today, fits into our scheme of national defense, and by describing for you the improvements and changes in the status of the Guard during recent years.

Doubtless many of you had among your forbears men who were not professional men at arms, but who nevertheless carried a saber or a musket when volunteers were called for in some of our early wars. George Washington's entire force was, at first, made up of such men.

For another example, most of Jackson's troops at New Orleans were nonprofessional volunteers. The idea of citizens, responding to a community or colony need, or even to a national need, for armed defense, goes many centuries back.

The realization of the weakness of our constitutional militia has led our country to develop, improve, and train its National Guard as well as its Regular Army. The National Guard of today, however, has no direct connection with the militia except as to background for legal purposes. Its members who are between 21 and 45 are exempt from militia enrollment. In substance, just as is true of the Regular Army, and the Organized Reserves, the members of the National Guard are peacetime volunteers.

These members of the National Guard are citizens of the United States whose interest in national defense is such that they are willing to devote much of their time to military study and training. They are not merely members of State or local military groups. They are, by choice and by oath, members of a national force, the Army of the United States.

When becoming a member of the federally recognized National Guard, a young man loses or surrenders none of the responsibilities or burdens of a citizen of his State or Nation but in addition he assumes new obligations and liabilities. He takes a dual oath to his State and the United States that obliges him to give his time freely to training and to instantly and without regard to damage to his civilian occupation report for State or Federal active military service. Thus the personnel of the National Guard without question is entitled to the foremost place among all practical patriots of our country.

For many years the law governing the armed land forces of our Nation has been known as the National Defense Act. The present National Defense Act dates from 1920, with several important amendments since that time. In fact, this law establishes for the first time our basic military policy. The existing National Defense Act, in its first paragraph, names the components of the Army of the United States. For simplicity, we can say that there are three main parts: The Regular Army, the National Guard, and the Organized Reserves. The Regular Army, of course, is our professional force. The Organized Reserves consist mainly of Reserve officers, many of whom are organized in skeleton units which have practically no enlisted men. The National Guard, on the other hand, is organized into military units like those of the Regular Army, containing both officers and enlisted men. There are 18 complete Infantry and 4 Cavalry divisions, 1 Coast Artillery brigade, and a number of separate regiments of all arms and services.

It so happens, however, that the origins of the National Guard were all State forces rather than national forces. And that is still true. The National Guard, as it exists today, consists of State forces. There are guard units in all 48 of the States, and in Puerto Rico, Hawaii, and Alaska—these are now being organized—and in the District of Columbia. In each State and Territory the commander in chief of the National Guard is the Governor, and in the District of Columbia there is a commanding general appointed by the President. The members of the guard take an oath to bear true faith and allegiance to the States and Territories to which they belong.

But you will remember that I said a little while ago that the National Guard is a component of the Army of the United States. That is perfectly true. It belongs both to the States and to the United States. Its members not only swear to bear true faith and allegiance to their own States but also to the United States. To become exact in describing this dual status, there are really two names for the same military force, and both names are used in the National Defense Act. These two names are the National Guard and the National Guard of the United States. To all intents and purposes these two names mean the same military force. The words "National Guard," however, are used in referring to the guard as a force of the States and Territories; and the words "National Guard of the United States" refer to the guard as a part of the Army of the United States.

There is a good reason for thus having two names for what amounts to the same thing. Under the Constitution, the National Guard can be called into the service of the United States by the President in order to repel invasion, put down rebellion, or enforce the laws of the Union, when the available Regular Army is

insufficient for the purpose. The President has power to do this when he deems it necessary, without any authorization by Congress. Thus he has the power, in certain circumstances to "call"—please keep that word in mind—to "call" the National Guard into the military service of the United States as forces from the States and Territories, without regard to the fact that these same forces are also a part of the Army of the United States. Such a call is transmitted to the Governors of the States by the Secretary of War for the President. Remember, please, ladies, that in what I have just told you about, I was referring to the "National Guard" of the States, Territories, and District of Columbia, and not the "National Guard of the United States" as part of the Army of the United States.

The National Guard of the United States, as a part of the Army of the United States, cannot be ordered into active military service by the President. The National Defense Act requires that Congress must first declare a national emergency, such as a state of war. Then, instead of calling the National Guard of the States and Territories the President issues a proclamation in which he orders the National Guard of the United States, which is already a part of the Army of the United States, into active military service.

Perhaps this somewhat complicated matter will stand out more clearly in your minds, if you will remember that under a Presidential call, the National Guard is, in a sense, borrowed from the Governors of the States and Territories, and used to repel invasion, put down rebellion, or enforce the laws of the Union. No action by Congress is necessary. The National Guard units thus borrowed do become a part of the Army of the United States while they are in the national service, but the State authorities still exercise control over such matters as promotion of officers and recruiting of enlisted men. But under a Presidential order the National Guard of the United States, already a part of the Army of the United States, comes instantaneously into active military service. There must be a war or equivalent national emergency declared by Congress. The Guard immediately loses its status as State troops under an order, although this status is simply in abeyance. When the war or other emergency is over, the units have to be returned to the States from which they came. They then resume their purely peacetime State status.

The authority to "call" the National Guard actually dates back to 1789, when the Constitution was adopted. It was last exercised in 1917, when practically all State troops were ordered to the Mexican border. The authority to order the National Guard of the United States as a component of the Army of the United States into the active military service dates from 1933, when Congress passed an important amendment to the National Defense Act of 1920. This authority, of course, has never been exercised.

I have tried to make it plain that the National Guard (from now on I shall use the shorter name to mean the guard, both as State and Federal troops) has by law an important dual place in our national defense. Perhaps this will be still plainer if I now go on to show you the place of the guard in our actual military plans.

It is the military policy of the United States to maintain in time of peace a small, well-equipped land force, consisting of the Regular Army and the National Guard—a force which can rapidly be expanded in any major emergency. This force is called the initial protective force and its purpose is to defend the Nation in conjunction with the Navy and other outlying defenses until the Army can be enlarged. The plan for doing this is called the protective mobilization plan. Under this plan as it now stands the National Guard would form about 70 percent of the initial protective force. Thus the National Guard as a component of the Army of the United States, composed of complete combat units, only, from divisions down, has become and is a front-line M-day force.

In order to keep prepared for its part in the Nation's defense, the National Guard carries on continual training. The National Guard receives money by annual appropriation from Congress for many of its needs. These funds provide arms and other equipment, uniforms, motor vehicles, horses, and airplanes, provide for the construction and repair of certain buildings at camps, and for sending officers to the service schools of the Regular Army for courses of training, and for many other needs. The guard receives money from the States for the building and upkeep of armories, camps, and rifle ranges, for the expenses of rifle practice, for extra field training pay, and extra pay in times of State emergency, and for numerous other things.

At their home stations the units of the National Guard assemble at least one night a week for active training. They meet in armories provided by their States not only as drill halls but as places where arms and equipment can be safely kept. Often, too, there are meetings of a social kind, for there is relaxation within the brotherhood of arms as well as hard work.

In the summer the National Guard goes to camps for field training. These may be purely State camps composed entirely of National Guard troops, or guard units may join with parts of the Regular Army in large maneuvers. This summer training usually lasts for 2 weeks. An important part of it is the actual travel to and from home station to camp by marching, by motors, or by train, which give practice in troop movement for field service.

Recently, as you have read in your papers, there has been a considerable amount of extra training for the initial protective force, which is both the National Guard and the Regular Army. The training of the guard, of course, follows the same lines as

that of the Regular Army. By this I mean that the guard uses the same training manuals and uses the same kinds of arms and equipment. It is also assisted in its training by about 500 officer instructors and a similar number of sergeant instructors assigned to full-time instructional duty from the Regular Army. The actual instruction is carried on by the officers of the guard itself and these professional instructors supervise their work.

Altogether there are some 4,500 units in the National Guard, and these are stationed in about 2,500 different towns and cities. Some of the units have long tradition behind them. Many date back to the Revolutionary War. All of you have doubtless heard of such regiments as the Richmond Light Infantry Blues, the Seventh Regiment of New York City, the Washington Artillery of New Orleans, the Boston First Corps, the First Maryland Infantry, and many other similar ancient units. Such regiments as these are permitted by law to keep their old names, although they are also designated by national regimental numbers and the names of their States.

The National Guard, as the trained volunteer citizen soldiery of the United States, carries on the old and sound tradition that a man can do his duty both as a citizen and, if the time comes when he is needed, as a soldier. The men who must spring to arms as part of our initial protective force must be trained men, men who are ready in military knowledge to take their places in the Army of the United States. Those millions who spring to arms untrained will undoubtedly serve their nation later after they have become soldiers through proper training. But it is the duty, the aim, and the purpose of the members of the National Guard and the National Guard of the United States to be prepared and ready at any moment they are needed.

From what I have told you of the National Guard, and its place in the life of our Nation, you can see that it is a representative force based on the highest patriotic ideals—those of the citizen soldier. At any time, and especially in such days of uncertainty in the world's history as those we are now living through, there should be no hesitancy on the part of any American mother if her son desires to become a member of the National Guard. Indeed, she should encourage such a step. In the guard a young man learns during peace to adjust himself to discipline and group living, lessons not unneeded by the youth of today, or for that matter, in any past day. In the guard, too, many young men develop to a high degree their capabilities for the understanding and efficient leadership of others which is typical of the Army of the United States. Discipline and leadership alike are of far more importance than ever in these days when nations must consider their preparedness as whole nations—when it is national morale and not merely the morale of armies and navies which must bear the strain of a national emergency.

Above all, however, a young man learns, as a member of the National Guard, a thorough understanding of the utter necessity for an adequate national defense. There he will gain no desire to see war come upon us, for he will more clearly realize, as a member of our armed forces, just what war can be. But he will unquestionably imbibe, from his training and his better understanding of national defense, a patriotic spirit which is clear and sound—a full determination that no dictator—no warlike conqueror—shall ever be permitted to isolate or enslave the people of the United States of America.

### Sane View of Defense

#### EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, February 7, 1940

EDITORIAL FROM THE ST. LOUIS GLOBE-DEMOCRAT OF  
FEBRUARY 4, 1940

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the St. Louis Globe-Democrat of February 4, 1940, entitled "Sane View of Defense."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Globe-Democrat of February 4, 1940]

#### SANE VIEW OF DEFENSE

Oswald Garrison Villard, contributing editor of The Nation, offered a calm, rationalized argument last week in opposing heavy increase in military and naval spending. Speaking in a forum discussion, Mr. Villard asserted the United States is impregnable because of the geographical protection offered by the Atlantic and Pacific Oceans. He ridiculed as fantastic the assumption we could be successfully attacked by any great power.

He advised that if more defense expenditures are needed they ought to be decided on "wisely, rationally, after the most careful

study by a national commission composed of civilians as well as military men." The whole tenor of his observations was that the country eschew defense hysteria, for which there is no cause or excuse.

There is much in what he says. None can disregard sound considerations of national safety which demand an adequate defense. But it has seemed increasingly clear that the emphasis on vast Federal investment in naval and military arms, since the European conflict started, has been inspired more by emotion than reason.

Perhaps Mr. Villard goes too far in declaring this continent "impregnable," but the natural defenses of its two great oceans make foreign invasion a most remote sort of possibility. We can see nothing on the world horizon to make such a fear appear substantial. In recommending a commission to study defense needs, a commission composed of civilians as well as professional military men, Mr. Villard implies a natural aptitude on the part of Army and Navy authorities to stress defense expenditures out of proportion. The country obviously should depend on its military experts for specialized advice regarding defense. But it is not unreasonable to feel these authorities may in all sincerity be likely to scale needs higher than conditions warrant.

There is at present no proximate danger of the United States becoming embroiled abroad. We have already a strong Navy, almost a match in tonnage for Britain's. It seems belaboring the possibilities foolishly to conceive any foreign power would try to come over here on aggression bent. And we do not want to build ships or squander tax funds on arms to make our intervention abroad more easy of achievement by propagandists.

Adequate defense, yes. But proposals advocated now in Washington seem to go too far for the present. Tremendous Navy building now looks like a waste. When peace comes to Europe, a disarmament agreement seems inevitable. The United States was a party to the last such convention and would doubtless be to the next. Enormous outlays for new warships will probably mean building naval armament to scrap a few years hence.

### My Conception of Democracy

#### EXTENSION OF REMARKS

OF

HON. LYLE H. BOREN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

RADIO ADDRESS BY HON. LEON C. PHILLIPS GOVERNOR OF  
OKLAHOMA

Mr. BOREN. Mr. Speaker, I believe these words from the thought of a man of courage, ability, and great industry are worthy of careful and considerate attention:

The subject of democracy is one of perpetual interest and permanent importance, especially in the United States.

Many Americans are inclined to forget that the priceless heritage of democracy which they enjoy today had to be won in hard battle and that it took generations of effort to establish living democratic institutions on this continent.

Democracy is not a spontaneous gift of the gods.

If we are not wise and enlightened, we may not be a democracy in the future.

In the past the struggle for freedom was won by those who had the brain and the will to be free.

To be preserved, every right must be fought for.

Democracy is exemplified in its practical application. It reduces the art of living to workable practice. For the ideal democracy is the community, big or small, where all men are free to work out their own salvation, where the desire to work is realized in ready opportunity.

Freedom of life is the cherished goal of existence, because it, and it alone, gives liberty of action, choice of how and where the good things of life may be achieved and enjoyed.

Jefferson, in the immortal Declaration, called it "the pursuit of happiness."

Material existence, strange as it may seem, is inseparable from the spiritual as long as we live in this material world.

We live not by bread alone, but we cannot live without bread.

Democracy shall attain the ideal when opportunity is equal unto all men, according to their talents, and equal protection afforded to all.

That every man has an inalienable right to live, to own, possess, and enjoy the fruits of his own labor is a first principle of ideal democracy.

And thus to produce and enjoy is the strongest material incentive of life. There can therefore be no freedom, no liberty of democracy when the incentive of individual initiative is destroyed or does not exist.

Self-reliance is a necessary pillar to ideal democracy, and any policy that tends to destroy self-reliance in like degree destroys democratic ideals.

A grave tendency is manifest to forego self-reliance and rest in the sweet illusions of Government relief and paternalism.

If continued, this tendency may, as it has in Europe, lead to a state of mind, where this group of formerly independent and free American citizens will be willing to suffer abuses and economic slavery for a mere existence.

This policy not only tends to destroy democracy, but if current trends are permitted to continue, the burden of Government taxes will ever increase, thereby necessitating an ever-increasing governmental regimentation in all lines of private enterprise, until we may find ourselves as completely regimented as any dictatorship that ever existed—a democracy in name but a dictatorship in fact.

This must never, and shall not, happen in free America.

As we review the ghastly spectacle of blood and carnage being wrought upon the world by men given dictatorial powers, we are thankful to God that the tradition of liberty, justice, and equality still shines from the annals of our national life.

The heritage of our past is too great to sacrifice it willingly or thoughtlessly through our lack of effort to perpetuate it.

We who are the proud inheritors of a great nation and enjoy the privileges of its citizenship must carry also the obligations of its citizenship.

Today this Nation is faced with momentous decisions and national problems which are far more complex and formidable than those which occupied the labors of its founders.

The need for statesmanship and a rebirth of democracy was never greater than today, nor the call to patriotic service more pronounced. If our democracy is to live, it must be through the unselfish service of its citizens today, tomorrow, and every day.

Every reading, thinking, and observing American knows that right now within our own borders democracy is being attacked.

Yes I mean attacked by propaganda clever schemes and underhanded methods of destroying fundamental American principles by the Communists, the Nazis, Fascists, Workers Alliance, German Bund, and a dozen other kindred organizations, and by fanatical well-meaning zealots, who would federalize all activity for the sake of expediency.

And many of these have the effrontery to do this in the name of Americanism.

No occasion, no group, no movement, not even political expediency will justify the unfurling of the red flag of communism in America.

There is room in this democracy for but one flag, Old Glory. A serious mistake being made by some of our citizens is considering their citizenship a right rather than a duty.

We Americans are prone to lay great stress upon our rights and forget or shirk our duties.

The truth is that duties come first and they constitute the foundation for the enjoyment of our rights.

In a democracy, the rights of liberty and property depend upon the fulfillment of our obligations to our fellow men.

Organized society requires the individual to subordinate many of his personal desires to the good of the whole community and to assume duties for the public good.

Self-government—the democratic ideal toward which we are striving—is impossible unless the great majority of citizens honestly and wisely perform the duties of citizens.

I'm proud to be an American citizen and perform my duties as such.

I want my children and their children's children to be proud to be Americans.

I can only assure this to my offspring by doing my part to preserve this great country as a strong and virile democracy.

I consider that to be an American is the noblest circumstance of my life.

We need only to look at Europe to fully appreciate the paradise that America really is.

One glance abroad makes us adore our own country, its soil, its climate, its equality, liberty, laws, people, and manners.

The darkest hours in our history have never failed to bring forth the will, the courage, and the faith to overcome every obstacle.

The saga of America is the story of a people recruited from every corner of the world, united by an unswerving determination to make every sacrifice necessary to live in a new way in accordance with a fresh formula.

What is this thing that so powerfully influences man's thoughts and actions? What is democracy that it so alters the course of human history?

It is not merely a form of government. It is a way of life.

It is the way of life which the common man has sought the world over and one which we in America have dedicated our lives to attain and defend. It is, above all, a recognition of the inherent worth of the common man, the dignity of his labor, and his hopes and aspirations to freedom. Democracy on the political side may be described as that form of government which guarantees the necessary conditions to the full expression of that worth and dignity and the realization of those aspirations.

It seems fitting and proper that we should again remind ourselves of some of the beliefs that make our Nation not only different, but strong, virile, and unafraid.

We Americans believe in individual liberty, so far as it can be exercised without injury to the superior rights of the community.

We believe in complete religious tolerance.

We believe in freedom of speech and of the press subject to temporary restraint in times of popular excitement, by public authority only.

We believe in control of public policies and measures, by representative legislative bodies elected by universal suffrage.

We believe in the executive head of the Nation elected for a short term of universal suffrage and exercising large powers under specific constitutional limitations.

We believe in self-government, in universal education, in resistance to evil men and governments.

We believe in submission to the will of the majority after full discussion and a fair vote.

We believe in leading rather than driving men.

We believe in a universal sense of obligation to the community and the country, an obligation to be discharged by service, gratitude and love, in the dignity and strength of common human nature, and therefore in democracy and its ultimate triumph.

With all of the above ideals of liberty being attacked in many sections of the world, and with eternal vigilance as the price of liberty, it is well for us to be vigilant. The same conditions that caused all the unrest in other countries exists also here. In those other countries there was poverty, jealousy of the well-to-do and rich, racial hatred, religious prejudice, selfish ambitions, greed for power; all of these existed and were fanned into emotional flames by ambitious and unscrupulous leaders resulting in political upheaval.

Here in our own beloved country, we have the same conditions waiting to be fanned into flames. There exists here those same racial and religious prejudices, jealousies, selfishness, greed, and poverty. They caused great changes elsewhere; they could cause them here.

The cure and remedy is in the heart and mind of each individual. It is as individuals we enjoy our present freedom, it depends on our actions as individuals as to how long we will enjoy freedom. If each individual will become a self-appointed apostle to preserve an orderly and peaceful Government, all will be well, as under those conditions, the rabble rousers and agitators will be left without hearers or followers.

I would like to leave one final thought. I believe this Nation has gone as far as it should go in the centralization of Government.

I believe it has gone as far in that direction as it can safely go.

I believe that the people are awake to the importance of retaining freedom of action in the several States and that the trend is now in the right direction.

I applaud the awakened sense of the people because I believe that the doctrine of States' rights is fundamental and that the welfare of the Nation and of every individual citizen of these United States depends upon steadfast devotion to that creed.

I thank you.

## Defense of Human Rights

### EXTENSION OF REMARKS

OF

HON. RAYMOND S. McKEOUGH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

RESOLUTION OF CHICAGO ALL-AMERICAN COMMITTEE FOR THE DEFENSE OF HUMAN RIGHTS

Mr. McKEOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution, read and adopted at a mass protest meeting held under the auspices of the Chicago All-American Committee for the Defense of Human Rights, on Sunday, January 14, 1940, at the Chicago Coliseum:

We American citizens of Czechoslovakian, Polish, Jewish, and Finnish origin or descent, assembled in the Coliseum in the city of Chicago, Ill., stand united in our condemnation of the unparalleled acts of aggression which have resulted in the conquest of Czechoslovakia, the dismemberment of Poland, and the ruthless attack on Finland, and the barbarous oppression of all minorities in these countries.

During the past 7 years the world has seen civilization crumble, freedom become enchained, and the lust for power become dominant. The events of the past 5 months, since the conclusion of the Nazi-Soviet pact, have made the issue confronting mankind unmistakably clear. The ultimate conflict of our day is a struggle between democracy and dictatorship; between enlightenment, humanity, and civilization on the one hand and inhumanity, brutality, and darkness on the other. Nazi Germany and Communist Russia are one, a united menace to the civilized world.

The American people, neutral though they should be and are in political action, cannot and will not be neutral or silent in thought. They stand arrayed against aggression, eager to uphold the sacred obligations of saving humanity and preserving freedom by utilizing all of the many instruments of peace.

The Nazis have made of free and democratic Czechoslovakia a prison; of Poland they have made a charnel house; Christians and Jews of Germany, Austria, Czechoslovakia, and Poland have been

robbed of all their material possessions and of every right that makes human life precious. Catholic priests, Protestant ministers, and Jewish rabbis have been degraded, imprisoned, and executed. Christian and Jewish seats of learning, and their irreplaceable libraries and ancient manuscripts have been desecrated, burned, and destroyed. Students by the thousands have been beaten and murdered. Two and one-half million Jews of Poland, and millions of Christians are now vassals of Germany and subjected to a barbarism and terror unknown even in the days of the savage Huns. Millions of Jews and Christians are denied food, shelter, and medicine; they are perishing from hunger and epidemic; they are subjected to degradation and systematic wholesale extermination; they are being killed and forced to dig their own graves. Millions of laborers and labor leaders, business and professional men, women and children have been uprooted from their homes, sent to far removed places and forced to labor as slaves or exterminated.

The cynicism, the ruthlessness, the disregard of human rights and feelings that Soviet Russia has shown in its conquest of Poland, its subjugation of small Baltic nations, and its attempt—so far, happily, unsuccessfully—to conquer Finland, makes it a fit partner of its ally and friend, Nazi Germany, and equally subject to the scorn and condemnation of the moral sense of the world.

The American Government still maintains diplomatic relations with Germany and Russia. The nations of Germany and Russia pay little regard to our ambassadors, and give them no opportunity to protect the lives and property of American citizens in those countries. They have a prison wall around the territories they have conquered; they have made these territories one vast concentration camp and torture chamber; to maintain their aggressions they permit no communication with, or entrance to, these areas and deny opportunity to humanitarian and relief agencies to give aid and succor to the victims of their aggressions. The American Government accords to the representatives and citizens of Germany and Russia in this country all of the customary diplomatic courtesies and rights. Thus the maintenance of diplomatic relations has many advantages for the German and Russian Governments, and no corresponding advantages for the American Government: Now, therefore, be it

*Resolved*, That we, American citizens here assembled, representatives of many religions, creeds, and races, all deeply conscious of, and grateful for, living in and being part of this great country, do reaffirm our loyalty and adherence to the principles of democracy upon which this Nation was founded, and to the American way of life and government. We commend the President of the United States for his moral condemnation of the actions of Nazi Germany in conquering Czechoslovakia, Poland, and Austria, and of its bestial and barbarous treatment of Jews and other minorities; and for his moral condemnation of Russia for its conquest of Poland and invasion of Finland.

We urge the President and the people of the United States to continue their interest in and help to the oppressed Jews, Czechoslovakians, Poles, and Germans of Europe and to the valiant Finns, and to convey to the German and Russian Governments America's abhorrence and condemnation of their oppressions. We appeal to the President of the United States, who has led the world in his condemnation of aggression and brutality, to raise his voice and exercise his great power once again in behalf of the relentlessly oppressed people of Poland, Czechoslovakia, and Austria upon whom is practiced a perverted cruelty which violates every impulse of humanity and justice. We appeal to the President and Congress of the United States to urge such measures as are available to them, to enable legitimate relief agencies, of, and by, American citizens to bring aid and succor to the unfortunate victims of Nazi and Communist aggressions; and to keep open the mail channels and other means of communication between the people of the United States and the people of conquered areas. We appeal to the President, the Congress, and all people of the United States to preserve and maintain the noble tradition of this country as a haven and asylum of refuge for victims of religious and political oppression and persecution.

We condemn the attempt by agents of nazi-ism and communism and their American friends and allies, to undermine and destroy the principles, ideals, and institutions of this democratic Nation by stirring up religious and racial antagonisms and hatreds.

We call upon the President and the Congress of the United States to consider the facts set forth in these resolutions and to take such measures and action, in keeping with the fine traditions of the United States and the fundamental rights of humanity, which will best serve the oppressed peoples of Europe and the interests of this country.

## Unsound Growth in the Aircraft Industry

### EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

Mr. MARTIN of Iowa. Mr. Speaker, the Washington Evening Star for February 6 carries an article of considerable

interest to those of us who have been carefully watching the effect of the lifting of the arms embargo and the activities of Secretary of the Treasury Morgenthau in encouraging the rapid expansion of our aircraft industry to fill the large military orders of France and Britain for use in the present European war. The entire article appearing in the Evening Star is as follows:

[From the Washington Evening Star of February 6, 1940]

AIRCRAFT INDUSTRY GROWTH PRAISED BY MORGENTHAU

Secretary of the Treasury Morgenthau yesterday described the "orderly expansion of the aircraft industry" as a tribute to American business methods.

Returning from visits to the United Aircraft plant in Hartford, Conn., and the Wright Aeronautical Co. plant at Paterson, N. J., the Secretary told reporters:

"I was tremendously impressed that the domestic economy is on an even keel largely due to the leadership and initiative of President Roosevelt.

"While the rest of the world is upset I go into these factories and find them working at top speed."

He said the airplane industry was charging fair prices and paying fair wages and making complaints about nothing.

"It goes to show," he continued, "that when there is business, the American businessman does go ahead, does expand, and makes profits."

Secretary Morgenthau heads a committee appointed by President Roosevelt to coordinate foreign and domestic airplane purchasing.

Apparently Mr. Morgenthau overlooks entirely the real cause for this sudden wave of prosperity in this particular industry. In my speeches in the House of November 1 and 3, I predicted that the lifting of the arms embargo would have exactly the effect that is now so strongly manifest and I now contend that the domestic economy is not on an even keel and that the only leadership and initiative of President Roosevelt bearing upon this sudden wave of prosperity in the aircraft industry was the lifting of the arms embargo and the plunging of American industry headlong into the maelstrom of the present European war. As set out in my extension of remarks of January 24, this present expansion of the aircraft industry is wholly dependent upon a most volatile and unsound demand and is also robbing the American farmer of the British and French market for farm products. I repeat that our domestic economy is anything but on an even keel and that we are setting in motion factors which will prolong the war and which will cause a large industry in our own land to desire the prolongation of the war and which may even plunge us headlong into the war. Furthermore, the sudden termination of new orders and the cancelation of old orders at the close of hostilities may be the very factor that will precipitate recession and economic collapse.

I have just received a letter from a very outstanding constituent of mine on this general subject. The writer of this letter, Mr. Weaver, portrays very clearly and effectively the views that have been very generally expressed in many communications I have received from my district on this most important issue. Mr. Weaver's letter is a splendid Midwestern answer to Secretary of the Treasury Morgenthau's views, notwithstanding the fact that it was written the day before the above Associated Press article appeared in our papers. I am including Mr. Weaver's letter in full herewith:

WAPELLO, IOWA, February 5, 1940.

HON. THOMAS E. MARTIN,

House of Representatives, Washington, D. C.

MY DEAR TOM: Newspaper accounts keep coming out indicating an increase in the tempo in the export of arms, munitions, and other materials to the warring countries; also accompanied by loans and credit facilities by these nations in this country. I am not fully acquainted with the terms of the Johnson Act nor the exact wording of the late Neutrality Act, but it does appear to me that we are treading the same road that led to our entry in the last World War. Personally, I have not changed my opinion in any respect about the late repeal of the Neutrality Act, and, if anything, my conviction is strengthened that Congress did away with a good piece of legislation. If this thing keeps up the way it is going at present, all "Hell and high water" can't keep us out of this war. The reason I am writing you this letter is not in any way to criticize your position, because I know that it is exactly in accord with mine, but it does seem to me that certain observations can be made at the present time in regard to this situation which I am becoming somewhat apprehensive about.

I was reading an account the other day of the negotiations for sale of some of our speediest airplanes to France, which would be exclusive of armament and motors. This airplane has just very

recently been brought to the public view, and, of course, I do not know whether it has been superseded by some advance plans, but it does appear to me that such a practice is questionable in view of the fact that we are sadly lacking in such equipment for our own forces.

I think, in final analysis, this thing all boils itself down to the dollar sign again. Either the greed of certain individuals in this country is going to have to be curtailed, or we are going to become a party in this war. My apprehension about this matter is in part a selfish one because of the fact that I am a Reserve officer in the Army and do not want to get my head blown off any sooner than anyone else, but will do so if it need be. Be that as it may, the general public is beginning to wonder what in the Hell is going on, as we are definitely taking sides in this conflict by our actions, although we shout neutrality from the housetops.

I know that you are keeping a close watch on this matter due to your connection with the Military Affairs Committee, and further, I know that your convictions upon this subject are parallel with my own. Anything you can do to cool off the anxiety to continue this practice will be greatly appreciated by this district at least.

With kindest personal regards, I beg to remain,  
Sincerely yours,

W. O. WEAVER.

### Health Legislation

#### EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 7, 1940

LETTER FROM H. C. LOWRY

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PARKSIDE HOTEL, D. C., February 5, 1940.

Re Health legislation.

Dear CONGRESSMAN: As you know, Congress under the leadership of both the Democratic and Republican Parties, has been most liberal in making appropriations for public health. Each succeeding administration has added increased public-health services in different administrative bureaus. To coordinate these functions the President signed Executive Order No. 7481 in October 1936, which set up the Interdepartmental Committee to Coordinate Health and Welfare Activities.

The committee thus created had two definite objectives to fulfill, both of which have been sidetracked, and the only report the committee has made to date is a report citing the need for a national health program. A trumped-up convention was called and much time and money has been spent to propagandize the so-called Wagner health bill. More recently this program has been thrown out the window and a hospital building program substituted therefor. Such is the end result of all the ballyhoo and expenditure of money. The health activities of the Federal Government are, as they were, still scattered in 43 branches of the Government.

In effect, the yearling professors have offered legislation to change about everything under the sun, and neglected the most prized jewel—public health. The mountain has truly labored and brought forth a mouse. But instead of a mouse trap we are offered "fire traps." The fact that this program was set in motion by trick propaganda and the inside influence of a mere handful of overly ambitious welfare workers who made the fatal mistake of attacking that monster—that small coterie of political doctors under the direct command of the medical dictator—is no reason why Congress should fail to give due consideration to the all-important problem of finding some solution to work out our national health problems.

In the hope that Congress will deal with this subject at this session, I offer you certain suggestions which I think you and the other Members of Congress would appreciate. I trust the Members of Congress are well acquainted with the report and recommendations of the interdepartmental committee and the counter-proposals of the American Medical Association House of Delegates. Judging from the remarks and opinions of the Members of Congress with whom I have discussed these matters, it is evident that Congress does not agree with the findings of the committee nor the American Medical Association.

To be specific, I respectfully submit that generally speaking competent physicians will not submit to regimentation by either the State or Federal Government, and this is true of the American people. Few individuals would tolerate any interference with the free choice of a physician. Any system of compulsory insurance, State or National, managed by bureaucracy, would quickly develop into a rotten stench and a political racket. When the Government begins to pay doctor bills, graft and corruption will run riot. If any form of State medicine were put in operation and the

Government selected the surgeons, undertaking parlors would soon pop up like mushrooms on every available street corner. Padded bills and kick-back commissions would be the rule instead of the exception. It is not the prerogative of government to dictate medical care or the type of therapy indicated in any given case. The reputation and good will of a physician or a surgeon would soon depend upon his politics and how much he kicked in to the ward boss.

From the standpoint of the long-haired professor who would compare the amount of a surgeon's fee with the price of a haircut, medical costs could be materially reduced. But from the standpoint of those who are willing to take into account comparable circumstances, there is little hope of ever substantially reducing the costs of health services and maintain and improve the standard of services we all hope to attain. Congressmen are for the most part practical, if not always of the intelligentia; therefore permit me to mention some known and proven facts in the abstract.

Namely, the average cost of maintaining and operating the public hospitals in this country of from 400 to 500 beds is equal to the entire administrative cost of any one of several States in this Union. That Allen County in Indiana (Fort Wayne, the county seat) and Allen County in Ohio (Lima, the county seat) found that they could pay private hospitals and doctor bills to private practitioners cheaper than to own and operate city and county hospitals. That eminent surgeons or physicians must have some incentive to improve the lot of medicine and surgery and will not work for the wages we pay bureaucrats. Who would patronize a doctor who collects 50 cents for an office call or \$25 surgical fees? How much respect does the public have for a \$2,200 per year health officer?

No doubt the Members of Congress know of the tremendous cost of medical care in this country, and thus have an idea what socialized medicine would cost the States and the Federal Government. If so, Congress will deliberately confine the scope of national health services to the control and eradication, so far as is possible, of communicable and so-called preventable diseases and a program of health education. Once Congress goes beyond these limits and employs private physicians and embarks upon a hospital-building program, both as a welfare service of the Government, this Nation is sunk. When the President says that a people cannot afford to build a hospital but can support and maintain it, he has been sadly misinformed. The annual cost of maintenance will equal the cost of production. In other words, if they can't find \$300,000 to build and refund in 20 years, how can they raise \$300,000 per year to maintain the project?

The individuals who would advocate government ownership of hospitals should first visit State and Federal hospitals. It will be found that about half of the worth-while equipment is stolen by the outgoing staff when there is a change in the administration. It will be found that graft and split commissions are common practices. The staff members are almost 100 percent political appointees, whose first concern is how much booty they can rake up for the next campaign fund. And, for the most part the surgical staff is composed of doctors who cannot get on the surgical staff of a regular standardized hospital, and who "is there" to operate on anybody for anything in order to qualify, in a manner, as a surgeon.

The individuals who would promote socialized medicine, or demand that the Government employ physicians and surgeons to attend the public generally, should first examine the W. P. A. reports and ascertain how much money has been squandered to date. For instance, an interne in Chicago was paid \$635 to operate on two W. P. A. relief clients. Another young doctor of Chicago Heights, Ill., was paid \$598.50 to operate on two similar W. P. A. cases. These are not exceptions, but rather the common rule—if you will only examine the record ("Astorbilt" fees for charity).

Until 1934, when the brain trust captured Washington, we thought the "good ole U. S. A." had stepped far beyond the ideologies of Europe. And, in fact, the rest of the world. But since '34 we have heard that what was new and worth while (?) was to be found in Europe in the totalitarian States. As, for example, State medicine. But little do they think. Should anyone imagine that Americans would stand in line, not unlike cattle, as they do in Europe, to wait their turn for CC pills and a daub of iodine? Nor do they tell us that State medicine costs have increased from 8 to 22 percent in Europe. From these figures you can well imagine what the cost in America would be with our truly democratic political set-up. Even today, right here in America, few Government health clinics, or health officers' offices, would pass a sanitary inspection.

For the most part, doctors in public-health work are of the class that graduated with little more than a prescription book, a tongue depressor, and a faint hope of ever developing into a physician or a surgeon. Before Congress is ready to institute a new health program, personnel must be trained. But, first, what we need most now is to stop guessing. Experiments in medicine and surgery, and drug and drugless therapy, are mandatory. Radium and X-ray therapy have proven overrated. The "horse and buggy" cautery technique is back in vogue for cancer work. Blood "banks" have been discredited and known to be dangerous after the blood is 5 days old. Every day we hear startling claims made for this and that treatment, only to learn in a few days that it is "out the window."

It has been said that 10 percent of the people can buy anything, that 20 percent cannot buy anything, and that 70 percent can buy and pay, if properly sold. And, while there is a lot of truth in this, at the same time we know that there are many exceptions to this rule when a major illness occurs. We also

know of many abuses that break this rule; such as "split fees," unnecessary consultation fees, unnecessary X-ray pictures and laboratory fees, the doctors who demand a "kick-back" from the pathological laboratories, surgical-supply agencies, opticians, anesthetists, and other allied agents. But, at best, we know that even after these abuses have been discredited, there remains a large percentage of the 70 percent who cannot pay for all advisable and necessary health costs.

Group hospitalization and insurance to cover medical and surgical costs have helped to solve these needs to a certain extent. Cooperative group-health clinics have been organized, but they are of short duration, and except for a few that are being heavily subsidized the idea has been a failure. Private group practitioners have organized clinics to work out a satisfactory solution. And while a good many such clinics are in operation, they, too, are short lived due to the fact that when the "moving spirit" (individuality and personality) expires, the patient turn-over, like the operating personnel, loses faith and confidence. The Mayo, Percy, Lahey, Crile, Gamble-Montgomery, and others are no exception to this rule. Johns Hopkins, the foremost clinic in America, always runs in the "red."

Therefore, the greatest health needs, no doubt, are for diagnostic clinics equipped for the use of the physician and the 20 and the 70 percent. If Congress confines the Government program to communicable and preventable diseases, and an educational program, then offers reasonable accommodations for diagnostic services, the insurance companies can and will write insurance within the reach of all employables. No doubt, private and local public hospitals and clinics will be glad to cooperate in such a program, and the professionals will offer no resistance so long as the program is kept free of politics and fair to all parties concerned.

Yes, Congress might well study the possibility of a medical West Point. The ground work must first be laid before any new health program can be made to operate economically. Personnel is mandatory, for there is a pitiful need for properly trained professionals and allied agents in the public-health field. We have only to visit our present-day health clinics and review the experiences of bungling and suffering and miserable treatment our soldiers underwent during the last war, and examine the staff of veterans' hospitals to realize the necessity of action by Congress, if improvement in our Army, Navy, and public-health officers' personnel is to be attained.

Congress might at least finish the job the interdepartmental committee set out to do, and coordinate all present Government health functions in one well-coordinated bureau. These functions might at least be placed in the hands of therapists and taken out of the hands of doctors of philosophy, old maids, and clerks. Any delay is penny-wise and pound-foolish, and will cost the Government millions of good taxpayers' dollars. The Government is now spending millions training personnel in certain subsidized hospitals and colleges where certain influences are at work to warp the minds of the professionals and allied agents. If the Members of Congress will begin on page 181 and read the Mayo-Fishbein-Rockefeller chapter in the volume *Medical Mussolini*, fifth edition, valuable information will be found available.

I know you are interested in the above subject matter, and I hope you can interest your colleagues to the point that some immediate action is taken.

Most respectfully,

H. C. (CARLYLE) LOWRY.

### The N. Y. A. in Action

#### EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 6, 1940

LETTER FROM MALCOLM M. WILEY, DEAN OF THE UNIVERSITY OF MINNESOTA, AND TWO REPORTS SHOWING PRACTICAL OPERATION OF THE NATIONAL YOUTH ADMINISTRATION

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a letter from Dean Malcolm M. Wiley, of the University of Minnesota, together with two reports showing the practical working of the N. Y. A. and its timely assistance to promising men and women. I recall my own very difficult problems of finding money for tuition, clothing, board, and room rent, and other incidental details of getting through a great university, and it is with a sympathetic attitude that I submit this interesting and instructive report for the benefit of the Congress and general public:

UNIVERSITY OF MINNESOTA,

Minneapolis, February 2, 1940.

The Honorable JOHN G. ALEXANDER,

The House of Representatives, Washington, D. C.

MY DEAR MR. ALEXANDER: Enclosed you will find two reports: (1) Backgrounds of College N. Y. A. Students and (2) Student Attitudes Toward Government Aid in Education. Now that you will soon be considering appropriations for a continuation of the National Youth Administration program, I thought you might like to have at hand these materials, which give indication of the success with which the program has operated at the university and in the State of Minnesota.

May I especially call your attention to Backgrounds of College N. Y. A. Students. The material on page 4 shows the income of parents of students who are now serving as N. Y. A. students at the University of Minnesota. You will see that 44.5 percent of the students come from homes where the income is less than \$1,000, and almost 70 percent are from homes where the income is less than \$1,500. Couple this with the fact, also shown in the report, that one-half of the students are from homes with four or more dependents, and it becomes clear that the N. Y. A. assistance is meeting a need and that it unquestionably is permitting promising young men and women to attend college who could not otherwise do so because of meager home resources.

It is also interesting to notice, as shown on page 5, that almost one-fifth of the N. Y. A. students at the University of Minnesota are from homes in which the father follows an agricultural pursuit.

You will find a quick summary of the essential material on page 10.

I know, of course, that in the weeks immediately ahead you will give full and careful consideration to the needs of youth in general and to the appropriations for the N. Y. A. program in particular.

Very truly yours,

MALCOLM M. WILEY,

University Dean and Assistant to the President.

#### BACKGROUND OF COLLEGE N. Y. A. STUDENTS

A report on certain aspects of the National Youth Administration program at the University of Minnesota, covering the period January 1, 1934, to April 30, 1939

(By Dorothy G. Johnson, director of the employment bureau, and Malcolm M. Wiley, university dean and assistant to the president)

On November 17, 1933, the Federal Emergency Relief Administration authorized a special allotment of funds to the Minnesota emergency relief administration for an experimental work-relief program for college students. The project had been planned by a State-wide commission for the education of unemployed youth, appointed by the then Gov. Floyd B. Olson, with E. M. Phillips, State commissioner of education, as chairman. President Lotis D. Coffman, of the University of Minnesota, was chairman of the executive committee that formulated the program for which the Federal aid was given. Beginning in January 1934, 1,000 college and university students in the State of Minnesota were selected for assignment to work projects on the various campuses, and for the services performed they were paid an average of \$15 a month from Federal funds. (A special supplement provided by the executive council of the State added \$5 per student per month to the Federal earnings.)
